General Rural Zone GRUZ - R25 Oppose

I vehemently object to any mining on the Barrytown flats.

According to your Sept 22 Regional Council newsletter you have purchased 15 water level radar sensors, only 3 have been installed so far. Install some and collect data that as you say will be invaluable during flood events where inundation maybe imminent which I believe is on such low lying land. without your own data, collected over time, how can you be in a position to make educated decisions to compare to your mandate and mission statement, regardless of any information mining companies propose.

The COP 27 United Nations Climate Change Conference happening right now in Egypt says "facing catastrophe for humanity is the defining issue of our time, co-operate or perish". Can this council justify granting consent when the world leaders are giving you this warning.

Consider this, the normal maximum high tide levels for Greymouth is 3.2m, for Westport 3.5m. On Aug 23rd 2021 Greymouth measured 3.3m and Westport 3.6m.

The first time ever recorded! Then on Oct 6th 2021 Greymouth recorded a high tide level of 3.4m, Westport 3.7m. Another record breaking tides!. Aug, Sept and this month 2022 Greymouth recorded another record breaker high tide of 3.6m!!! Predicted on Jan 22nd and Feb 21st 2023 Westport will experience a high tide of 3.8m!!!

This is an increase of 300mm in the last year and a half of sea level high tide increases, documented.

This threat is real, here and now, who knows what further increases we will experience in the future.

This all makes the Barrytown flats increasingly fragile and open cast mining here increases the risk of coastal erosion, inundation and salination that will destroy this land and precious wetlands, our home.

Are you listening??? Stop it now please for all of us.

Remove this rule. Have no mining on the Barrytown flats in any zone.
