Te Tai o Poutini Plan Committee Meeting
Commencing at 9.00am 18 September 2025
West Coast Regional Council Chambers, Paroa, Greymouth
Livestreamed on YouTube
@westcoastregionalcouncil5171

Please Note that this meeting will be held over a number of consecutive working days. The meeting will be adjourned at the end of each session and reconvened at the date and time resolved by TTPP Committee. Each session will be livestreamed via the link above. Once TTPP Committee has made their decision on the Independent Hearing Panel recommendations, any further sessions available for the meeting will be cancelled.

AGENDA

9.00am	Welcome and Apologies	**Chair**
9.05am	Confirm previous minutes of 26 June 2025	**Chair**
	Matters Arising	**Chair**
9.10am	Report – Decisions Meeting Process	**Project Manager**
9.15am	Noting Report – Summary of Hearings Recommendations Reports for Information	**Principal Planner**
Final agenda item	Report – Decisions on Submissions and Adoption of Decisions on the proposed Te Tai o Poutini Plan, Variation 1 and Variation 2	**Principal Planner**
On TTPP Committee Making its decision	Meeting ends	

Venues for reconvened sessions of the meeting are as follows:

DATE	VENUE
19 September 2025	Arahura Marae, Old Christchurch Rd, Arahura
22 September 2025	West Coast Regional Council Chambers, Paroa, Greymouth
23 September 2025	Grey District Council Chambers, Tainui St, Greymouth
24 September 2025	Grey District Council Chambers, Tainui St, Greymouth
26 September 2025	West Coast Regional Council Chambers, Paroa, Greymouth

TTPP Committee Meetings for 2025	Time	Venue
No October meeting – Local Elections		
19 November	1.30-3.30pm	WCRC
To be Confirmed	1.30-3.30pm	WDC

MINUTES OF MEETING OF TE TAI O POUTINI PLAN COMMITTEE HELD AT CLOCKTOWER CHAMBERS, 119 PALMERSTON STREET, WESTPORT AT 9.00 AM ON 26 AUGUST 2025

Present

R. Williams (Chairman), Mayor T. Gibson (GDC), Cr B. Cummings (WCRC), Kaiwhakahaere F. Tumahai (Ngāti Waewae), Cr J. Howard (BDC), Mayor J. Cleine (BDC), Cr A. Gibson (GDC), Cr P. Haddock (WCRC), Mayor H. Lash (WDC)

In attendance

D. Lew (WCRC), Jo Field (WCRC), J. Armstrong (TTPP Project Manager), Michael McEnaney (GDC), Joanne Soderlund (GDC), Simon Pickford (BDC), Carissa du Plessis (BDC), Lois Easton (Kereru Consultant on behalf of WCRC), Janeen Kydd-Smith (Sage Planning on behalf of WCRC), Lucy de Latour (Wynn Williams), Kate Dickson (Wynn Williams), Doug Bray (WCRC), Chu Zhao (WCRC).

Welcome

Apologies

Kaiwhakahaere P. Madgwick (Makaawhio), Cr G. Neylon (BDC), & Cr A. Cassin (WDC)

Moved (Mayor Cleine / R. Williams)

That the apologies of Kaiwhakahaere P. Madgwick, Cr Neylon *& Cr Cassin be accepted.*

Carried

Confirm minutes of the previous meeting held 26 June 2025

Moved (Kaiwhakahaere Tumahai / Cr Cummings)

That the minutes of the meeting held 26 June 2025 be confirmed.

Carried

Matters arising from previous meetings

None raised

Presentation – Legal Options and Process for Decision–Making

Lucy de Latour pointed out three options available to TTPP Committee for making decisions on the recommendations report of the Independent Hearings Panel:

1. Accept the recommendations in full.
2. Accept the recommendations in part (and reject parts of the recommendations).
3. Reject the recommendations in full

For Option 1:

- TTPP has legal effect
- Any outstanding concerns can be resolved through appeals
- Consistent with the earlier decision to appoint a hearings panel of qualified experts to hear evidence on behalf of the Committee
- Cost effective and fastest option

The Procedure is that the committee accepts the recommendations and adopts the recommendations (and reasoning) of the Hearing Panel as its own decision. Committee publicly notifies the decision.

For Option 2:

- Parts of the TTPP will have legal effect
- Any parts that are rejected will revert to the notified version of the TTPP
- Committee cannot substitute its own decision
- Not consistent with earlier decision to appoint Commissioners to hear submissions
- Risk that a decision to reject recommendations will be challenged
- Additional time and cost will be incurred in rehearing submissions and making new decisions

The procedure is that the committee accepts specific recommendations by adopting those recommendations (and reasoning) of the Hearing Panel as its own decision. Committee rejects recommendations by providing reasons (after taking action to reduce risk of rejecting recommendations). Committee then publicly notifies this decision.

For Option 3:

- TTPP will revert to notified version – some provisions have legal effect
- Committee cannot substitute its own decision
- Not consistent with earlier decision to appoint Commissioners to hear submissions
- Risk that a decision to reject recommendations will be challenged
- Significant costs and time delays involved with reducing this risk

The procedure is that the committee rejects recommendations as a whole and provides reasons (after taking action to reduce risk of rejecting recommendations). Committee publicly notifies this decision.

Chair Williams asked about the fourth point of the Option 3 – who would think about challenging or how would that recommendation be challenged.

Lucy de Latour answered that the challenge, if the committee makes that decision, would be a judicial review in the High Court. She added that if the committee takes into account irrelevant considerations in making a decision to reject, it would need very clear and strong reasons to reject.

Lucy de Latour talked about four ways to reduce the risk of legal challenge if report rejected in part or in full:

1. Rehear the submissions/ evidence on the relevant part of the TTPP
2. Appoint a different hearing panel to rehear the submissions/ evidence on the relevant parts of the TTPP
3. Prepare a variation to amend the TTPP
4. Withdraw the relevant parts of the TTPP

Lucy de Latour noted that the submitters can appeal to the environment court against the council's decision. The environment court will look at the merits of the decision, as well as whether it was the correct decision on the law. The environment court can direct the council(s) to amend the proposed plan to remedy issues.

Cr Haddock asked the cost if there was an appeal by one of the submitters.

Lucy de Latour answered that the environment court won't award costs for appeals on planning documents, but there will be costs involved for the committee in terms of being there as respondent in the room for the mediations and appeal.

Report – The TTPP Decision-Making Process

Lois Easton pointed out that TTPP Committee will get 24 recommendation reports from the commissioners. She will prepare for the committee a summary of each of the 24 recommendation reports. The Technical Advisory Team (TAT) will also get those reports and the track change version of the plan before those reports come to the committee.

Mayor Cleine asked the timing of the upcoming decision-making meetings/workshops.

J. Armstrong noted that TAT workshops will be held on the 11th,12th and 15th of September, prior to the first Committee meeting on the 18th of September. The Committee meeting will be held from 18 – 24 September. She highlighted that their aim is to make a decision on the 24th, but to keep the 26th as a backup just in case.

Cr Cummings asked whether they would be making decisions each day.

J. Armstrong said that everyone will be asked if they are comfortable with a topic before moving on. She added that Ms Easton will ask if the Committee agrees on these matters, and that some issues will need further conversation on the final day.

Moved (Mayor Lash / Mayor Gibson)

1. *That the Committee receive the report.*

Carried

Financial Report to 31 May 2025 & Financial Report to 30 June 2025

Mayor Cleine asked if the Regional Council has raised a loan for around $3.9 million to cover the difference between income and expenditure on Page 25.

J. Armstrong responded that they had.

Moved (Kaiwhakahaere Tumahai / Mayor Lash)

1. *That the Committee receive the report*

Carried

R. Williams pointed out that it is very important when budgets are set for next year, that the budget details will be presented to the Committee.

Project Manager's Report

The report was taken as read.

Moved (R. Williams / Mayor Cleine)

1. *That the Committee receive the report.*

Carried

Meeting ended at 10.13am.

Te Tai o Poutini PLAN
A combined district plan for the West Coast

Prepared for: Te Tai o Poutini Plan Committee

Prepared by: Jo Armstrong, Project Manager

Date: 18 September 2025

Subject: **Te Tai o Poutini Plan – Decisions Meeting Process**

SUMMARY

This report explains the process for this Te Tai o Poutini Plan Committee meeting, which will extend across several days until decisions on the Independent Hearing Panel recommendations have been made.

A resolution is sought to extend this meeting past the six-hour meeting time limit set in clause 4.2 of Te Tai o Poutini Plan Committee Standing Orders 2025.

RECOMMENDATIONS

1. *That TTPP Committee receive the report.*
2. *That in accordance with clause 4.2 of the Standing Orders, the TTPP Committee agrees that this meeting to make decisions on the recommendations of the Independent Hearing Panel will continue until such time as decisions are made on all recommendations.*
3. *That in accordance with clause 8.12 of the Standing Orders TTPP Committee resolves to accept late reports as items of business not on the agenda which cannot be delayed.*

Jo Armstrong

Project Manager

Background

1. Hearings on the proposed Te Tai o Poutini Plan (TTPP) were completed on 20 March 2025.
2. Hearings were held for each of the 26 TTPP topics, as all were submitted on.
3. Since that time the Hearing Panel have written and deliberated on their recommendation reports with the final recommendation reports for 19 of the topics being received by The TTPP Committee at the time of agenda finalisation.

Process for this Multi-day Meeting

4. Due to the large number of topics requiring a decision, it is proposed that this meeting will adjourn at the end of today (18 September) and be reconvened on a date and time to be resolved at the end of the meeting.
5. This process will continue on the working days up to and including 24 September 2025, until such time as the TTPP Committee has made its decision on the Hearing Panel recommendations.
6. If further time is required, the meeting can extend to a session on 26 September 2025. However, in order to provide hard copies of the decisions version of TTPP at notification on 10 October 2025, the final text needs to be with the printer on 25 September 2025.

Resolution Required to Extend Meeting

7. Under clause 4.2 of the Standing Orders *A meeting cannot continue more than six hours from when it starts (including any adjournments) or after 10.30pm, unless the meeting resolves to continue.*
8. Due to the extended nature of this meeting, a resolution to continue the meeting for longer than six hours is being sought.

Procedural Motion to Adjourn Required

9. Under clause 4.1 of the Standing Orders *A meeting can be adjourned to a specified time and day if required by resolution of the meeting.*
10. At the end of each day a motion to adjourn to the date and time specified will be put to the meeting for approval.

Late Reports Received by TTPP Committee

11. Any final Independent Hearing Panel recommendations reports not received at the time this meeting agenda was finalised, will be presented for Committee resolution under clause 8.12 of the Standing Orders as *Items of business not on the agenda which cannot be delayed –*

    A meeting may deal with an item of business that is not on the agenda where the meeting resolves to deal with that item and the chairperson provides the following information during the public part of the meeting:

    The reason the item is not on the agenda; and

    The reason why the discussion of the item cannot be delayed until a subsequent meeting.

    s. 46A (7), LGOIMA.

    Items not on the agenda may be brought before the meeting through a report from TTPP staff or the chairperson.

Prepared for: **Te Tai o Poutini Plan Committee**

Prepared by: **Lois Easton, Principal Planner**

Date: **Thursday 18th September 2025**

Subject: **Summary of Hearings Recommendations Reports for Information**

SUMMARY

This report contains an overview of the recommendations from the Hearing Panel in relation to Te Tai o Poutini Plan and a brief summary of the key changes recommended to each topic of the Plan from the Hearing Panel.

RECOMMENDATIONS

1. That the information is received.
2. That the contents of this report are noted.

INTRODUCTION

1. The Independent Hearing Panel has heard submissions and provided Recommendations Report to the Committee in relation to Te Tai o Poutini Plan (TTPP), Variation 1 and Variation 2. These reports are comprehensive and include a summary of the information provided by the submitters, the responses of the s42A reporting officer, the rationale of the panel in relation to these matters and their recommendations on the submissions and changes to the TTPP.
2. This report provides an overview of the Recommendations Reports of the Hearing Panel and a brief summary of each report's recommendations in relation to each hearing topic.

OVERVIEW OF THE RECOMMENDATIONS

3. The Hearings Panel has prepared a comprehensive set of recommendations report, which are integrated across the Plan. From this some key themes in recommendations are evident in terms of changes from the proposed Plan. These are:
    a. ***An overall approach to strengthening Objectives, Policies and Rules in relation to reverse sensitivity matters***.
    During the development of TTPP reverse sensitivity (whereby industrial, farming and mining operations are adversely impacted by complaints of new – usually residential – neighbours moving close to the activity) was identified as a key issue and the notified TTPP addressed this to some extent. There was strong representation from submitters through the hearings that these were insufficient. The Hearings Panel recommendations across a range of topics – starting with the Strategic Direction, strengthen the approach of TTPP in managing reverse sensitivity matters.
    b. Overall, a simplification of the Plan, where possible.
    Many submitters expressed concern about the complexity of TTPP. Some of that complexity is inherent – modern RMA documents are not user friendly to lay people, and the requirement to meet National Planning Standards means the TTPP looks very different to the current Operative Buller, Grey and Westland District Plans. However, where possible, the Hearings Panel have made recommendations which reduce the complexity of the provisions – particularly the Rules, within the Plan.
    c. Providing more explanatory material to aid interpretation.
    The recommendations include the introduction and amendment of a large number of definitions to aid in interpretation of the Plan. This was based on submitters asking, across the topics, for new concepts to be more clearly defined, and to give greater certainty of process and intent. The Hearing Panel have also recommended the addition of a range of new Appendices to the Plan to aid in interpretation. They have also recommended additional Methods, with a focus on guidance and support for landowners, to help them navigate the TTPP planning process.
    d. Ensuring the Objectives, Policies and Rules sit within the National Direction and are not ultra vires (illegal).
    Since the TTPP was publicly notified there have been two new National Direction Instruments – the National Policy Statement for Indigenous

Biodiversity, and the National Policy for Highly Productive Land which have come into effect. Alongside this a number of National Direction Instruments have been amended. The Hearings Panel have been very mindful of these National Direction Instruments and their requirements, and their recommendations reflect these as much as possible within the scope of submissions. It is not lawful (*ultra vires)* to go against the requirements of National Direction instruments, and the Hearings Panel have been very careful on this matter. They have also recommended the redrafting of some aspects of the TTPP – such as the Limited Notification clauses, to ensure that they fit within the current RMA legal framework.

e. ***Keeping the "West Coast flavour"***

A key part of the development of the proposed TTPP was applying the national framework to the local West Coast context and ensuring that TTPP reflected the aspirations of the West Coast. This means that some things are done differently than in other Plans, for example the Sites of Significance to Māori topic has a high reliance on Permitted Activities, whereas in the rest of the country many of these activities would require resource consents.

f. The main increases in stringency recommended are for mineral extraction and ecosystems and biodiversity.

In finalising the proposed Plan staff advised the Committee at the time that both the mineral extraction and indigenous vegetation clearance rules were among the most enabling in the country and there may be difficulty in justifying this level of enablement through the process.

The Hearings Panel have made recommendations that increase the stringency of regulation for mineral extraction but retain a high degree of enablement in particular in the Mineral Extraction and Buller Coalfield Zones. They have also recommended an increase in stringency in relation to indigenous vegetation clearance, but the recommended provisions still remain among the most permissive in the country.

g. Overall, the recommendations are for less stringent regulation than the proposed Plan – particularly for urban uses and infrastructure.

Because the three operative plans are very old and do not reflect current national requirements the proposed Plan reflected a significant increase in regulation for some activities.

However, the recommendations from the Hearings Panel for the majority of topics are for a reduction of stringency in the regulation. This is particularly in relation to the extent of the mapped overlays – for example reductions in the areas of outstanding natural landscape and high coastal natural character and removal of three of the natural hazard overlays. In addition, there is a strong set of recommendations that reduce the regulatory requirements for infrastructure – in particular regionally significant infrastructure, including electricity transmission and distribution and renewable electricity generation, as well as network utilities such as local roads.

Alongside this the recommendations across the zone provisions are for a reduction in stringency for a range of activities that are unlikely to lead to

significant adverse effects, such as relocated buildings, minor structures and fences. The recommendation that the "catch all" rules across the zones are generally Discretionary rather than Non-complying is also a reduction in stringency. The natural environment recommendations are for a significant reduction in stringency in terms of urban locations.

TOPIC BY TOPIC SUMMARY OF RECOMMENDATIONS

4. The full Recommendations Reports have been circulated separately to the Committee and include tracked changes versions of the chapters. They have also been reviewed by the Technical Advisory Team (TAT).
5. It should be noted that staff views expressed in this report are those of the TTPP staff and that individual TAT staff of the organisations represented on the Committee will provide their own advice from their organisation perspective to their respective representatives.

STRATEGIC DIRECTIONS RECOMMENDATION REPORT

6. The Strategic Directions Recommendations Report addresses the submissions and further submissions for Te Tai o Poutini Plan in relation to the Strategic Directions Chapter in Part 2 District Wide Matters.
7. This report provides recommendations on 458 submissions points and 168 further submissions points.
8. The report makes a number of recommendations to the Strategic Directions Overview and the Title Page of the chapter. As these are descriptive matters (i.e. not an objective, policy or rule), rather than parts of the Plan with legal weight these changes are considered minor.
9. The Notified Plan had seven strategic directions for – Agriculture, Connections and Resilience, Mineral Extraction, Natural Environment, Poutini Ngāi Tahu, Tourism and Urban Form and Development. The report recommends regrouping and amending these strategic directions as follows:
    a. Renaming the Agriculture Strategic Direction to Rural Production and renaming the Connections and Resilience Strategic Direction to Climate Change and Resilience;
    b. Rewording the objectives to create both objectives and policies – recognising that the Plan drafting was poor in this respect;
10. The report recommends amendment and redrafting of the strategic directions in response to submissions.
11. The recommendation also outlines the understanding that the objectives and policies in the strategic direction section are given equal weight to other objectives and policies in the Plan. While they have guided its direction they do not over-ride other policies.
12. Other than the recommended changes to the Climate Change and Resilience Strategic Direction, TTPP staff consider that the practical effect of the rewording/redrafting is relatively minor, and there are no specific concerns.
13. In relation to the Climate Change and Resilience Strategic Direction, more substantial changes are proposed,
    a. Changes which have the effect of more strongly linking the strategic direction to the natural hazards provisions in the Plan and the need to adapt to the effects of climate change. Staff consider this change is useful to support the integration of the Plan, and will provide helpful guidance/support to Plan Changes to address natural hazards in the future.

b. Addition of policy which supports, at a local level, reductions in greenhouse gas emissions – through new technology, development of renewable electricity generation, and low carbon transport options such as walking, cycling and electric vehicles.
c. Addition of policy that links the natural environment and nature based solutions as a way to provide resilience to climate change.

14. Overall TTPP staff consider that the recommended amendments to the Strategic Directions Chapter do not have significant consequences for the overall direction of the Plan, or require any consequential amendments. They also note that the amendments recommended to the strategic directions in relation to natural hazards contain an element of future proofing for national direction, as the government has advised that stronger national direction around natural hazards is coming through the development of a National Policy Statement for Natural Hazards.
15. As recommended by the Hearings Panel, TTPP staff consider these changes make this section of the Plan clearer to read and more closely link the strategic directions to the objectives, policies and rules across the Plan, improving Plan integration.
16. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic, though do note there are some typographic and spelling errors within the recommendations which will need to be corrected.

ENERGY INFRASTRUCTURE AND TRANSPORT RECOMMENDATION REPORT

17. The Energy, Infrastructure and Transport Recommendations Report provides recommendations on 1064 submissions points and 355 further submissions points.
18. The report addresses some of the most technically complex parts of the Plan, and this is reflected in the high level of engagement of submitters, the production of multiple reports to support the hearings and the size of the recommendation report.
19. It should be noted that for the activities covered by this chapter the zone rules do not apply, and there was very significant engagement from the infrastructure sector in the hearings process.
20. During the hearings process, specific submitter Expert Witness Conferencing was held to try and reach agreement on the wording of provisions. The outputs of this have had a strong influence on the Panel Recommendations.
21. A key matter raised in the hearings relates to the definition of Critical Infrastructure and the replacement of this with Regionally Significant Infrastructure, to better align the TTPP with the West Coast Regional Policy Statement (RPS). This change is recommended by the Panel, however they recommend a different (wider) definition of Regionally Significant Infrastructure than the RPS – recognising the specific matters that are regulated by TTPP.
22. A further key matter was the need for a "catch all" rule which addresses matters not specifically provided for in the rules. Without such a "catch all" rule, unforeseen activities could end up being non-complying activities, not because of their adverse effects, but unanticipated nature. A Discretionary "catch all" rule is recommended for all three chapters.
23. In relation to the Energy Chapter it is recommended:
    a. That the objectives and policy direction be much clearer in terms of recognising the importance of the National Grid and renewable electricity generation (to give effect to specific national direction);
    b. That a new objective specific to electricity transmission and distribution and the co-ordination of this with subdivision, use and development be included;
    c. That the policy and rules differentiate between electricity transmission (National Grid) and distribution (local lines);

d. That the policies are redrafted to be clearer and more consistent with the range of national direction;
e. That three new policies are included covering:
    - Significant electricity distribution lines and compliance with electrical safe distances;
    - Discouraging the development of non-renewable electricity generation; and
    - Servicing of subdivision and development.
f. Amendment of the Permitted Activity rules to better provide for day-to-day maintenance, operation, repair and upgrade of electricity transmission, distribution and renewable electricity generation;
g. Redrafting of the Permitted Activity for renewable electricity generation to better provide for new small and community scale renewables generation – the recommendations reflect a significant relaxation in the rules compared with the notified proposed Plan for this type of activity;
h. Specifically providing a Permitted Activity for back-up generators when outages and emergencies occur;
i. Specifically providing a Permitted Activity for new electricity distribution (local) lines;
j. Amendments to the rules where resource consents are required to be clearer and to align with the recommended policy approach and permitted activities.
k. Specifically including a rule that restricts the development of non-renewable electricity generation.

24. In relation to the Infrastructure Chapter it is recommended:
    a. Relatively minor amendments to the objectives and policies to address some submitter concerns around clarity and consistency with higher order documents (national and regional direction);
    b. Amendment to the Permitted Activity rules to better provide for day-to-day maintenance, operation, repair and upgrade of infrastructure and better link to national direction around telecommunications infrastructure;
    c. Relatively minor amendments to the other rules to make these clearer, easier to understand and address the relevant resource management matters.
25. In relation to the Transport Chapter it is recommended:
    d. Relatively minor rewording and clarification of the transport objectives and policies;
    e. Addition of two new Transport policies:
        - In relation to safe and efficient movement of people and goods; and
        - In relation to high trip generating activities – linking to the rules on this matter
    f. Amendment to the Permitted Activity rules to better provide for day-to-day maintenance, operation, repair and upgrade of the transport network;
    g. Better providing for sightlines at railway crossings;
    h. Amendment of the transport standards at Appendix One to update these to current good practice standards and to include an updated roading hierarchy.
26. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
27. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic, though do note there are some typographic and numbering errors within the recommendations which will need to be corrected. Essentially they consider the recommendations of the commissioners on this topic would improve the Plan.

CONTAMINATED LAND AND HAZARDOUS SUBSTANCES RECOMMENDATIONS REPORT

28. The Contaminated Land and Hazardous Substances Recommendations Report provides recommendations on 106 submissions points and 26 further submissions points.
29. The main recommendations in relation to Contaminated Land are:
    a. Add an additional policy in relation to used and closed landfills.
30. The main recommendations in relation to Hazardous Substances are:
    b. To include definitions of Hazardous Substances and Major Hazard Facility;
    c. Amend the policy to more explicitly refer to new major hazard facilities being located outside of natural hazard overlays.
31. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
32. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners would improve the Plan.

HISTORIC HERITAGE RECOMMENDATIONS REPORT

33. The Historic Heritage Recommendations Report provides recommendations on 222 submissions points and 59 further submissions points.
34. Heritage New Zealand Pouhere Taonga were a significant submitter across this topic and a pre-hearing meeting was held with this organisation. This informed recommendations in the s42A report and has had an impact on the recommendations from the hearing panel.
35. The main recommendations in relation to Historic Heritage include a range of relatively minor matters:
    a. Refining the definitions so that they better help interpret the objectives, policies and rules. A new definition is recommended for Accidental Discovery Protocol Commitment, and amendments to the definitions of Archaeological Site, Historic Heritage, Heritage Fabric and Suitably Qualified or Experienced Heritage Professional are recommended.
    b. Minor amendments to Objectives 3 and 4 – clarifying that protection is from "inappropriate subdivision, use and developments" and that demolition and destruction of heritage items could only occur in limited circumstances
    c. Amendment to the policies to better recognise the potential for adaptive reuse, the functional and operational needs of regionally significant infrastructure and public safety.
    d. Adding a new policy specifically around regionally significant infrastructure.
    e. Adding a requirement for date stamping of new materials as part of Permitted Activity rules.
    f. Amending the rules to correct references to Heritage Items and Archaeological Sites
    g. Better providing for utilities and regionally significant infrastructure as part of Permitted Activities
    h. Clarifying the role of HNZPT in relation to archaeological sites through advice notes within the rules and requirements for specific consultation.
    i. Addition of new non-statutory methods to support historic heritage interpretation and understanding on the West Coast.

36. More significant recommendations are:
    a. Making repositioning of a Historic Heritage item a Restricted Discretionary rather than Controlled Activity
    b. Making Relocation of a Historic Heritage item a Discretionary Activity in all circumstances;
    c. Making demolition or destruction of a historic heritage item or area a Non-complying rather than Discretionary Activity.
    d. Recommending the listing of a further seven historic heritage items.
37. A further evaluation under s32AA was undertaken in relation to the significant recommendations which indicated these are effective and efficient and that the benefits outweigh the costs of the actions. It was noted that all owners of the new heritage items were contacted about the scheduling and no objections were raised.
38. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic.

NOTABLE TREES RECOMMENDATIONS REPORT

39. The Notable Trees Recommendations Report provides recommendations on 81 submissions points and 17 further submissions points.
40. The main recommendations in relation to Notable Trees are:
    a. Amend Objective TREE – O3 and Policy TREE – P4 to more strongly recognise safe operation of infrastructure and energy activities;
    b. More clearly define the requirements for arboricultural contractors that provide a certifying role in relation to the Rules;
    c. Some other minor amendments – emphasising energy activities and clarifying the rules;
    d. Amending the Schedule of Notable Trees to make it clearer which trees support Poutini Ngāi Tahu values.
41. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
42. Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners would improve the Plan.

SITES AND AREAS OF SIGNIFICANCE TO MĀORI RECOMMENDATIONS REPORT

43. The Sites and Areas of Significance to Māori (SASM) Report provides recommendations on 1057 submissions points and 581 further submissions points.
44. This topic was one of the largest in terms of public submissions, but a significant number of those submissions points were addressed by the RMA Clause 16 Minor Error corrections undertaken after the TTPP was notified. In particular a number of submissions related to concerns about being affected by SASMs, or that rules may affect them, where this is not the case.
45. Alongside the hearing there was a session of Planner expert witness conferencing (where the planner representatives of the submitters met with the s42A report planner to discuss and provide any recommendations back to the panel) and meetings between the legal counsel representing the submitters and the Committee to discuss matters around written approval.
46. These meetings and advice back to the Commissioners have had a significant influence on their recommendations.
47. There are a large number of recommended changes to this chapter, which encompass a number of key aspects:

a. Providing additional definitions for ease of interpretation of objectives, policies and rules. New definitions are proposed for the following terms: cleanfill material: cultural materials; hazardous facilities; landfill; upper slopes; and wastewater treatment facilities
b. Including two new Methods in the plan:
    - to develop written protocols and guidance for engagement with Poutini Ngāi Tahu for both permitted activities and resource consents and information in general for landowners of SASM
    - to support through non-regulatory methods the development of access for Poutini Ngāi Tahu to SASM
c. To emphasise in both the objectives and policies that access to SASM sites by Poutini Ngāi Tahu is only with landowner agreement.
d. Substantial redrafting of the Permitted Activity Rules so that it is much clearer which SASM sites each rule applies to.
e. Amending the "approval" process for Permitted Activities to a "certification" process, with the addition of a Schedule – Schedule 3A which outlines in detail how this certification process will proceed. This will provide a greater degree of certainty to both landowners and the Councils administering the Plan.
f. Clarifying the Permitted Activity Rule around quarrying and mineral extraction in the pounamu and aotea management areas and in SASM sites.
g. Better providing for maintenance, repair and upgrading of infrastructure within most SASM as either a Permitted or Controlled Activity.
h. Providing for mineral extraction that is not Permitted within SASM as a Discretionary Activity (rather than Non-complying as per the Notified Plan).
i. Redrafting many of the rules to make them clearer to understand when they apply and how to be assessed.

48. In relation to the Sites and Areas of Significance to Māori mapped and scheduled in the Plan the Panel makes the following recommendations:
    a. Removing all SASM sites that are mapped below Mean High Water Springs, as these are outside of the jurisdiction of Te Tai o Poutini Plan.
    b. Amending the shapes/mapped area of SASM sites where this does not mean any additional landowner is affected by the SASM.
    c. Not amending the shapes/mapped area where this would extend the SASM site across additional landowner's property.
    d. Redrafting Schedule 3 to help make it clearer what rules apply to which SASM.
    e. Adding additional SASMs to the Plan where these affect public conservation land or a waterbody, but not where additional landowners would be affected by the SASM.
    f. Removing 2 SASM where these affect private landowners and the exact location of the SASM site was not able to be clarified at the hearing.
49. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.

ECOSYSTEMS AND BIODIVERSITY RECOMMENDATIONS REPORT

50. The Ecosystems and Biodiversity Recommendation Report addresses 1143 submissions and 611 further submissions points.
51. This was one of the larger topics and is recognised as one of the most contentious matters within the Plan.

52. To add to the complexity of the topic there have been a range of changes to central government direction which have occurred since the Plan was notified. These are referred to in the recommendations report and the timeline included is shown below:

TTPP		**HIGHER ORDER DOCUMENTS AND LEGISLATION**
		November 2019 – March 2020 Public consultation on the proposed NPSIB
		24 July 2020 RPS Operative
		31 August 2020 Summary of submissions (NPSIB)
July 2022 Plan notified		*June 2022 – July 2022* Exposure draft released (NPSIB)
30 September 2022 Submissions close		
11 January 2023 Minute 14 – Responds to request to delay the hearing due to Government's intention to review the NPSIB and the mapping of SNA.		
May 2023 Further submissions close		
		7 July 2023 NPSIB gazetted
		May 2024 Resource Management (Freshwater and Other Matters) Amendment Bill
12 July 2024 S42A Report available		
6 August 2024 Minute 36 – Responds to a further request to delay the hearing		
8 August 2024 Minute 40 – Reschedules the hearing		
		24 October 2024 Resource Management (Freshwater and Other Matters) Amendment Act Section 78 – Time limited modifications to NPSIB
		October 2024

			NPSIB amended by Section 30 of the Resource Management (Freshwater and Other Matters) Amendment Act 2024
18, 19, 21 and 22 November 2024 Ecosystems and Indigenous Biodiversity hearings held. <u>Documents presented at hearing</u> (a) Introductory statement from reporting planner (b) Supplementary Statement from Reporting Officer (c) Wynn Williams legal advice (dated 8 November 2024 and 22 November 2024) (d) Evidence/statements and legal submissions from submitters			
3 December 2024 Minute 54 – Directing planner caucusing			
17 February 2025 Joint Witness Statement provided			
7 March 2025 Reporting Officer's Right of Reply provided			

53. As is outlined in the timeline above, after the hearing, the commissioners directed that planner expert caucusing occur and a Joint Witness Statement with recommended changes to the policies and rules was developed.
54. A major focus of discussion and evidence presented at the hearing was the inter-relationship between the national (NPSIB) and regional (RPS) direction and what were the requirements that the Plan has to meet. Legal advice and legal submissions were received on this. Key matters that all parties agreed were:
    a. The NPSIB and WCRPS criteria while written differently are essentially the same.
    b. Only the NPSIB requirement to identify SNAs has been deferred until 2030 (not removed) - all other parts of the NPSIB are in effect, and within the scope of submissions, the Councils must implement it.
    c. The councils are required to identify SNAs under the direction of the WCRPS, regardless of the NPSIB deferral.
55. The commissioner recommendations largely reflect the agreed position from the joint witness caucusing. This involved planners from the range of organisational submitters including mining, conservation, farming and infrastructure representatives.
56. The recommended amendments are supported by amendments to the definitions of: Significant Natural Area; Area of Significant Indigenous Biodiversity; and Indigenous Vegetation Clearance and new definitions for: Poutini Ngāi Tahu Land; Cultural Harvest; Specified Māori Land; Ecological District; Effects Management Hierarchy; Threatened Environments Classification; Threatened or At Risk or Threatened or At

Risk (Declining); Biodiversity Compensation; Biodiversity Offset; Net Gain; Indigenous Biodiversity; Indigenous Vegetation; Improved Pasture; and Parent Title.

57. The main recommendations in relation to the Objectives are:
    a. Amending Objective ECO – O1 (now 5) to specify that significant areas will be identified in consultation with landowners and will be mapped
    b. Splitting ECO – O2 into two objectives – one focussed on protection of significant areas and the other focussed on managing the adverse effects of subdivision use and development.
    c. Redrafting ECO – O4 (now 1) to reflect the direction and requirements of the NPSIB.
58. The main recommendations in relation to the Policies are:
    a. Redrafting Policy 1 around the identification of SNAs to:
        – reflect the requirements of the RPS to identify these promptly,
        – meet the requirements of the NPSIB to confirm whether existing SNAs meet the NPSIB criteria.
        – Meet the NPSIB requirements to undertake an assessment in Grey District to determine if there are further SNAs as well as the assessment needed for Buller and Westland.
        – No change to the notified Plan date for the identification of SNAs – June 2027.
    b. Including an Appendix which outlines in detail the process and principles for working with landowners to identify SNAs.
    c. Redrafting Policy 2 to include the matters identified in the NPSIB which are allowed to occur in SNAs (e.g. maintenance of improved pasture).
    d. Including a new Policy (now Policy 3) that identifies activities that can occur in SNAs in accordance with the Effects Management Hierarchy (e.g. Mineral extraction of national benefit).
    e. Amending Policy 3 (now 4) to clarify how the bonus lot subdivision provisions are supposed to work.
    f. Clarifying that Policy 6 (now 7) relates to all indigenous biodiversity.
    g. Expanding the matters of assessment in Policy 7 (now 8) to include functional or operational needs of regionally significant infrastructure, mineral extraction of national benefit or quarrying of regional benefit.
    h. Clarifying how biodiversity offsetting and compensation are determined with the addition of two appendices from the NPSIB and referring to these in Policy 7 (now 8).
    i. Redrafting Policy 8 (now 9) to be more consistent with national and regional direction.
    j. Deleting Policy 9 in relation to offsetting and compensation (these matters are now recommended to be covered in Policy 7).
    k. Expanding Policy 10 to provide more guidance for activities within the coastal environment consistent with the direction of the NZCPS
    l. Providing a stand-alone policy (Policy 11) for the national grid and renewable electricity generation.
    m. Providing a new policy (Policy 12) around the role of biodiversity in creating resilience to climate change.
59. Substantial redrafting of the Permitted Activity Vegetation Rules to make them clearer:
    a. Creating a set of general standards in Rule 1. Specific Changes from the notified plan are
        – Having a maximum clearance of 2000m^2 on any site that has not been assessed for significance [this is a significant increase in

stringency compared with the proposed Plan where 5000m^2 vegetation clearance was Permitted]
  - Having a maximum of 5000m^2 clearance on any site that has had a significance assessment, including those in Grey District [this is a significant increase in stringency compared with the proposed Plan as vegetation clearance in the Grey District was only restricted in areas of Outstanding Natural Landscapes – however it is a significant reduction in stringency for areas in Outstanding Natural Landscapes in the Grey District as they did not have Permitted vegetation clearance]
  - Providing exemptions to minimum clearance rules for the national grid, telecommunications and electricity distribution and transmission networks, network utility operations in the main towns; clearance of planted garden vegetation; shelterbelts and plantation forestry [this is a significant reduction in stringency compared with the proposed Plan].

b. Having a specific Permitted Rule (Rule 2) for indigenous vegetation clearance for Network Utilities, Renewable Electricity Generation and the National Grid. [this is a significant reduction in stringency compared with the proposed Plan].
c. Having a specific Permitted Rule (Rule 3) for indigenous vegetation clearance for lawfully established activities and structures;
d. Having a specific Permitted Rule (Rule 4) for indigenous vegetation clearance in urban areas. [this is a significant reduction in stringency compared with the proposed Plan and addresses some identified problems experienced with the proposed Plan rules which have current legal effect].
e. Having a specific Permitted Rule (Rule 5) for indigenous vegetation clearance on Māori Purpose Zone, Poutini Ngāi Tahu Land or Specified Māori Land [this is a reduction in stringency compared with the proposed Plan].
f. Having a Permitted Rule (Rule 6) for the range of other activities originally Permitted in Rule 1 in the Notified Plan.
g. Providing a "catch all" Permitted Activity for non-listed activities that fall within the maximum Permitted vegetation clearance limits. [This is a reduction in stringency compared with the proposed Plan].
h. Providing a Permitted Activity Rule that has some limited circumstances for clearance in an SNA (the notified Plan) [This is a reduction in stringency compared with the proposed Plan].

