Re: TTPP – Noise Caucusing Agenda

Hi Alex,

Further to yesterday's hearing, I have proposed an agenda for the caucusing on the noise rules of the TTPP.

1. What interpretation do the acousticians have of the TTPP's objectives for the rural zone noise rule?
2. What measurement position should be used for the rural zone noise rule?
3. Are limits of 55dB L_{Aeq} day time and 45dB L_{Aeq} / 75dB L_{AFmax} night time appropriate as standard criteria for the Rural zone?
4. Would the rural zone noise rule benefit from periods of respite from the levels agreed on 2 above, such as during evenings and/or on weekends and public holidays?
5. Is there merit in considering different noise rules for the different precincts within the rural zone (the General rural zone, the Rural Lifestyle zone and the Settlement zone)?
6. With respect to the port, what is the purpose of R9 and is it appropriately worded?
7. With respect to the port, what is the purpose of the port noise rule within RX3 and is it appropriately worded?
8. With respect to the mineral extraction zone, what is the purpose of the R11 and is it appropriately worded?
9. With respect to the mineral extraction zone, what is the purpose of the mineral extraction zone noise rule within RX3 and is it appropriately worded?
