

As requested by the commissioners this morning, I propose the following topics for inclusion in the noise/planning conferencing with respect to the National Public Health Service submission points (S190) on the noise chapter:

NOISE-R2.12 – Appropriate parameters (non-acoustic) for exemption of aircraft movements, including consideration of separation distances from houses.

NOISE-RX – Noise limits for evening periods

NOISE-RX – Proposed noise limits at notional boundaries of sensitive activities in generally non-sensitive zones

NOISE-R10.2X – Appropriate controls for unplanned engine testing

As raised with the commissioners, there might be limitations for scope of changes proposed by the reporting officers with respect to:

NOISE-RX – increasing the noise limit from the notified rules by 10 dB in the 7pm to 10pm period

NOISE-R10.2X – exempting some engine testing from any noise controls where they were subject to noise limits in the notified rules.