60. The main effects of the recommended changes to the Permitted Rules would be:
    a. Within the Grey District significant increase in stringency of the rules affecting rural landowners outside of areas of outstanding natural landscapes;
    b. Within the Grey District a significant relaxation of the rules for landowners in areas of outstanding natural landscape.
    c. A slight relaxation in the restrictions on landowners with existing SNAs;
    d. Within the Buller and Westland Districts, significant relaxation of the rules for infrastructure providers;
    e. Within all urban areas a significant relaxation of the rules – this means that the number of landowners affected across all districts is significantly less than the proposed Plan.
61. Rules requiring resource consents have been amended to be clearer, and to specify the level of ecological assessment required when vegetation clearance is proposed.

62. Where resource consent is required for clearance, the recommendations are to retain the Restricted Discretionary Activity in the Grey District but increasing the stringency to a Discretionary Activity in Buller and Westland.
63. In relation to the Subdivision Rules where bonus lots are provided for where significant areas are protected:
    a. Removing the duplicate set of rules from the ECO chapter and having these only in the subdivision chapter;
    b. Providing clarity around what ecological assessment is required to support the application;
    c. Amending the matters of control for Rule SUB – R7 and matters of discretion in SUB – R9 to be more consistent with other subdivision rules;
    d. Decreasing the minimum size of the bonus lots from 4000m^2 to 1000m^2 – in practice this will make more properties able to take advantage of the scheme, and for more bonus lots to be created.
64. In addition to the Rule changes the Hearing Panel recommend the addition of a method around giving effect to the NPSIB in relation to Specified Māori Land, tangata whenua provisions and Policy ECO – P1.
65. The Hearing Panel also recommend a method that outlines that once the SNA process is complete the vegetation clearance rules will be reviewed to reflect the identification process being complete.
66. The Hearing Panel recommend a reduction in the size of four SNAs, based on ecological assessments undertaken of the sites.
67. TTPP Staff acknowledge the Ecosystems and Biodiversity provisions are some of the most significant in the Plan – they implement national direction around managing the adverse effects of activities on ecosystems and biodiversity, but have a widespread effect across many parts of the West Coast and affect many landowners.
68. The National and Regional Direction is very strong in relation to this matter, and many organisational submitters and infrastructure providers consider that the identification of SNAs is a very high priority for the West Coast, as they face significant costs for individual ecological assessments for many projects without the clear identification of SNAs in place. They see the identification of SNAs as delivering significant benefits in terms of avoided future regulatory costs.
69. To counter this some individual landowners face significant additional regulatory burden with the identification of SNAs, however until this work is done, all landowners with indigenous vegetation are affected by regulation.
70. The recommended amendments to the plan recognise this dichotomy by providing for a process to identify SNAs working alongside landowners. The previous Grey District Council process is recognised as good example of successfully working with landowners through this.
71. The recommended amendments provide for this work to be done by June 2027 and TTPP staff are concerned that for a good process, this may not allow sufficient time. However the important action is to develop a workplan and start undertaking the work, as currently the TTPP is non-compliant with the requirements of the WCRPS. The presence of a deadline for undertaking the work is seen by some submitters, and likely appellants, as a key requirement to see the long delayed progress in implementing this work.

NATURAL FEATURES AND LANDSCAPES RECOMMENDATIONS REPORT

72. The Natural Features and Landscapes Recommendations Report provides recommendations on 551 submissions points and 496 further submissions points.

73. This was a significant topic in terms of public submissions, and one in which, in particular the network utility operators and electricity generators significantly engaged with.
74. There are a large number of recommended changes to this chapter, which encompass a number of key aspects:
    a. Providing an additional definition for the term minor upgrade in order to assist with interpretation of objectives, policies and rules;
    b. Amendments to Objective NFL – O1, and to all the policies to be clearer in interpretation and better provide for lawfully established buildings and structures, use and development of Māori land, infrastructure and renewable electricity generation;
    c. Addition of a new policy outlining the criteria and process for identification of outstanding natural landscapes in Te Tai o Poutini Plan.
    d. Amendment of Permitted Activity rules to be clearer about the activities that are permitted and to ensure that they are of a scale where adverse effects on landscape values are likely to be less than minor;
    e. Amending the Controlled Activity Rules NFL – R9 and NFL – R10 to be Restricted Discretionary Activities and including additional matters of discretion.
    f. Providing an additional Restricted Discretionary Activity Rule in relation to mineral extraction within an outstanding natural landscape or outstanding natural feature (ONLFG) within the Buller Coalfield and Mineral Extraction Zones (under the notified plan this is a Discretionary Activity).
    g. Amending the Discretionary Activity for Afforestation with Plantation Forestry within an ONLF to be a Non-complying rather than Discretionary Activity.
    h. Providing Discretionary Activity escalation rules for mineral extraction and Poutini Ngāi Tahu/Māori Purpose Activities do not meet the Restricted Discretionary Activity standards.
    i. Substantial amendment to the mapping of outstanding natural landscapes (ONLs) based on reassessment by Bridget Gilbert Landscape Architect. The recommendations are to remove the ONLs from a number of properties and amend the boundaries to pull them back in a range of locations. In a number of locations the updated maps represent a significant reduction in the extent of ONL affecting private land.
    j. Amendment to Schedule Five to better describe the values of ONLs.

75. TTPP Staff acknowledge the NFL chapter as being one of the most significant in the Plan – in that it implements national direction around the identification and protection of these areas, but also that it introduces new protections for landscape that was not part of the previous operative plans.
76. Overall however TTPP staff consider that the recommended amendments to the Plan represent a significant improvement compared with the notified Plan.

NATURAL CHARACTER AND THE MARGINS OF WATERBODIES AND ACTIVITIES ON THE SURFACE OF WATER RECOMMENDATIONS REPORT

77. The Natural Character and the Margins of Waterbodies and Activities on the Surface of Water Recommendation report covers two chapters of the Plan and addresses 415 submissions points and 152 further submissions points.
78. Parts of these chapters have had legal effect since the time of notification, so the commissioners have been informed by the experience of their implementation.

79. Main recommendations in the Natural Character and the Margins of Waterbodies report are:
    a. Amending the definition of riparian margin to exclude wetlands outside of the coastal marine area – advice from the TAT is that this will significantly reduce the regulatory burden in relation to activities near wetlands;
    b. Providing new definitions for watercraft, bed and fullest flow to assist in interpretation;
    c. Relatively minor amendments to the Objectives and Policies to clarify their intent;
    d. Moving Policy 5 into the Public Access Chapter;
    e. Moving the rules on vegetation clearance in riparian areas into the Ecosystems and Biodiversity Chapter;
    f. Better providing for network utilities and regionally significant infrastructure in the Permitted Activities;
    g. Specifically providing for maintenance and repair of lawfully established natural hazard mitigation structures and farming uses in the Permitted Activities;
    h. Providing for a range of other expected activities (eg Pump sheds, temporary bridges for military training, mai mai) as permitted activities;
    i. Increasing the volume of Permitted earthworks to align with the WCRC Land and Water Plan.
    j. Consolidating the Permitted Activity rules for new natural hazard mitigation structures into Rule 1
    k. Requiring that where Permitted standards for natural hazard mitigation structures are not met that a Restricted Discretionary Activity rather than Controlled Activity resource consent be required.
80. The main recommendations in relation to the Activities on the Surface of Water Chapter are:
    a. Minor amendments to the objectives and policies to clarify their intent;
    b. Clarifying the provisions around the waterways of cultural significance and where the rules apply;
    c. Making specific provision for the activities of the Māhinapua Aquatic Club;
    d. Providing for mai mai and clarifying the requirements around whitebait stands;
    e. Some amendments to matters of discretion in restricted discretionary rules to address missing matters;
    f. Amending the zoning maps so that Waterbodies are shown as General Rural Zone.
81. Because the recommended changes are of a minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
82. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. They note that as a result of the recommendations fewer resource consents are likely to be required and the provisions are more targeted on activities that are likely to have significant adverse effects.

SUBDIVISION, FINANCIAL CONTRIBUTIONS AND PUBLIC ACCESS RECOMMENDATIONS REPORT

83. The Subdivision, Financial Contributions and Public Access Recommendations Report provides recommendations on 925 submissions points and 127 further submissions points.

84. The main recommendations in relation to Subdivision are:
    a. Amendments to the Objectives to:
        - More strongly emphasise the need for subdivision to facilitate safe, efficient and effective operation of regionally significant infrastructure;
        - Protect highly productive land as defined in the National Environmental Standard (NES)
        - Minor wording changes to other objectives to make them clearer and more readable
    b. Amendments to the Policies to:
        - More clearly outline the requirements in relation to overlay areas
        - Strengthen the direction around infrastructure
        - Support structure plans as a way of unlocking land zoned for Future Urban Development
        - Address reverse sensitivity issues with regionally significant infrastructure, mineral extraction and industrial activities
        - Provide specific reference to highly productive land and the NES
    c. Amendments to the Rules to:
        - Clarify the wording and circumstances for Permitted Activities
        - Ensure that Controlled Activity subdivisions provide for a compliant building platform and do not compromise existing infrastructure
        - Add additional matters of control and discretion around natural hazards, geotechnical constraints, easements, waterbodies
        - Separate out the rules for subdivision within the national grid corridor and the significant electricity distribution lines
        - Minor amendments to the subdivision standards to clarify the requirements for infrastructure
85. The main recommendations in relation to Financial Contributions are:
        - Removal of the provisions (at the Objective, Policy and Rule level) for offsetting and compensation. This has focussed the chapter entirely on the provision of Council infrastructure.
        - Amend the policies and rules to make it clearer the basis for which financial contributions are assessed and calculated and when they are able to be taken.
86. The main recommendations in relation to Public Access are:
        - Addition of a new policy making it clear that it is intended to provide for public access to and along the coastal marine are and other waterbodies, but that public safety is a key consideration.
87. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
88. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic.

NOISE RECOMMENDATIONS REPORT

89. The Noise Recommendations Report provides recommendations on 314 submissions points and 139 further submissions points.
90. Noise is a technically complex area and the recommendations from the panel are informed by the Expert Witness Caucusing and joint recommendations that occurred between the noise experts representing submitters and the expert engaged to assist the hearing.

91. While there are a large number of changes proposed to the chapter, many of these are technical corrections agreed between the expert witnesses.
92. The main matters where there is significant change recommended relate to the acoustic insulation requirements in rule NOISE – R3 and a reworking and standardisation of the noise standards across the zones.
93. In terms of standardisation of the noise standards (and differentiation between "noisy" and "quiet" times) the panel has relied on the expert witnesses and recommends an approach similar to that undertaken in recent district plans across New Zealand. This means a slightly longer period of "noisy time" in some zones, but will make the plan much easier to enforce as times will be more standardised.
94. In terms of the acoustic insulation issue, there are a range of changes recommended:
    a. In relation to roads, the proposed Plan had a blanket setback from State Highways applied based on their speeds. This applied only to new buildings for sensitive activities (e.g. residential, accommodation). The panel recommends that a "Road Noise Overlay" be included to replace these standard setbacks. This has been developed by NZTA based on actual traffic movements and takes into account topography. The TTPP staff view is that this is an improved approach compared with a blanket "rule of thumb" and it appears to reduce the extent of properties affected by the road noise acoustic requirements.
    b. In relation to the railway corridor, the proposed Plan required acoustic insultation within 40m of a railway line, the recommendations are to widen this to 100m from the tracks, but remove the requirement in relation to the Hokitika Line. This has the effect of increasing the land area that the overlay applies to, but reducing the number of properties affected.
    c. Identifying a noise overlay area around the Westport Rifle Range with a new requirement for acoustic insulation in this noise overlay area.
    d. In relation to all aspects of acoustic insulation requirements, the proposed Plan only applied acoustic insultation requirements to new buildings, and the recommendation is that this also apply to additions or alterations to existing buildings. This is consistent with the approach taken in the rest of the country, but will be an additional regulatory burden for some homeowners. In order to make compliance easier, a schedule has been developed which provides some standard methodology to implement the requirements and avoid the need for engagement of an acoustic expert.
95. While there are some aspects of the recommendations in relation to acoustic insulation which place additional regulatory burden on some landowners, there was very clear agreement between the technical noise experts on these matters. Given the significant negative impact of noise on human health, the commissioners have felt it is necessary to recommend these amendments to the Plan. They note that building to meet Building Code requirements for thermal insulation and glazing will generally meet most or all of the acoustic requirements and therefore in practice the additional cost to landowners to meet the standards may be negligible.
96. Overall the changes are considered to be relatively minor and a further evaluation under S32AA was not undertaken.

SIGNS RECOMMENDATIONS REPORT

97. The Signs Recommendations Report provides recommendations on 120 submissions points and 19 further submissions points.
98. The main recommendations in relation to Signs are:

a. Minor wording changes to improve the clarity of the Objective, Policy SIGN – P2 and Policy SIGN P6;
b. Addition of a new policy to support the rules in relation to off-site signs in rural and residential zones;
c. Amendments to the Permitted Activity rules to make them clearer;
d. Reduction in Permitted height from ground level of a Permitted Sign to 2.5m;
e. Additions to matters of discretion for signs that require resource consent to include sign content and address traffic safety matters.

99. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
100. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners would improve the Plan.

OPEN SPACE AND RECREATION ZONES RECOMMENDATIONS REPORT

101. The Open Space and Recreation Zones Recommendations Report provides recommendations on 326 submissions points and 66 further submissions points.
102. There are three zones in the Open Space and Recreation Zones chapter. The Natural Open Space Zone covers National Parks and gazetted wilderness areas in the conservation estate. The Sports and Active Recreation Zone covers the major Council sporting facilities as well as golf courses, racecourses other sporting facilities. The Open Space Zone covers most of the public conservation estate (including stewardship land) and other Council parks and reserves.
103. Alongside the zone – specific rules, the Objectives and Policies for the three zones are held in an overarching chapter.
104. The main recommendations in relation to the OSRZ - Objectives and Policies chapter are:
    a. Amendments to the overview better explaining the three zones and their relationship with the Reserves Act, National Parks Act and Conservation Act and clarifying that mineral extraction can be appropriate in the Open Space Zone.
    b. Minor amendments to Objectives 1 and 2 better linking these to the Open Space Management Plan planning instrument, and specifically identifying that mineral extraction can be appropriate in the Open Space Zone.
    c. Amending Policy OSRZ – P2 to specifically provide for electricity transmission, distribution and renewable electricity generation and OSRZ – P9 to specifically provide for renewable electricity generation.
    d. Amending OSRZ – P9 to also include mineral prospecting and exploration alongside extraction as a purpose in the Open Space Zones.
    e. Including a new policy specifically around the reclassification of stewardship land.
    f. Including a new method providing for a future plan change if there is a rezoning benefit when stewardship land is reclassified.
    g. Other minor wording amendments to the policies to provide better clarity on intent.
105. The main recommendations in relation to the Natural Open Space Zone are:
    a. Amending the definition of Camping Grounds to include cabins and ancillary motel accommodation and specifically exclude nohoanga;
    b. Deleting Permitted Activities in relation to Temporary Camping Grounds, Residential Activities and Retail Activities as these are considered inappropriate as a Permitted Activity in National Parks and gazetted

wilderness areas – these rules are replaced with Restricted Discretionary Activity Rules for these three activities.

c. Minor amendments to matters of discretion in other rules, to be clearer around the assessment of landscape effects and effects on Poutini Ngāi Tahu values.
d. Adding a new "Any Other Activity" Discretionary Activity Rule. This is consistent with the approach the Commissioners are recommending across the Plan for "catch all" rules – in the notified Plan these "catch all" rules are mostly non-complying, but the Commissioners have formed a view that a Discretionary Activity is generally more appropriate and recommend this consistent change.

106. The main recommendations in relation to the Open Space Zone are:
    a. Minor amendments to the overview clarifying the relationship between this chapter and the Energy, Infrastructure and Transport chapters.
    b. Adding specific reference to the Rifle Range Protection Area across the relevant rules in the chapter.
    c. Deleting Rule OSZ – R4 in relation to clubrooms as this duplicates another rule.
    d. Amending Rule OSZ – R13 in relation to Park Facilities and Park Furniture to a Restricted Discretionary Activity rather than a Controlled Activity and specifically providing for the safe operation of the rail corridor as a matter of discretion.
    e. Amending the matters of discretion across the range of rules to better describe landscape effects, effects on Poutini Ngāi Tahu values and specifically include the safe and efficient operation of the rail corridor.
    f. Amending the "Any Other Activity" Rule to be Discretionary rather than Non-complying.
107. The main recommendations in relation to the Sports and Active Recreation Zone are:
    a. Deleting Rules SARZ – R4 in relation to clubrooms and SARZ – R9 in relation to grandstands as these duplicate another rule.
    b. Amending Rule SARZ – R10 in relation to Park Facilities and Park Furniture to a Restricted Discretionary Activity rather than a Controlled Activity and specifically providing for the safe operation of the rail corridor as a matter of discretion.
    c. Amending the matters of discretion across the range of rules to better describe landscape effects, effects on Poutini Ngāi Tahu values and specifically include the safe and efficient operation of the rail corridor.
    d. Amending the "Any Other Activity" Rule to be Discretionary rather than Non-complying.
108. Alongside the recommended changes to the Overviews, Objectives, Policies and Rules the commissioners recommend rezoning 7 parks to more appropriate types of Open Space Zone and 4 privately owned properties that had been incorrectly zoned Open Space Zone.
109. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
110. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners would improve the Plan.

COMMERCIAL AND INDUSTRIAL ZONES RECOMMENDATIONS REPORT

111. The Commercial and Industrial Zones Recommendations Report provides recommendations on 735 submissions points and 71 further submissions points.
112. This report covers two sections of the Plan – Commercial and Mixed Use Zones and Industrial Zones.
113. In terms of Commercial and Mixed Use Zones, there are four zones – Commercial Zone, Town Centre Zone, Mixed Use Zone and Neighbourhood Centre Zone.
114. Alongside the zone – specific rules, the Objectives and Policies for the four zones are held in an overarching chapter.
115. The main recommendations in relation to the COMZ – Objectives and Policies chapter are:
    a. Addition of a new objective specifically around managing adverse effects on activities within and adjoining commercial areas.
    b. Addition of a new objective that spells out more clearly the purpose of the zones.
    c. Minor amendments to the other objectives and some policies to better recognise cycling, as well as functional and operational needs.
116. The main recommendations in relation to the individual Commercial and Mixed Use Zones rules are:
    a. Some restructuring and rewording to make them clearer including by separating out buildings from activities within the rules.
    b. Making activities not provided for in the rules Discretionary rather than non-complying (this is a Plan – wide recommendation in relation to most Zone chapters)
    c. Simplification of standards around relocatable buildings, accommodation and minor structures.
    d. Increasing the height limit of buildings within the Commercial Zone to 15m;
    e. Including a 1.5m setback from the Railway Corridor for buildings
    f. Minor amendments to the town centre urban design guidelines;
117. In terms of Industrial Zones, there are two zones – General Industrial Zone and Light Industrial Zone.
118. Alongside the zone – specific rules, the Objectives and Policies for the two zones are held in an overarching chapter.
119. The main recommendations in relation to the INZ – Objectives and Policies chapter are:
    a. Deleting the requirement for stormwater treatment and the associated Policy 11.
    b. Minor amendments to the other objectives and some policies to better target management of visual amenity and zone boundary effects.
120. The main recommendations in relation to the individual Zones rules are:
    a. Some restructuring and rewording to make them clearer including by separating out buildings from activities within the rules.
    b. Making activities not provided for in the rules Discretionary rather than non-complying (this is a Plan – wide recommendation in relation to most Zone chapters).
    c. Simplification of standards around relocatable buildings, retail activities and minor structures.
121. Alongside the recommended changes to the objectives, policies and rules, the commissioners recommend minor rezoning changes reflecting current use of the properties including:
    a. Rezoning several properties in Westport to Neighbourhood Centre Zone (these were errors identified after the Plan was notified)

b. Rezoning several properties in Westport to Commercial Zone (these were errors identified after the Plan was notified)
c. Rezoning a property at Marsden Rd Greymouth from Light Industrial to Future Urban Zone
d. Rezoning of a property at Livingstone Street Hokitika to Neighbourhood Centre Zone
e. Rezoning of some industrial properties at Kaiata, Reefton, West Drive Hokitika and Kaniere to an industrial zone (these were errors identified after the Plan was notified)

122. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
123. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners on this topic would improve the Plan.

RESIDENTIAL ZONES RECOMMENDATIONS REPORT

124. The Residential Zones Recommendations Report provides recommendations on 708 submissions points and 109 further submissions points.
125. There are three zones in the Residential Zones chapter. The General Residential Zone is the "standard" residential zone found across the four main centres on the West Coast. The Large Lot Residential Zone is restricted to specific areas where the larger lot development is considered more appropriate given the infrastructure and environmental constraints of the location. The Medium Density Residential Zone is located around some major transport routes, some town centres and some neighbourhood centres.
126. Alongside the zone – specific rules, the Objectives and Policies for the three zones are held in an overarching chapter.
127. The main recommendation in relation to the Objectives and Policies chapter is:
    a. Minor amendments to Policies RURZ -P4 and RURZ – P10 to make this clearer to understand.
128. The main recommendations in relation to the General Residential Zone Chapter are:
    a. Amending the density provisions within Buller District to provide for a maximum of two residential dwellings per allotment, as sought by the Buller District Council.
    b. Specifically providing for accessory buildings (eg garages) within the Permitted Activities.
    c. Providing additional exemptions for emergency services and simplifying the minor structures Permitted Activity rule.
    d. Introducing a new Appendix to support the Permitted Relocated Buildings rule.
    e. Changing the Residential Visitor Accommodation Permitted Activity so that only homestay accommodation is Permitted in Westland District, as sought by Westland District Council.
    f. Amending and making clearer and more consistent the matters of discretion for Restricted Discretionary Activity rules.
    g. Reducing the stringency of the rule for fences, walls and retaining structures not meeting Permitted Activity standards from Discretionary to Restricted Discretionary.
129. The main recommendations in relation to the Large Lot Residential Zone Chapter are:

a. Specifically providing for accessory buildings (eg garages) within the Permitted Activities.
b. Simplifying the minor structures Permitted Activity rule.
c. Amending and making clearer and more consistent the matters of discretion for Restricted Discretionary Activity rules.
d. Reducing the stringency of the rule for fences, walls and retaining structures not meeting Permitted Activity standards from Discretionary to Restricted Discretionary.

130. The main recommendations in relation to the Medium Density Residential Zone Chapter are:
    a. Specifically providing for accessory buildings (eg garages) within the Permitted Activities.
    b. Simplifying the minor structures Permitted Activity rule.
    c. Changing the Residential Visitor Accommodation Permitted Activity so that only homestay accommodation is Permitted in Westland District, as sought by Westland District Council.
    d. Amending and making clearer and more consistent the matters of discretion for Restricted Discretionary Activity rules.
    e. Reducing the stringency of the rule for fences, walls and retaining structures not meeting Permitted Activity standards from Discretionary to Restricted Discretionary.
131. Alongside the recommended changes to the Policies and Rules, the commissioners recommend rezoning changes as follows:
    a. Rezoning the Alma Road terrace area in Westport to a mix of zones, as sought by the Buller District Council;
    b. Rezoning the road reserve adjacent to the O'Connor home in Westport to General Residential Zone (from General Rural);
    c. Amending 4 Neighbourhood Centre Zone areas in Reefton to General Residential Zone, as sought by the Buller District Council;
    d. Rezoning a property at Sturge Street Cobden to General Rural Zone (from General Residential) as sought by the landowner;
    e. Amending the Kaiata Park Zoning in relation to the outline development plan area, as sought by the landowner;
    f. Rezoning 5 properties on the Seaview Terrace in Hokitika adjacent to Silver Fern Farms from General Residential to Rural Lifestyle Zone.
    g. Rezoning the Medium Density Residential Zone along the Revell St beach frontage in Hokitika to General Residential Zone.
132. The matter of Appendix Two Recession Planes (Height in Relation to Boundary) across all zones was also dealt with in this hearing and there are recommendations to clarify this through additional explanatory text added to the appendix and a restructuring of the standard across the Plan, as sought by Buller District Council.
133. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan, a further evaluation under s32AA was not required.
134. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic. Essentially they consider the recommendations of the commissioners would improve the Plan.

RURAL ZONES RECOMMENDATIONS REPORT

135. The Rural Zones Recommendations Report provides recommendations on 1399 submissions points and 297 further submissions points.

136. There are two zones addressed within the report – the General Rural Zone (which is most of the rural land on the West Coast) and the Rural Lifestyle Zone (which is a new zone allowing for smaller subdivision sizes). Alongside this there are two precincts – the Community Living Precinct which covers the Gloriavale community in Grey District, and the Highly Productive Land Precinct which places a 10ha subdivision minimum lot size across land within it –mostly in the Grey District, but also some lands at Karamea in Buller.
137. Alongside the zone rules, the report covers the Objectives and Policies for the Rural Zones – including those that affect the Settlement Zone, although the rules for that zone are deal with in a separate report.
138. The most significant change recommended by the panel relates to the Highly Productive Land Precinct. They recommend that the basis of this precinct is altered to implement the NPS – Highly Productive Land and that the Precinct only apply to land identified as Land Use Capability Class 3.
139. The effect of this would be to remove the precinct from most of the Grey Valley and instead replace it with a smaller area. In Buller it would mean land to the east behind Westport and at Little Wanganui would also be moved into the Precinct, restricting subdivision on these properties to a minimum lot size of 10ha.
140. The recommendations also deal with a number of definitions that relate to activities that occur in rural areas. The panel recommends amendments to the following definitions:
    a. Agricultural Pastoral and Horticultural Activities (the main permitted activities in the zone) to add agricultural aviation activities, greenhouses and artificial crop protection structures;
    b. Farm quarry to make it clear that the definition allows for quarrying to serve a farm property, not just a single site
    c. Intensive indoor primary production to make it clear this does not include wintering barns
141. The panel also recommends the addition of new definitions to aid interpretation of the Plan – Agricultural aviation activities; commercial forestry; exotic continuous cover forestry; primary production; land based primary production; plantation forestry; specified Māori land; and woodlot.
142. The main recommendations for the Objectives and Policies for the rural zones are:
    a. Minor amendments to Objectives 1 and 2 to standardise language across the plan and specifically provide for rural activities in the objective;
    b. Adding a new Objective 7 that specifically relates to the General Rural Zone and the need to protect primary production uses from reverse sensitivity effects;
    c. Adding a policy that specifically relates to the General Rural Zone and supporting its primary purpose as a location of primary production activities and those which support primary production;
    d. Adding a policy that specifically relates to the Westport Radio Mast Electromagnetic Overlay, which is a new overlay recommended to be included in the Plan;
    e. General rewording of policies to clarify them and make them easier to understand;
    f. Amending Policy 1 (now 2) to be clear it is specific to the General Rural and Rural Lifestyle Zones and emphasising the primary production focus in these zones;
    g. Amending Policy 2 (now 3) to be clear it is specific to the Settlement Zone;
    h. Amending Policy 4 (now 5) to be clear it is specific to the Rural Lifestyle Zone;

i. Substantially redrafting Policy 5 (now 6) to focus on productive capacity of land and primary production;
j. Recognising regionally significant infrastructure and educational activities in Policy 6 (now 7) as being appropriate in the rural zones;

143. The main recommendations for the rules are:
a. Providing a setback from the railway corridor;
b. Amending the standards for pig keeping and poultry;
c. Putting in place a maximum size for a permitted building of 1000m^2 or 500m^2 for a residential building in the General Rural Zone
d. Putting in requirements for firefighting water to be provided for residential and papakāinga developments
e. Simplifying the rules for minor structures in line with other zones;
f. Deleting the requirements for Relocated Buildings
g. Replacing the traffic generation standard for home businesses to one that relates to the number of off-site workers
h. Reference to the recommended Westport Radio Mast EM Overlay
i. Standardisation of matters of discretion
j. Deleting the rule in relation to non-rural activities as it duplicated other provisions
k. Relaxing the rule for non-compliant fences to a Restricted Discretionary rather than Discretionary Activity
l. Redrafting of some rules to make their interpretation clearer
m. Providing the "catch all" rule as Discretionary rather than non-complying
n. Amending the visitor accommodation rule so that only homestay visitor accommodation is a Permitted Activity in Westland

144. Alongside this some rezoning is recommended, specifically:
a. Rezoning of road reserve at Cape Foulwind to Settlement Zone and Light Industrial Zone
b. Amending a zoning error for part of a property south of Hokitika so that the whole property is zoned settlement zone
c. Removing the split zone at 3 Bayfield Street Seddon so the whole property is zoned General Rural Zone
d. Rezoning some Ngāi Tahu forestry blocks to General Rural Zone
e. Removing the split zone at 42 Hatters Terrace Nelson Creek so the whole property is Rural Lifestyle Zone
f. Rezoning 3 properties at Barrytown, 2 properties at Rutherglen Road and 4 properties at Moana as Rural Lifestyle correcting zoning errors
g. Rezoning 13 ha of land at Waipuna as Rural Lifestyle
h. Rezoning 135 Ruatapu Road as Rural Lifestyle
i. Rezoning the CMP Kokiri Site, T Croft, Hindeman Sawmill and International Panel and Lumber Sites as Light Industrial Zone

145. It should be noted that many submissions to this topic sought rezoning of properties to allow for development. The commissioners sought additional technical advice in relation to wastewater capacity and the ability for development at both Moana North and Cape Foulwind to proceed if on-site wastewater systems were used. This report raised concerns about the adverse environmental effects of additional on-site wastewater disposal at both Moana and Cape Foulwind. The commissioners were not convinced from the information provided by the submitters, that the infrastructure issues could be easily dealt with, and recognised the limited funding and capacity of the Councils to develop community infrastructure at multiple locations. In the case of Cape Foulwind they considered that there may be merit in

rezoning this area in the future, but that this would need to be a planned development which addressed all the infrastructure issues in a comprehensive way.

SETTLEMENT ZONE RECOMMENDATIONS REPORT

146. The Settlement Zones Recommendations Report provides recommendations on 376 submissions points and 29 further submissions points.
147. While the report covers only one zone there are three precincts within the Settlement Zone – Coastal Settlement, Settlement Centre and Rural Residential Precinct.
148. The Settlement Zones are a type of rural zone, so the Recommendations Report for Settlement Zones only has recommendations in relation to the policies that are specific to the precincts – the rest of the Objectives and Policies are addressed in the Rural Zones recommendations.
149. The main recommendations in relation to the Settlement Zone are:
    a. Changes to Policy SETZ – PREC3 – P3 (Coastal Settlement Precinct) to better recognise the port at Jackson Bay and support visitor and worker accommodation and tourism support facilities at Punakaiki
    b. Better recognising industrial, commercial and rural activities and infrastructure in Policy SETZ – PREC4 – P4 (Rural Residential Precinct)
    c. Restructuring of some rules to make them easier to interpret
    d. Accommodating a range of changes sought by the Councils to better reflect their local differences including height limits, provision for accessory buildings, setbacks from wastewater treatment facilities, simplifying rules for minor structures and home business, changes to visitor accommodation Permitted Standards in Westland,
    e. Specifically requiring provision for firefighting water
    f. Simplifying rules for relocated buildings
    g. Recognising the Westport Radio Mast and the potential risk of electromagnetic coupling with tall buildings,
    h. Simplifying the rules for retail activities
    i. Standardising matters of discretion in Restricted Discretionary Activities
    j. Putting in place specific rules around the Moana North Development Area
    k. Rezoning the Moana North (Russell Robinson site) to a mix of General Residential, Settlement (Rural Residential Precinct) and Neighbourhood Centre Zone and including an Outline Plan for the development
    l. Rezoning some land at Te Kinga (Iveagh Bay) from Rural Residential Precinct to Settlement Zone (no precinct).

150. The rezoning at Moana North is probably the most significant recommendation from this report and there was substantial evidence presented by the submitter in support of the rezoning. The rezoning recommended would allow 200-300 new dwellings to be built at Moana and significantly change the community. The commissioners considered the submission and evidence presented very carefully, and sought additional technical information around the infrastructure situation. They have recommended that the site be rezoned in accordance with an Outline Plan for the area – this includes a range of measures to manage adverse effects. There are "no build" requirements for the former landfill and identified SNA, and the bush area would remain in the Settlement Zone – Rural Residential Precinct, with some additional rule requirements around landscape and ecological protections. The bulk of the site is recommended to be rezoned General Residential Zone. This would allow for a much greater of density of development than the proposed Plan and would require new lots to connect to full reticulation. Currently there is no

reticulated water supply at Moana, and it would be difficult for the development to proceed without a water supply being developed. The overall proposal does have some significant implications for the Grey District Council in terms of infrastructure requirements which are not currently provided for the Grey District Infrastructure Strategy.

SPECIAL PURPOSE ZONES RECOMMENDATIONS REPORT

151. The Special Purpose Zones Chapter covers seven of the special purpose zones and also addresses submissions seeking the identification of further special purpose zones.
152. Most of the special purpose zones apply to only small areas of land within each district where the "special" activity is located.
153. The recommendations report provides recommendations on 673 submissions points and 61 further submissions points.
154. For the Airport Zone the key recommendations are:
    a. The addition of Haast Airfield to the Airport Zone. Alongside this a Noise Control Overlay, a Flight Path Overlay and consequential amendments to the overview, definitions, objectives, policies and rules occur to recognise the Haast Airfield in that zone.
    b. Providing a specific policy and Permitted Activity rule for Greymouth Aerodrome to be used for public events.
    c. Inclusion of additional matters of discretion to the restricted discretionary rules around infrastructure provision and design matters.
155. For the Future Urban Zone the key recommendations are:
    a. Changes to the policy and rules to clarify the process of the Council using a Structure Plan to unlock development within the zone without the need for a Plan Change;
    b. Amendments to the rules for relocated buildings, visitor accommodation and mineral extraction to align with similar rules in other zones.
156. For the Hospital Zone the key recommendations are:
    a. The addition of Ngakawau Medical Centre to the Zone and consequential amendments to the overview.
    b. Addition of retirement villages where there is an ancillary hospital to the Definition of Healthcare and Medical Activities and consequential amendments to the policies and rules to make this activity Permitted;
    c. Allowing for helicopter landing at medical centres as a Permitted Activity;
    d. Removing the requirements around relocated buildings.
157. For the Māori Purpose Zone the key recommendations are:
    a. Changes to the definitions of Iwi/Papatipu Rūnanga Management Plan; Papakāinga and Papatipu Rūnanga and deletion of the definition of Māori Land
    b. Minor amendments to the objectives and policies to make their intent clearer;
    c. Amendments to the setback and density Permitted standards to align them with other equivalent zones;
    d. Requiring developments to provide for firefighting water;
    e. Amendments to the rules for relocated buildings and visitor accommodation to align with similar rules in other zones;
    f. Providing for emergency facilities and park furniture as a Permitted Activity;
    g. Standardisation of matters of discretion to align with other zones;
    h. Clarifying the alternative compliance pathway in rules where there is Iwi/Papatipu Management Plan in place;
    i. Specifically providing for mineral extraction in the zone

j. Rezoning the Lake Moeraki Reserve as Māori Purpose Zone.

