

Our submission is related to the Variation and the effect it will have on our Property . (Property valuation number ; 2574005503)

Late entry with the submission is due to unrelated circumstances so we do apologise .Please ensure our response is noted and filed .

We can only forward our submission via e-mail without the appropriate submission forms – reason being we are unable to submit it as the access to the forms is not available per <https://tppp.nz>

Our submission relates to the Waimea water way, bordering our Property .Of all the years we have been at the Homestead the Waimea has never encroached onto the Property .

The actual Homestead is established on a raised section of the block nullifying any water / flood issues .

The only time / reason we would have an issue, is the fact that the Waimea is unfortunately very much silted up and this is due solely to the **Mining operations upstream** .No

Significant movement of water in times of downpour and heavy rain is not noticeably evident, this includes at the point where the Waimea meets the Sea .

This is in fact something that must be dealt with rather than pushing all resources into the Variation (2), Plan .

Case in point, is the recent fines Westland Regional Council imposed on an Operator for unlawful discharge in the Streams .(German Gulley / Waimea .)

Please take this e-mail as our submission being, totally against and vehemently opposing Variation 2 to the proposed Te Tai Poutini Plan .

Also note ---- a request was asked if the WRC could forward a copy of the Plan in relation to Awatuna – albeit late request but made. To date not received .

In conclusion, we are obviously against the Variation and the impact in many ways it will have on our Property, (Insurance – resale etc) It is a fact, that our main

Danger in flood and water egress is from all the Mining Operations causing havoc with local streams / water ways .

Regards

Paul Truman