158. The Port Zone applies at Westport and Greymouth Ports. For the Port Zone the key recommendations are:
    a. Including two new objectives and a new policy to better recognise the ports as regionally significant infrastructure and protect them from reverse sensitivity effects;
    b. Amend the objectives and policies to better recognise functional and operational needs and safe operation of the ports.
    c. Relatively minor changes to the amenity standards of the Permitted Activities to reflect the focus is on adverse effects on adjacent residential areas, not within the port zone itself;
    d. Standardisation of some rule wording and matters of discretion to be similar to other zones.
159. The Stadium Zone applies at the Westland Recreation Centre and Pulse Energy Centre. For the Stadium Zone the key recommendations are:
    a. Amendment to the definition of Stadium Activity to include Educational facilities;
    b. Minor amendments to the objectives and policies to correct spelling errors and recognise light as an adverse effect that should be managed.
    c. Standardisation of some rule wording and matters of discretion to be similar to other zones.
160. The Scenic Visitor Zone applies to commercial areas at Punakaiki, Franz Josef and Fox Glacier. For this zone the key recommendations are:
    a. Amendments to the policies and rules to better recognise worker and visitor accommodation and Poutini Ngāi Tahu values
    b. Standardisation of some rule wording and matters of discretion to be similar to other zones.
    c. Addition of advice notes to assist the Plan user.
161. To provide for the potential development of the Franz Josef Gondola the commissioners recommend amendments to the definitions of Recreation Activity and a new definition for Aerial Cableway. They also recommend the development of a Precinct within the Natural Open Space Zone that covers the proposed location of the gondola, with a specific policy and Discretionary Activity Rule that outlines the approach to development of such an activity.

DESIGNATIONS RECOMMENDATIONS REPORT

162. The Designations Recommendations Report provides recommendations on 71 submissions points and 6 further submissions points.
163. The main matters addressed in the recommendations relate to errors within the Designations tables and maps. Where at all possible the commissioners have recommended fixing these errors based on either the submissions or through Clause 16 of the RMA which allows for the fixing of minor errors.
164. NZTA sought alteration to their designation to expand the extent of this. A map viewer was developed to show the extent of changes proposed and how this would impact on adjacent properties. After reviewing the extent of changes proposed by NZTA on this viewer the commissioners have recommended that the mapping be amended to reflect these alterations.
165. Because the recommended changes are of a relatively minor nature and are intended to improve the workability of the Plan and correct errors, a further evaluation under s32AA was not required.
166. TTPP Staff have not identified any specific matters of concern to the Councils and Poutini Ngāi Tahu in relation to this topic though do note some spelling errors that

need to be corrected. They consider the recommendations of the commissioners would improve the Plan by correcting errors and providing up to date descriptions and mapping of the designations.

167. It should be noted that even if the Committee adopts the recommendations of the commissioners in relation to Designations, the final decision on these does not lie with the Committee. Instead the recommendations will be provided to the Requiring Authorities (e.g. NZTA) for them to decide if they accept the recommendations.

NEXT STEPS

168. This report provides an overview of the recommendations reports from the Independent Hearings Panel for the TTPP. A separate report on this agenda outlines the process and recommendations around adopting the recommendations from the reports.

Prepared for: **Te Tai o Poutini Plan Committee**

Prepared by: **Lois Easton, Principal Planner**

Date: **Thursday 18th September 2025**

Subject: **Decisions on Submissions and Adoption of Decisions on the proposed Te Tai o Poutini Plan, Variation 1 and Variation 2**

SUMMARY

This report outlines the process to date for Te Tai o Poutini Plan (TTPP) being prepared, going through the hearings phase and the recommendations on submissions and changes to the TTPP being presented to the Committee.

It seeks that the Committee make decisions on the submissions and adopt decisions on the proposed TTPP, Variation 1 and Variation 2.

RECOMMENDATIONS

That the Te Tai o Poutini Plan Committee:

1. Receives the Recommendation reports and appendices of the Independent Hearing Panel on the provisions of and submissions on the proposed Te Tai o Poutini Plan (including Variations 1 and 2).
2. Notes the contents of this report.
3. Adopts the Independent Hearings Panel recommendation reports (and appendices) as the Committee's decision on the provisions of and submissions on the proposed Te Tai o Poutini Plan (including Variations 1 and 2), in accordance with Clauses 10(1), 10(2) and 10(4)(aaa) of Schedule 1 of the Resource Management Act 1991.
4. Resolves to correct any typographic and numbering errors in the Hearings Panel recommendation reports appendices prior to making changes to the Decisions Version of the Plan.
5. Resolves to publicly notify the Committee's decision on 10 October 2025, in accordance with Clause 10(4)(b) of Schedule 1 of the Resource Management Act 1991.
6. Resolves to correct minor errors and make changes of minor effect in accordance with Clause 16(2) of Schedule 1 of the RMA, as identified in the Independent Hearing Panel's Recommendation reports.
7. Directs staff to alter the proposed Te Tai o Poutini Plan provisions and mapping application to reflect the Independent Commissioners recommended changes and to correct minor errors and changes of minor effect in accordance with clause 16 (2) of the First Schedule of the Resource Management Act 1991.
8. Notes that adopting the Recommendation reports of the Independent Hearing Panel as the Committee's decision means the Committee also adopts the independent hearing panel's reasons for those decisions on submissions as set out in the recommendation reports.

9. Notes that adopting the Recommendation reports of the Independent Hearing Panel as the Committee's decision does not mean the Committee has formed a view on possible future plan changes mentioned in the reports and recommendations.

INTRODUCTION

1. The Proposed Te Tai o Poutini Plan (TTPP) hearings have been completed, and the Committee is now required to notify its decision on the Proposed TTPP. This report sets out the process for adopting the recommendations as set out above, including the statutory requirements under the RMA. The Committee must decide whether to accept or reject the recommendations of the Independent Hearing Panel.

BACKGROUND

2. Every territorial authority is required to have a District Plan under the Resource Management Act. The TTPP is a review and replacement of the Buller, Grey and Westland District Plans.
3. Work on preparing the TTPP commenced in 2019, and the Proposed Plan was publicly notified for submissions in July 2022. Through the formal submission process on the TTPP, a total of 666 submissions and 212 further submissions were received.
4. The Committee delegated the task of hearing submissions and other evidence to the Independent Hearings Panel. On 21 March 2023 the Committee appointed a panel of five independent resource management commissioners to hear and make recommendations on the TTPP. In accordance with section 34(1)(A), the Council delegated its authority to hear submissions and make recommendations on the TTPP to the Independent Hearing Panel.
5. The recusal of one of the Independent Hearing Panel members resulted in a replacement being appointed by TTPP Committee. This meant there was a delay to the start of the hearings until 30 October 2023.
6. The Independent Hearing Panel was made up of
   - Commissioner Dean Chrystal (Chair)
   - Commissioner Paul Rogers
   - Commissioner Anton Becker
   - Commissioner Maria Bartlett
   - Commissioner Sharon McGarry
7. The Plan was divided into topics with the larger topics heard by all five commissioners and the smaller topics heard by 1-4 commissioners.
8. On 25 June 2024 Variation 1 to TTPP (Activities on the Surface of Water at the Ports) was Limited Notified for submissions and this was also incorporated into the Independent Hearing Panel process. Five submissions, all in support of the Variation, were received, with no further submissions.
9. On 25 June 2024 Variation 2 to TTPP (Coastal Natural Hazard Mapping) was notified for public submissions. Variation 2 was renotified on 21 November 2024 and in total 641 submissions and 126 further submissions were received. These were also incorporated into the Independent Hearing Panel process

DISCUSSION

10. The Independent Hearing Panel has prepared 26 recommendation reports, as detailed below:
    1. Introduction and General Provisions
    2. Strategic Direction
    3. Energy Infrastructure and Transport
    4. Contaminated Land and Hazardous Substances
    5. Natural Hazards (incorporating Variation 2)
    6. Notable Trees
    7. Historic Heritage
    8. Sites and Areas of Significance to Māori
    9. Natural Character and the Margins of Waterbodies and Activities on the Surface of Water
    10. Natural Features and Landscape
    11. Ecosystems and Biodiversity

12. Coastal Environment
13. General District Wide Matters – Earthworks, Light, Temporary Activities
14. Noise
15. Signs
16. Subdivision, Financial Contributions and Public Access
17. Mineral Extraction
18. Open Space Zones
19. Residential Zones
20. Commercial and Industrial Zones
21. Settlement Zone
22. Rural Zones
23. Special Purpose Zones
24. Variation 1
25. Outstanding Matters
26. Designations

11. The Recommendation Reports are provided in Attachment 1 and can be accessed on the TTPP website here: IHP Recommendations Reports
12. The Independent Hearing Panel has set out the reasons for its recommended changes in the relevant Recommendation Reports.
13. As an Appendix of each Recommendation Report, the Independent Hearing Panel provides its recommended version of the TTPP chapter(s) which that Recommendation Report relates to. The Independent Hearing Panel's reports are presented to the Committee in this public meeting which commences on 18 September 2025. The meeting will be adjourned and reconvened on subsequent days until this decision can be made.
14. The TTPP Committee can vote to accept or reject recommendations.
15. Where recommendations are accepted, the Committee adopts these recommendations as its decision(s).
16. The Independent Hearing Panel has heard submitters and considered evidence put forward to it. If the Committee decides to reject a recommendation it cannot substitute its own decision but must appoint commissioners to rehear the submissions on that matter, or prepare a Variation to the Plan with new provisions for public submission.
17. Decisions on provisions can be both appealed to the Environment Court and be judicially reviewed.
18. In making decisions, the Committee faces constraints on what it can and cannot consider. Notably, recommendations cannot be 'out of scope' of the submissions. Therefore, the Committee cannot make a decision where there is no submission in relation to this matter. The Independent Hearing Panel recommends some changes of minor effect and to fix minor errors. These are incorporated in the Independent Hearing Panel's report appendices.

Requiring authorities are the decision makers for designations

19. Designations operate differently within the RMA than the other instruments contained in the District Plan. A key difference is that requiring authorities (the owner of a designation) are the decision makers. The Committee's role is to determine whether it accepts or rejects the IHP's recommendations and refer those to the requiring authority for its determination.
20. Following confirmation of each requiring authority's decision, the Committee must serve notice on those that it considers to be directly affected by the modified designation.

Notification of Decisions are Required by 14 January 2026

21. In accordance with an extension provided by the Minister for the Environment, the Committee is required to give its decisions on TTPP by 14 January 2026.
22. The Committee must publicly notify its decisions at least 5 working days after the date of the above decisions being made and must serve notice of the decision(s) on any parties who made a submission on the relevant matters.
23. A 30 working day appeal period commences from the date that the decision on the provisions is notified.

Options

Option 1 – Accept all Independent Hearing Panel recommendations (recommended)

Accept Resolutions 1-8 without amendment – accepting all recommendations of the Independent Hearings Panel

Benefits

24. Would prevent delay of decisions being made by removing requirement to rehear the matter or defer to a future plan change.

Costs/risks

25. In accepting the recommendations, the Committee also accepts the reasoning and weighting of evidence used by the Independent Hearing Panel in coming to its recommendations.

Option 2 – Reject some of the Independent Hearing Panel recommendations (not recommended)

Benefits

26. Allows the Committee to rehear those parts of the recommendations which might not align with the Committee's strategic goals, interpretation of evidence or reasoning.

Costs/risks

27. There is inadequate time to facilitate a rehearing and for the Committee to make a subsequent decision in time to meet requirements to make decisions on TTPP by the 14 January 2026 deadline. A further request to the Minister for the Environment to extend the deadline for decisions would be required and may not be granted.
28. There must be good reasons for the Committee to reject the recommendations otherwise there is a risk of one of the submitters seeking a judicial review of the decision by the High Court.
29. Additional costs for both the West Coast Regional Council (as funder of TTPP) and submitters in rehearing the topic(s).

Option 3 – Reject all of the **Independent Hearing Panel recommendations (not recommended)**

Costs/risks

30. There is inadequate time to facilitate a rehearing and for the Committee to make a subsequent decision in time to meet requirements to make decisions on TTPP by the by the 14 January 2026 deadline. A further request to the Minister for the Environment to extend the deadline for decisions would be required and may not be granted
31. There must be good reasons for the Committee to reject the recommendations otherwise there is a risk of one of the submitters seeking a judicial review of the decision by the High Court.
32. Significant costs are associated with convening a new hearings panel and rehearing submissions. Costs in the order of at a least a million dollars to the West Coast Regional Council but also substantial costs to submitters, many of whom have been represented with professional planners and lawyers.

Alignment with higher order RMA direction

33. In making decisions on the TTPP, the Committee is required to give effect to higher order RMA instruments including:

    a. Matters of National Importance in the RMA

    b. National Policy Statements and National Environmental Standards

c. Regional Policy Statements and Environmental Plans

34. The plan has been assessed by Council Officers in its drafting, and by Independent Hearing Panellists during their deliberations. These assessments are that it meets the higher order direction extant at the time of decision.

Engagement and Consultation

35. Considerable engagement and consultation have been undertaken throughout the development of the proposed TTPP programme of works, including the consultation process on the Draft Plan prior to public notification.
36. At each stage of consultation, the Committee undertook media campaigns and held public drop-in sessions throughout the West Coast.
37. The proposed TTPP was notified on 14 July 2022. An extensive media campaign occurred at this time. In addition to the formal notice in local newspapers, this included a letter sent to each West Coast rate payer, communication via the Council's website and social media channels and additional newspaper advertising. Copies of the TTPP were made available in all Council offices, libraries and service centres and an additional round of public drop-in sessions were held.
38. Public notification of the TTPP presented the public with the opportunity to make formal written and oral submissions to the Independent Hearing Panel.
39. The TTPP has been developed in partnership with Poutini Ngāi Tahu.
40. This supports the Committee's statutory obligations in relation to Te Tiriti o Waitangi and the Part 2 (section 8) of the RMA.
41. The development of TTPP has involved significant engagement with mana whenua. Poutini Ngāi Tahu have submitted on the TTPP and await the final decisions from the Committee.

Financial Implications

42. The development of TTPP is funded via a special rate from the West Coast Regional Council (WCRC).
43. Rejecting one or more recommendations of the Hearing Panel will result in additional cost to the WCRC. This is due to the requirement to reconsider the matter and hold a new hearing to make a decision.
44. There will be costs associated with appeals to the Environment Court or responding to judicial review in the High Court, including legal costs. These costs will be relative to the number and complexity of matters that are the subject of appeals. As such costs are presently unknown and will be advised when known and as appropriate.

Communications Plan

45. The Committee's decisions will be publicly notified no later than 10 October 2025, and within five days of this date officers will serve that decision on every person who made a submission on the TTPP.
46. At this time the ePlan will be updated to reflect the Committee's decisions and show that the newly decided rules have legal effect.
47. Formal notification of decisions will be advertised through:
    a. An advertisement in The Greymouth Star, Hokitika Guardian and Westport News;
    b. The Four Councils websites;
    c. The TTPP website
    d. WCRC social media channels; and
    e. Direct notification (via email) to all parties who have made a submission on a provisions.
48. Council and libraries staff will assist customers to access the TTPP through publicly accessible computers at these facilities.
49. Phone and email support will also be available by the TTPP Planning Team.

NEXT STEPS

50. Where the recommendations from the Independent Hearing Panel are agreed to, the Committee accepts these recommendations as their decisions.

51. If any recommendations are rejected, officers will support the Committee in organising for the matters to be reheard or deferred to a future plan change.
52. The Committee formally notifies its decisions in accordance with Clause 10, Part 1, Schedule 1, of the Resource Management Act 1991.
53. The Committee formally notifies that any TTPP provisions, which proceed through Part 1, Schedule 1 and are not subject to appeal are made operative (in accordance with Clause 20, Part 1, Schedule 1 of the Resource Management Act 1991).

APPENDICES

PART A – INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Introduction

1. Matters to do with our appointment and other preliminary matters applicable to all Hearing Panel's recommendations on the Proposed Te Tai o Poutini Plan (**pTTPP** or **'the Plan'**) are recorded and addressed in Recommendation Report 1.

2. This Recommendation Report relates to the Strategic Directions (**SD**) – Te Pae Tawhiti Chapter. The Report contains the Hearing Panel's evaluations and recommendations to the pTTPP Committee on the submissions and further submissions received on these sections of Part 2 of the Plan.

3. The Strategic Directions Section 32 Report[1] provides an evaluation for the inclusion of SD in the Plan, including consideration of the regulatory framework, key resource management issues, the evidence and research basis, including the consultation, information and analysis undertaken and evaluation of the options. It concludes that '*the proposed strategic objectives are considered to be the most appropriate way to achieve the purpose of the RMA as they will provide for the social, economic, cultural, and environmental wellbeing of the West Coast. They will ensure an RMA outcome-based approach to planning matters, so that strategic objectives can be achieved. Additionally, the objectives give effect to higher order documents.'*

4. The Section 42A Officer's Report[2] (**'s42A Report'**), authored by Ms Lois Easton (a Principal Consultant for Kereru Consultants) was circulated prior to the hearing. The s42A Report assessed a total of 458 submission points and 149 further submissions on the SD Chapter. It provided an analysis of submissions and further submissions received; and made recommendations on changes to the notified plan provisions (the changes were included in Appendix 1 and the recommendations on all submissions as to either accepted, accepted in part or rejected in Appendix 2). An Addendum to the s42A Report was issued highlighting 19 further submissions that had been omitted from the s42A Report in error.

5. Submissions on Strategic Directions as a whole, the Strategic Directions Overview and the relationship between strategic objectives and other plan objectives and policies were addressed at the beginning of the report.

6. A s32AA evaluation for all the recommended changes was provided at the end of the s42A Report.

7. This Recommendation Report largely follows the same structure as the s42A Report, addressing each of the SD topics in turn. The Panel has considered the submissions and further submissions, the s42A Report and Addendum analysis and recommendations,

[1] Te Tai o Poutini Plan – Section 32 Evaluation Report One Overview and Strategic Directions
[2] Te Tai o Poutini Plan – Section 42A Report: Strategic Directions

submitter evidence and statements, the Reporting Officer's reply evidence and the responses to Minute 22, before providing our evaluation and recommendation.

8. This Recommendation Report should be read in conjunction with the s42A Report and the tracked change version of the notified Plan provisions (attached as Appendix 1 to this Report). The tracked change version of the pTTPP provisions forms an integral part of the decision and records all recommended amendments (additions and deletions) to the notified pTTPP provisions made by the Panel. The tracked change version of the pTTPP shows the Panel's recommended changes to the notified provisions, with **bold and underlining** indicating additions and ~~strikethrough~~ indicating deletions. If there is any discrepancy between this Recommendation Report and the tracked change version of the Plan, the tracked change version of the Plan shown in Appendix 1 of this Report must prevail.

9. This Recommendation Report contains the reasons for the Panel's recommendations. These comprise either adoption of the reasoning and recommendations of the original section 42A Reports or the Reporting Officer's reply evidence, or a specific reasoning by the Panel.

10. Where the Panel recommends the pTTPP provisions should remain as notified, it is because:

    (a) The Panel has adopted the reasoning and recommendation of the s42A Report or Addendum to retain the provision as notified; or

    (b) The Panel has adopted the reasoning and recommendation to retain the provision as notified as recommended in the Reporting Officer's reply evidence; or

    (c) The Panel has recommended to retain the provision as notified for reasons set out in this Recommendation Report.

11. Where there is a recommended change to a notified provision of the pTTPP, it is because:

    (a) The Panel has recommended amendment to a provision for reasons set out in this Recommendation Report in response to a submission point, which the s42A Report did not recommend; or

    (b) The Panel adopted the reasoning and recommendation of the s42A Report or Addendum to change the provision to that recommended in the original s42A Report; or

    (c) The Panel has adopted the reasoning and recommendation to that recommended in the Reporting Officer's reply evidence; or

    (d) A consequential change has been necessary following on from a decision in either (a), (b) or (c).

12. Where there may be a different recommendation between the s42A Report and the Reporting Officer's Addendum or reply evidence (i.e., the recommendation by the Reporting Officer has changed as a result of hearing the evidence of submitters), unless the Panel decision specifically adopts the original s42A Report's reasoning and recommendations, the reasoning and recommendations in the (later) reply to evidence has been adopted and it must be taken to prevail.

13. If there are circumstances where the Panel consider that alternative relief is more appropriate than that requested in submissions and further submission to give effect to the RMA, NZCPS, national policy statements and/or RPS, but are still within the scope of the

relief sought, the relevant recommendation clearly sets out the nature of the change and the reason for the change. This is recorded in this Recommendation Report.

14. If any changes are recommended to the provisions (since the Section 32A Report was completed) a further evaluation, if required pursuant to section 32AA of the RMA, has been undertaken. Any such circumstances are referred to in this Recommendation Report in sufficient detail to demonstrate a further evaluation was undertaken.

15. Clause 16(2) of the First Schedule of the RMA enables the Panel to recommend amendments to alter information, where such an alteration is of minor effect, or may correct any minor errors. In the Panel's recommendations below each section considered in Part C of this Report and in the tracked change version of the notified Plan provisions (Appendix 1 of this Report) records any such minor amendments.

1.2. Terminology in this Report

16. Throughout this Report, the following abbreviations will be used:

Resource Management Act 1991	RMA
New Zealand Coastal Policy Statement 2010	NZCPS
National Policy Statement Electricity Transmission 2008	NPSET
National Policy Statement for Renewable Electricity Generation 2011	NPSREG
National Policy Statement on Freshwater Management 2020	NPSFM
National Policy Statement on Urban Development 2020	NPSUD
National Policy Statement for Indigenous Biodiversity 2023	NPSIB
National Policy Statement for Highly Productive Land 2022	NPSHPL
National Planning Standards 2020	NPS
West Coast Regional Policy Statement 2000	WCRPS
Effects Management Hierarchy	EMH
Bathurst Resources Limited and BT Mining Limited	Bathurst Resources

Birchfield Ross Mining Limited, Birchfield Coal Mines Limited, Papahaua Resource Limited, Phoenix Minerals Limited, Rocky Mining Limited, TiGa Minerals and Metals Limited, Whyte Gold Limited, WMS Group Limited and WMS Land Co. Limited	Collectively referred to as: - Birchfield *et al* and individually referred to as: - Birchfield - Papahaua - Phoenix - Rocky Mining - TiGa - Whyte Gold - WMS
Department of Conservation	DOC
Director General of Conservation	Director General
Federated Farmers of New Zealand	Federated Farmers
Heritage New Zealand Pouhere Taonga	HNZPT
Horticulture New Zealand	HortNZ
KiwiRail Holdings Limited	KiwiRail
Manawa Energy Limited	Manawa
Ministry of Education Te Tāhuhu o Te Mātauranga	Ministry of Education
Royal Forest and Bird Protection Society of New Zealand Inc.	Forest and Bird
Silver Fern Farms Limited by its authorised agents Mitchell Daysh Limited	Silver Fern Farms
Te Mana Ora (Community and Public Health) of the NPHS/ Te Whatu Ora	Te Mana Ora
Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio	Poutini Ngāi Tahu
Te Tumu Paeroa – The office of the Māori Trustee	Te Tumu Paeroa
Toka Tū Ake EQC	EQC
Waka Kotahi NZ Transport Agency	Waka Kotahi

1.3. Hearing arrangements

17. The hearing was held at the West Coast Regional Council Building from the 30 October to 3 November 2023. Some submitters appeared remotely by internet connection.

18. At the hearing, Ms Easton tabled an Introductory Statement which in part covered Strategic Directions.

1.4. Appearances

19. The following submitters appeared at the hearing:

Submitter	Parties appearing for
Poutini Ngāi Tahu	Ms Katherine Viskovic and Ms Sarah Scott (legal) Ms Veronica Balwin-Smith (cultural) Ms Rachel Pull (planner)
Ms Inger Perkins	For themself and on behalf of the West Coast Penguin Trust
Mr Anthony Eden	For themself
Mr Richard Alridge	For themself
Ms Katherine Crick	For themself
Birchfield *et al*	Ms Alex Booker and Mr Alex Hansby (legal) Mr John Ballingall (economist) Ms Katherine McKenzie (planner) Mr Mark Birchfield and Mr Philip McKinnel (for Birchfield) Mr Raymond Mudgway, Mr Michael Stewart and Mr Duncan Hardie (for WMS) Ms Donna Meates (on behalf of Mr Chris Meates for Phoenix) Mr Iain Whyte (for Whyte Gold) Mr Robert Brand (for TiGa) Mr Thomas Ritchie (for Papahaua).
Silver Fern Farms	Mr Steve Tuck (planner)
Scenic Hotel Group	Mr Karl Luxon and Ms Kim Smith
Straterra	Ms Josie Vidal (CEO) and Mr Jeremy Harding

Royal Forest and Bird Protection Society	Ms Nicky Snoyink
Mr Neil Mouat	For themself
Manawa Energy Limited	Ms Nicola Foran (corporate) Ms Stephanie Styles (planner)
Mr Vance Boyd	For themself
Mr Greg Maitland	For themself
Terra Firma Mining Limited	Ms Lucy Smith (corporate)
Westpower	Mr Rodger Griffiths (corporate) Mr Martin Kennedy (planning) Ms Sylvie Saskova, (technical administrator)
Ms Annie Inwood and Ms Suzanne Hill	For themselves
Ms Kair Lippiatt	For themself
Development West Coast	Mr Heath Milne (corporate)
KiwiRail	Ms Allison Arthur Young and Ms Kristen Gunnell (legal) Ms Michelle Grinlinton-Hancock (corporate) Ms Catherine Heppelthwaite (planner)
Ms Frida Inta	For themselves and on behalf of Buller Conservation Group
West Coast Fish and Game Council	Mr Dean van Mierlo (legal) Mr Dean Kelly (planner)
Te Tumu Paeroa	Ms Sonya Rimene and Ms Ngahuia Huirama
Director General of Conservation	Mr Matthew Pemberton (legal) Ms Amy Young (planner)
Transpower	Ms Rebecca Eng (corporate) and Ms Pauline Whitney (planner)
Bathurst Resources	Mr Joshua Leckie (legal counsel) Mr Richard Tacon (corporate) Ms Claire Hunter (planner)

1.5. Overview of submitter evidence received

20. For those appearing at the hearing legal submissions were received from:

    (a) Ms Katherine Viskovic and Ms Sarah Scott for Poutini Ngāi Tahu (dated 16 October 2023),

    (b) Mr Dean van Mierlo for Fish & Game (dated 12 October 2023),

    (c) Ms Alex Booker and Alex Hansby for Birchfield et. al. (dated 13 October 2023),

    (d) Ms Alison Arthur-Young and Ms Kirsten Gunnell for KiwiRail (dated 16 October 2023);

    (e) Mr Matt Pemberton for the Director General of Conservation (dated 26 October 2023),

    (f) Ms Christina Sheard and Mr Joshua Leckie for Bathurst Resources and BT Mining; and

    (g) Ms Lucy de Latour for the TTPP Committee (dated 13 October 2023).

21. For those appearing at the hearing the following evidence and/or statements were received:

    (a) Mr Dean Kelly, manager of West Coast Fish and Game (dated 27 September 2023);

    (b) Mr Rodger Griffiths, GM for Westpower (dated 16 October 2023);

    (c) Mr Martin Kennedy, planner for Westpower Limited (dated 1 October 2023);

    (d) Ms Nicola Foran, environmental policy manager for Manawa (dated 29 September 2023);

    (e) Ms Stephanie Styles, planner for Manawa (dated 26 September 2023);

    (f) Ms Rebecca Eng, Technical Lead - Policy for Transpower (dated 29 September 2023);

    (g) Ms Pauline Whitney, planner for Transpower (dated 29 September 2023);

    (h) Ms Veronica Baldwin-Smith for Ngāi Tahu (dated 2 October 2023);

    (i) Ms Rachael Pull for Poutini Ngāi Tahu (dated 2 October 2023);

    (j) Mr Heath Milne, CEO for Development West Coast (dated 30 September 2023);

    (k) Ms Amy Young on behalf of the Director General of Conservation (dated 16 October 2023);

    (l) Mr George Brand, Managing Director of TiGa Minerals and Metals Limited (dated 2 October 2023);

    (m) Mr John Ballingall, economist for Birchfield et. al. (dated 2 October 2023);

    (n) Ms Katherine McKenzie, planner for Birchfield et. al. (dated 2 October 2023);

    (o) Mr Thomas Ritchie for Rocky Mining Limited and Papahaua Resources Limited (dated 2 October 2023);

(p) Mr Michael Stewart for WMS Group Limited and WMS Land Co Limited (WMS) dated 2 October 2023);

(q) Mr Duncan Hardie for WMS (dated 2 October 2023);

(r) Mr Raymond Mudgeway for WMs (dated 2 October 2023);

(s) Mr Iain Whyte for Whyte Gold Limited (dated 2 October 2023);

(t) Mr Chris Meates for Phoenix Minerals Limited (dated 2 October 2023);

(u) Mr Mark Birchfield for Birchfield's Ross Mining Limited (dated 2 October 2023);

(v) Mr Phillip McKinnel, CEO for Birchfield Coal Mines Ltd (dated 2 October 2023);

(w) Ms Michelle Grinlinton-Hancock, RMA Team Leader for KiwiRail (dated 2 October 2023);

(x) Ms Catherine Heppelthwaite, planner for KiwiRail (dated 2 October 2023);

(y) Ms Emily Levenson, Environmental Policy Advisor at Horticulture New Zealand (dated 29 September 2023);

(z) Mr Richard Tacon, CEO for Bathurst Resources Limited (dated 29 September 2023);

(aa) Ms Clare Hunter, planner for Bathurst Resources Limited (dated 29 September 2023);

(bb) Mr Vance Boyd for himself (date 31 October 2023);

(cc) Ms Lucy Smith for Terra Firma Mining Limited (date 31 October 2023);

(dd) Ms Josie Vidal, CEO for Straterra (October 2023);

(ee) Ms Frida Inta for herself and Buller Conservation Group

(ff) Ms Sonya Rimene and Ms Ngahuia Huirama for Māori Trustee, Dr Charlotte Severne (dated 31 October 2023);

(gg) Ms Inger Perkins for herself (dated 30 October 2023);

(hh) Ms Inger Perkins for the West Coast Penguin Trust (**WCPT**) (dated 30 October 2023);

(ii) Ms Nicky Snoyink, Regional Conservation Manager for Forest & Bird (dated 31 October 2023);

(jj) Ms Katherine Crick for herself (dated 30 October 2023); and

(kk) Mr Phillip Alridge for himself.

22. The following evidence was tabled without hearing appearances:

- Letter from Mr Chris Horne on behalf of Chorus, Spark and One NZ dated 20 September 2023;

- Letter from Mr Steve Tuck, planner on behalf of Silver Ferms Farms dated 16 October 2023 and a statement (dated 17 October 2023);

- Statement of evidence by Ms Kate Graham, planner for the Ministry of Education dated 11 October 2023;

- Statement of evidence by Ms Fiona Thomson on behalf of West Coast Regional Council dated 16 October 2023; and

- Statement of evidence by Ms Rebecca Davies on behalf of New Zealand Defence Force dated 27th October 2023.

1.6. Overview of information exchanged following the hearing

23. Following the hearing, the Panel received the following further information:

- An initial Right of Reply from Ms Easton (dated 10 November 2023) addressing the breadth of scope provided by the submissions on the Strategic Directions (**"Initial reply evidence"**), which included a legal opinion on the issue of scope from Wynn Williams.

- Further comment from Forest and Bird on the primacy of the SD (**"the Forest and Bird November letter"** date 3 November 2023).

- A supplementary submission from counsel for Bathurst Resources addressing the legal position on the primacy of SD and providing an alternative objective/policy structure for the Mineral Extraction SD (**"the Bathurst November supplementary submission"** dated 24 November 2023).

- A supplementary submission from counsel for the Director-General of Conservation addressing questions posed by the Panel at the hearing (**"the Director General of Conservation November supplementary submission"** dated 10 November 2023).

- Evidence from Ms Rebecca Eng addressing questions posed by the Panel at the hearing (**"Transpower November evidence"** dated 10 November 2023).

24. On 19 January, the Panel issued Minute 16 to Ms Easton requesting consideration of an objective/policy structure for the SD, the need for an 'economic' SD and a 'natural hazard' SD. Ms Easton's response ("**review paper"**) was received on 5 April 2024.

25. The Panel then issued a further minute (Minute 22) inviting submitters to respond to Ms Easton's 5 April 2024 correspondence (by 24 May 2024). A total of 12 submitters responded to Minute 22 ("**responses to Minute 22"**).

1.7. Procedural Steps and Issues

26. No procedural matters were raised at the hearing.

1.8. Site Visits

27. No site visits relating to this chapter were undertaken.

PART B - STATUTORY REQUIREMENTS AND DOCUMENTS

28. Strategic Directions is one section of seven sections located in Part 2 – District-Wide Matters – Te Wāhanga 2 – Ngā Kaupapa ā-Rohe Whānui. As notified, the section includes strategic objectives for seven significant resource management issues identified for the three districts, including Agriculture, Connections and Resilience, Mineral Extraction, Natural Environment, Poutini Ngāi Tahu, Tourism and Urban Form and Development. In the case of Poutini Ngāi Tahu, the SD (as notified) comprises objectives and policies.

29. The section 32 Report outlined the relevant statutory considerations applicable to the TTPP, but not how they specifically informed the SD. The statutory documents included the RMA, NZCPS, NPSET, NPSREG, NPSFM, NPSUD, NPSIB (draft at the time), NPSHPL (draft at the time), the NPS, the WCRPS, the Iwi Management Plans, the Mana Whakahono a Rohe Agreement and the Statutory Acknowledgements. The section 32 Report also listed several other documents, including national environmental standards, statutes and local policies, but again, did not describe their direct relevance to the SD.

30. In considering submissions and making recommendations, the s42A Officer has referred directly to the NZCPS, NPSFM, NPSET, NPSREG, NPSIB, and the WCRPS. The evaluation below will discuss their relevance to the SD.

31. The Panel accepts the NPSIB does not apply to the development, maintenance to the upgrade of renewable electricity generation assets and activities, and electricity transmission network assets and activities.

32. Clause 10 of the First Schedule states that providing decisions on individual submissions is unnecessary. The Panel's recommendations are made within the scope of requested relief, either individual submissions or groups of submissions making similar requests, as specified in the reasons for recommendation.

33. With respect to SD, the National Planning Standards (**NPS**) directs that:

    1. *If the following matters are addressed, they must be located under the Strategic direction heading:*
        a. *an outline of the key strategic or significant resource management matters for the district*
        b. *issues, if any, and objectives that address key strategic or significant matters for the district and guide decision making at a strategic level*
        c. *policies that address these matters, unless those policies are better located in other more specific chapters*
        d. *how resource management issues of significance to iwi authorities are addressed in the plan.*
    2. *Rules must not be included under the Strategic direction heading.*
    3. *An Urban form and development chapter must be included under the Strategic direction heading.*
    4. *Each strategic direction matter must be its own chapter and be included alphabetically under the Strategic direction heading.*

PART C – SUBMISSIONS, EVIDENCE, EVALUATION AND RECOMMENDATIONS

1.9. General comments

Structure of the Strategic Directions

34. The Panel noted that the purpose of strategic directions is to provide an overarching guidance and framework for the Plan and its development, implementation, and interpretation. SD provide the vision and goals for the combined districts and how they will manage their resources and plan for development in a way that aligns with national and regional priorities moving forward. We noted that there is a need to ensure that subsequent chapters and provisions are consistent with this overall direction that is established.

35. The Panel notes that the NPS requires that if the following matters are addressed, they must be located under the SD heading:

    a. *an outline of the key strategic or significant resource management matters for the district*

    b. *issues, if any, and objectives that address key strategic or significant matters for the district and guide decision making at a strategic level*

    c. *policies that address these matters, unless those policies are better located in other more specific chapters*

    d. *how resource management issues of significance to iwi authorities are addressed in the plan.*[3]

36. At the hearing the Panel raised some concerns about the structure of the notified SD and noted that broadly many of the directions were drafted as policies rather than objectives.

37. Following the SD hearing, counsel for Bathurst provided the Bathurst November supplementary submission which, in part, provided submissions on whether some of the Minerals (**MIN**) SD would sit more appropriately as policies (rather than objectives). Helpfully, they offered a redraft of the provisions.

38. In December 2023, the Panel issued Minute 16 asking Ms Easton to consider whether a redraft of the SD (into objectives and policies) was possible (within scope) or appropriate. In her response (dated 5 April 2023), Ms Easton advised:

> *The strategic directions chapter is the only "cross plan" chapter in the Plan. If the Commissioners consider that some of the strategic objectives are more appropriately included as policies, it is my view that these should be strategic policies within the Strategic Directions chapter.*
>
> *…*
>
> *I have reviewed the submissions that affect the strategic objectives and I consider that there is no scope for substantial amendment (other than the specific wording changes sought by submitters), or converting the objectives to policies for the:*
>
> - *Agriculture Strategic Objectives*

[3] Chapter 7, Mandatory directions, National Planning Standards

- *Poutini Ngāi Tahu Strategic Objectives and Policies*

I do consider there is more scope for amendment to the:

- *Connections and Resilience Objectives*
- *Mineral Extraction Strategic Objectives*
- *Natural Environment Strategic Objectives*
- *Tourism Strategic Objective*
- *Urban Form and Development Strategic Objective*

39. Helpfully, Ms Easton drafted a suite of provisions formatted as objectives and policies for those SD where she considered there to be scope for such an amendment, and these are discussed below.

40. Following receipt of Ms Easton's response to Minute 16, the Panel issued Minute 22, inviting submitters to also comment on the reformatting of the SD to objectives and policies.

41. Overall, the revised SD (to an objective/policy format) garnered little attention from those submitters who responded to Minute 22. Most of the respondents commented on the specific details of the SD Chapter rather than the format of the SD (with most comments falling on the appropriateness of having a specific Economic Development SD (discussed further below).

Panel Comment

42. The Panel considers an approach to SD involving objectives and policies is open to consideration and may help strengthen the Chapter overall. We have, therefore, given this consideration in terms of each section below. In this context, we note that the Poutini Ngāi Tahu section of SD already contains an objective and policy framework.

Climate change and natural hazards

43. Many submitters, including two of the three District Councils, canvassed the need to incorporate SD for climate change and natural hazards. The Panel has considered additional provisions addressing climate change and natural hazards under the Connections and Resilience SD. The available scope to consider climate change and natural hazards provisions is discussed in Section 1.13 below.

Economic Strategic Direction

44. The Panel requested that Ms Easton consider the appropriateness and scope for an Economic SD. In her Right of Reply, Ms Easton advised:

> *Economic development is undoubtedly a significant strategic issue for the West Coast, and the approach of the TTPP Committee was to identify the main economic sectors on the West Coast (Mining, Agriculture, Tourism) and to have strategic directions for each of these. This reflected the feedback provided by the community and stakeholders through the Plan development process.*
>
> *There have been a series of economic development action plans and strategies in place for the West Coast during the period of development of TTPP. The current West Coast*

economic development strategy is Te Whanaketanga. This sits more widely than the RMA planning framework for TTPP. The main areas where TTPP intersects with this framework are as follows:

- *Resilience – and vulnerability to extreme weather, sea level rise and natural disaster is identified as a key issue.*
- *Identification that the economy of the West Coast is not very diverse, and relies on natural resources for economic prosperity.*
- *That there is poor housing quality and a lag in supply of new housing.*
- *That the economy has a heavy reliance on transport infrastructure and with a large geographical area means that infrastructure is challenging to fund and deliver.*

Broadly I would consider that the current strategic objectives largely capture this, particularly within the Connections and Resilience, Mineral Extraction, Agriculture and Tourism Strategic Directions. The poor housing quality issue is addressed in the Urban Development Strategic Direction, and the lag in supply of new housing has been addressed by the very large amount of rezoning of land for residential development, and provision of new medium density and mixed use zones in the Plan.

In terms of whether an approach of having a broad economic development objective with supporting policies, rather than individual strategic directions for Mineral Extraction, Agriculture and Tourism, I do not recommend this approach…

I also note that submitters have not specifically sought this, and many would consider this approach a dilution of the intent of the strategic direction which highlights specific economic areas as being strategically important to the West Coast. However, I acknowledge that there are aspects of the West Coast economy not currently addressed in the strategic directions.

45. In their response to Minute 22, counsel for Poutini Ngāi Tahu agreed with Ms Easton that a broad Economic SD is not appropriate, specifically stating[4]:

> *While Ngāi Tahu supports economic development on the West Coast, it is very concerned that broadening out the strategic direction to recognise economic development more generally will have the potential to place economic wellbeing above any other strategic objective. It is concerned that this approach may result in 'watering down' the provisions that specifically recognise other matters of strategic importance, including Poutini Ngāi Tahu values.*

46. In their response to Minute 22, Westland District Council advised that:

> *An overarching economic development objective is not necessary. Enabling economic provisions area contained throughout the plan and is supported within high level planning documents. [sic] Economic development shouldn't take precedence over other community and environmental needs. The inclusion of this within the strategic direction chapter will potentially lead decision makers to believe this is the intention of the plan.*

[4] Memorandum on behalf of Te Rūnanga O Ngāti Waewae, Te Rūnanga O Makaawhio and Te Rūnanga O Ngāi Tahu, dated 29 April 2024

47. Similarly, Buller District Council (**BDC**) considered '*overarching economic development objectives could potentially result in a dilution of the intent of the current strategic directions, which are considered to target key economic areas'*.

48. In their response to Minute 22, Mr Tuck (for Silver Fern Farms) supports the inclusion of specific Economic SD. Mr Tuck broadly supported the Economic SD suggested (but not supported) by Ms Easton (in her 5 April 2024 response), but considered that amendments to ED-O1 and ED-P5 are required to broaden their application to other activities (not just agriculture, mineral extraction and tourism). Mr Tuck acknowledged that changes to the UFD SD were also appropriate to address the issue of reverse sensitivity.

49. Counsel for Bathurst (in their response to Minute 22) did not oppose the inclusion of Economic SD, but rather promoted arguments that they should not supplant the need for a specific Mineral Extraction SD.

50. Ms Inta provided a response to Minute 22 and noted that:

> *I do not support an inclusion of Economic Development in the TTPP Strategic Directions. It would unbalance the TTPP in favour of economic development at the expense of the other important issues encapsulated in Section 5: Purpose of the RMA. Economic development is an issue particularly important to most West Coasters, but no matter how important it is it cannot override other considerations under the RMA to produce a biased district-wide plan*.

51. Ms Smith (for Terra Firma) responded to Minute 22, noting that the Economic Development SD did not specifically recognise and provide for the use and development of mineral resources and did not reflect the sector's importance to the West Coast.

Panel Comment

52. The Panel has considered Ms Easton's comments and those of submitters who responded to Minute 22 of the issue of an Economic Development SD. We acknowledge the comments that an Economic Development SD might be seen as taking precedence over other provisions. However, the Panel addresses the issue of primacy of SD below. The Panel concludes that while it has been worthwhile teasing this issue out and that as acknowledged by Ms Easton, there are aspects of the West Coast economy not currently addressed in the strategic directions, we have decided that an Economic Development SD should not be included in the TTPP. The Panel acknowledges there are inherent differences between the three key areas of Mineral Extraction, Agriculture and Tourism and there is a potential danger bringing those elements together under one SD might dilute of the overall intent.

53. In addition to the above, the Panel is conscious that while there might be a broad level of scope available to us, no submitters have specifically sought this particular outcome.

Other matters

54. The Panel notes that the issue of how '*energy activities and infrastructure*' aligns with '*critical infrastructure*' and '*strategically significant infrastructure*' is raised by several submitters. The Panel is mindful that the approach adopted needs to be consistent throughout the pTTPP. As set out in the Energy, Infrastructure and Transport Recommendation Report the definition of '*critical infrastructure*' has been recommended to be replaced with '*Regionally Significant Instructure'* which effectively mirrors the WCRPS. All recommendations in this

report adopt the recommendations on this issue set out in the Energy, Infrastructure and Transport Recommendation Report.

1.10. Primacy of the Strategic Directions

Submissions and Further Submissions

55. Four submission and six further submission points were received on the following statement (**"the primacy statement"**) included in the SD Overview and at the end of each set of SD:

> *For the purposes of preparing, changing, interpreting, and implementing Te Tai o Poutini Plan, all other objectives and policies in all other chapters of this Plan are to be read and achieved in a manner consistent with these Strategic Directions.*

56. All four submission points opposed the inclusion of the primacy statement and the Forest and Bird submission (S560.434) provided alternative wording. Five of the six further submission points sought that the primary submissions be rejected.

Section 42A Report

57. Ms Easton recommended rejecting the submissions seeking deletion of the primacy statement.

Hearing and Submitter Evidence

58. Forest and Bird considered that the primacy statement is particularly problematic because *'the strategic directions are worded more like policy direction, they set direction on implementation rather than outcomes and include directive terms that could create conflicts with achieving higher order documents'*[5]. Forest and Bird noted that while their approach to the primacy statement does not differ (i.e. to have it removed), its inclusion in other district plans (i.e. Selwyn and New Plymouth) is less concerning because those strategic objectives are less directive. They considered there was better wording that could be applied that came from Environment Court decisions and had been used in the notified proposed Napier District Plan which was similar to what they had sought through their submission on the pTTPP.

59. Mr Kennedy (for Westpower) supported the retention of the primacy statement (although his evidence addressed it as a matter relating to the first paragraph of the overview).

60. During the hearing the Panel questioned the parties as to whether there was any Environment Court authority addressing whether strategic objectives should be drafted to have primacy over other objectives in a district plan and sought feedback on that matter.

Responses and Reporting Officer Reply Evidence

61. Following the completion of the hearing, and in response to the Panels queries, correspondence was received from Forest and Bird[6] and Bathurst[7] commenting on the

[5] Forest and Bird Hearing Notes, page 2
[6] Memorandum dated 3 November
[7] Supplementary Legal Submissions on behalf of Bathurst Resources Limited and BT Mining Limited, 24 November 2023

appropriateness of the primacy statement with both citing *Darby Planning Ltd Partnership v QLDC*. The Bathurst response quoted that case as follows[8]:

> *This authority suggests that the standard approach to drafting does not include placing any primacy on strategic objectives. In the context of the QLDC PDP, the Court observed that it was a relatively standard approach for strategic objectives not to be treated in isolation or with primacy but rather that they be considered according to relevant groupings.*

62. Forest and Bird provided a useful analysis on the NPS (and status of SD), concluding that[9]:

> *x. There is nothing in RMA, ss 58B – 58J to suggest that the Standards supplant the Council's functions or obligation to construct its plan in accordance with ss 74, and 75. On the contrary, the purpose of the Standards is to assist with achieving the RMA's purpose and set out the requirements relating to structure, format or content. This means any provisions included in the Proposed Plan using the discretion under the Standards Chapter 7 cl 1. must accord with Part 2, s 31, s 74 and s 75.*
>
> *xi. There is nothing in RMA, s 75 or the Standards to suggest that there is a hierarchy amongst objectives that must or may be included in the proposed plan or that there is a requirement that they be assessed against each other. Standards, Chapter 7, cl 1(b) simply stipulates that objectives that address key strategic matters for the district and guide decision making at a strategic level, must be located under the strategic heading. The Standard does not require the inclusion of strategic objectives and does not suggest that they be any more than for the purpose of guiding decision making at a strategic level.*

63. Forest and Bird submitted that the Strategic Directions should not have primacy but should identify and address the district's key resource management issues.

64. Having considered the further information provided by Forest and Bird and counsel for Bathurst, in her response to Minute 16 (dated 5 April 2024), Ms Easton agreed that the primacy statement should be deleted.

65. Various parties (Bathurst, Ms Inta, and Westland District Council (**WDC**)) responded to Minute 22, with some concurring with Ms Easton's response, and others disagreeing.

66. Mr Kennedy disagreed with the recommendation and stated that[10] "*the paragraph does not seek that the strategic directions take precedence over all other matters but that, when undertaking planning activities, objectives and policies throughout the plan are implemented in accordance with, ie read and achieved in a manner consistent with ..., the strategic matters identified as key resource management issues for the region*".

67. Terra Firma said that[11] "*given the importance of the strategic objectives in achieving a vision for land use, it seems they should have a role somewhere between having primacy over, and being entirely equal to, other provisions*". They suggested that the primacy statement be

[8] *Darby Planning Limited Partnership v Queenstown Lakes District Council* [2019] NZEnvC 133 – specifically at [71], referring to an Environment Court Minute dated 22 February 2019 at [10]
[9] Response to Panel questions, 3 November 2023
[10] Further comment to s42a reporting officer's response in relation to Minute 16, dated 27 October 2023
[11] Feedback on Minute 22 Strategic Directions, dated 24 May 2024

amended to reflect the need to consider whether other provisions are consistent with Strategic Directions.

68. Poutini Ngāi Tahu agreed that the NPS do not require a hierarchy in the strategic directions chapter of a district plan and confirm the role of the chapter is for it to apply on a district wide basis and provide requirements as to what must be included in that chapter. Counsel for Poutini Ngāi Tahu noted, however, that Court's observations in *Darby* were given in the context of the Queenstown proposed District Plan itself, which was exempt from implementing the NPS at that time. It was submitted that[12]:

> *…the Darby decision is of no assistance to the Panel's recommendations on the proposed TTPP Strategic Directions chapter, and its relationship with the rest of the TTPP. Except perhaps for the helpful principle that it is well worth the TTPP being clear in how each of its various chapters relate to each other – so that there is no room for debate, or unnecessary uncertainty, in the current and future plan development, or plan implementation.*

69. Poutini Ngāi Tahu pointed out that the wording of the Overview section confirms there is no hierarchy between strategic objectives, and they consider that there is nothing in the overview text that suggests that there is a 'hierarchy' between the SD Chapter and the rest of the pTTPP. Poutini Ngāi Tahu did not agree with Ms Easton that the statement needs to be deleted. Nevertheless, they consider if there is uncertainty around this, then clarification that there is no 'hierarchy' between the strategic directions and other parts of the pTTPP would be supported.

70. Mr Boyd did not support the removal of the primacy statement, considering that[13] *'while it was not unreasonable to consider natural hazard (and other) sections in a complementary way it would be sensible for the Strategic Directions chapter to "set the scene" while the detail could be dealt with in the relevant sections'*.

Evaluation

71. Considering the evidence, the Panel accepts that the strategic directions should not have primacy over other objectives and policy. In other words, there should be no hierarchy. We are of the view that the current wording does leave it open to interpretation (and therefore uncertainty) that the strategic directions are given primacy in the TTPP, which is borne out to some extent by the differing views expressed by the various parties on the same wording.

72. The Panel considers it useful to clarify the situation to provide a greater level of certainty rather than to delete the relevant paragraph altogether. However, we do not consider it necessary to have clarifying wording applied after each suite of strategic directions, as is currently the case. Any clarifying wording, in our view, appropriately sits in the Overview section alongside the other guidance within that section.

73. In their submission, Forest and Bird provided alternative wording as follows:

> *For the purpose of District Plan development, including Plan changes, the strategic objectives in this chapter provide direction for the development of the more detailed provisions contained in the District Plan. For the purpose of District Plan implementation (including the determination of resource consent*

[12] Memorandum on behalf of Te Rūnanga O Ngāti Waewae, Te Rūnanga O Makaawhio And Te Rūnanga O Ngāi Tahu, dated 29 April 2024
[13] Comment on Minute 16 and 22, dated 24 May 2024

> *applications and notices of requirement): a) the strategic objectives may provide guidance on what the related objectives and policies in other chapters of the District Plan are seeking to achieve; and b) the relevant objectives and policies of the District Plan (including strategic objectives in this chapter) are to be considered together and no fixed hierarchy exists between them.*

74. While the Panel considers the above wording somewhat cumbersome, there are elements that we find would be useful in a revised version of the statement that help provide clarity of the issue. For these reasons, we recommended the following amended wording:

> *For the purposes of preparing, changing, interpreting, and implementing Te Tai o Poutini Plan,* ***the relevant objectives and policies of the District Plan (including strategic objectives in this chapter) are to be considered together and no hierarchy exists between them.*** ~~*all other objectives and policies in all other chapters of this Plan are to be read and achieved in a manner consistent with these Strategic Directions*~~

75. Furthermore, the primacy statement (as notified) be deleted from the end of each of the SD objectives, which addressed in each recommendation box below.

Recommendation

76. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends the that relevant submission points identified in the footnotes below are accepted in part and that changes are made to the Strategic Direction Overview as follows:

> *For the purposes of preparing, changing, interpreting, and implementing Te Tai o Poutini Plan,* ***the relevant objectives and policies of the District Plan (including strategic objectives in this chapter) are to be considered together and no hierarchy exists between them.*** ~~*all other objectives and policies in all other chapters of this Plan are to be read and achieved in a manner consistent with these Strategic Directions*~~[14]

1.11. Strategic Directions Overview

Submissions and Further Submissions

77. Eighteen submission points were received in support of the SD Overview; and 17 submission points and 16 further submissions were received seeking amendments to the SD Overview. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

78. Ms Easton recommended minor changes to the SD Overview in response to submissions, including changes to clause (2) (West Coast Penguin Trust (S275.008) and Suzanne Hills (S443.007)), clause (4) (Director General (S602.024)), clause (5) (Te Mana Ora (S190.003)), and removal of reference to '*zone and overlay objectives and policies*' and replacing it with '*other objectives and policies*' (noting that not all objectives and policies are tied to zones and overlays) (Forest and Bird (S560.085)).

[14] Royal Forest and Bird Protection Society of New Zealand Inc. (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

79. Ms Easton recommended that the Director General's submission (S602.023) to amend the Title Page be rejected as listing resource management issues is no longer a standard practice in second-generation plans.

80. Ms Easton recommended that submissions seeking reference to resource management issues (Director General (S602.023)), sustainable development (Inger Perkins (S462.003)) or the aggregate industry (Aggregate and Quarry Association (S521.015)) be rejected. Further, she recommended that the submission seeking to include reference to '*biodiversity and natural heritage*' (in lieu of '*natural environment*') (Director General (S602.023)) be rejected.

81. Ms Easton recommended rejecting submissions seeking to broaden or narrow the clauses within the Overview (Te Mana Ora (S190.004), Buller Conservation Group (S552.035), Frida Inta (S553.035) and Forest and Bird (S560.433)).

82. Ms Easton recommended that Westpower's (S547.046) amendments to clause (4) should be rejected as it considered this would dilute the RMA's purpose.

83. Ms Easton did not support the submission by Westpower (S547.045 and S547.047 and further submission by Transpower (FS110.008)) to include '*construction…and upgrade*' and '*energy activities and infrastructure*' in clause (6). Ms Easton considered '*operation and maintenance*' to be sufficient.

84. Finally, Ms Easton considered the additional clause sought by Development West Coast (S484.003) associated with enabling thriving communities through a resilient, sustainable and diverse economy and the use and development of resources was covered adequately in clauses (4) and (5).

Hearing and Submitter Evidence

85. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the Reporting Officer).

Heading

86. Ms Young (for the Director General) clarified that the Director General's submission merely seeks that the SD Title Page list the actual SD headings.

Paragraph 1

87. Forest and Bird noted that the Reporting Officer's recommendation to support the removal of '*zone or overlay*' (in front of objectives and policies) had not been picked up in the amendments set out in Appendix 1 to the s42A Report.

Clause (4)

88. Forest and Bird opposed the amendment to clause (4) (promoted by the Director General and supported by the Reporting Officer) to replace '*fostering*' with '*enabling*'. They noted: *While "enabling" may be clearer, as considered by the officer, its use in this context is not consistent with how it is used in s5 of the RMA. Section 5(2) refers to "'managing' use, development, and protection of natural and physical resources".* They considered that '*fostering*' should be retained and reference to '*protection*' should be included as a resource management outcome to foster. Forest and Bird had also sought several amendments to the clause.

89. Ms Inta, who had sought some changes to the clause, opposed the recommendation to reject the inclusion of '*including those*' (as recommended in her submission). She considered that *'without my amendment this clause could allow unfettered exploitation of any natural value not deemed significant within the district/ region'*. She also opposed the amendment from '*fostering*' to '*enabling*' on the grounds that '*foster*' in more neutral or objective than '*enable*'.

90. With respect to the wording '*protecting the natural values'*, Mr Kennedy (for Westpower) noted that *'in many instances the plan proposes a management rather than prohibition or absolute protection approach in all instances. I note that in at least the cases of s6(a), (b) and (f) such areas are to be protected from inappropriate use and development and not all development'.* Accordingly, Mr Kennedy supported a '*management*' rather than '*protection*' approach.

Clause (6)

91. Mr Kennedy considered that the clause (6) should be amended to refer to '*regionally significant infrastructure'* being a term used and defined in the WCRPS and suitably encompassing key infrastructure (including electricity generation and distribution infrastructure). He also considered that '*construction*' and '*upgrading*' should be added to the clause as the WCRPS[15] enables *'development, operation, maintenance, and upgrading'* of regionally and nationally significant infrastructure.

92. Ms Whitney, for Transpower, also considered that '*construction…and upgrading*' is a critical addition to the clause because these activities are distinct from '*operation and maintenance*' and the NPSET provides for '*construction…and upgrading'* (in respect of the National Grid).

New Clauses

93. Mr Kennedy reiterated support for a new clause (originally requested by Development West Coast), which states '*enabling thriving communities through a resilient, sustainable and diverse economy and the use and development of resources'*. He considered that clause (4) and (5) do not provide sufficient coverage of the issue raised and that the clause better reflects the WCRPS[16].

Responses and Reporting Officer Reply Evidence

94. The amendments proposed by the Director General to the Title Page were further clarified in a post hearing response from the Director General's counsel[17].

Evaluation

95. For improved clarity and consistency, the Panel agrees with the Director General that the Title Page should be amended to list the actual SD headings (both English and Te Reo Māori). The amendment includes the updated heading because of other recommendations further below. We also agree that the reference to '*zone or overlay*' should be deleted and replaced with '*other*' in the opening paragraph of the SD Overview given that there are district wide matters that are neither overlay nor zone.

[15] Chapter 6, Objective 1
[16] Chapter 4, Objective 1
[17] Response to questions from the Panel, dated 10 November 2023

96. The Panel agrees with Ms Easton's recommended amendment to clause (2) to include *'enhancing'* environmental quality.

97. The Panel agrees with the amendments to clause (4) to replace '*fostering*' with '*enabling*' and introducing '*cultural and heritage*' as part of the values. In terms of the former, while we acknowledge the concerns expressed by submitters regarding the word '*enabling*', we consider it better understood in resource management terms than '*fostering*' and note that it is being used in conjunction with 'whilst protecting' in this context. Finally, on this clause, we agree with Ms Easton that the word '*protecting*', rather than 'management' as sought by Mr Kennedy, is more appropriate in the context of this clause given the reference to matters of national importance in the RMA.

98. Regarding clause (5), the Panel agrees with submitters and Ms Easton that introducing a '*sustainable economy*' is appropriate and counterbalances the '*prosperous economy*' component of the clause. In terms of Ms Easton's introducing '*including agriculture*', we are concerned that this might be seen as picking a winner by singling one industry out. However, on review of the submission in detail and the relief sought, Te Mana Ora (S190.003) are requesting the inclusion of Agriculture in the SD cover page, as they refer to it not included under a heading rather than in clause (5). This is similar to the submission sought by the Director General above. For these reasons, we do not recommend the inclusion of '*including agriculture*' in clause (5) but accept that it should be included on the Strategic Directions cover page.

99. Regarding all other submissions, the Panel agree with Ms Easton's conclusions on each submission and further submission point.

100. There are three consequential amendments to the SD Overview that arise because of other recommendations. The first relates to the reference in clause (6) to '*critical infrastructure*' which because of recommendations in the Energy, Infrastructure and Transport Chapters has been replaced with '*regionally significant infrastructure'*.

101. The second comes because of our recommendations in section 1.13 below, where the Panel considers an additional clause on climate change and natural hazards is appropriate as a consequence in the overview wording. This is appropriate to give effect to s7(h) and s7(i) RMA matters and set strategic direction for two important resource management matters in the Plan.

102. The third amendment stems from the recommendation below to introduce policies into SD other than those within the Poutini Ngāi Tahu section and as a result, the following amendments is recommended to the Strategic Directions Overview:

> There is no hierarchy between the stated Objectives, i.e., no one Strategic Objective has primacy over another, and the Strategic Objectives should be read as a whole. ~~It should be noted that with the exception of the Poutini Ngāi Tahu strategic directions, these are objectives only. In the case of Poutini Ngāi Tahu, there are also strategic policies that sit across the Plan~~.

103. Finally, the Panel note that because of our recommendation above regarding the removal of the wording which purportedly gave primacy to strategic objectives, we have included that amendment within the recommendation below for consistency.

Recommendations

104. For the reasons outlined above, the Panel recommends that the relevant submission identified in the footnote below is accepted and that changes are made to amend and reorder the Strategic Directions Title Page to list the actual SD headings and their Māori names as follows:

> **Strategic Direction – Te Pae Tawhiti**
>
> This section of the plan will outline the significant resource management issues for the three districts. It will set the strategic direction for the plan in relation to:
>
> Climate Change **and Resilience**
>
> Mineral Extraction **- Te Tango Kohuke**
>
> ~~Biodiversity and natural heritage management~~ **Natural Environment - Te Taiao**
>
> ~~Natural hazards~~
>
> **Poutini Ngāi Tahu**
>
> **Land Based Primary Production - Te Whakanao Mātāmua i te Whenua**
>
> Tourism **- Te Tāpoi**
>
> Urban form and development **- Te āhua me te whanaketanga o te tāone**[18]

105. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submissions identified in the footnotes below are accepted or accepted in part and that changes are made to the Strategic Direction Overview as follows:

> **Strategic Direction Overview**
>
> **Te Tirohanga Whānui ki ngā Ahunga Rautaki**
>
> This chapter sets out the overarching direction for Te Tai o Poutini Plan as expressed through Strategic Directions. Strategic Objectives and Policies form an important part of the resource consent framework and should be considered alongside the relevant ~~zone or overlay~~ **other**[19] objectives and policies when assessing resource consents.
>
> These directions reflect those factors which are considered to be key to achieving the overall vision for the pattern and integration of land use within the Westland, Grey and Buller Districts.
>
> The Strategic Directions are intended to demonstrate:
>
> 1. Commitment to, and articulation of the Councils' partnership with Poutini Ngāi Tahu;
> 2. Alignment with the communities' aspirations for development while maintaining **and enhancing**[20] environmental quality across the West Coast/Te Tai o Poutini;

[18] Director General of Conservation (S602.023)
[19] Forest and Bird (S560.085)
[20] West Coast Penguin Trust (S275.008) and Suzanne Hills (S5443.007)

3. Integrated management through the grouping of environmental considerations which combine to achieve strategic outcomes; and avoiding strategic objectives becoming isolated within various chapters of Te Tai o Poutini Plan;
4. ~~Fostering~~ **Enabling**[21] the use and development of natural and physical resources whilst protecting the natural**, cultural and heritage**[22] values that have been elevated to matters of national importance by the Resource Management Act 1991 and those matters of national and regional significance by National and Regional Policy Statements;
5. A prosperous**, and sustainable**[23] economy through enabling a wide range of appropriate business activities.
6. Operation and maintenance of ~~critical infrastructure~~ **regionally significant infrastructure**[24];
7. The management of urban growth integrating existing and future infrastructure, providing sufficient land, or opportunity to meet growth demands for housing and business.

8. Resilience to climate change and natural hazards.[25]

For the purposes of preparing, changing, interpreting, and implementing Te Tai o Poutini Plan, **the relevant objectives and policies of the District Plan (including strategic objectives and policies in this chapter) are to be considered together and no hierarchy exists between them.** ~~all other objectives and policies in all other chapters of this Plan are to be read and achieved in a manner consistent with these Strategic Directions~~[26]

For the avoidance of doubt, for resource consent applications, the Strategic Objectives **and Policies** may require specific consideration and application to proposals, as a relevant consideration under section 104(1)(b)(vi) of the RMA.

There is no hierarchy between the stated Objectives i.e., no one Strategic Objective has primacy over another Strategic Objective and the Strategic Objectives should be read as a whole. ~~It should be noted that with the exception of the Poutini Ngāi Tahu strategic directions, these are objectives only. In the case of Poutini Ngāi Tahu there are also strategic policies that sit across the Plan.~~[27]

Activity and location specific objectives and policies are located in the relevant chapter of Te Tai o Poutini Plan. The planning standards require that 'like' matters are grouped together in a chapter with the relevant objectives.

1.12. Agriculture – Te Ahuwhenua

Submissions and Further Submissions

106. Six submission points were received in support of the Agriculture SD (as a whole), while two were received seeking amendments to the Agriculture SD.

[21] Director General (S602.024)
[22] Director General (S602.024)
[23] West Coast Penguin Trust (S275.008)
[24] Consequential plan wide amendment
[25] Consequential amendment from Director General (S602.025)
[26] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)
[27] Consequential amendment, Clause 16

107. Five submissions were received in support of the AG-O1 and four submission points were sought amendments to the AG-O1.

108. Seven submission points were received in support of the AG-O2and four submission points were received seeking amendments to the AG-O2.

109. The Panel adopts the summary of the submission points and further submission points provided in the s42A Report.

Section 42A Report

110. Ms Easton recommended that no changes be made to the AG SD and that submissions seeking amendments be rejected for the following reasons:

- the application of agrichemicals relates to Regional Council functions (Buller Conservation Group (S552.036) and Frida Inta (S553.036));
- they shift the focus of AG-O1 away from the productive value of soil (WMS (S599.017), Federated Farmers (S524.028) and HortNZ (S486.008));
- there is sufficient coverage of sustainable use of soil in AG-O1 (Craig Schwitzer (S96));
- the focus of the chapter is agriculture (Westpower (S547.048));
- the enabling nature of AG-O2 appropriately reflects the community aspirations (Forest and Bird (S560.087)); and
- separating AG-O2 into two objectives is unnecessary (HortNZ (S486.009) and Federated Farmers (S524.028)).

Hearing and Submitter Evidence

111. Ms Inta considered that the RMA directs that district councils do have a function with respect to the application of agrichemicals as directed by s31(1)(b)(e): *the control of any actual or potential effects of activities in relation to the surface of water in rivers and lakes,* and more generally as directed by s31(1)(a) and (b).

112. Ms Levenson (for HortNZ) stated that that primary objective of HortNZ's submission is to ensure that the NPSHPL is given effect to (to preserve the West Coast's limited highly productive land, specifically areas near Westport, Karamea, Little Wanganui, and in the Grey Valley). To this end, Ms Levenson supports reference to '*highly productive land*' rather than *'versatile soils'* in AG-O1. This amendment was supported in written evidence from the WCRC.

113. Mr Kennedy acknowledged the position of the Reporting Officer to recommend that reference to '*energy activities and infrastructure'* be rejected in AG-O2 provided that suitable provision is made for these activities in other SD.

114. Forest and Bird considered that '*support industries and services*' should not be enabled (in AG-O2) as *'the environmental effects are vague, they should not be enabled carte-blanche'*.

Responses and Reporting Officer Reply Evidence

115. In her Right of Reply (10 November 2023), Ms Easton noted that:

> *Economic development strategies on the West Coast have had a longstanding emphasis on supporting mining, tourism and agriculture as the backbone*

industries for the West Coast economy. …In all three Districts agriculture is the single largest land use – mainly dairy farming'. Ms Easton went on to confirm that the AG SD were informed by:

- *AG – O1 was pulled over from the Operative Westland District Plan and applied across the Region.*
- *Ke Whanaketanga Tai Poutini West Coast Strategy – Mission Two*
- *WCRPS – Resilient and Sustainable Communities Policy 1*

Evaluation

116. The Panel agrees with Ms Levenson and WCRC that AG O1 should refer to '*Highly Productive Land*', as is defined in the Panel's Recommendation Report on the Rural Zones Chapter, rather than versatile soils, noting that this reflects and gives effect to the higher order NPSHPL.

117. In terms of AG O2, the Panel agrees with HortNZ that the term '*agriculture*' is somewhat limiting and that it would be more appropriate to refer to '*land based primary production activities*' to ensure activities such as horticulture are included. For the reasons detailed below, we consider the term '*land based primary production*' more appropriate terminology for this section of SD and have made a number of amendments to reflect this.

118. The Panel has also considered whether AG-O2 should be split in two separate objectives as sought by HortNZ and Federated Farmers. We agree with the submitters that the objective as currently worded appears to be focussed on two different components of the rural (agriculture) sector. We agree with Federated Farmers that the overarching recognition should stand alone as an objective, rather than be included with support industries. We also consider that rural industries are a distinct activity within rural areas. As a consequence, we recommend Objective AG-02 is split into two separate objectives.

119. Finally, because of the Panel recommendation in the Rural chapter to include a definition of Land Based Primary Production in the TTPP in line with the NPS-HPL, which incorporates agriculture alongside pastoral, horticultural and forestry activities, the Panel considers a number of consequential amendments are required to the Agriculture SD to reflect this situation. This includes renaming this section '*Land Based Primary Production*' and revising wording within the section to reflect this, noting that our recommendation on the HortNZ submission above partially achieves this in any event.

Recommendation

120. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submissions identified in the footnotes below are accepted or accepted in part and that changes are made to the Agriculture SD as follows:

~~AG Agriculture – Te Ahuwhenua~~ LBPP –Land Based Primary Production - Te Whakanao Mātāmua i te Whenua[28]

This Chapter sets out the overarching direction for matters relating to ~~agriculture~~ **land based primary production**[24] across the West Coast/Te Tai o Poutini.

[28] Consequential amendments as a result of definition on Land Based Primary Production, which includes agriculture, being recommended to be included in the TTPP

~~Agriculture~~**Land Based Primary Production** Strategic Objectives

~~AG~~**LBPP** - O1

To maintain the productive value of ~~versatile soils~~ **highly productive land** ~~and agricultural land~~[29] for current and future agricultural, **pastoral**[30] and horticultural uses.

~~AG~~**LBPP** - O2

To recognise the significance of agriculture to the West Coast economy~~,~~ and provide for ~~agricultural~~ **land based primary production,**[31] development and innovation.~~ and~~

LBPP – O3

Enable support industries and services needed to maintain land based primary productions viability within rural areas.[32]

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[33]

1.13. Connections and Resilience – Ngā Hononga me te Manawa Titi

121. Based on the submissions received, the Panel has resolved that the issue of connections and resilience extends to consideration of natural hazards and climate change. Therefore, this section considers submissions and evidence relating to requests for SD relating to natural hazards and climate change.

Submissions and Further Submissions

122. Two submission points were received seeking amendments to the introduction of the Connections and Resilience SD.

123. Five submission points were received in support of the Connections and Resilience SD (as a whole).

124. Seven submission points were received in support of CR-O1, and one submission point was received seeking amendments to CR-O1.

125. Twelve submission points were received in support of CR-O2, and three submissions points were received seeking amendments to CR-O2.

126. Seven submission points were received in support of CR-O3, and three submission points were received seeking amendments to CR-O3.

127. Nine submission points were received in support of CR-O4, and one submission was received seeking amendments to CR-O4 and one submission sought to delete it entirely.

[29] HortNZ (S486.008)
[30] Consequential amendment resulting from definition of Land Based Primary Production.
[31] HortNZ (S486.009)
[32] Federated Farmers (S524.028) and HortNZ (S486.009)
[33] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

128. Thirteen submission points seeking new CR provisions (which were largely opposed by further submissions).

129. Seventeen submission points and 11 further submission points sought the inclusion of specific natural hazard and / or climate change SD. These include submissions that have been allocated to other SD provisions but are in essence seeking recognition of natural hazards and / or climate change.

130. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

131. A number of submissions (Director General of Conservation (S602.025 and S602.026), Westpower (S547.049, S547.055, S547.056, S547.057 and S547.058) and Manawa Energy (S438.025 and S438.0256)) sought amendments to how the Chapter refers to '*infrastructure*', including seeking reference to '*critical infrastructure'*, '*regionally significant infrastructure'* and *'energy activities and infrastructure'*, as well as deleting reference to '*infrastructure*' to broaden the scope of the Chapter to make it more generic to all development. Ms Easton has generally recommended that all these submissions be rejected, except the submission to amend CR-O1 to include '*critical infrastructure'*. Ms Easton noted that the '*Critical Infrastructure*' definition includes defence facilities, which are not included in the definition of 'infrastructure', but are critical infrastructure in the face of disaster.

132. Ms Easton recommended that submissions by Poutini Ngāi Tahu (S620.061) and NZTA Waka Kotahi (S450.015) be accepted to amend CR-O2 and CR-O3 respectively, to refer to the locational, functional and operational requirements of infrastructure. Ms Easton considered that the influence of natural hazards and climate change on the location of infrastructure is a relevant consideration.

133. Ms Easton recommended that Forest and Bird's submission (S560.089) seeking the deletion of CR-O4 be rejected. She considered that, given the West Coast's vulnerability to natural hazard events and climate change, the backup and self-sufficiency of critical infrastructure is a key issue.

134. Ms Easton recommended that all submissions seeking new Climate Change provisions be rejected. She considered that the existing provisions provided sufficient coverage of the National Grid and transport infrastructure (Transpower (S299.021), Birchfield (S601.014, S601.024), Rocky Mining (S474.028), Papahaua (S500.017), TiGa (S493.015) and WMS (S599.004)); and that additional objectives 'cherry picking' WCRPS provisions are not necessary or appropriate Westpower (S547.050 and S547.051). Lastly, Ms Easton considered that the submissions by Buller Conservation Group (S552.037) and Frida Inta (S553.037) are best addressed by a suite of climate change SD.

135. Ms Easton considered that EQC submission S612.005 had merit, but natural hazards are best addressed elsewhere in the SD (rather than the Tourism SD). Ms Easton recommended that EQC submission S612.006 be rejected as avoiding high hazard areas on the West Coast is unlikely (this submission was made on the UFD SD).

136. In paragraphs 288 – 298 of the s42A report, Ms Easton acknowledged that the notified CR SD do not provide sufficient coverage of climate change, emissions reductions and natural

hazard adaptation. In response to submissions[34], Ms Easton recommended that Climate Change SD are included in the pTTPP, as follows:

CC – O1: To enable communities of Te Tai o Poutini/the West Coast to build resilience to and adapt to the effects of climate change.

CC – O2: To support communities to make good decisions around climate change exacerbated hazards and managed retreat to safer areas of lower risk.

CC – O3: To support technologies and activities that enable greenhouse gas emissions reductions and the transition to a low carbon emissions economy, while ensuring their adverse effects are well managed.

Hearing and Submitter Evidence

137. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the Reporting Officer).

138. For Westpower, Mr Kennedy reiterated the concerns around the definitions and use of '*infrastructure', 'critical infrastructure'* and '*regionally significant infrastructure'* and that, if the definitions were aligned to the WCRPS, then much of the ambiguity would be resolved. Mr Kennedy supported the introduction of three new strategic policies to the CR SD to recognise the locational, functional and operational requirements of energy infrastructure and activities, the need to offset or compensate for adverse effects caused by energy infrastructure and activities and to provide for energy infrastructure and activities in areas of significance. He considered that using policies is an appropriate way to achieve the strategic objectives.

139. For Manawa, Ms Styles raised concerns with the use of '*critical infrastructure'* in lieu of '*regionally significant infrastructure'*. She considered there is no need to use '*critical infrastructure*' when *'regionally significant infrastructure'* is appropriate and aligns with regional and national policy. Concerning CR-O3, Ms Styles also considered that the functional and operational need to locate in particular locations needed to be explicitly provided for, but she did not support the use of '*ensure*' or '*hazardscape'* and she agreed that using '*locational need*' was unnecessary.

140. Ms Whitney, for Transpower, considered that an additional objective specifically recognising the National Grid is appropriate and is supported by the direction of the NPSET and WCRPS.

141. Ms McKenzie, for Birchfield *et al*., noted that the definition of '*critical infrastructure'* currently does not include ports (despite the WCRPS including ports as regionally significant infrastructure). She considered that if the definition is not amended to include ports, then CR-O2 should be amended to include ports. Ms McKenzie also considered that a new CR objective is required to recognise the importance of the strategic road network within the region.

142. Ms Frida Inta considered that recognition of the role that intact ecosystems play in supporting resilience is needed through a new objective.

[34] Inger Perkins (S462.001, S462.002, S462.005, S462.018), Lynley Hargreaves (S481.003), Jane Neale (S262.003, S262.005), Clare Backes (S444.017), Suzanne Hills (S443.002, S443.006, S443.054), Terry Sumner (S269.001), Michael Hill (S70.020), West Coast Penguin Trust (S275.013), Forest and Bird (S560.003), Frida Inta (S4553.037) and Bullller Conservation Group (S552.037), Te Tumu Paeroa (S440.005)

143. Ms Inger Perkins (for WCPT) requested an additional climate change objective, specifically: *To achieve a transition to a low carbon emissions economy aligned with national Emissions Reduction Plans by enabling and supporting emissions reductions through existing activities and new technologies and activities.* She considered that the overall approach to climate change needed to be much stronger.

144. Forest and Bird submitted that a clear SD is needed to respond to the National Emissions Reduction Plan and National Adaptation Plan and recognise the role that nature-based solutions play in climate change response. They noted that threatened and at-risk native species are supported by provisioning inland migration and habitat requirements, as part of any climate response. Specific wording for both issues was proposed.

145. Mr Boyd considered there should be reference to Natural hazards within SD, while Ms Hill considered reference could be made to the National Adaption Plan.

Responses and Reporting Officer Reply Evidence

146. The DOC November letter was provided following the hearing. It provided insight on whether the Panel should have regard to the National Adaptation Plan and DOC's Adaptation Plan, whether there are gaps in the WCRPS in relation to natural hazards and climate change, and what options open to the Panel's if they consider there is conflict between the WCRPS and National Direction or the RMA. The letter concluded that the Panel was required to have regard to the National Adaptation Plan (and Emissions Reduction Plan) pursuant to s74(2)(e) of the RMA (and s5ZI of the Climate Change Response Act 2002); also, that it was the Director General's position that the WCRPS is inconsistent with the RMA; and lastly that recourse to higher order documents is provided for in case law and is open to the Panel if they determine that the WCRPS provides insufficient coverage of natural hazards and climate change and seek guidance from national policy and / or the RMA accordingly.

147. In reply, Ms Easton confirmed that the submissions on the pTTPP provided sufficient scope to include SD for natural hazards and climate change. While she considered both would be useful, in terms of the issue of natural hazards she said this could be addressed through that topic chapter. In terms of climate change, Ms Easton considered that to minimise duplication with the Connections and Resilience SD that climate change provisions be combined with this.

148. Ms Easton also noted that if a specific amendment is needed to address emissions reductions, consequential changes will likely be needed to the Energy, Mineral Extraction, and Transport Chapters (which there is some scope for). Lastly, Ms Easton advised that national and regional planning is in progress to address natural hazards and that there may be merit in waiting to respond to this direction.

149. In her review paper, Ms Easton provided a revised set of SD, '*Climate Change and Resilience*' (replacing '*Connections and Resilience'*), which included two objectives and six policies.

Responses to Minute 22

150. In their response to Minute 22, WDC advised:

- *Agree that a climate change consideration should be included within the connections and resilience objectives.*
- *Agree that Natural Hazards should be included in the strategic direction chapter to provide overarching objectives in regard to managing existing development and the*

location and appropriateness of new development within areas of know natural hazards.

- *Disagree that managed retreat should not be a consideration for this updated section. Although managed retreat should sit with Regional Council, it is referred to in various objectives and policies within the plan, including the NH chapter and the FUZ chapter. Therefore, we view it should be acknowledged within the strategic direction chapter to achieve cohesion in provisions and existing plan intentions.*
- *Agree that the inclusion of natural hazards should be informed by the Regional and National level planning instruments, inclusive of the draft NPS-NH.*
- *…*
- *… We would recommend the inclusion of natural hazards within the Strategic Direction chapter to provide a high-level overview which summarises the direction the plan intends to take with its later NH chapter and associated provision.*

151. Mr Boyd considered that *'it would be appropriate to wait for this* [the NPS on Natural Hazards] *and other information before progressing any Natural Hazard matters, including coastal natural hazards'.* Mr Kennedy for Westpower had similar concerns.

152. Ms Inta concurred with including climate change and natural hazards.

153. Transpower also supported the revised provisions; however, it sought recognition within proposed Policy CCR-P6 of the associated electricity transmission needed to support the development and expansion of renewable electricity generation (**REG**). It also continued to support the provision of a specific National Grid strategic objective, as sought in its submission.

Evaluation

154. The Panel records that some evidence from submitters was outside of the scope of their submission. While we acknowledge the evidence received, we do not consider that there is scope for us to consider such evidence, and we have disregarded the points.

155. The Panel has looked closely at the matters raised through a range of submissions, including those identified as seeking changes to the Strategic Objectives as a whole. In short, we agree with submitters that climate change and natural hazards should form a stronger part of the framework of these provisions, as in many respects, they are at the core of the reason for having such provisions with SD. We also consider some of the objectives are currently framed as policies rather than objectives. We agree that there is a wide range of scope within the submissions to address these particular matters, as noted by Ms Easton in her 10 November reply.

156. The Panel have considered the revised set of provisions (and objective and policy framework) drafted by Ms Easton and we consider overall they better address the broad issue of natural hazards, the factors which influence that and how multiple forms of resilience might be enabled. We also consider that the revised provisions align with the National Adaptation Plan, as sought by the Director General, Forest and Bird and the WCPT, and overall, better reflect the requirements of Part 2 of the RMA. The Panel records it has also considered the Emissions Reduction Plan, and the changes made to that Plan in December 2024.

157. While the Panel acknowledge Mr Boyd's comments about awaiting an NPS on Natural Hazards, such a document has not yet been gazetted, and we consider it necessary at this

point to consider Natural Hazards within the context of the current legislative environment and national guidance.

158. Turning to more specific issues, the Panel notes, as already referred to, that references to '*critical infrastructure*' are recommended to be replaced with '*regionally significant infrastructure*' as a result of the Panel's Recommendation Report on the Energy, Infrastructure and Transport Chapters. The Panel considers this change addresses matters raised, in particular by Westpower, Manawa, and Birchfield et al. We also agree that within proposed Policy CCR-P2 it is appropriate for '*functional or operational need*' to be used in the context of RSI.

159. In terms of proposed Policy CCR-P4, the Panel notes that the WCRC suggest that reference to managed retreat is inconsistent with a statement by the Reporting Officer that this matter is largely dealt with outside the plan, and that this should be clarified. We note that the National Adaption Plan (2022), which Ms Hill referred us to, refers to passing legislation to support managed retreat as one of its nine critical actions to support councils, communities, businesses and individuals to consider adaptation options available for their area; and acknowledge that a NPS on National Hazards may eventuate at some point.

160. In addition to the above, the Panel consider the Policy CCR-P4 would give effect to the natural hazard provisions in Chapter 11 of the WCRPS, particularly Policy 4. In our view, elements of issues relating to relocation will inevitably involve aspects of land use planning associated with the districts rather than the region. For that reason, we consider reference to managed retreat in proposed Policy CCR-P4 is appropriate. We also note that WDC supports reference to managed retreat in the policy at the strategic directions level, given that it is referred to elsewhere in the Plan.

161. Notwithstanding the above, the Panel considers the reference to *'zoning*' in proposed Policy CCR-P4 is inappropriate and recommend deleting that wording.

162. Regarding proposed Policy CCR-P6, the Panel accepts Transpower's comments regarding the need to recognise the associated electricity transmission with renewable electricity generation and has recommended the inclusion of '*associated infrastructure'* in the policy.

163. In terms of a specific National Grid strategic objective, the Panel agrees with Ms Easton's conclusions in her s42 Report, that the National Grid is specifically included in the definition of '*Regionally Significant Infrastructure*' which is referred to in the revised provisions and that there is a specific Energy Chapter which a strong focus on supporting this activity. Similarly, in relation the submissions seeking reference to land transport infrastructure, we note that the state highway and special purpose road networks are included within the definition of '*Regionally Significant Infrastructure'*. We therefore agree with Ms Easton that land transport infrastructure is sufficiently cover in the proposed provisions and within the Transport Chapter itself.

164. Finally, the Panel agrees with Buller Conservation Group and Frida Inta that there is a gap in recognising the role of the natural environment and nature-based solutions in providing resilience to climate change in this particular SD topic. The Panel does not agree it is necessary to refer to ecosystem services and climate stability. The Panel recommends this can be simplified by introducing a new objective as shown below and consider this gives effect to higher order documents including the NZCPS and NPSIB and has regard to the National Adaption Plan.

165. The Panel agrees that Westpower's additional provisions, which effectively paraphrase policies from the WCRPS, are unnecessary.

166. Due to the significance of the changes proposed and the fact that they did not all evolve directly from the s42A Report, the Panel has considered the amendments below in terms of section 32AA of the RMA. (We note that Ms Easton has already addressed the issue of climate change within the provisions in this regard.)

167. We consider the change to an objective and policy framework will improve the effectiveness of the plan by aiding plan interpretation and administration. The benefits of the change are improved direction and ease of interpretation, and there are no costs. The risk of not acting is that there would be misalignment of provisions and a lack of clarity. There are no risks from acting. The Panel is satisfied the policies as recommended are the most appropriate way to achieve the objectives.

Recommendation

168. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that relevant submissions identified in the footnotes below are accepted in part and that changes are made to the Connections and Resilience SD as follows:

Note – several of the provisions proposed below incorporate significant elements of the original provisions and those on climate change proposed by Ms Easton, however, for ease of reading the original provisions are with ~~strikethrough~~ and the revised/new provisions are in **bold and underlined**

~~CR Connections and Resilience - Ngā Hononga me te Manawa Titi~~

~~This Chapter sets out the overarching direction for matters relating to infrastructure connections and resilience across the West Coast/Tai o Poutini.~~

~~Connections and Resilience Strategic Objectives~~

~~CR - O1 To build greater resilience in West Coast/Te Tai o Poutini communities and infrastructure, recognising the effects of climate change and the need to adapt to the changes associated with those effects.~~

~~CR - O2 To enable and protect the continued function and resilience of critical infrastructure and connections and facilitate their quick recovery from adverse events.~~

~~CR - O3 To ensure that new locations for critical infrastructure and connections take account of the hazardscape and are built away from natural hazards.~~

~~CR – O4 To enable the development of greater infrastructure self – sufficiency and backup of critical infrastructure on the West Coast / Te Tai o Poutini.~~

CCR Climate Change and Resilience – Te Āhuarangi Hurihuri me Te Manawaroa

This Chapter sets out the overarching direction for matters relating to climate change and resilience across the West Coast/Te Tai o Poutini.

Climate Change and Resilience Strategic Objectives

CCR – O1 There is resilience to natural hazards and adverse events in the West Coast/Te Tai o Poutini communities and infrastructure, which supports adaptation to the effects of climate change.

CCR – O2 Greenhouse gas emissions are reduced and opportunities to transition to a low carbon emission economy are provided, including as a result of new technology.

Climate Change and Resilience Strategic Policies

CCR - P1 Enable the continued functioning of regionally significant infrastructure and connections and facilitate their quick recovery from the adverse effects of natural hazard events, which may include relocation.

CCR – P2 Ensure that new locations for regionally significant infrastructure and connections are built away from natural hazards, unless there is a functional need or operational need to be in that location.

CCR – P3 Enable the development of greater infrastructure self-sufficiency and backup of regionally significant infrastructure on the West Coast/Te Tai o Poutini.

CCR – P4 Support communities to make good decisions around climate change exacerbated hazards by identifying and providing for relocation to safer locations.

CCR – P5 Support, at a local level, reduction in emissions of greenhouse gases, including through providing for low carbon transport options such as walking, cycling and electric vehicles.

CCR – P6 Provide for the development and expansion of renewable electricity generation and associated infrastructure at a range of scales across Te Tai o Poutini/the West Coast, to support emissions reductions and a low carbon future.[35]

CCR – P7 Recognise the role of the natural environment and nature-based solutions in resilience to climate change.[36]

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[37]

1.14. Mineral Extraction – Te Tango Kohuke

Submissions and Further Submissions

[35] Manawa (S438.025 & S438.026), Westpower (S547.055, S547.056, S547.057 & S547.058), Ngāi Tahu (S620.061), Waka Kotahi (S450.015), Director General of Conservation (S602.026), West Coast Penguin Trust (S275.013), Inger Perkins (S462.001, S462.002, S462.005, S462.018), Lynley Hargreaves (S481.003), Jane Neale (S262.003, S262.005), Clare Backes (S444.017), Suzanne Hills (S443.002, S443.006, S443.014, S443.054), Terry Sumner (S269.001), Michael Hill (S70.020), Forest and Bird (S560.003), Te Tumu Paeroa (S440.005) and Development West Coast (S484.004)

[36] Frida Inta (S553.037) and Buller Conservation Group (S552.037)

[37] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

169. Eleven submission points and one further submission point were received in support of the Mineral Extraction SD (as a whole). One further submission point was received in opposition.

170. Twelve submission points were received in support of the MIN-O1, two in opposition (including one seeking deletion), and one submission point sought an amendment to the Objective. Six further submissions were received.

171. Fourteen submission points were received in support of MIN-O2, two in opposition (including one seeking deletion), and two submission points were received seeking amendments to the Objective. Seven further submission points were received.

172. Twelve submission points were received in support of the MIN-O3, and four were received seeking amendments.

173. Four submission points were received in support of MIN-O4, two in opposition, and 10 sought amendments. Nine further submission points were received.

174. Five submission points were received in support of the MIN-O5.

175. Eleven submission points were received in support of the MIN-O6, two in opposition, and 16 sought amendments. Five further submission points were received.

176. Two submission points were received seeking new MIN objectives. One submission point sought the deletion of any reference to further coal extraction.

177. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

178. In relation to MIN-O1, Ms Easton considered that the purpose of the Objective is appropriate (noting the submissions in support and the community in general for the mining sector), but that an amendment to specify that effects should be avoided, remedied or mitigated was appropriate (Te Mana Ora (S190.011)). Ms Easton considered it appropriate that the Objective makes reference to minimising consenting complexity and recommended that Suzanne Hills' submission (S443.009) be rejected.

179. Ms Easton recommended that the amendment to MIN-O2 suggested by the Director General (S602.027) to acknowledge the need to manage effects be accepted. She considered that this amendment would also address other submissions (NZTA Waka Kotahi (S450.018), Suzanne Hills (S443.010) and Forest and Bird (S560.092)). Ms Easton acknowledged that the substantive decision on the appropriateness of combining the Buller Coalfield Zone (**BCZ**) and Mineral Extraction Zone (**MINZ**) is considered as part of the Mineral Extraction Chapter, but that any consequential changes can be made to the MIN SD should a change occur.

180. Ms Easton recommended that submissions on MIN-O3 seeking recognition of the social and economic benefits of mining (Forest and Bird (S560.093)) and the effects management hierarchy (Karen Lippiatt (S439.005), Terra Firma Mining Limited (S537.005), Forest and Bird (S560.093)) be accepted. She did not support amendments seeking to avoid competing land uses (Aggregate and Quarry Association (S521.016)), to acknowledge unique geology and indigenous biodiversity (Karen Lippiatt (S439.005)) or to require public notification (Karen Lippiatt (S439.005)).

181. With respect to MIN-O4, Ms Easton did not consider that amendments were needed and recommended that all the submissions be rejected (Celine Stokowski and Anthony Thrupp (S522.001), Clare Backes (S444.016), WMS Group (S599.024), TiGa (S493.020), Birchfield (S601.019), BRM (S603.016), Birchfield (S604.016), Phoenix (S606.016), Whyte Gold (S607.016), Terra Firma (S537.006), Forest and Bird (S560.094) and Waka Kotahi (S450.020)). Specifically, Ms Easton considered that references to '*reverse sensitivity*' and '*existing*' should be retained.

182. In recognition of the five supporting submissions (and none opposing), Ms Easton recommended that MIN-O5 be retained as notified.

183. Submissions on MIN-O6 are, are related to the effects of management hierarchy and, more specifically, the role of offsetting and compensation. Ms Easton recommended that amendments to the Objective are appropriate to acknowledge critical infrastructure (Waka Kotahi (S450.021)); correctly reference significant habitats and cultural values (Poutini Ngāi Tahu (S620.063)); and the use of the offsetting and compensation to address residual effects (Bathurst (S491.008), Buller Conservation Group (S552.039), Frida Inta (S552.039), Te Mana Ora (S190.016), Director General (S602.028), Karen Lippiatt (S439.004) and WCPT (S275.010)).

184. Ms Easton considered that submissions seeking additional new objectives or clarification are not warranted as the proposed package of SD sufficiently covers the issues relating to Mineral Extraction. She therefore recommended that these submissions be rejected (Suzanne Hills (S443.005), Terra Firma (S537.008), Straterra (S536.002) and Inger Perkins (S462.024)).

Hearing and Submitter Evidence

185. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the Reporting Officer).

186. Ms Booker (for Birchfield *et. al*.) provided legal submissions covering a range of matters including the relevance of the NBEA (now repealed); the direction provided by the NPS; the relevant RMA statutory tests for a district plan change; the hierarchy of planning documents (noting that the pTTPP must give effect to the NZCPS, NPSFM, NPSIB and the WCRPS); managing conflicting objectives and policies (with reference to *Port Otago Ltd v Environmental Defence Society Incorporated [2023] NZSC 112*); the consistency of the pTTPP with the WCRPS (which has given effect to the NZCPS, and to a limited extent that of the NPSFM, but has not given effect to the NPSIB); the consenting pathway for mineral and aggregate extraction activities through the NPSIB and NPSFM (with reference to the EMH); appropriate use of the EMH (for significant effects on indigenous biodiversity); and lastly, the need for planning documents to be clear and concise and avoid repetition. In response to questions Ms Booker agreed that if there was a conflict with the more specific provisions reference should be made to SD.

187. The various mining operators reiterated the employment opportunities available through mining throughout the districts and their involvement in supporting the community. They emphasised the uncertainties encounter in the RMA process and noted that modern mining recognises its role and responsibilities.

188. Ms McKenzie (for Birchfield *et. al.*) emphasised the importance of mining to the West Coast and considered that MIN-O1, MIN-O2, MIN-O3 and MIN-O6 should be retained as notified. She considered that the additional references to '*managing effects*' and the EMH in MIN-O1,

MIN-O2 and MIN-O3 would duplicate what is already set out in MIN-O6. Further, she noted that it is incorrect to reference the EMH (in MIN-O3 and MIN-O6) where all types of effects are to be considered because, under the NPSIB and NPSFW, the EMH is limited to residual effects that are more than minor.

189. Ms Vidal for Straterra said it was important to have a consenting pathway for mining and noted that the boom in mining was partly driven by Greentech industries. She also pointed to the innovative rehabilitation of mining sites that can occur, giving the Globe example at Reefton. Similarly, Mr Maitland said it was important to have an overarching framework for mineral extraction.

190. Ms Katherine Crick commented on the MIN SD and opposed the MINZ at Barrytown. She did not want the MIN SD to be overarching. This is considered as part of the Mineral Extraction recommendation report.

191. Ms Snoyink, for Forest and Bird, noted that the organisation was not opposed to the inclusion of a strategic direction for this activity, but that any SD should be consistent with national policy and should avoid being worded as policy. She noted Forest and Bird disagree with the Reporting Officer that MIN-O1, MIN-O2 and MIN-O6 should be retained (even as amended). She highlighted the amendment sought to MIN-O3 was to '*appropriately avoid, remedy or mitigate'* effects, not to refer the EMH because this has limited application. Ms Snoyink advised Forest and Bird opposed reference to mineral extraction 'in a range of locations' on the basis that this reduces plan certainty. Lastly, she noted that Forest and Bird consider MIN-O4 should refer to '*lawfully established*' (rather than '*existing*'), as this terminology is consistent with other parts of the pTTPP and the definition of 'reverse sensitivity'.

192. In response to questions Ms Snoyink considered a number of the objectives were actually policies.

193. Ms Smith (for Terra Firma) generally opposed the changes recommended by the Reporting Officer to the MIN SD. Ms Smith considered there was no need for MIN-O1 or MIN-O2 to refer to '*effects management*'; that MIN-O3 should refer only to '*effects management*'; a new SD objective should be included to refer to social and economic benefits; and that MIN-O6 should be retained as notified.

194. Ms Inta considered that MIN-O1 and MIN-O6 should be amended to refer to the EMH and that MIN-O2 should be deleted. With respect to MIN-O6, she considered that all values should be protected (not just those that are significant) and that some context is required to offsetting and compensation.

195. Mr Leckie presented legal submissions on behalf of Bathurst. In respect of the MIN-O6, he noted that providing for offsetting and compensation (as well as avoiding, remedying or mitigating) gives effect to the WCRPS and ensures consistency with s104(1)(ab) of the RMA.

196. Ms Hill disagreed that that mineral extraction should be a SD. She considered it provided a strong bias towards such activity and noted there was no reference to cumulative effects. She questioned the meaning of wording within the MIN provisions. Ms Lippiatt provided similar comments.

197. Mr Milne from Development West Coast emphasised the importance of mineral extraction to the West Coast. In supporting this he said that the West Coast economy was different to

the rest of New Zealand, noting that 611 people were employed in the mining sector with an average salary of $77,000.

198. Ms Hunter (for Bathurst) considered that MIN-O6(a) should be amended to include '*offset or compensate*' (after '*avoid, remedy, mitigate'*) as mineral extraction activities should *'have access to the full gamut of environmental effects management methods, including the use of environmental offsets and/or compensation. This is consistent with section 104(1)(ab), which sets out the matters a consent authority must have regard to when considering a resource consent application'*.[38] Ms Hunter advised that this is a more appropriate response than reference to the EMH, which is only applicable in certain circumstances (as prescribed by the NPSFM and NPSIB). Furthermore, she advised that there is no pTTPP definition for EMH and it is therefore unclear what it means in a pTTPP context. She went onto say that '*given that there is no accompanying definition or use of the term within the remainder of the notified TTPP (as far as I am aware), I do not think it is appropriate to refer to an "effects management hierarchy" if this has not been suitably defined in the context of the TTPP'*.[39]

199. Ms Hunter recommended that MIN-O6 be amended as follows:

    a. *<u>To the extent that is practicable,</u> avoid, remedy or mitigate adverse effects of mineral extraction activities on the West Coat/ Te Tai o Poutini's significant natural and cultural features…*

    b. *<u>Where it is not practicable due to the functional or operational needs of the mineral extraction activity to avoid, remedy or mitigate all adverse effects, ensure such effects can be offset or compensated for.</u>*

    ~~*Allow adverse effects to be addressed by alternative mitigation measures such as biodiversity offsetting and environmental compensation.*~~

<u>Responses and Reporting Officer Reply Evidence</u>

200. In her initial right of reply (10 November 2023), Ms Easton, in response to the Panel's question as to why Mineral Extraction had been elevated so significantly in the strategic direction, noted the significance of mining to the West Coast, particularly the Buller District where it is the single largest economic contributor. She also noted that large mine developments have long lead times to establish before mining can even commence. She said that gold and coal mining, alongside aggregate and hard rock quarrying, represent the "baseline" of activity by the mineral extraction industry and that economic development strategies for the district expect the new hard rock, gold and mineral sands mines to significantly increase the size of the economy and range of jobs available in the districts.

201. Ms Easton also advised that the MIN SD arose from consideration of the following:

    - *WCRPS – Use and Development of Resources Objective 1, Policy 1, Policy 2*
    - *WCRPS – Resilient and Sustainable Communities Objective 2, Policy 2*
    - *WCRPS – Ecosystems and Biodiversity Policy 3*
    - *Ke Whanaketanga Tai Poutini West Coast Strategy Mission 2*
    - *Minerals and Petroleum Resource Strategy*
    - *West Coast Economic Development Action Plan 2017 – Key Action Streamline the mining consent process – single window processing initiative*

[38] Evidence of Ms Clare Hunter, paragraph 35
[39] Evidence of Ms Clare Hunter, paragraph 39

- *WCRPS – Poutini Ngāi Tahu – Objective 2, Policy 2*

202. Ms Easton considered that there was broad scope to change the mineral extraction strategic objectives provided by the relief sought by submitters, outlining a number of these in the reply. She noted that there were submissions seeking the deletion of several of the mineral extraction strategic objectives, which provided scope for amendments that range from deletion of these objectives to amendments to the text that fit on the continuum between deletion and the text as notified.

203. The Bathurst November supplementary submissions from Mr Leckie, in response to questions from the Panel, provided additional information setting out the higher order policy support for (1) a consenting pathway for mineral extraction in the pTTPP and (2) recognition of the functional and operational needs for mineral extraction. Bathurst consider that mineral extraction is provided for by the RMA (as it supports the wellbeing of the West Coast people and communities); the WCRPS (which enables mining, its effects and its functional needs, and the need to protect it from reverse sensitivity); and the NPSIB and NPSFM (which recognise the functional needs of mining). It submitted that if the TTPP departs from the objective and policy framework of the WCRPS that directs the recognition of the importance of mineral extraction to the West Coast, the TTPP will not give effect to the WCRPS.

204. The supplementary submissions stated Bathurst's relief and also sought clarification that the full EMH is available to manage the potential adverse effects of mining on biodiversity (consistent with the approach applied in the NPS-IB). However, the Panel note this appears to be different from the view expressed by Ms Hunter, who did not think it was appropriate to refer to an EMH, as this had not been suitably defined in the context of the TTPP.

205. In addressing the Panels question as to whether some of the Mineral Extraction strategic objectives would be more appropriate as strategic policies, Mr Leckie agreed with that observation; and as part of their supplementary submission Bathurst provided a redrafting of the Mineral Extraction strategic objectives. This consisted of an overall Objective which recognises the important role mineral extraction has for the economic, social and cultural wellbeing of the West Coast, and reframed the notified version of the remaining Objectives as policies directing the actions that are necessary to achieve and implement the Objective

Responses to Minute 22

206. Bathurst indicated that they continued to support the inclusion of Strategic Objective MIN-O1 as redrafted in the Bathurst November supplementary submissions, which they said provided an enabling overall objective that recognises the critically important role of minerals to the West Coast.

207. Terra Firma considered MIN-O1 necessary to provide the appropriate recognition and considered the mineral extraction provisions should remain in a separate Strategic Direction. They supported the original wording of MIN-O1 but were happy with the amendments suggested in the Bathurst November supplementary submissions.

Evaluation

208. As a result of recommendations to retain the Mineral Extraction Chapter and associated zoning, the Panel accepts that Mineral Extraction SD should be retained, and we agree it would provide an overarching framework. We also accept the economic evidence on the

importance of mineral extraction to the region and particularly the Buller District and acknowledge the requirement to give effect to the WCRPS.

209. The Panel has considered the issues raised in submissions, including those supporting the provisions. As we signalled at the hearing, and as acknowledged by Mr Leckie for Bathurst, we also consider some of the objectives of the Mineral Extraction SD are framed as policies rather than objectives. We accept Ms Easton's analysis in her 10 November reply that there is a broad scope within the submissions for change in the mineral extraction strategic objectives.

210. The Panel has considered the revised sets of provisions drafted by both Ms Easton and Bathurst. In general terms, the Panel agree that an objective and policy framework is better suited to the Mineral Extraction provisions and that there is no need for further provisions. We have addressed these in turn below.

211. In terms of MIN-O1, the Panel considers it is appropriate acknowledge the mineral resources of the West Coast and signal their use and development. However, we also agree with Te Mana Ora, as also acknowledged by Ms Easton, that addressing adverse effects on the environment are not well captured in the strategic objectives for mineral extraction overall. In our view, both these aspects need to be captured at the objective level to give effect to Part 2 of the RMA; and therefore, we do not accept the revised Bathurst version, which has only one objective, which is solely focused on the provision for the use and development of, and importance of, mineral resources.

212. The Panel has considered Ms Easton's recommended change to MIN-O1 which combines the provision for the use and development of mineral resources with avoiding duplication of regulation and avoiding, remedying or mitigating adverse effects. The Panel's view is that this general approach (aside from the issue of duplication of regulation, which is discussed below) is more balanced and, apart from not recognising the important role that mineral extraction plays, which we consider is a policy matter, addresses the key issues and reflects the way other objectives, notably TRM-O1 regarding Tourism, have been drafted. We consider using the term 'environment', which is defined in the RMA, rather than 'natural environment and local communities' is more encompassing and points to all aspects of the environment.

213. The Panel has also considered whether two separate objectives might be more appropriate, however, we do not think there are any major gains in clarity or effectiveness in doing so.

214. Like Forest and Bird, Te Mana Ora and Ms Hill, the Panel is unclear as to the necessity of referring to 'avoiding duplication of regulation across agencies' as this could apply to multiple sections of the plan rather than just Mineral Extraction. We note that Bathurst has not pursued that wording within their revised version of the provisions. In our opinion, this is not a matter that needs to be addressed within the framework of SD unless there is a specific issue that has been identified. We also note that the Mineral Extraction Chapter has a policy addressing the coordination of consents, and we consider that it is appropriate in that context. The Panel is alert to avoiding duplication and recognising the different district and regional council functions, while seeking integration.

215. Overall, the Panel disagrees that MIN-O1 should be deleted, as sought by some submitters. However, we accept that it needs to be amended for the reasons given above. We therefore recommend that MIN-O1 is revised as follows:

> *~~To ensure provision for t~~ **T**he use and development of the West Coast/Te Tai o Poutini's mineral resources while ~~also avoiding duplication of regulation across agencies.~~ **managing adverse effects on the environment.***

216. In line with the Panel's recommendation below, MIN-O1 becomes the sole objective under the Mineral Extraction SD. Therefore, while we acknowledge the concerns expressed by Ms Hunter and Ms McKenzie regarding Ms Easton's revised MIN-O1 and its duplication with MIN-O6, we consider the context in which their conclusions were reached is now different.

217. The Panel recommends that MIN-O2 – MIN-O6 should be revised as policies with similar wording to the notified wording of the objectives.

218. The Panel acknowledge the submissions on MIN-O2 from the Director General and NZTA Waka Kotahi and Ms Easton's recommended amendment to introduce the management of adverse effects, which was supported by Ms Young. However, we agree with Ms Hunter and Ms McKenzie that the management of the effects arising from the activities of mineral extraction is adequately addressed through other mineral extraction SD provisions, notably MIN-O6. The Panel considers there is no need to replicate these in enabling provisions, given all provisions must be considered together (alongside all the other strategic direction objectives in the TTPP).

219. The Panel disagrees with Forest and Bird that the objective (now to be policy) should be deleted. While we acknowledge the expressed concern about enabling extraction within zones that have significant natural values without any consideration of overlays or other significant values, we agree with Ms Easton that the District-Wide Chapters will still apply, particularly in relation to overlays and significant natural areas.

220. The Panel does however consider there is a distinction to be made within this objective (now to be policy) between the provision for mineral extraction by way of special purpose zones and providing for it in more generic zone. In the case of the former the provision of a specific zone can be seen as enabling of mineral extraction, whereas in the latter it is more of a case of providing for some extraction where this is deemed to be acceptable. In our view this provision should be setting the framework for having mineral extraction zones and providing a framework for some extraction in the other zones where this is deemed to be acceptable i.e. to be determined by more detailed policies and rules in the specific zones themselves. The Panel does not consider mineral extraction should simply be enabled across the Rural and Open Spaces Zones. We consider there is scope provided by the Forest and Bird submission to amend this provision to reflect our concerns.

221. The Panel recommends that MIN-O2 be changed to MIN-P1 and that the policy wording be amended as follows:

> *~~To e~~ **E**nable mineral extraction and ancillary activities which support it, ~~including~~ specifically **through a** ~~within the~~ Buller Coalfield Zone~~,~~ **and** Mineral Extraction Zone, and **provide for these activities in appropriate locations within the** Rural Zones and Open Space Zones.*

222. In relation to MIN-O3, the Panel agrees with Ms Easton's response to the Aggregate and Quarry Association that the strategic objectives in their entirety already provide strong direction, recognising the economic value of mineral extraction, including aggregate resources. We also agree that it is inappropriate to amend the substantive direction and focus of the MIN-O3 to be about supporting unique geology and indigenous biodiversity as sought by Ms Lippiatt.

223. Ms Easton considered there was merit in referring to the provision of economic and social benefits provided adverse effects can be appropriately managed in accordance with the effects management hierarchy as sought by Terra Firma, Ms Lippiatt and Forest and Bird. Ms McKenzie again considered amendments to address effects in this objective was inappropriate and unnecessary because the requirement to manage adverse effects was already provided in MIN-O6. She also considered the addition of the effects management hierarchy term inappropriate in the context of this objective.

224. The Panel agrees in part with the amendments proposed by Ms Easton to MIN-O3, as we consider the nature of this provision is somewhat different in context to MIN-P1, in recognising the fixed nature of the mineral resource outside of specified zones. We also note that MIN-O3 already contains reference to managing adverse effects which Ms McKenzie's clients supported, therefore the scope to remove it based on other submissions is limited. Where we agree with Ms McKenzie, is in terms of the reference to the effects management hierarchy, which we discuss in more detail in relation to MIN-O6 below. We also consider the reference to economic and social benefits, as sought by Forest and Bird, is appropriate in the context of this provision.

225. The Panel recommends that MIN-O3 be changed to MIN-P2, and that the policy wording be amended as follows:

> ~~*To r*~~ ***R****ecognise that mineral resources are widespread* ~~*and*~~ ***but*** *fixed in location throughout the West Coast/Te Tai o Poutini and that* ***extraction of them in a range of locations outside specified zones may be appropriate and provide economic and social benefits to the region and nationally,*** *provided adverse effects* ***can be appropriately*** ~~*are*~~ *managed* ~~*mineral extraction activities can be appropriate in a range of locations outside specified zones and precincts*~~*.*

226. MIN-O4 is a reverse sensitivity provision, and the Panel agrees that such a provision is appropriate in the context of mineral extraction, where the impact on existing sensitive activities can be adverse, in particularly close proximity. The Panel does not agree that such a provision should be deleted, nor does it accept that by addressing reverse sensitivity, the TTPP is in some way prioritising mineral extraction. Indeed, issues of reverse sensitivity are generally associated with sensitive activities locating in proximity to established activities which are generating effects.

227. The Panel does not agree with the removal of the '*existing*' sought by the mining industry and agrees with Ms Easton that where new mines are proposed, they should be assessed against the effects that they will have on the community and environment at the time of the application. However, the Panel does consider the words '*lawfully established*' are necessary in this instance and we note that Ms Easton conceded this in response to questions at the hearing. We also note that a definition of '*lawfully established*' is addressed in the Mineral Extraction Recommendation Report.

228. The Panel recommends that MIN-O4 be changed to MIN-P3, and that the policy wording be amended as follows:

> ~~*To e*~~***E****nsure that new subdivision, use and development does not compromise existing* ***lawfully established*** *mineral extraction activities, including through reverse sensitivity* ~~*to*~~ *effects, such as dust, noise and traffic generation.*

229. In terms of MIN-O5, there are no submissions in opposition, so the only amendment is a consequential one relabel MIN-O5 as MIN-P4 and delete the word '*To*' at the beginning, as shown in the recommendation box below.

230. MIN-O6 is the provision primarily addressing adverse effects and there were a variety of submissions ranging from seeking its retention to its removal, thus providing a wide range of scope. In a broad sense, the Panel considers this provision is important in the context of the Mineral Extraction SD to give effect to Part 2 of the RMA and we recommend it is retained to the extent that it addresses adverse effects.

231. Several submissions were concerned with the biodiversity offsetting and environmental compensation components of the objective and sought its deletion or amendment, including introducing reference to the EMH. In contrast, Bathurst sought that offsetting and compensation be included as part of an acceptable response to managing adverse effects in clause (a). As a result of submissions Ms Easton recommended that the EMH be introduced into clause (a) of the objective and that clause (b) refer to the mitigation hierarchy to allow residual adverse effects to be addressed by alternative mitigation measures such as offsetting and compensation. However, the Panel notes this later change removed the specific references to <u>biodiversity</u> offsetting and <u>environmental</u> compensation.

232. Having considered the key issues around the use of the EMH, the Panel agrees with Ms Hunter and Ms McKenzie that its use in national level documents specifically relates to indigenous biodiversity and freshwater to address ecological effects and that the process of assessment under the EMH requires a sequence of steps beginning with avoid. We therefore have concerns about transferring application of the EMH in the specific context of ecological effects and using it in relation to all effects such as noise or traffic amongst others. In our view, no national direction directly supports this approach outside of the matters covered in the NPSFM and NPSIB.

233. The Panel notes the WCRPS specifically excludes the consideration of offsets and compensation in relation to effects on indigenous biodiversity from RSI (Chapter 6, Policy 5) and prescribes the offsetting and compensation steps in Chapter 7, Policies 2-5. However, the Panel is mindful that the WCRPS provisions do not give effect to the NPSFM or the NPSIB.

234. Based on the above, the Panel recommend that the EMH is not included explicitly in MIN-O6 (to be MIN-P5) given that the provision would apply to a range of matters and is not in any way limited to indigenous biodiversity or freshwater values. That is not to say, however, that the EMH may not be utilise in situations where ecological effects are relevant when considering assessments in terms of the NPSFM and NPSIB.

235. For reasons that will become apparent the Panel has not adopted Ms Easton's minor wording amendments to the sub-clauses under clause (a) or Ms Hunter's or the Director General's revised versions of clause (b). We do however note that we have given consideration to the appropriate use of the terms '*functional need or operational need'* in light of the higher order statutory direction. We consider '*operational needs*' should only be used where this is consistent with the national direction given this is a much lower threshold. This is addressed in more detail in other recommendations.

236. Having considered the various submissions on MIN-O6, the Panel considers the sub-clauses under clause a. are unnecessary and simply complicate the provision. There is an inherent danger with such provisions that the matters identified under 'including' become the only matters considered and, in this situation and given the issue, we consider it would be more

appropriate to simply refer to addressing the adverse effects of mineral extraction activities on the environment. In our view this enables all effects to be considered. The Panel also consider clause b. is unnecessary noting that s104(1)(ab) of the RMA is available, as noted by Ms Hunter, as is the EMH in certain circumstances. We therefore do not consider it is necessary to specifically refer to these mechanisms.

237. Finally, we agree that a reference to public notification as sought be Ms Inta and Buller Conservation Group is inappropriate within a strategic objective (or policy).

238. The Panel recommends that MIN-O6 be relabelled as MIN-P5 and that the policy wording be amended as follows:

~~*To:*~~

~~*a. Avoid, remedy or mitigate the adverse effects of mineral extraction activities on the West Coast/Te Tai o Poutini's* **environment**~~*. significant natural and cultural features, sites and heritage, and amenity values, including:*

~~*i. Poutini Ngāi Tahu cultural resources and taonga including sites and areas of significant to Māori identified in Schedule Three;*~~

~~*ii. Areas of significant indigenous vegetation, indigenous fauna habitat and protected native fauna;*~~

~~*iii. Outstanding natural landscapes and features;*~~

~~*iv. Waterways and waterbodies; and*~~

~~*v. The coastal environment;*~~

~~*vi. The wellbeing of people and communities; and*~~

~~*b. Allow to allow adverse effects to be addressed by alternative mitigation measures such as offsetting and compensation.*~~

Recommendation

239. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that relevant submissions identified in the footnotes below are accepted in part and that changes are made to the Mineral Extraction SD as follows:

Mineral Extraction – Te Tango Kohuke

This Chapter sets out the overarching direction for matters relating to mineral extraction across the West Coast/Te Tai o Poutini.

Mineral Extraction Strategic Objectives

MIN-O1 ~~To ensure provision for t~~ **T**he use and development of the West Coast/Te Tai o Poutini's mineral resources while ~~also avoiding duplication of regulation across agencies.~~ **managing adverse effects on the environment.**[40]

Mineral Extraction Strategic Policies

[40] Te Mana Ora (S190.011), Forest and Bird (S560.091)

MIN-~~O2~~**P1** ~~To e~~ **E**nable mineral extraction and ancillary activities which support it, ~~including~~ specifically **through a** ~~within the~~ Buller Coalfield Zone~~,~~ **and** Mineral Extraction Zone, and **provide for these activities in appropriate locations within the** Rural Zones and Open Space Zones.[41]

MIN-~~O3~~**P2** ~~To r~~ **R**ecognise that mineral resources are widespread ~~and~~ **but** fixed in location throughout the West Coast/Te Tai o Poutini and that **extraction of them in a range of locations outside specified zones may be appropriate and provide economic and social benefits to the region and nationally,** provided adverse effects **can be appropriately** ~~are~~ managed ~~mineral extraction activities can be appropriate in a range of locations outside specified zones and precincts~~.[42]

MIN-~~O4~~**P3** ~~To e~~ **E**nsure that new subdivision, use and development does not compromise existing **lawfully established**[43] mineral extraction activities, including through reverse sensitivity ~~to~~ effects, such as dust, noise and traffic generation.

MIN-~~O5~~**P4** ~~To s~~ **S**upport Poutini Ngāi Tahu to manage their pounamu and aotea stone resources through the use of Pounamu and Aotea Management Area Overlays.

MIN-~~O6~~**P5** ~~To:~~

~~a.~~ Avoid, remedy or mitigate the adverse effects of mineral extraction activities on the West Coast/Te Tai o Poutini's **environment.**[44] ~~significant natural and cultural features, sites and heritage, and amenity values, including:~~

i. ~~Poutini Ngāi Tahu, cultural resources and taonga including sites and areas of significant to Māori identified in Schedule Three;~~

ii. ~~Areas of significant indigenous vegetation, significant indigenous fauna habitat and protected native fauna;~~

iii. ~~Outstanding natural landscapes and features;~~

iv. ~~Waterways and waterbodies; and~~

v. ~~The coastal environment;~~

vi. ~~The wellbeing of people and communities; and~~

~~b.~~ ~~Allow to allow adverse effects to be addressed by alternative mitigation measures such as offsetting and compensation.~~

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[45]

1.15. Natural Environment – Te Taiao

Submissions and Further Submissions

[41] Forest and Bird (S560.092)
[42] Forest and Bird (S560.093)
[43] Forest and Bird (S560.094)
[44] Forest and Bird (S560.096), Brian Anderson (S576.016), Katherine Crick (S101.016), Trevor Hayes (S377.008), Karen Lippiatt (S439.006) & (S439.004), West Coast Penguin Trust (S275.010), Celine Stokowski and Anthony Thrupp (S522.003)
[45] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

240. Two submission points were received in support of the Natural Environment SD (as a whole).

241. Five submission points were received in support of the NENV-O1, and 10 submission points were received seeking amendments to the NENV-O1. Twelve further submission points were received.

242. Three submission points were received in support of the NENV-O2, and four submission points were received seeking amendments to the NENV-O2. One further submission point was received.

243. Seven submission points were received in support of the NENV-O3, one submission point sought the objective be deleted, and 18 submission points sought amendments to the NENV-O3. Eleven further submission points were received on this objective.

244. Four submission points were received in support of the NENV-O4, while 14 sought amendments to the NENV-O4. Ten further submission points were received on this objective.

245. One submission point sought further recognition of Outstanding Natural Landscapes (**ONL**) and Significant Natural Areas (**SNA**) in the NENV SD.

246. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

247. Ms Easton considered that the NENV-O1 should be amended to reflect s6 of the RMA (Manawa (S438.028)), but not to the extent sort by other submitters, which sought to 'parrot' the Act (New Zealand Agricultural Aviation Association (S166.003), HortNZ (S486.010) and Federated Farmers (S524.030)). Ms Easton also considered reference to '*enhancing*' natural environment values was appropriate (Director General (S602.029)). However, she did not support amendments to the objectives that would remove reference to '*cultural and spiritual values*' (Frida Inta (S553.040) and Buller Conservation Group (S552.040)); replace '*protection*' of natural environment values with 'management' (Westpower (S547.059)); or providing more detail of the specific areas to be protected (Silver Fern Farms (S441.009)).

248. In relation to NENV-O2, Ms Easton agreed that deletion of '*areas and features*' was appropriate (Forest and Bird (S560.099)) and that the '*connection*' of Poutini Ngāi Tahu to the environment should also be recognised (Poutini Ngāi Tahu (S620.065)). However, Ms Easton disagreed that the objective should be deleted (Frida Inta (S553.040) and Buller Conservation Group (S552.040)) because it was consistent with Te Tiriti o Waitangi.

249. Forest and Bird (S560.100) sought that NENV-O3 be deleted. Ms Easton did not consider this to be an appropriate outcome; more specifically, she considered that *'…while not all types of landscapes, features and ecosystems are contained within the PCL, it shapes the natural environment context on the West Coast. PCL has many natural and cultural values as well as being important for tourism, recreation and the identify of being a West Coaster. It also provides some of the core habitats for mobile species such as birds that extend their range out into private land and more inhabited areas. This strategic objective also provides important direction for the Open Space Zones…'*. [PCL – Public Conservation Land]

250. The submissions relating to specific development and activities (in NENV-O3) sought removal of infrastructure (Buller Conservation Group (S552.041) and Frida Inta (S553.041));

qualifications for the provision of infrastructure (Director General (S602.030)); recognition of lawfully established activities (Federated Farmers (S524.031), pest and weed management (New Zealand Agricultural Aviation Association (S166.004), and energy activities and critical infrastructure (Westpower (S547.060)); and provision for mineral extraction (TiGa (S493.022), Birchfield (S601.021), WMS (S599.026), BRM (S603.018), Birchfield (S604.018), Phoenix (S606.019), Whyte Gold (S607), Bathurst Resources (S491.009) and Straterra (S536.044)). Ms Easton considered that infrastructure with a function and/or operational need to be located in significant natural areas should be provided for in the objective. Similarly, Ms Easton considered that lawfully established activities and pest and weed management activities should also be provided for. Conversely, Ms Easton did not consider that mineral extraction activities should be provided for in areas of significant environmental value as there is no higher order policy directive for such an outcome. Ms Easton advised that any reference to infrastructure in the objective can be amended depending on the Panel's conclusions about the definition of '*Energy Activities'*.

251. With respect to NENV-O4(a), Ms Easton did not support the amended wording sought by Birchfield et al (WMS (S599.027), TiGa (S493.023), Birchfield (S601.022), BRM (S603.019), Birchfield (S604.019), Phoenix (S606.020) and Whyte Gold (S607.019)), as she considered that the wording was inconsistent with sections 6(a), (b), (c), (f) and (g) of the RMA. However, Ms Easton supported the alternative wording suggested by Westpower (S547.061) to replace '*unique and important*' with '*significant and/or outstanding'* and including reference to '*inappropriate subdivision, use or development*'. In recommending these changes be accepted, Ms Easton considered that she has addressed several other submissions (Terra Firma (S537.009), Director General (S602.031), Forest and Bird (S560.101 and S560.436) and Te Tumu Paeroa).

252. In relation to NENV-O4(b), Ms Easton considered that reference to EMH should be included (Te Mana Ora (S190.020)), but she did not consider the changes sought by Forest and Bird (S560.101) to refer to '*appropriate activities*' and '*activities with appropriate conditions*' were necessary.

253. Lastly, Ms Easton considered that further policies to specifically protect Outstanding Natural Landscapes and Significant Natural Areas were not necessary (Clare Backes (S444.002)) because the topic focussed objectives and policies in Part 3 of the pTTPP are appropriate and adequate.

Hearing and Submitter Evidence

254. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the reporting officer).

255. Forest and Bird did not support the changes recommended by the Reporting Officer to NENV-O1, NENV-O3 or NENV-O4.

256. Specifically, Forest and Bird considered that NENV-O1 was not clear in its relationship to s6 of the RMA, noting that *'F&B's reading of the notified wording is that the objective is about recognising and protecting what contributes to the West Coast's character and identity is not necessarily the same as protection for matters of national importance under s6 so does not need to be limited to "outstanding" or "significant"'*. Furthermore, the use of 'significant' and 'outstanding' *'would potentially exclude aspects of Policies 11, 13 and 15 of the NZCPS'*. Lastly, Forest and Bird considered that the use of 'restore' in NENV-O1 is a more appropriate term compared to 'enhance'.

257. With respect to NENV-O3, Forest and Bird maintained that the objective should be deleted as it is unclear and reads like a policy. Furthermore, Forest and Bird did not consider that the recognition of existing lawfully established (farming activities) in significant areas is appropriate for the natural environment.

258. In relation to NENV-O4(a), Forest and Bird expressed similar concerns to those held for NENV-O1. They considered that if the intention is to align the objective with s6 of the RMA, it should align itself with s6(a) of the RMA and the NZCPS (which refers to 'natural character'). Furthermore, they considered to include 'significant' and 'outstanding' and 'inappropriate subdivision, use and development' would be inconsistent with s6(c) of the RMA (*'the protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna:'*). Lastly, Forest and Bird considered that the use of the EMH in NENV-O4(b) was inconsistent with the framework for that effects management concept.

259. In relation to NENV-O1, Ms Inta noted that all natural indigenous biodiversity and natural areas need protecting, not just those that are outstanding or significant. She considered that NENV-O3 should be deleted, or at least not limited to public conservation land. She also considered that NENV-O4 should retain reference to '*unique and outstanding'* which is *'more elastic, not so encased by static borders'*.

260. Ms Levenson (for HortNZ) noted opposition for adding '*enhance*' to NENV-O1, as this is not consistent with the NPSIB, which only recognised restoration and enhancement where maintenance of indigenous biodiversity is sought. Ms Levenson promoted the phrase '*restore where degraded'* in lieu of '*enhance*'.

261. Mr Kennedy (for Westpower) considered that the blanket protection promoted by NENV-O1 was a higher threshold than required by the RMA, the various NPS' and the WCRPS. In relation to NENV-O3, Mr Kennedy considered that the amendment to '*functional and operational need'* should instead be '*technical and locational need*', which was consistent with the WCRPS.

262. Ms McKenzie (for Birchfield et al) considered that to include '*enhance*' in NENV-O1 is inconsistent with s6 of the RMA, the NZCPS (which promotes restoration, or otherwise enhance as an option), the NPSIB (which only requires enhancement 'where necessary' and only with respect to indigenous biodiversity, not natural character, landscapes and features) and the WCRPS (which encourages enhancement, i.e. it does not mandate it). Ms McKenzie considered that higher order documents '*encourage and promote'* enhancement, but do not direct it. In relation to NENV-O3, Ms McKenzie considered that mineral extraction activities should also be recognised as having a functional or operational need to location in significant areas because this is provided for by the NPSIB and, less generally, by the WCRPS.

263. In a similar vein to Ms McKenzie, Ms Hunter (for Bathurst) considered that NENV-O3 needed to refer to mineral extraction activities (as well as infrastructure), as they too are functionally and locationally constrained and may need to locate within significant natural areas. Ms Hunter also referred to the NPSIB (Clause 3.11 specifically) as providing a pathway for mineral extraction activities in significant areas and also advised that mining is critical to support infrastructure and housing development.

264. Ms Whitney (for Transpower) generally supported the alterations to NENV-O3 but expressed concerns that the reference to '*functional need and operational need'* should not be a conjunctive reference, rather it should read '*functional need <u>or</u> operational need*' as there may well be instances where both needs are not met. She noted that the Reporting Officer

recommended amendment to CR-O3 refers to '*functional or operational need to be in that location*'. She did not consider the introduction of '*locational need*' was necessary.

265. Ms Whitney said that NENV-O2(b) should refer to 'significant **natural** area', although it was noted by the Panel that Transpower had not submitted on this matter.

Responses and Reporting Officer Reply Evidence

266. In her right of reply (10 November 2023), Ms Easton noted that the NENV SD arose from consideration of the following:
- *WCRPS -Indigenous Biological Diversity – Objective 1, Objective 3, Policy 3, Regionally Significant Infrastructure Policy 3*
- *Ke Whanaketanga Tai Poutini West Coast Strategy - Mission Two*

267. In her 'review paper' Ms Easton provided a revised Natural Environment set of SD which included two objectives and two policies.

Responses to Minute 22

268. Ms Inta and Buller Conservation Group sought amendments to the revised NENV-P1, in particular:

- clause (a) to address duplication and the contribution to the protection of natural environmental values made be private land;
- clause (b) to discourage infrastructure within SNAs; and
- clause (d) regarding supporting the ethic of stewardship. She also expressed concerns about the revise NENV-P2(b) in potentially enabling some level of subdivision, use and development within SNA's.

269. Transpower supported revised NENV-O1 in principle but for consistency would support reference to '*outstanding*' in relation to natural features and landscapes. In terms of revised NENV-P1, Transpower reiterated that the mix of terminology used within the plan is confusing noting that it is not clear if the policy is confined to '*Significant Natural Areas'* as defined in the TTPP, and/or '*Areas of significant indigenous vegetation and fauna habitat*', and if the policy applies to Outstanding Natural Features and Landscapes. They also sought to amend the '*and*' to '*or*' in clause (b) to reflect there may well be instances where both needs are not met and questioned whether clause e. regarding pest and weed control was better placed as a non-regulatory method outside the TTPP.

Evaluation

270. The Panel has considered the issues raised in submissions on the Natural Environment SD section, including those supporting the provisions as notified. Again, in the context of this section, we consider some of the objectives are framed as policies rather than objectives. We accept Ms Easton's analysis in her 10 November reply that there is broad scope within the submissions for change in the Natural Environment strategic objectives.

271. The Panel have considered the revised sets of provisions drafted by Ms Easton drafted in her 'review paper' and commented on them below. In general terms, we agree that an objective and policy framework is better suited to the Natural Environment SD provisions. We address these in turn below.

272. In relation to NENV-O1, the Panel generally considers it is appropriate to clarify its intent. However, we acknowledge the introduction of the word '*enhance*' is not supported by a number of submitters with suggestions that it is inconsistent with s6 of the RMA. Some submitters, including Forest and Bird and HortNZ, prefer the word '*restore*'.

273. The difficulty here is that the objective is dealing with three distinct areas, natural character, landscapes and features and ecosystems and indigenous biodiversity, where the wording used in high order documents for each can be different. For example, the words '*restore*' and '*restoration*' prominent in the NPSIB, within which '*enhancement*' is part of the definition of '*restoration*'. '*Restoration*' is also used more prominently used in the NPSFM than '*enhancement*', whereas the NZCPS encourages '*restoration*' of the coastal environment and promotes restoration or rehabilitation of the natural character of the coastal environment. Enhancement in the NZCPS is generally confined to open space and walkways.

274. The Panel acknowledge Ms McKenzie's reference to the NPSIB requiring enhancement (and restoration) '*where necessary'* and only with respect to indigenous biodiversity; and note that NPSIB Objective to maintain indigenous biodiversity is to be achieved by amongst other things '*protecting and restoring indigenous biodiversity as necessary to achieve the overall maintenance of indigenous biodiversity'*. The NPSFM uses '*promoted*' as its qualifier.

275. Based on the above, the Panel considers '*restore*' the more appropriate word stemming from the higher-level documents than '*enhance*' in this instance. We also consider a qualifier such as '*where degraded*' appropriate in these circumstances.

276. The Panel agrees with the additional wording proposed by Manawa and recommended by Ms Easton, although we consider that '*outstanding*' needs to relate to natural landscapes and features alone as per s6(b) of the RMA.

277. The Panel agrees with Ms Easton that the intent at a strategic level is to '*protect*' the highest value natural environment features rather than simply '*managing*' adverse effects as sought by Westpower. We also agree that '*Poutini Ngāi Tahu's cultural and spiritual values'* should be retained in the objective.

278. Finally, the Panel agrees with Ms Easton that strategic objectives do not need to parrot the RMA, and we consider the following amendments will make the objective clearer:

*NENV-O1 ~~To r~~ Recognise, ~~and~~ protect **and where necessary restore** the natural character, **outstanding natural** landscapes and features, **significant** ecosystems and indigenous biodiversity that contribute to the West Coast's character~~, and~~ identity and **to** Poutini Ngāi Tahu's cultural and spiritual values.*

279. In terms of NENV-O2, the Panel agrees with the amendments recommended by Ms Easton to refer to the natural environment generally rather than areas and features; and to recognise the connection of Poutini Ngāi Tahu to the natural environment. However, this is one of the provisions we consider reads as a policy, and therefore, we have recommended the wording of Ms Easton's amended objective in her 'review paper' below.

280. The Panel agrees with Ms Easton's reasoning that the objective should not be deleted, as Ms Inta and Buller Conservation Group sought.

281. The Panel's recommended wording on NENV-O2 is as follows:

NENV–O2 ~~To ensure that t~~ **T**he rights, interest, ~~and~~ values **and connection** of Poutini Ngāi Tahu to **the** natural environment ~~areas and features~~ are protected and provided for and that the ability to exercise kaitiakitanga and tino rangatiratanga is maintained and enhanced.

282. NENV-O3 attracted several submissions, ranging from requests to delete it to various amendments. Again, the Panel considers this provision to read as policy and would be better reframed as such.

283. The Panel agrees with Ms Easton's reasoning, particularly associated with public conservation land, recommend the provision is retained and not deleted as sought by Forest and Bird.

284. The Panel acknowledges that infrastructure is, and may continue to be, located in areas such as an Outstanding Natural Landscape and a continued reference to infrastructure in some form is necessary. We note that as a result of recommendations in the Energy, Infrastructure and Transport Chapter '*infrastructure*' in this context would be replaced with '*Regionally Significant Infrastructure*' which would satisfy part of the Westpower submission.

285. We agree with the Director General that introducing '*functional and operational needs'* of RSI into clause (b) will assist in the interpretation of this objective and we consider this is case where '*operational need*' is appropriate to give effect to the NPSREG, NPSET and RPS. Notwithstanding, we agree with Ms Whitney that this does not need to be a conjunctive test, and the word 'or' should replace 'and' which would be consistent with other recommendations.

286. While the Panel acknowledges Mr Kennedy's preference is to use '*technical and locational need'* to be consistent with the WCRPS, we consider '*functional and operational need'* more appropriate, given they are defined and more widely use in the higher-order NPS's.

287. The mining companies have sought that clause b. be expanded to include mineral extraction on the basis such activity is also in terms of its locational, functional and operational requirements, with Ms Hunter noting that the NPSIB provides a pathway for such. We have given this some consideration, however, we agree with the conclusions of Ms Easton on this matter and note that we have addressed it in the Mineral Extraction SD provisions to some extent.

288. The Panel agrees with the other amendment sought by the Director General to remove the reference to '*protecting significant areas, habitats and features*' in clause a. as it seems to somewhat duplicate what is already in the clause. We note that these amendments address the concerns of other submitters.

289. The Panel agrees that the introduction of a lawfully established clause sought by Federated Farmers is appropriate and may address some of the mining industry's concerns above. We also agree that a reference to weed and pest control, as sought by the NZ Agricultural Aviation Association, is appropriate in this context.

290. The Panel recommends that NENV-O3 be changed to NENV-P2 and that the policy wording be amended along the lines of Ms Easton's amended objective in her 'review paper' shown below. We also note Ms Whitney comment on introducing the word '*natural*' into subclause (b), however we consider this would narrow the clause substantially. As we see it '*significant areas*' was designed to encompass the broad range of environmental features. We consider

the term may therefore be unclear and we recommend amending it in line with proposed Policy 1 to refer to '*significant and/or outstanding natural environment areas and features*' for clarity using Clause 16(2) of the RMA:

NENV–P2 ~~To~~ In relation to the natural environment recognise:

a. The substantial contribution to the protection of natural environment values that is made by the existence of public conservation land ~~in protecting significant areas, habitats and features~~;

*b. The **functional or operational** need for **regionally significant** infrastructure to sometimes be located in significant **and/or outstanding natural environment** areas **and features**; ~~and~~*

*c. The need to support the ethic of stewardship **on private and public lands** ~~and to consider the positive effects of the conservation estate in achieving the requirements of the RMA~~;*

d. There are lawfully established activities located in significant natural environment areas; and

e. The need for weed and pest control to protect, maintain and enhance natural environment values.

291. In terms of NENV-O4, this is a further provision the Panel considers reads as a policy and would be better framed as such.

292. The mining industry have sought to change the emphasis of the provision from identifying areas that "*must be protected*" to areas "*which require a greater degree of protection*". The Panel agrees with Ms Easton that s6 of the RMA clearly specifies "*protection*" for the likes of outstanding natural landscapes, natural character and significant biodiversity values. Further, it was unclear to us what "*a greater degree of protection*" was to be measured against, and in our view, such wording would create a high level of uncertainty.

293. In terms of the introduction of the EMH, the Panel considers that under the Ecosystems and Indigenous Biodiversity Chapter is a place for it to be referenced, given the requirements of the higher order documents in this regard. We agree with Ms Easton that it helps provide direction on how to manage adverse effects of activities within these high natural environments. We are, however, cautious that the EMH may not be appropriate in all circumstances and therefore consider its introduction needs to be accompanied by a qualifier. We are also mindful that it is specific to the NPSIB and its use relates to activities within identified SNA, which yet to be completed under the NPSIB.

294. With regard to the other rewording sought by submitters, the Panel agrees with Ms Easton that the objective could be better worded and better aligned with the RMA requirements. In that context, we agree with the reference to "*significant and/or outstanding*" sought by Westpower in replace of "*unique and important*" and the introduction of "*inappropriate subdivision, use and development*', as sought by the Director General.

295. The Panel does not support the revised wording of clause (b), proposed by Forest and Bird, nor the need to define "*important natural environment areas and features*".

296. The Panel recommends that NENV-O3 be changed to NENV-P1 and that the policy wording be amended along the lines of Ms Easton's amended objective in her 'review paper' shown below:

~~*NENV-O4 To clearly identify:*~~

~~*a. Unique and important natural environment areas and features on the West Coast/ Te Tai o Poutini which must be protected; and*~~

~~*b. Areas where subdivision, use and development to enable community economic, cultural, and social wellbeing can be sustainably managed.*~~

NENV-P1 Within significant and/or outstanding natural environment areas and features:

a. identify areas which must be protected from inappropriate subdivision use and development; and

b. identify areas where subdivision, use and development can be sustainably managed, using, where appropriate, the effects management hierarchy, to enable community, economic, cultural and social wellbeing.

Recommendation

297. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submissions identified in the footer below are accepted or accepted in part and that changes are made to the Natural Environment SD as follows:

Natural Environment – Te Taiao

This Chapter sets out the overarching direction for matters relating to the natural environment across the West Coast/Tai o Poutini.

Natural Environment Strategic Objectives

NENV-O1 ~~To r~~ Recognise, ~~and~~ protect **and where necessary restore**[46] the natural character, **outstanding** landscapes and features, **significant**[47] ecosystems and indigenous biodiversity that contribute to the West Coast's character and identity ~~and Poutini Ngāi Tahu's cultural and spiritual values~~.

NENV–O2 ~~To ensure that t~~ **T**he rights, interest**s**, ~~and~~ values **and connections**[48] of Poutini Ngāi Tahu to **the** natural environment ~~areas and features~~[49] are protected and provided for and ~~that~~[50] the ability to exercise kaitiakitanga and tino rangatiratanga is maintained and enhanced.

~~NENV-O4 To clearly identify:~~

~~a. Unique and important natural environment areas and features on the West Coast/ Te Tai o Poutini which must be protected; and~~

~~b. Areas where subdivision, use and development to enable community economic, cultural, and social wellbeing can be sustainably managed.~~

[46] Director General of Conservation (S602.029)
[47] Manawa S438.028
[48] Ngāī Tahu (S620.065)
[49] Forest and Bird (S560.099)
[50] Clause 16(2) First Schedule of the RMA

Natural Environment Strategic Policies

NENV-P1 Within significant and/or outstanding natural environment areas and features:[51]

a. identify areas which must be protected from inappropriate subdivision use and development; and[52]

b. identify areas where subdivision, use and development can be sustainably managed, using, where appropriate, the effects management hierarchy, to enable community, economic, cultural and social wellbeing.[53]

NENV-~~O2~~**P2** ~~To~~ In relation to the natural environment recognise:

a. The substantial contribution to the protection of natural environment values that is made by the existence of public conservation land ~~in protecting significant areas, habitats and features;~~[54]

b. The **functional or operational**[55] need for **regionally significant** infrastructure to sometimes be located in significant **and/or outstanding natural environment** areas **and features**;[56] ~~and~~

c. The need to support the ethic of stewardship **on private and public lands** ~~and to consider the positive effects of the conservation estate in achieving the requirements of the RMA~~;[57]

d. There are lawfully established activities located in significant natural environment areas; and[58]

e. The need for weed and pest control to protect, maintain and enhance natural environment values.[59]

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[60]

1.16. Poutini Ngāi Tahu

Submissions and Further Submissions

298. Four submission points were received in support of the Poutini Ngāi Tahu SD (as a whole).

299. Three submission points were received in support of the POU-O1, one of which sought a new definition to support the SD.

[51] Westpower (S547.061)
[52] Director General of Conservation (S602.031)
[53] Te Mana Ora (S190.020)
[54] Director General of Conservation (S602.030)
[55] Director General of Conservation (S602.030) TiGa Minerals and Metals Limited (S493.022) Birchfield et al (S601.021), (S599.026), (S603.018), (S604.018), (S606.019), (S607.018), Bathurst (S491.009)
[56] Clause 16(2) of the RMA
[57] Director General of Conservation (S602.030)
[58] Federated Farmers (S524.031)
[59] New Zealand Agricultural Aviation Association (S166.004)
[60] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

300. Two submission points were received in support of the POU-O2, one neutral submission was received, and one was received seeking amendments to the POU-O2 (which was opposed in a further submission). One further submission was received in opposition.

301. Two submission points were received in support of the POU-O3.

302. Two submission points were received in support of the POU-O4.

303. Twenty-one submission points were received in support of the various POU policies, while 15 submission points were received seeking amendments to the POU-P3, POU-P4, POU-P5, POU-P6, POU-P9 and POU-P10. Thirteen further submission points were received largely opposing amendments sought.

304. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

305. Ms Easton acknowledged support for the Poutini Ngāi Tahu SD as a whole, for POU-O1, POU-O3 and POU-O4. With respect to Te Tumu Paeroa submission (S440.008) on POU-O1 seeking a new definition, Ms Easton advised that this issue would be considered as part of Special Purpose Zones topic.

306. With respect to POU-O2, Ms Easton did not support the submission by Te Tumu Paeroa (S440.009), which sought to limit the cultural rights and interests by including '*where appropriate*' in the objective. Ms Easton advised that this would be inconsistent with the Ngāi Tahu Claims Settlement Act and Te Rūnanga o Ngāi Tahu Act, which identify that Te Rūnanga o Ngāi Tahu is the iwi authority for the West Coast who hold mana whenua. Ms Easton also advised that the submission by Birchfield (S604.109) would be considered as part of the Sites and Areas of Significance to Māori topic.

307. Submissions were received seeking amendments to the POU-P3, POU-P4, POU-P5, POU-P6, POU-P9 and POU-P10.

308. Ms Easton did not support the amendment to POU-P3 (sought by Westpower (S547.062)) to provide for the management of cultural landscapes (rather than protection). Ms Easton considered that cultural landscapes are provided for pursuant to s6(e) and warrant protection, rather than management.

309. Ms Easton supported the change to POU-P4 sought by Poutini Ngāi Tahu (S620.075) to amend '*Māori cultural activities'* to '*Māori purpose activities*', as this improved consistency and readability.

310. With respect to POU-P5, Ms Easton did not support the amendment sought by Buller Conservation Group and Frida Inta (S552.042 and S553.042) that only '*recognised*' mahinga kai sites are guaranteed access. Ms Easton advised that mahinga kai was traditionally gathered throughout the region. Lastly, Ms Easton confirmed that the submission by Te Tumu Paeroa (S440.010) would also be addressed as part of the Sites and Areas of Significance to Māori topic.

311. Ms Easton did not support the deletion of the Ngāi Tahu (Pounamu Vesting) Act 1997 in POU-P6, as sought by Birchfield (S604.110), and noted that cross referencing other legislation was not out of place.

312. Ms Easton did not support the amendment sought by Te Tumu Paeroa (S440.011) to recognise Māori landowners (as well as Poutini Ngāi Tahu) as specialists in tikanga. Ms Easton advised that only Poutini Ngāi Tahu are recognised as mana whenua and are therefore the experts on tikanga on the West Coast.

313. Birchfield *et. al.* and Federated Farmers sought to amend the protection requirement of POU-P10 to a management / recognition requirement (WMS Group (S599.028), TiGa (S493.024), BRM Developments (S603.020), Birchfield (S604.020), Phoenix Minerals (S606.021), Whyte Gold (S607.020) and Federated Farmers (S524.032)). Ms Easton did not support this amendment because it was not consistent with s6(e) of the RMA. Further, Ms Easton did not support the minor wording change sought by Frida Inta (S552.042) and Buller Conservation Group (S552.042) becasue the notified wording was intentional.

Hearing and Submitter Evidence

314. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the reporting officer).

315. With respect to POU-P3, Mr Kennedy (for Westpower) noted the following: *'It* [the submission] *proposes consistency between what is ultimately sought through the related objective POU-O3 (identify and manage) and later provisions in the plan regarding SASM's for a management approach through direct consultation requirements. In my opinion the change sought is appropriate, consistent with, and will directly assist the outcome sought in POU-03 as there may be instances, depending on the circumstances, where it is accepted that total protection is not required to achieve Poutini Ngai Tahu outcomes'*.

316. Ms Inta (for herself and the Buller Conservation Group) noted that it is appropriate that access for Māori purpose activities is subject to some limits to ensure that access does not compromise other important values in the region.

317. Ms Rimene and Ms Huirama (for Te Tumu Paeroa) presented information outlining the position of the Māori Trustee that the provisions of the TTPP should provide a pathway for Māori who whakapapa to the region (but are not registered to Poutini Ngāi Tahu) to develop their lands (in particular papakāinga). Specifically noting that, where a pathway is not provided, *'The Māori Trustee considers that placing this additional requirement on Māori who whakapapa to Māori freehold land is unprincipled and inconsistent with the Māori Land Act - Te Ture Whenua Māori Act 1993 and the Resource Management Act 1991'*.

Responses and Reporting Officer Reply Evidence

318. A letter was provided by Dr Charlotte Severne (the Māori Trustee) on 20 November 2023, in response to questions by the Panel. This letter assisted the Panel to understand better the role and responsibility of the Māori Trustee, the status and values of Māori Freehold Land and the barriers to the development of Māori Freehold Land. Notably, the letter records that - *'Te Ture Whenua Māori Act 1993 recognises that Māori land is a taonga tuku iho of special significance to Māori passed on from generation to generation. An interest in Māori freehold land is also considered a whakapapa link for owners to their tūpuna, whānau, hapū and iwi, whether they reside on the whenua or not*'.

319. A Joint Statement prepared by representatives of Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio, Te Rūnanga o Ngāi Tahu and the Māori Trustee was provided to the Panel on 14 August 2024. With respect to the Poutini Ngāi Tahu SD, this Joint Statement confirmed

that the Māori Trustee's submission (S440.009) on POU-O2 was formally withdrawn and that POU-P9 be amended as follows:

> *Recognise Poutini Ngāi Tahu and Māori landowners as specialists in tikanga and as being best places to convey their relationship with their ancestral lands, water, sites, wāhi tapu and other taonga.*

320. In her Right of Reply (10 November 2023), Ms Easton noted that the POU SD arose from consideration of the following:
- *WCRPS – Poutini Ngāi Tahu Chapter*
- *Mana Whakahono a Rohe Agreement*
- *Westland National Park Draft Management Plan*
- *Paparoa National Park Management Plan*
- *Lake Mahinapua Iwi Management Plan*

Hearing Panel's Evaluation

321. The Panel have considered the submission and further submission points and Ms Easton's responses to those. We agree that no changes are necessary to POU-O1, POU-O2, (noting that the Te Tumu Paeroa submission (S440.009) has been withdrawn), POU-O3, POU-O4, POU-P1, POU-P2, POU-P7 and POU-P8.

322. In terms of POU-P3, the Panel agree with Ms Easton that cultural landscapes fall under the matters provided for in Section 6 (e) of the RMA and as such the replacement of "*protection*" with "*management*" of cultural landscapes as sought by Westpower is inappropriate. No changes are therefore recommended to POU-P3.

323. Poutini Ngāi Tahu have sought amendments to the wording of the POU-P4 to be consistent with other parts of the Plan in terms of the use of "*Māori purpose activities*" instead of "*Māori cultural activities*" and reordering the wording of the policy. The Panel agrees these changes would improve Plan consistency. They have also sought to deleted reference to '*settlements*' on the basis that enabling Papakāinga throughout the Te Tai o Poutini region and not just within settlements as it is important to ensure the relationship of Poutini Ngāi Tahu with their ancestral land continues. The submission notes that this is also reflected in the provisions of the plan where Papakāinga is enabled in areas outside of settlements. Again, the Panel agrees with this change.

324. Frida Inta and Buller Conservation Group have sought that the provisions of POU–P5 only apply to "*recognised*" mahinga kai sites. Ms Easton has noted that mahinga kai sites are not scheduled in the Plan and that during pre-European times, mahinga kai were coast-wide. As such, she did not consider the amendment appropriate, and the Panel agrees with that position. No changes are, therefore, recommended to POU-P5.

325. Birchfield Ross Mining Limited have sought that the reference to the Pounamu Vesting Act in POU-P6 be deleted on the basis that it is not necessary that an RMA document refer to other legislation. Ms Easton considered there was value in referencing the Pounamu Vesting Act, as this was the basis that returned all pounamu owned by the Crown to Ngāi Tahu. She also noted that it is not uncommon for other legislation to be referenced in an RMA document, giving the example of the Building Act which is referenced in a number of TTPP provisions. The Panel agrees with the reasoning; therefore, no changes are recommended to POU-P6.

326. In terms of POU-P9, the Panel notes the letter from Te Tumu Paeroa dated 22 August 2024 formally withdrawing their submission point to include "*Māori landowners*" within the policy.

327. Birchfield *et. al*. have sought that POU-P10 be amended to replace "*protect*" with "*manage adverse effects on*" while Federated Farmers have sought that that "*protect*" be replaced with "*recognise*". Ms Easton did not consider that the words "*manage adverse effects on*" or "*recognise*" reflected the protective intent of s6 of the RMA. The Panel agrees with that position, and we consider that "*protect*" is the appropriate word to use in this policy.

328. Finally, the Panel agrees with Ms Easton that the words "*while ensuring*" in POU-P10 should be retained rather than "*and ensure*" as sought by Frida Inta and Buller Conservation Group. We note Ms Easton's comment that the use of "*while ensuring*" was deliberate – to imply that Poutini Ngāi Tahu's role around decision making is integral to the protection of sites.

329. No changes are therefore recommended to POU-P10.

Recommendation

330. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that relevant submissions identified in the footnotes below are accepted and that changes are made to the Poutini Ngāi Tahu SD as follows:

POU-P4	Provide for papakāinga, marae and Māori ~~cultural~~ **purpose** activities to be established **on Poutini Ngāi Tahu land and** throughout the West Coast/Te Tai o Poutini ~~settlements and on Poutini Ngāi Tahu land~~.[61] ~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[62]

1.17. Tourism – Te Tāpoi

Submissions and Further Submissions

331. Three submission points were received in support of the TRM-O1, while eight submission points were received seeking amendments to the TRM-O1.

332. The Panel adopts the summary of the submissions and further submissions provided in the s42A Report.

Section 42A Report

333. Ms Easton supports the submissions by Jane Whyte and Jeff Page (S467.001 and S467.008) to recognise the strategic importance of Punakaiki, Weheka/Fox Glacier and Waiau/Franz Josef to the tourism industry on the West Coast (noting that all three townships have a '*Scenic Visitor Special Purpose Zone'*). Ms Easton has recommended that a new clause (9) be added to the objective, specifically: *Recognising the strategic importance of Weheka/Fox Glacier, Waiau/Franz Josef and Punakaiki townships to Te Tai o Poutini/West Coast tourism.*

[61] Ngāi Tahu (S620.075)
[62] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

334. Ms Easton also supported the minor amendments sought by Poutini Ngāi Tahu (S620.082) to achieve consistency across the pTTPP.

335. Ms Easton supported any consequential redrafting of TRM-O1(3) and TRM-O1(4) arising from amendments to the definition of infrastructure dealt with in the Energy, Infrastructure and Transport Chapters hearing (Westpower, S547.063).

336. Ms Easton did not consider that further amendments to the Tourism SD were needed to address the natural environment (Forest and Bird, S560.104), natural hazards (EQC, S612.005) or reformatting (Karen Lippiatt, S439.011). Ms Easton advised that other SD would address the natural environment and natural hazards and that reformatting of the objective does not assist with its understanding or readability.

Hearing and Submitter Evidence

337. The evidence summarised below refers only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the Reporting Officer).

338. Mr Luxon for Scenic Hotels Group said they were seeking to grow new opportunities in tourism and looking to the TTPP to encourage that. He noted that the provision of staff accommodation was a problematic area which the Plan might address. Mr Milne from Development West Coast also considered accommodation one of the biggest issues.

339. Mr Kennedy (for Westpower) acknowledged the merits of waiting to see how infrastructure definitions are resolved through other hearing streams before confirming the wording of TRM-O1(3) and TRM-O1(4).

Responses and Reporting Officer Reply Evidence

340. Ms Easton in her initial reply evidence consider there was scope for amendments to the Tourism Strategic Objective, noting that the submission of Karen Lippiatt (S439) sought to turn it into multiple objectives. However, Ms Easton did not provide any specific alterations in her review paper but included tourism within the Economic Development provisions which the Panel has recommended not to proceed with.

Evaluation

341. In considering the objective, the Panel is of a view that, as currently framed, it is somewhat of a confusion of statements, objective and policies, with words like supporting, providing, ensuring and managing all being used in the provision in the same context. We concur with the submission of Karen Lippiatt that the clauses need to be refined and consider doing so will provide greater clarity in what is sought to be achieved.

342. The Panel agrees that the townships of Punakaiki, Fox Glacier, and Franz Josef should be recognised in the Tourism SD given that they are the most visited tourism locations on the West Coast and that all three have Scenic Visitor Zone (a Special Purpose Zone) identifications over some of their commercial areas, which recognise the townships' importance to the tourism industry.

343. The Panel also accepts the minor wording changes to ensure consistency sought by Poutini Ngāi Tahu. We acknowledge the changes to the wording '*infrastructure*' sought by Westpower and note the recommended amendments stemming from the EIT Chapters.

344. The Panel agrees with Ms Easton that tourism activity within Public Conservation Land is subject to the Conservation Act and Conservation General Policy, which DOC administers. We do not see the need for the objective to reflect this.

345. The Panel also agrees that the matters raised by Forest and Bird are already addressed in the Natural Environment SD.

346. For the reasons outlined above TRM-O1 have been amended as follows:

TRM-O1 ~~To r~~ **R**ecognise the significance of tourism to the West Coast/Te Tai o Poutini economy by providing for sustainable tourism development while managing the adverse effects on the environment, communities and infrastructure. ~~This includes:~~

TRM-P1 Support:

1. ~~Supporting~~ the development of visitor facilities and accommodation within and near existing settlements and communities and on public conservation land where appropriate;
2. ~~Supporting~~ the development of cycling and walking connections between tourism sites;
3. ~~Supporting~~ Ngāti Waewae and Ngāti Māhaki ~~o Makaawhio~~ to exercise kaitiakitanga, and provide education about the cultural importance of maunga, other landforms, taonga and wāhi tapu to Poutini Ngāi Tahu and how to treat these areas with respect; ~~and~~
4. ~~Supporting~~ Poutini Ngāi Tahu in expansion of their tourism and visitor activities to deliver better economic outcomes for the hapū**; and**
5. **the strategic importance of Weheka/Fox Glacier, Waiau/Franz Josef and Punakaiki Townships.**

TRM-P2 Provid**e** ~~ing~~ for the development, maintenance and upgrading of supporting infrastructure and ~~Ensuring~~ **ensure** that visitor facilities are connected to existing services and infrastructure.

TRM-P3 Manag**e** ~~ing~~ the development and expansion of visitor activities and services so that the natural and **Poutini Ngāi Tahu** ~~cultural~~ **values**, amenity and character of the West Coast/Te Tai o Poutini and its communities are maintained.

TRM-P4 ~~Promoting~~ **Ensure** a sustainable approach to tourism and minimising the adverse effects, and in particular cumulative adverse effects, of visitor activities and services on Poutini Ngāi Tahu values and wāhi tapu, natural values, amenity and landscape.

Recommendation

347. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that relevant submissions identified in the footer below are accepted and accepted in part and that changes are made to the Tourism SD as follows:

TRM-O1 ~~To r~~ **R**ecognise the significance of tourism to the West Coast/Te Tai o Poutini economy by providing for sustainable tourism development while managing the adverse effects on the environment, communities and infrastructure. ~~This includes:~~

Tourism Strategic Policies

TRM-P1 Support:[63]

1. ~~Supporting~~ the development of visitor facilities and accommodation within and near existing settlements and communities and on public conservation land where appropriate;
2. ~~Supporting~~ the development of cycling and walking connections between tourism sites;
3. ~~Supporting~~ Ngāti Waewae and Ngāti Māhaki ~~o Makaawhio~~[64] to exercise kaitiakitanga, and provide education about the cultural importance of maunga, other landforms, taonga and wāhi tapu to Poutini Ngāi Tahu and how to treat these areas with respect; ~~and~~
4. ~~Supporting~~ Poutini Ngāi Tahu in expansion of their tourism and visitor activities to deliver better economic outcomes for the hapū; **and**
5. **the strategic importance of Weheka/Fox Glacier, Waiau/Franz Josef and Punakaiki Townships.**[65]

TRM-P2 Provid**e** ~~ing~~ for the development, maintenance and upgrading of supporting infrastructure and ~~Ensuring~~ **ensure** that visitor facilities are connected to existing services and infrastructure.

TRM-P3 Manag**e** ~~ing~~ the development and expansion of visitor activities and services so that the natural and **Poutini Ngāi Tahu** ~~cultural~~ **values**,[66] amenity and character of the West Coast/Te Tai o Poutini and its communities are maintained.

TRM-P4 ~~Promoting~~ **Ensure** a sustainable approach to tourism and minimising the adverse effects, and in particular cumulative adverse effects, of visitor activities and services on Poutini Ngāi Tahu values and wāhi tapu, natural values, amenity and landscape.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[67]

1.18. Urban form and development - Te āhua me te whanaketanga o te tāone

Submissions and Further Submissions

348. Eleven submission points were received in support of the UFD-O1, while 12 submission points were received seeking amendments to the UFD-O1. Ten further submission points were received.

349. The Panel adopts the summary of the submissions and further submission points provided in the s42A Report.

Section 42A Report

[63] Karen Lippiatt (S439.011) – in relation to the introduction of policies
[64] Ngāi Tahu (S620.082)
[65] Jane Whyte & Jeff Page (S467.001)
[66] Ngāi Tahu (S620.082)
[67] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

350. In response to submissions, Ms Easton supported amendments to the UFD SD to provide for heritage resources (Pouhere Taonga (S140.009)), Poutini Ngāi Tahu values (Ngāi Tahu (S620.083)) and reverse sensitivity effects on critical infrastructure (KiwiRail Holdings Limited (S442.019)); to specify that new urban development is location away from identified hazards and to promote low impact environment practices (Forest and Bird (S560.106)).

351. Ms Easton did not consider that further amendments are required to the UFD SD to provide for the health and wellbeing of communities and people (Te Mana Ora (S190.036)); to specify additional transport modes (Karen Lippiatt (S439.012)); to promote integrated management of land and water resources (Westpower Limited (S547.065)); to address reverse sensitivity effects on business and industrial land (Silver Fern Farms (S441.010)); to specifically recognise education facilities (Ministry of Education (S456.005)); and to remove reference to special character and amenity values (HortNZ (S486.012))

352. Ms Easton noted that the definitions for '*infrastructure*', '*critical infrastructure*' and '*regionally significant infrastructure'* are outstanding issues and, once resolved, it may be appropriate to amend the UFD SD further to ensure alignment (Westpower Limited (S547.064) and Manawa Energy (S438.030)).

Hearing and Submitter Evidence

353. The evidence summaries below refer only to areas of disagreement (i.e. where a submitter disagrees with the recommendation of the Reporting Officer).

354. Ms Styles (for Manawa) noted that, for consistency with the WCRPS, the term '*critical infrastructure'* should be replaced with '*regionally significant infrastructure'*. Ms Styles recommended that any decisions on the UFD SD be delayed until decisions are made on the Energy, Infrastructure and Transport Chapters.

355. Similar to Ms Styles, Mr Kennedy (for Westpower) considered that the terminology used in the UFD SD should reflect the decisions made on key definitions as part of the Energy, Infrastructure and Transport Chapters.

356. Mr Tuck (for Silver Fern Farms) did not consider that the UFD SD sufficiently addressed the potential conflicts between zones, which he considered is a key function of district plans, particularly when considering rezoning proposals. Mr Tuck considered that a new subclause was needed, specifically: …*Avoids or manages potential conflict (including reverse sensitivity effects) between incompatible activities and zones.*

Responses and Reporting Officer Reply Evidence

357. As part of her "review report" Ms Easton proposed an objective and policy for the Urban Form and Development SD.

358. Ms Inta concurred with the change to the objective and policy but considered that there should be protection from reverse sensitivity to the urban environment.

359. Transpower supported the revised objective but noted it did not appear to reflect the notified objective. They expressed concerns with the policy in that clause (1) of the notified objective which refers to '*environments and built form that are attractive'* now forms the chapeau for the suggested policy and forms the basis for the other policy considerations. Confining the policy consideration to '*attractiveness*' Transpower considers is inappropriate given it is the sole policy for Urban Form and Development, and the very confined nature of

the overriding policy directive. They also said it was open to interpretation what is meant by *'attractive'*.

360. Transpower also expressed concern with clause (g), which is specific to infrastructure, stating that the chapeau means the clause is very limiting in achieving safe, efficient and effective infrastructure. They also had concerns that the reference to reverse sensitivity effects did not recognise there may be other effects which can compromise regionally significant infrastructure. Transpower continued to support the provision of a specific National Grid specific strategic objective.

361. Silver Fern Farms had considered there was a policy gap at the strategic level of the pTTPP, which was potentially inconsistent with the RMA s75(3)(c) requirement to give effect to the WCRPS, which includes clear directions about reverse sensitivity issues at Chapter 5, Objective 2 and Policy 2. They considered that this gap appeared to be recognised in paragraphs 13-14 of Ms Easton's review, but that this had not been addressed in proposed UFD-P1 apart from in relation to significant infrastructure. Silver Fern Farms considered critical need within SD to manage reverse sensitivity effects on other important economic activities in addition to mineral extraction.

Evaluation

362. The hearing Panel again consider the objective as currently framed it is somewhat of a confusing mixture of statements, objective and policies. We note that HortNZ has sought that point 4-10 of UFD-O1 be amended to policies and that the objective itself be revised. Others have also sought the objective be revised. Therefore, we consider there is scope for a change to include objectives and policies to provide greater clarity and direction.

363. The Panel notes submitters (Manawa, Radio NZ and Westpower) seek changes to the term critical infrastructure and/or reference energy activities. We acknowledge this has primarily been addressed in the Energy, Infrastructure and Transport Chapters and that it is appropriate to reflect that outcome in these provisions.

364. The Panel agrees with Pouhere Taonga that heritage resources should be referenced under the Urban Form and Development SD. We consider that a reference to the health and well-being of residents, workers, and visitors in the objective, as sought by Te Mana Ora, is not necessary and note that this would not be confined to urban form and development in any event.

365. Toka Tū Ake EQC and Forest and Bird seek to avoid intensification in higher hazard areas, and to identify that urban development should be located away from identified hazardous locations respectively. The Panel notes that clause (4) requires recognition of the risk of natural hazards and requires new development is located in less hazardous locations. In our view, this necessitates consideration of the issue of natural hazards in relation to all development and is sufficient to appropriately address the issues raised by Toka Tū Ake EQC in different ways without requiring avoidance. The Panel recommend including the amendments sought by Forest and Bird.

366. KiwiRail and Silver Fern Farms raise the need for reverse sensitivity effects to be addressed within the Urban Form and Development SD. Ms Easton considers that this is already addressed within the zone provisions and it is therefore unnecessary to include this in the strategic direction for urban form. While noting that the protection of critical infrastructure is referenced in the objective, the Panel has some sympathy for the submitter's concerns.

We note that reverse sensitivity has been specifically included in the Mineral Extraction SD provisions, and we consider the Urban Form and Development SD is the other obvious area, at a strategic level, where reverse sensitivity effects could be recognised in relation to subdivision, use and development. We therefore agree that reverse sensitivity effects should be addressed in these provisions.

367. The Panel agrees with Ms Easton that the NPSFM specifically requires district plans to include provisions to promote positive effects and address adverse effects on the health and well-being of waterbodies, freshwater ecosystems, and receiving environments (in relation to Westpower's submission to restrict the consideration of the well-being of waterbodies and freshwater ecosystems to plan changes).

368. The Panel generally agrees with Silver Fern Farms that reference business and industrial activity is appropriate within the urban form and development SD, given that they are predominantly within and form a major part of urban environments and support their economic viability. We are not, however, convinced that reference to operational or functional needs to be in a particular location is necessary at this level.

369. The Panel agrees with Ms Easton, in response to the Ministry of Education's submission that, while educational facilities are very important, they are not a significant driver for urban form and development. In many respects, their location and function are already set. Nevertheless, we do consider reference to educational facilities, in terms of access, is necessary and recommend amending the provisions accordingly.

370. Ms Easton supports reference to guidelines around low impact design in response to Forest and Birds submission; and the Panel agrees with that inclusion.

371. Finally, the Panel agrees with the inclusion of recognising Poutini Ngāi Tahu values as part of the urban environment as sought by Ngāi Tahu.

372. Turning to the revision of the Objective, we agree with Transpower that Ms Easton's review report change to UFD-O1 does not entirely reflect the previous version and may therefore create a scope issue. As a result, we have amended the Objective in line with submissions and the original version. The Panel also agrees with Transpower that the use of the wording *'attractive'* at the front of the proposed policy in the review paper is problematic and would essentially requires all subsequent provisions to address the attractive requirement, which seems unnecessary and in places unachievable.

373. For the reasons outlined above UFD-O1 have been amended as follows:

UFD–O1 ~~To have u~~ **U**rban environments and built form **are attractive to residents, businesses and visitors and support economic viability and function** on the West Coast Te Tai o Poutini.

UFD–P1 Promote urban environments and built form through:

~~1. Are attractive to residents, business and visitors;~~

a. identifying and maintaining the values of areas of special character and amenity in urban areas and settlements;

~~2. Have areas of special character and amenity value identified and their values maintained;~~

b. support**ing** the economic viability and function of **commercial, including** town centres**, and industrial areas and protect them from potential reverse sensitivity effects between incompatible activities**;

c. support**ing** inclusivity and housing choice for diversity in the community now and into the future;

d. supporting low environmental impact practices, materials and design during urban development;

e. improv**ing** ~~e~~ overall accessibility and connectivity for people, transport (including walking and cycling), **education facilities** and services;

f. the identification, recognition and protection of heritage resources which are significant to the character and identity of Te Tai o Poutini/the West Coast; and

g. maintain**ing** the health and wellbeing of waterbodies, freshwater ecosystems and receiving environments.

UFD-P2 Recognise the risk of natural hazards ~~whereby~~ **to** new development **and where possible** locate~~d~~ **it away from identified** hazardous locations.

UFD-P3 Promote the re-use and re-development of buildings and land, including private and public land.

UFD-P4 Promoting the safe, efficient and effective provision and use of infrastructure, including the optimisation of the use of existing infrastructure and protection of ~~critical infrastructure~~ **regionally significant infrastructure from reverse sensitivity effects**.

UFD-P5 Recognising Poutini Ngāi Tahu values as part of the urban environment.

Recommendation

374. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that relevant submissions identified in the footnotes below are accepted or accepted in part and that changes are made to the Urban Form and Development SD as follows:

UFD–O1 ~~To have u~~ **U**rban environments and built form **are attractive to residents, businesses and visitors and support economic viability and function** on the West Coast Te Tai o Poutini.[68]

Urban Form and Development Strategic Policies

UFD–P1 Promote urban environments and built form through:[69]

~~1. Are attractive to residents, business and visitors;~~

a. **identifying and maintaining the values of areas of special character and amenity in urban areas and settlements;**[70]

[68] HortNZ (S486.012)
[69] HortNZ (S486.012)
[70] HortNZ (S486.012)

~~2. Have areas of special character and amenity value identified and their values maintained;~~

b. support**ing** the economic viability and function of **commercial, including** town centres**, and industrial areas and protect them from potential reverse sensitivity effects between incompatible activities**;[71]

c. support**ing** inclusivity and housing choice for diversity in the community now and into the future;

d. supporting low environmental impact practices, materials and design during urban development;[72]

e. improv**ing**~~e~~ overall accessibility and connectivity for people, transport (including walking and cycling), **education facilities**[73] and services;

f. the identification, recognition and protection of heritage resources which are significant to the character and identity of the West Coast/Te Tai o Poutini; and[74]

g. maintain**ing** the health and wellbeing of waterbodies, freshwater ecosystems and receiving environments.

UFD-P2 Recognise the risk of natural hazards ~~whereby~~ **to** new development **and where possible** located ~~d~~ **it away from identified** hazardous locations.[75]

UFD-P3 Promote the re-use and re-development of buildings and land, including private and public land.

UFD-P4 Promoting the safe, efficient and effective provision and use of infrastructure, including the optimisation of the use of existing infrastructure and protection of ~~critical infrastructure~~ **regionally significant infrastructure from reverse sensitivity effects**.[76]

UFD-P5 Recognising Poutini Ngāi Tahu values as part of the urban environment.[77]

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~[78]

1.19. Miscellaneous

375. Development West Coast (S484.004) sought the addition of a new Strategic Direction chapter around "*Sustainable Communities and Use and Development of Resources*". The

[71] Silver Fern Farms (S441.010)
[72] Forest and Bird (S560.106)
[73] Ministry of Education (S456.005)
[74] Pouhere Taonga (S140.009)
[75] KiwiRail Holdings Limited (S442.019), Westpower (S547.064)
[76] Forest & Bird (S560.106)
[77] Ngāi Tahu (S620.083)
[78] Forest and Bird (S560.090, S560.086, S560.088, S560.097, S560.102, S560.103, S560.105, S560.435)

proposed objective and policies echoed the Sustainable and Resilient Communities Chapter of the WCRPS, and the wording of the policies proposed is similar.

376. Ms Easton commented that, while the objective and policies proposed are laudable sentiments, she did not consider it necessary to repeat direction that is already covered in the RMA and WCRPS. The Panel agrees with Ms Easton's assessment.

377. Suzanne Hills (S443.014) sought an objective on the development and implementation of a regional renewable energy strategy. Ms Easton did not consider it to be a matter that should be addressed in a district plan. She said a regional renewable energy strategy should be set at the regional level and driven by the West Coast Regional Council or Development West Coast. The Panel agrees that waste management planning is generally undertaken at a regional level and that it is not necessary to include it in SD.

378. Finally, the Panel notes that in order to align with the requirements of the NPS, the strategic direction matters must be included alphabetically under the Strategic Direction heading[79]. As a result of the changes to the titles recommended above the strategic direction matters will need to be reordered alphabetically.

[79] Chapter 7, Mandatory directions, National Planning Standards

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS

Plan Text Amendments

Recommended amendments to the provisions in response to submissions are shown in ~~strikethrough~~ and **bold** and **underline**.

Strategic Directions Title Page

Strategic Direction – Te Pae Tawhiti

This section of the plan will outline the significant resource management issues for the three districts. It will set the strategic direction for the plan in relation to:

Climate Change **and Resilience**

Mineral Extraction **- Te Tango Kohuke**

~~Biodiversity and natural heritage management~~ **Natural Environment - Te Taiao**

~~Natural hazards~~

Poutini Ngāi Tahu

Land Based Primary Production - Te Whakanao Mātāmua i te Whenua

Tourism **- Te Tāpoi**

Urban form and development **- Te āhua me te whanaketanga o te tāone**

Strategic Directions Overview

Te Tirohanga Whānui ki ngā Ahunga Rautaki

This chapter sets out the overarching direction for Te Tai o Poutini Plan as expressed through Strategic Directions. Strategic Objectives and Policies form an important part of the resource consent framework and should be considered alongside the relevant ~~zone or overlay~~ **other** objectives and policies when assessing resource consents.

These directions reflect those factors which are considered to be key to achieving the overall vision for the pattern and integration of land use within the Westland, Grey and Buller Districts.

The Strategic Directions are intended to demonstrate:

1. Commitment to, and articulation of the Councils' partnership with Poutini Ngāi Tahu;
2. Alignment with the communities' aspirations for development while maintaining **and enhancing** environmental quality across the West Coast/Te Tai o Poutini;
3. Integrated management through the grouping of environmental considerations which combine to achieve strategic outcomes; and avoiding strategic objectives becoming isolated within various chapters of Te Tai o Poutini Plan;
4. ~~Fostering~~ **Enabling** the use and development of natural and physical resources whilst protecting the natural**, cultural and heritage** values that have been elevated to matters of national importance by the Resource Management Act 1991 and those matters of national and regional significance by National and Regional Policy Statements;

5. A prosperous**, and sustainable** economy through enabling a wide range of appropriate business activities.
6. Operation and maintenance of ~~critical infrastructure~~ **regionally significant infrastructure**;
7. The management of urban growth integrating existing and future infrastructure, providing sufficient land, or opportunity to meet growth demands for housing and business.

8. Resilience to climate change and natural hazards.

For the purposes of preparing, changing, interpreting, and implementing Te Tai o Poutini Plan, **the relevant objectives and policies of the District Plan (including strategic objectives and policies in this chapter) are to be considered together and no hierarchy exists between them.** ~~all other objectives and policies in all other chapters of this Plan are to be read and achieved in a manner consistent with these Strategic Directions~~

For the avoidance of doubt, for resource consent applications, the Strategic Objectives **and Policies** may require specific consideration and application to proposals, as a relevant consideration under section 104(1)(b)(vi) of the RMA.

There is no hierarchy between the stated Objectives i.e., no one Strategic Objective has primacy over another Strategic Objective and the Strategic Objectives should be read as a whole. ~~It should be noted that with the exception of the Poutini Ngāi Tahu strategic directions, these are objectives only. In the case of Poutini Ngāi Tahu there are also strategic policies that sit across the Plan.~~

Activity and location specific objectives and policies are located in the relevant chapter of Te Tai o Poutini Plan. The planning standards require that 'like' matters are grouped together in a chapter with the relevant objectives.

~~AG Agriculture – Te Ahuwhenua~~ LBPP –Land Based Primary Production - Te Whakanao Mātāmua i te Whenua

This Chapter sets out the overarching direction for matters relating to ~~agriculture~~ **land based primary production** across the West Coast/Te Tai o Poutini.

~~Agriculture~~**Land Based Primary Production** Strategic Objectives

~~AG~~**LBPP** - O1

To maintain the productive value of ~~versatile soils~~ **highly productive land** ~~and agricultural land~~ for current and future agricultural, **pastoral** and horticultural uses.

~~AG~~**LBPP** - O2

To recognise the significance of agriculture to the West Coast economy~~,~~ and provide for ~~agricultural~~ **land based primary production,** development and innovation.~~ and~~

LBPP – O3

Enable support industries and services needed to maintain land based primary productions viability within rural areas.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

~~CR Connections and Resilience - - Ngā Hononga me te Manawa Titi~~

~~This Chapter sets out the overarching direction for matters relating to infrastructure connections and resilience across the West Coast/Tai o Poutini.~~

~~Connections and Resilience Strategic Objectives~~

~~CR - O1 To build greater resilience in West Coast/Te Tai o Poutini communities and infrastructure, recognising the effects of climate change and the need to adapt to the changes associated with those effects.~~

~~CR - O2 To enable and protect the continued function and resilience of critical infrastructure and connections and facilitate their quick recovery from adverse events.~~

~~CR - O3 To ensure that new locations for critical infrastructure and connections take account of the hazardscape and are built away from natural hazards.~~

~~CR – O4 To enable the development of greater infrastructure self – sufficiency and backup of critical infrastructure on the West Coast / Te Tai o Poutini.~~

CCR Climate Change and Resilience – Te Āhuarangi Hurihuri me Te Manawaroa

This Chapter sets out the overarching direction for matters relating to climate change and resilience across the West Coast/Te Tai o Poutini.

Climate Change and Resilience Strategic Objectives

CCR – O1 There is resilience to natural hazards and adverse events in the West Coast/Te Tai o Poutini communities and infrastructure, which supports adaptation to the effects of climate change.

CCR – O2 Greenhouse gas emissions are reduced and opportunities to transition to a low carbon emission economy are provided, including as a result of new technology.

Climate Change and Resilience Strategic Policies

CCR - P1 Enable the continued functioning of regionally significant infrastructure and connections and facilitate their quick recovery from the adverse effects of natural hazard events, which may include relocation.

CCR – P2 Ensure that new locations for regionally significant infrastructure and connections are built away from natural hazards, unless there is a functional need or operational need to be in that location.

CCR – P3 Enable the development of greater infrastructure self-sufficiency and backup of regionally significant infrastructure on the West Coast/Te Tai o Poutini.

CCR – P4 Support communities to make good decisions around climate change exacerbated hazards by identifying and providing for relocation to safer locations.

CCR – P5 Support, at a local level, reduction in emissions of greenhouse gases, including through providing for low carbon transport options such as walking, cycling and electric vehicles.

CCR – P6 Provide for the development and expansion of renewable electricity generation and associated infrastructure at a range of scales across Te Tai o Poutini/the West Coast, to support emissions reductions and a low carbon future.

CCR – P7 Recognise the role of the natural environment and nature-based solutions in resilience to climate change.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

Mineral Extraction – Te Tango Kohuke

This Chapter sets out the overarching direction for matters relating to mineral extraction across the West Coast/Te Tai o Poutini.

Mineral Extraction Strategic Objectives

MIN-O1 ~~To ensure provision for t~~ **T**he use and development of the West Coast/Te Tai o Poutini's mineral resources while ~~also avoiding duplication of regulation across agencies.~~ **managing adverse effects on the environment.**

Mineral Extraction Strategic Policies

MIN-~~O2~~**P1** ~~To e~~ **E**nable mineral extraction and ancillary activities which support it, ~~including~~ specifically **through a** ~~within the~~ Buller Coalfield Zone~~,~~ **and** Mineral Extraction Zone, and **provide for these activities in appropriate locations within the** Rural Zones and Open Space Zones.

MIN-~~O3~~**P2** ~~To r~~ **R**ecognise that mineral resources are widespread ~~and~~ **but** fixed in location throughout the West Coast/Te Tai o Poutini and that **extraction of them in a range of locations outside specified zones may be appropriate and provide economic and social benefits to the region and nationally,** provided adverse effects **can be appropriately** ~~are~~ managed ~~mineral extraction activities can be appropriate in a range of locations outside specified zones and precincts~~.

MIN-~~O4~~**P3** ~~To e~~ **E**nsure that new subdivision, use and development does not compromise existing **lawfully established** mineral extraction activities, including through reverse sensitivity ~~to~~ effects, such as dust, noise and traffic generation.

MIN-~~O5~~**P4** ~~To s~~ **S**upport Poutini Ngāi Tahu to manage their pounamu and aotea stone resources through the use of Pounamu and Aotea Management Area Overlays.

MIN-~~O6~~**P5** ~~To:~~

~~a.~~ Avoid, remedy or mitigate the adverse effects of mineral extraction activities on the West Coast/Te Tai o Poutini's **environment.** ~~significant natural and cultural features, sites and heritage, and amenity values, including:~~

i. ~~Poutini Ngāi Tahu, cultural resources and taonga including sites and areas of significant to Māori identified in Schedule Three;~~

ii. ~~Areas of significant indigenous vegetation, significant indigenous fauna habitat and protected native fauna;~~

iii. ~~Outstanding natural landscapes and features;~~

iv. ~~Waterways and waterbodies; and~~

v. ~~The coastal environment;~~

vi. ~~The wellbeing of people and communities; and~~

~~b. Allow to allow adverse effects to be addressed by alternative mitigation measures such as offsetting and compensation.~~

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

Natural Environment – Te Taiao

This Chapter sets out the overarching direction for matters relating to the natural environment across the West Coast/Tai o Poutini.

Natural Environment Strategic Objectives

NENV-O1 ~~To r~~ Recognise, ~~and~~ protect **and where necessary restore** the natural character, **outstanding** landscapes and features, **significant** ecosystems and indigenous biodiversity that contribute to the West Coast's character and identity ~~and Poutini Ngāi Tahu's cultural and spiritual values~~.

NENV–O2 ~~To ensure that t~~ **T**he rights, interest**s**, ~~and~~ values **and connections** of Poutini Ngāi Tahu to **the** natural environment ~~areas and features~~ are protected and provided for and ~~that~~ the ability to exercise kaitiakitanga and tino rangatiratanga is maintained and enhanced.

~~NENV-O4 To clearly identify:~~

~~a. Unique and important natural environment areas and features on the West Coast/ Te Tai o Poutini which must be protected; and~~

~~b. Areas where subdivision, use and development to enable community economic, cultural, and social wellbeing can be sustainably managed.~~

Natural Environment Strategic Policies

NENV-P1 Within significant and/or outstanding natural environment areas and features:

a. identify areas which must be protected from inappropriate subdivision use and development; and

b. identify areas where subdivision, use and development can be sustainably managed, using, where appropriate, the effects management hierarchy, to enable community, economic, cultural and social wellbeing.

NENV-~~O2~~**P2** ~~To~~ In relation to the natural environment recognise:

a. The substantial contribution to the protection of natural environment values that is made by the existence of public conservation land ~~in protecting significant areas, habitats and features;~~

b. The **functional or operational** need for **regionally significant** infrastructure to sometimes be located in significant **and/or outstanding natural environment** areas **and features**; ~~and~~

c. The need to support the ethic of stewardship **on private and public lands** ~~and to consider the positive effects of the conservation estate in achieving the requirements of the RMA~~;

d. There are lawfully established activities located in significant natural environment areas; and

e. The need for weed and pest control to protect, maintain and enhance natural environment values.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

Poutini Ngāi Tahu

….

POU-P4 Provide for papakāinga, marae and Māori ~~cultural~~ **purpose** activities to be established **on Poutini Ngāi Tahu land and** throughout the West Coast/Te Tai o Poutini ~~settlements and on Poutini Ngāi Tahu land~~.

….

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

Tourism – Te Tāpoi

This Chapter sets out the overarching direction for matters relating to tourism across the West Coast/Te Tai o Poutini.

Tourism Strategic Objectives

TRM-O1 ~~To r~~ **R**ecognise the significance of tourism to the West Coast/Te Tai o Poutini economy by providing for sustainable tourism development while managing the adverse effects on the environment, communities and infrastructure. ~~This includes:~~

Tourism Strategic Policies

TRM-P1 Support:

1. ~~Supporting~~ the development of visitor facilities and accommodation within and near existing settlements and communities and on public conservation land where appropriate;
2. ~~Supporting~~ the development of cycling and walking connections between tourism sites;
3. ~~Supporting~~ Ngāti Waewae and Ngāti Māhaki ~~o Makaawhio~~ to exercise kaitiakitanga, and provide education about the cultural importance of maunga, other landforms, taonga and wāhi tapu to Poutini Ngāi Tahu and how to treat these areas with respect; ~~and~~
4. ~~Supporting~~ Poutini Ngāi Tahu in expansion of their tourism and visitor activities to deliver better economic outcomes for the hapū; **and**
5. **the strategic importance of Weheka/Fox Glacier, Waiau/Franz Josef and Punakaiki Townships.**

TRM-P2 Provid**e** ~~ing~~ for the development, maintenance and upgrading of supporting infrastructure and ~~Ensuring~~ **ensure** that visitor facilities are connected to existing services and infrastructure.

TRM-P3 Manag**e** ~~ing~~ the development and expansion of visitor activities and services so that the natural and **Poutini Ngāi Tahu** ~~cultural~~ **values**, amenity and character of the West Coast/Te Tai o Poutini and its communities are maintained.

TRM-P4 ~~Promoting~~ **Ensure** a sustainable approach to tourism and minimising the adverse effects, and in particular cumulative adverse effects, of visitor activities and services on Poutini Ngāi Tahu values and wāhi tapu, natural values, amenity and landscape.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

Urban Form and Development – Te āhua me te whanaketanga o te tāone

This Chapter sets out the overarching direction for matters relating to the urban form and development across the West Coast/Te Tai o Poutini.

Urban Form and Development Strategic Objective

UFD–O1 ~~To have u~~ **U**rban environments and built form **are attractive to residents, businesses and visitors and support economic viability and function** on the West Coast Te Tai o Poutini.

Urban Form and Development Strategic Policies

UFD–P1 Promote urban environments and built form through:

~~1. Are attractive to residents, business and visitors;~~

a. **identifying and maintaining the values of areas of special character and amenity in urban areas and settlements;**

~~2. Have areas of special character and amenity value identified and their values maintained;~~

b. support**ing** the economic viability and function of **commercial, including** town centres**, and industrial areas and protect them from potential reverse sensitivity effects between incompatible activities**;

c. support**ing** inclusivity and housing choice for diversity in the community now and into the future;

d. supporting low environmental impact practices, materials and design during urban development;

e. improv**ing**~~e~~ overall accessibility and connectivity for people, transport (including walking and cycling), **education facilities** and services;

f. the identification, recognition and protection of heritage resources which are significant to the character and identity of the West Coast/Te Tai o Poutini; and

g. maintain**ing** the health and wellbeing of waterbodies, freshwater ecosystems and receiving environments.

UFD-P2 Recognise the risk of natural hazards ~~whereby~~ **to** new development **and where possible** locate~~d~~ **it away from identified** hazardous locations.

UFD-P3 Promote the re-use and re-development of buildings and land, including private and public land.

UFD-P4 Promoting the safe, efficient and effective provision and use of infrastructure, including the optimisation of the use of existing infrastructure and protection of ~~critical infrastructure~~ **regionally significant infrastructure from reverse sensitivity effects**.

UFD-P5 Recognising Poutini Ngāi Tahu values as part of the urban environment.

~~For the purposes of preparing, changing, interpreting and implementing Te Tai o Poutini Plan all other objectives and policies in all other chapters of Te Tai o Poutini Plan are to be read and achieved in a manner consistent with these strategic objectives.~~

TAI POUTINI PLAN COMMITTEE

Hearing of Submissions on the Proposed Te Tai O Poutini Plan

Recommendation Report of Hearing Panel

Recommendation Report: Topic 5

Contaminated Land - Ngā Whenua Tāhawahawa

Hazardous Substances - Ngā Matū Mōrearea

Hearing Date: 6 December 2023

HEARING PANEL

Paul Rogers (Chair)

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS 27

APPENDICES

Appendix 1 – Recommendations

PART A – INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Introduction

1. Matters to do with my appointment and other preliminary matters applicable to all Hearing Panel's recommendations on the Proposed Te Tai o Poutini Plan (**pTTPP** or 'the Plan') are recorded and addressed in Recommendation Report 1.

2. This Recommendation Report relates to the Contaminated Land - Ngā Whenua Tāhawahawa ('**CL**') and Hazardous Substances - Ngā Matū Mōrearea ('**HS**') chapters of the Hazards and Risks section in Part 2 – District-Wide Matters of pTTPP.

3. This Recommendation Report contains my evaluations and recommendations to the TTPP Committee on the submissions and further submissions received on the CL and HS chapters.

4. The Section 32 Report[1] on Hazard Substances and Contaminated Land ('**s32 Report**') provided an evaluation of the options relating to managing hazardous substances and contaminated land through the pTTPP, including the regulatory framework key resource management issues, the evidence base (research, consultation, information and analysis undertaken) and evaluation of the options. The evaluation concluded that, compared to the status quo, the pTTPP CL and HS provisions represent the most appropriate means of achieving the hazardous substances and contaminated land objectives of the pTTPP.

5. A total of 106 submission points and 28 additional submission points were received for the CL and HS chapters, as well as relevant definitions.

6. The Section 42A Officer's Report[2] ('**s42A Report**'), authored by Ms. Lois Easton, a principal planner with Kererū Consultants acting as the Reporting Officer, was circulated to the hearing. The s42A Report summarised the submissions and further submissions received, and relief sought. It analysed the submissions on the CL and HS provisions, and detailed recommendations (summarised in **Appendix 1** of the s42A Report). It also indicated whether individual submission points and further submission points were recommended to be accepted/accepted in part/rejected (see **Appendix 2** of the s42A Report).

7. The matters raised by submitters and further submitters were grouped in the s42A Report in relation to each of the following key issues:

   (a) CL chapter as a whole;

   (b) CL objectives;

   (c) CL policies and definitions;

   (d) HS chapter as a whole and definitions;

   (e) HS objectives; and

[1] Section 32 Evaluation, Report Three – Hazards and Risks Ngā Pūmate me ngā Mōrea, Part Two Hazardous Substances – Ngā Matū Mōrearea Contaminated Land – Ngā Whenua Tāhawahawa
[2] Section 42A Officer's Report Hazardous Substances and Contaminated Land

(f) HS policies.

8. A s32AA evaluation for all recommended amendments was provided at the end of the s42A Report.

9. After the hearing, Ms. Easton provided a Right of Reply ('**Reply**') dated 6 December 2023.

10. This Recommendation Report follows the same structure of the s42A Report. It provides a summary of the issues raised in submissions and further submissions, the s42A Report analysis and recommendations, the submitter's statement or evidence and the Reply, before providing my evaluation and recommendation.

11. This Recommendation Report should be read in conjunction with the s42A Report and the tracked change version of the notified pTTPP provisions (attached as **Appendix 1** to this Report). The tracked change version of the pTTPP provisions forms an integral part of the decision and records all my recommended amendments (additions and deletions) to the notified pTTPP provisions. The tracked change version of the PTTPP shows my recommended changes to the notified provisions in bold and underlining, indicating additions and strikethroughs, indicating deletions. If there is any discrepancy between this Recommendation Report and the tracked change version of the pTTPP, the tracked change version of the pTTPP shown in **Appendix 1** of this Report must prevail.

12. This Recommendation Report contains the reasons for my recommendations. These comprise either the adoption of the reasoning and recommendations of the original s42A Reports or the Reply, or a specific rationale.

13. Where I recommend the pTTPP provisions should remain as notified, it is because:

    (a) I have adopted the reasoning and recommendation of the s42A Report or the Reply to retain the provision as notified; or

    (b) I have recommended to retain the provision as notified for reasons set out in this Recommendation Report.

14. Where there is a recommended change to a notified provision of the pTTPP, it is because:

    (a) I have recommended an amendment to a provision for reasons set out in this Recommendation Report in response to a submission point, which the s42A Report did not recommend; or

    (b) I have adopted the reasoning and recommendation of the s42A Report to change the provision to that recommended in the original s42A Report; or

    (c) I have adopted the reasoning and recommendation as recommended in the Reply; or

    (d) A consequential change has been necessary, following on from a decision in either (a), (b) or (c).

15. Where there may be a different recommendation between the s42A Report and the Reply (i.e., the Reporting Officer's recommendation has changed as a result of hearing the statement or evidence of submitters), unless the recommendation specifically adopts the original s42A Report's reasoning and recommendations, the reasoning and recommendations in the (later) reply has been adopted and it must be taken to prevail.

16. If there are circumstances where I consider that alternative relief is more appropriate than that requested in submissions and further submissions to give effect to the RMA, NZCPS, NPS and/or RPS, but are still within the scope of the relief sought, the relevant recommendation sets out the nature of the change and the reason for the change. This is recorded in this Recommendation Report.

17. If any changes are recommended to the provisions (since the s32A Report was completed), a further evaluation, if required, has been undertaken pursuant to s32AA of the RMA. Any such circumstances are referred to in this Recommendation Report in sufficient detail to demonstrate that a further evaluation was undertaken.

18. Clause 16(2) of Schedule 1 of the RMA enables me to recommend amendments to alter information, where such an alteration is of minor effect, or may correct any minor errors. Any such minor amendments are recorded in the recommendations below each section considered in Part C of this Report and in the tracked change version of the notified Plan provisions (**Appendix 1** of this Report).

1.2. Terminology in this Report

19. Throughout this Report, the following abbreviations will be used:

Birchfields	Birchfield Ross Mining Limited and Birchfield Coal Mines Ltd
BCG	Buller Conservation Group
BDC	Buller District Council
Councils	Buller District Council, Grey District Council, and Westland District Council
Director General	Director General of Conservation
DoC	Department of Conservation
EPA	Environmental Protection Authority
EQC	Natural Hazards Commission Toka Tū Ake
FENZ	Fire and Emergency New Zealand
FFNZ	Federated Farmers of New Zealand
Forest & Bird	Royal Forest & Bird Protection Society of NZ Inc
Fuel Companies	Fuel Companies New Zealand
GDC	Grey District Council
Guidance Note	Guidance Note: Managing Hazardous Substances under the Resource Management Act
HAIL	Hazardous Activities and Industries List

HNZ	Horticultural New Zealand
HSNO	Hazardous Substances and New Organisms Act 1996
HSWA	Health and Safety at Work Act 2015
Manawa Energy	Manawa Energy Limited
MfE	Ministry for the Environment
NES-CS	Resource Management (National Standard for Assessing Contaminants in Soil to Protect Human Health) Regulations 2011.
Ngāi Tahu	Te Rūnanga o Ngāi Tahu, Te Runanga o Ngāti Waewae, Te Rūnanga o Makaawhio
Planning Standards	National Planning Standards
PRL	Papahaua Resources Limited
NPS	National Policy Statements
NZCPS	New Zealand Coastal Policy Statement 2010
RMA or the Act	Resource Management Act 1991
RML	Rocky Mining Limited
RPS	West Coast Regional Policy Statement
SFFL	Silver Fern Farms Limited
SLUS	Selected Land Use Sites
Te Mana Ora	Te Mana Ora (Community and Public Health) of Te Whatu Ora (Health New Zealand)
TiGa	TiGa Minerals and Metals Limited
WCRC	West Coast Regional Council
WCRP	West Coast Regional Plan
WDC	Westland District Council
Westpower	Westpower Limited
Worksafe	Worksafe New Zealand

1.3. Hearing Arrangements

20. The hearing was held via Audiovisual on 6 December 2023. Some submitters appeared by internet connection.

1.4. Appearances

21. The following submitters appeared at the hearing:

Ms. Frida Inta (S553 and FS223) for herself and on behalf of the BCG (S552 and FS224);

Mr. Martin Kennedy, planner of West Coast Planning Limited, on behalf of Westpower (S547 and FS222); and

Ms. Lois Easton as reporting officer.

1.5. Overview of submitter evidence received

22. Evidence from Manawa Energy (S438) dated 8 November 2023 and Westpower (S547 and FS222) dated 6 November 2023 was circulated before the hearing and tabled at the hearing.

23. For those appearing at the hearing, the following evidence and/or statements were received:

(a) Statement of evidence by Ms. Easton (undated); and

(b) Ms. Inta on behalf of BCG and herself (dated 6 December 2023).

1.6. Right of Reply

24. Ms. Easton provided a Reply responding to questions raised at the hearing and proposing further amendments beyond those recommended in the s42A Report.

1.7. Submitter correspondence

25. On 7 March 2024, the TTPP panel received a letter from Mitchell Daysh, dated 7 November 2023, on behalf of SFFL advising that:

(a) SFFL would not file evidence, nor appear at the hearing, in relation to their submission on the CL and HS chapters.

(b) SFFL supported Ms. Easton's recommendations, as detailed in her s42A Report.

(c) A further submission[3] on HS-O1 was incorrectly attributed to SFFL.

1.8. Procedural Steps and Issues

26. No procedural matters were raised at the hearing.

1.9. Site Visits

27. I undertook site visits throughout the pTTPP process, including those relevant to this hearing.

[3] Appendix Two details SFFL made a further submission (FS101.009) on the Fuel Companies submission (S613.002) on HS – O1. However, this is not the case. This may be mistaken for SFFL's further submission on the HNZ submission (S486.023) on HS – O1, or another entity's or person's further submission on S613.002

PART B - STATUTORY REQUIREMENTS AND DOCUMENTS

28. The CL and HS chapters are two of three subsections in the Hazards and Risks - Ngā Pūmate me ngā Mōrea section of Part 2 – District Wide Matters – Te Wāhanga 2 – Ngā Kaupapa ā-Rohe Whānui. Each chapter includes objectives and policies: the CL chapter manages contaminated land, while the HS chapter focuses on activities that involve hazardous substances.

29. Neither chapter includes rules. In terms of HS, The Hazardous Substances and New Organisms Act 1996 (HSNO), and related regulations are the principal regulations controlling the introduction, manufacture, use, storage and disposal of hazardous substances. The district councils have limited powers and responsibilities under HSNO, which is administered by other agencies, particularly in terms of the use and application of hazardous substances in working situations.

30. In terms of pTTPP, the approach taken to hazardous substances focused the provisions on major hazardous facilities. An example of major hazardous facilities on the West Coast is Westland Milk Products. The TTPP includes objectives and policies only for hazardous substances. Because there are no rules, these objectives and policies are principally used where a resource consent is triggered for another reason. This might, for example, concern natural hazards, and the natural hazards chapter includes provisions related to hazardous substances.

31. Turning to Contaminated Land, the situation is similar. Land can become contaminated when hazardous substances are not used, stored, or disposed of in a manner that is appropriate and safe. Contaminated land is commonly associated with past activities, such as the manufacture and use of pesticides, timber treatment, sheep dipping, and the disposal of waste in landfills.

32. District councils have significant functions regarding contaminated land; however, the rules governing this are already prescribed in the National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health 2011(NESCS). The NESCS is a nationally consistent set of planning controls that a District council must enforce under s44A Clause 8 of the RMA. It was developed to achieve a consistent, nationwide approach to managing issues related to the legacy of past chemical use, which has resulted in soil contamination and the disposal of hazardous waste.

33. The NESCS provides the rule framework for managing contaminated land to avoid impacts on human health, so only the objective and policy framework is required to assist in the assessment of resource consents.

34. The s32 Report[4] outlined the relevant statutory considerations for contaminated land and hazardous substances, noting changes to s30 and s31 of the RMA that removed councils' explicit duty to manage hazardous substances. However, it[5] emphasised that councils can still regulate hazardous substances under their broader role of achieving integrated management, especially if the HSNO or HSWA regulations are insufficient to manage environmental effects. The s32 Report[6] also highlighted matters from sections 6, 7 and 8 of the RMA, NES-CS, NPS, WCRPS, iwi management plans, HSNO, HSWA, and the MfE's Guidance Note relevant to the CL and HS chapters, and broadly discussed these considerations as well.

[4] Above n 1, section 6.2.1
[5] Above n 4
[6] Above n 1, sections 6.2.2 to 6.2.6

35. The s32 Report[7] indicated that there are three iwi management plans, i.e., Te Rūnanga o Makaawhio Pounamu Management Plan, Ngāti Waewae Pounamu Management Plan, and Lake Māhinapua Management Plan. It[8] noted that while these documents focus on specific issues, they also contain wider information about the overall approach to sustainability and kaitiakitanga of resources, and Poutini Ngāi Tahu values.

36. Clause 10 of Schedule 1 of the RMA states that it is not necessary to provide decisions on individual submissions. Recommendations are made within the scope of requested relief, either individual submissions or groups of submissions making similar requests, as specified in the reasons for recommendation. References to relevant submissions are made in the footers.

37. The Planning Standards mandatory direction 7.9 requires provisions to manage contaminated land to be located in a Contaminated Land chapter of the pTTPP. Mandatory direction 7.12 requires provisions relating to hazardous substances be in a Hazardous Substances chapter under the Hazards and Risks heading of the pTTPP. Lastly, mandatory direction 7.13 requires provisions relating to: managing the land use aspects of hazardous substances; the use, storage and disposal of hazardous substances on land that presents a specific risk to human or ecological health, safety and property; and manage land use near major hazard facilities to manage risk and reverse sensitivity issues be in a Hazardous Substances chapter of the pTTPP. I am satisfied the pTTPP structure is consistent with these national directions.

PART C – SUBMISSIONS, EVIDENCE, EVALUATION AND RECOMMENDATIONS

2. CONTAMINATED LAND

2.1. Whole Chapter

Submissions and Further Submissions

38. Seven submission points and one further submission point relating to the **CL chapter (as a whole)** were summarised in a Table on page 7 of the s42A Report. Five submissions supported the retention of the CL chapter as notified, and one other submission supported reference to the NES-CS rules. One submission sought an amendment to the entire chapter, which was opposed by a further submission.

39. I adopt the summary of these submissions detailed in the s42A Report, and I have considered all the relevant submissions.

Section 42A Report

40. Ms. Easton acknowledged submissions[9] supporting the retention of the CL chapter as notified. These submissions were recommended to be accepted.

41. She noted the submission[10] supporting a reference to the NES-CS provisions in the chapter.

[7] Above n 1, section 6.2.5
[8] Above n 7
[9] WDC (S181.004), BCG (S552.045), Ms. Frida Inta (S553.045), Ms. Margaret Montgomery (S446.008), and Mr. David Ellerm (S581.0130)
[10] Te Mana Ora (S190.147)

42. Ms. Easton recommended rejecting the submission[11] from Forest & Bird, reasoning that since the CL objectives and policies already include "*environment*" (defined to include "*ecosystems and the constituent parts*"), native species and their habitat are inherently addressed as a subset of these ecosystems.

43. Given paragraph [42] above, Ms. Easton recommended accepting the further submission[12] opposing Forest & Bird's submission.

Hearing and Submitter Evidence

44. Mr. Kennedy[13] advised at the hearing that he generally supported Ms. Easton's recommendations to accept Westpower's further submission point opposing Forest & Birds' submission on the CL chapter (which is detailed in paragraph [43] above).

Reporting Officer Reply Evidence

45. The Reply does not address the CL chapter as a whole.

Hearing Panel's Evaluation

46. I agree with Ms Easton's recommendations, which support the retention of the CL chapter as notified. I accept her reasoning, that since the CL objectives and policies already include "*environment*" (defined to include "*ecosystems and the constituent parts*"), native species and their habitat are inherently addressed as a subset of these ecosystems, leading to the rejection of the Forest & Bird submission.

Recommendation

47. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the **Contaminated Land chapter as a whole** be retained in the pTTPP.

2.2. Contaminated Land Objectives

Submissions and Further Submissions

48. 11 submission points relating to **CL–O1** were summarised in a Table on pages 8 and 9 of the s42A Report. Eight submissions supported the retention of the CL objectives as notified. One submission[14] sought amendment to the CL objective, yet requested it be retained. Two submission points sought an amendment to the objective.

49. I adopt the summary of these submissions detailed in the s42A Report, and I have considered all the relevant submissions.

Section 42A Report

Objectives (General)

[11] Forest & Bird (S560.184) – incorrectly recorded as S560.104 in the s42A Report
[12] Westpower (FS222.0248)
[13] Mr. Martin Kennedy, Notable Trees planning evidence, dated 6 November 2023, section 7.2
[14] Ms. Catherine Smart – Simpson (S564.009)

50. Ms. Easton acknowledged submissions[15] supporting the retention of the CL objectives as notified.

Objective 1

51. Ms. Easton noted the submission[16] supporting the retention of CL–O1 as notified.

52. Ms. Easton recommended rejecting the Fuel Companies' submission[17], arguing it was inappropriate to focus CL–O1 solely on human health while excluding the wider environmental impacts of contaminated land, as councils must manage those effects. She emphasised that all persons must avoid, remedy, or mitigate any adverse effects on the environment under s17 of the RMA.

53. Additionally, Ms. Easton preferred "*avoid or mitigate*" over "*managing to an acceptable level*" for contaminated land, noting this aligns with community expectations (evidenced by numerous submissions). She emphasised that the Councils have a function to prevent or mitigate any adverse effects of the development, subdivision, or use of contaminated land under s31 of the RMA.

54. Ms. Easton recommended accepting SFFL's submission[18], supporting the inclusion of "*remedies*" in the objective, as managing contaminated land often requires remedial actions beyond mitigation, such as the removal of contaminated soil and its proper disposal. She recommended the following amendment.

CL - O1 - To ensure that contaminated land is used, subdivided, developed or managed in a way that avoids, **remedies** or mitigates adverse effects on the environment and manages the risk to human health to a level that is appropriate for the intended use.

Pre-Hearing Statement

55. SFFL's pre-hearing statement supported Ms. Easton's recommendations on the CL objective.

Hearing and Submitter Evidence

56. Those present at the hearing did not raise any points relating to the CL objective.

Reporting Officer Reply Evidence

57. The Reply does not address the CL objective.

Hearing Panel's Evaluation

58. I note the support from submitters for Ms Easton's recommended amendments to Objective CL-O1, and I accept that these amendments are appropriate for the reasons given in the s42A Report.

Hearing Panel's Recommendation

[15] Mr. Geoff Voickman (S563.006), BDC (S538.089, 538.091), Te Mana Ora (S190.143), Koiterangi Lime Co LTD (S577.009), Ms. Catherine Smart-Simpson (S564.009), Mr. William McLaughlin (S567.090), Mr. Chris and Ms. Jan Coll (S558.733), Chris J Coll Surveying Limited (S566.773), and Ms. Laura Coll McLaughlin (S574.733)
[16] Te Mana Ora (S190.256)
[17] Fuel Companies (S613.007)
[18] SFFL (S441.011) – incorrected recorded as S441.001

59. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the following changes to the **Contaminated Land Objectives**:

Contaminated Land Objective	
CL – O1	To ensure that contaminated land is used, subdivided, developed,[19] or managed in a way that avoids,[20] **remedies**[21],[22] or mitigates adverse effects on the environment and human health.

2.3. Contaminated Land Policies and Definitions

Submissions and Further Submissions

60. Nine submission points and one further submission point relating to the **CL policies** (as a whole) were summarised in a Table on pages 10 and 11 of the s42A Report. Eight submissions supported the retention of the CL policies as notified. The further submission opposed Ms. Smart-Simpson's support to retain the CL policies as notified. One submission sought an amendment to the CL policies by inserting a third CL policy.

61. Two submission points and one further submission point relating to **CL–P1** were summarised in a Table on page 10 of the s42A Report. However, one submission point and one further submission point recorded against CL–P1 relate to CL–P2. The correct count is one submission point. The submission supported the retention of the policy as notified.

62. Two submission points and one further submission point relating to **CL–P2** were summarised in a Table on page 10 of the s42A Report. However, as noted in [61] above, there is a third submission point and a second further submission which were incorrectly categorised. One submission supported the retention of the policy as notified. Lastly, two submissions sought an amendment to the policy, both submissions were opposed by the further submissions.

63. Two submission points relating to **Contaminated Land definition** were summarised in a Table on page 11 of the s42A Report. Both submissions supported the retention of the definition as notified.

64. I have considered all the relevant submissions and further submissions, and I adopt the summaries in the s42A Report.

Section 42A Report

Policies (General)

65. Ms. Easton acknowledged submissions[23] supporting the retention of the CL policies as notified.

Policy 1

[19] Clause 16(2) of Schedule 2 RMA
[20] Clause 16(2) of Schedule 2 RMA
[21] SFFL (S441.011)
[22] Clause 16(2) of Schedule 2 RMA
[23] Koiterangi Lime Co LTD (S577.010), Ms. Catherine Smart-Simpson (S564.010), Mr. William McLaughlin (S567.091), Mr. Geoff Volckman (S563.007), Mr. Chris and Ms. Jan Coll (S558.734), Chris J Coll Surveying Limited (S566.734), Ms. Laura Coll McLaughlin (S574.734), and BDC (S538.090)

66. Ms. Easton noted the submission[24] supporting the retention of CL–P1 as notified.

Policy 2

67. Ms. Easton noted the submission[25] supporting the retention of CL–P2 as notified.

68. Ms. Easton recommended rejecting submissions[26] from HNZ and the Fuel Companies, and the further submission[27] from SFFL.

69. She was unsupportive of the Fuel Companies' request to remove "*avoids or mitigates adverse effects on the environment and"* which would limit the policy's focus to human health for the same reasons as detailed in [52] above.

70. Given [68] and [69] above, Ms. Easton recommended accepting the further submission[28] from the Director General.

71. Ms. Easton was also unsupportive of HNZ's request to limit identification to only when required by the NES-CS, noting that while NES-CS rules manage soil contamination for human health protection, activities on contaminated land may require resource consent under other pTTPP rules, making assessment against CL objectives and policies appropriate.

New CL policy

72. Ms. Easton recommended accepting Te Mana Ora's[29] submission as she supported their proposed new CL policy, citing recent experiences where severe weather events adversely affected closed landfills, and recognising the environmental and human health risks posed by activities on or near used or closed landfills. She recommended the following policy.

CL-P3 - Protect the environment and population health from adverse effects of contaminated land, particularly used and closed landfills by:

1. **Taking a precautionary approach to subdivision, development, or activities within the margins of a used or closed landfill;**

2. **Ensuring that new and future landfill sites are developed in areas that have lower risk of being impacted by natural hazards, including flooding.**

Contaminated Land definition

73. Ms. Easton acknowledged submissions[30] supporting the retention of the Contaminated Land definition as notified.

Pre-Hearing Statement

74. SFFL's pre-hearing statement supported Ms. Easton's recommendations on the CL policies.

Hearing and Submitter Evidence

[24] Te Mana Ora (S190.145)
[25] Te Mana Ora (S190.146)
[26] HNZ (S486.022) and Fuel Companies (S613.008)
[27] Silver Ferm Farms Limited (FS101.003)
[28] Director General (FS122.014)
[29] Te Mana Ora (S190.144)
[30] Fire and Emergency New Zealand (S573.002) and Transpower New Zealand Limited (S299.001)

75. Those present at the hearing did not raise any points relating to the CL policies or the Contaminated Land definition.

Reporting Officer Reply Evidence

76. In response to my hearing queries, Ms. Easton[31] advised the following:

(a) The pTTPP does not specify how to identify contaminated land, nor if the NES-CS applies to a site.

(b) It would be helpful if the pTTPP advised readers that the WCRC holds information about whether a site is contaminated. This advice, along with an electronic link to the WCRC website information on the HAIL and the SLUS register, could be included in the CL chapter Overview section as a minor amendment.

77. She recommended the following amendment.

Contaminated Land

Overview

…

Role of West Coast Regional Council

Information on the locations of known Contaminated Land on the West Coast is held by the West Coast Regional Council. In some instances activities in or on Contaminated Land may also require a resource consent from the West Coast Regional Council.

The West Coast Regional Council also holds the information on whether a site is on the Hazardous Activities and Industries List – known as HAIL. The West Coast Regional Council has an electronic register – the Selected Land Use Sites (SLUS) register. Sites that are included on this register may be affected by the rules in NESCS and also the policies that apply in this chapter. An electronic link to the West Coast Regional Council webpage and how to access the SLUS register can be found here: [insert link]

Hearing Panel's Evaluation

78. I agree with Ms Easton's recommendations on the notified policies, including her rejection of submissions seeking amendments for the reasons she provides in her s42A.

79. I also agree with her recommendation to include a new policy addressing closed landfills, CL-P3, for the reasons she details. I have made a minor amendment to aid the readability of the new policy.

80. Additionally, I support the inclusion of information within the overview advising plan users where they can find and access additional relevant information related to contaminated land. I have made minor changes to that information to aid readability.

Hearing Panel's Recommendation

[31] Lois Easton, s42A Author Right of Reply Contaminated Land and Hazardous Substances, dated 6 December 2023, page 1 and 2, points 3 to 5

81. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the following changes to the **Contaminated Land Role of West Coast Regional Council section** and the inclusion of a new policy to the **Contaminated Land Policies**:

Contaminated Land - Ngā Whenua Tāhawahawa
Role of West Coast Regional Council ~~Information on the locations of known Contaminated Land on the West Coast is held by the West Coast Regional Council~~**The West Coast Regional Council holds information on the locations of known Contaminated Land on the West Coast**[32]. In some instances,[33] activities in or on Contaminated Land may also require a resource consent from the West Coast Regional Council. **The West Coast Regional Council also holds the information on whether a site is on the Hazardous Activities and Industries List – known as HAIL. The West Coast Regional Council has an electronic register – the Selected Land Use Sites (SLUS) register. Sites that are included on this register may be affected by the rules in NESCS and also the policies that apply in this chapter. An electronic link to the West Coast Regional Council webpage and how to access the SLUS register can be found here: [insert link]**[34]

Contaminated Land Policies	
CL – P3	**Protect the environment and population health from adverse effects of contaminated land, particularly used and closed landfills by:** **1. Taking a precautionary approach to subdivision, development, or activities within the margins of a used or closed landfill; and**[35] 2. **Ensuring that new and future landfill sites are developed in areas that have lower risk of being impacted by natural hazards, including flooding.**[36]

3. HAZARDOUS SUBSTANCES

3.1. Whole Chapter and Definitions

Submissions and Further Submissions

82. A Table on pages 12 to 14 of the s42A Report records four submission points and one further submission point relating to the **HS chapter (as a whole)** but includes two errors. The submissions[37] from RML and PRL relate to the whole HS chapter, not only HS–P3. The correct count is six submission points and one further submission. Two submissions supported the chapter as notified. Four submissions sought the chapter be amended, with Forest & Bird's proposed amendment opposed by a further submission.

[32] Clause 16(2) of Schedule 2 RMA
[33] Clause 16(2) of Schedule 2 RMA
[34] Consequential change from HNZ (S486.022)
[35] Clause 16(2) of Schedule 2 RMA
[36] Te Mana Ora (S190.144)
[37] RML (S474.029) and PRL (S500.018)

83. A Table on page 13 of the s42A Report records one submission point supporting the **HS Overview** section, yet that submission[38] sought an amendment.

84. A Table on pages 12 to 14 of the s42A Report records seven submission points and two further submission points related to HS **definitions**. Six submissions sought a new "*major hazard facility*" term included in the pTTPP, with the submission from Manawa Energy and the Fuel Companies each supported by one of the further submissions. One submission sought to amend the definition of "*hazardous substances."*

85. I adopt the summary of these submissions detailed in the s42A Report, and I have considered all the relevant submissions.

Section 42A Report

86. Ms. Easton acknowledged submissions[39] supporting the retention of the HS chapter as notified.

87. She recommended rejecting the submissions[40] from Ms. Montgomery and Forest & Bird. She was unsupportive of including risks to native species and their habitats in the HS objectives and policies, as sought by Forest & Bird, for the same reasons detailed in [42]. She was also unsupportive of Ms. Montgomery's proposed HSNO insertion in the HS provisions, noting it is already referred to in the HS Overview section and covers various activities.

88. Given [87] above, Ms. Easton recommended accepting the further submission[41] opposing Forest & Bird's submission.

89. Ms. Easton recommended rejecting the submission[42] from Forest & Bird, reasoning that since the CL objectives and policies already include "*environment*" (defined to include "*ecosystems and the constituent parts*"), native species and their habitat are inherently addressed as a subset of these ecosystems.

90. Ms. Easton recommended accepting FENZ's submission[43], supporting the inclusion of the Planning Standards "*hazardous substance*" definition in the pTTPP. She recommended inserting the following definition into the pTTPP.

Hazardous Substances: has the same meaning as in section 2 of the RMA (as set out below):

includes, but is not limited to, any substance defined in section 2 of the Hazardous Substances and New Organisms Act 1996 as a hazardous substance. The Hazardous Substances and New Organisms Act 1996 defines hazardous substances as meaning, unless expressly provided otherwise by regulations or an EPA notice, any substance—

(a) with 1 or more of the following intrinsic properties:

i. explosiveness:

ii. (ii) flammability:

[38] Manawa Energy (S438.059)
[39] Mr. David Ellerm (S581.013) and SFFL (S441.012)
[40] Ms. Margaret Montgomery (S446.009) and Forest & Bird (S560.185)
[41] Westpower (S222.0249)
[42] Forest & Bird (S560.184) – incorrectly recorded as S560.104 in the s42A Report
[43] FENZ (S573.004)

iii. (iii) a capacity to oxidise:

iv. (iv) corrosiveness:

v. (v) toxicity (including chronic toxicity):

vi. (vi) ecotoxicity, with or without bioaccumulation; or

(b) which on contact with air or water (other than air or water where the temperature or pressure has been artificially increased or decreased) generates a substance with any 1 or more of the properties specified in paragraph (a)

91. Ms. Easton recommended accepting or accepting in part submissions[44] from Manawa Energy, Fuel Companies, Whyte Gold Limited, Birchfields, SFFL, HNZ, and FFNZ, and further submissions[45] from Westpower and GDC. She agreed that including a "*major hazard facility*" definition would improve clarity of the pTTPP, and she preferred the wording from FFNZ and HNZ for its greater clarity over other submissions. Ms. Easton recommended inserting the following definition into the pTTPP.

Major Hazard Facility: means any facility deemed a Major Hazardous Facility under the Health and Safety at Work Major Hazardous Facilities Regulations 2016.

92. She also recommended accepting the second submission[46] from Manawa Energy to provide a cross-reference to the new "*major hazard facility*" definition in the HS chapter Overview section.

93. Ms. Easton's recommendations on the submissions from RML and PRL are detailed in paragraph [129] of this report.

Pre-Hearing Statement

94. SFFL's pre-hearing statement supported Ms. Easton's recommendations on the HS chapter.

Hearing and Submitter Evidence

95. Mr. Kennedy[47] advised at the hearing that he generally supported Ms. Easton's recommendations to accept Westpower's further submission points on the HS chapter.

96. Manawa Energy[48] indicated that they supported Ms. Easton's recommendation to include a definition for "*major hazard facility*" in the pTTPP and inserting a cross-reference to this definition in the HS chapter Overview section.

Reporting Officer Reply Evidence

97. The Right of Reply did not address the submissions on the HS chapter (as a whole).

Hearing Panel's Evaluation

[44] Manawa Energy (438.021), Fuel Companies (S613.003), Whyte Gold Limited (S607.093), Birchfield Ross Mining Limited (S604.111), Birchfield Coal Mines Ltd (S601.119), SFFL (S441.007), HNZ (S486.024) and FFNZ (S524.040)
[45] Westpower (S222.0173) and GDC (FS1.216)
[46] Manawa Energy (438.059)
[47] Mr. Martin Kennedy, Notable Trees planning evidence, dated 6 November 2023, section 7.2
[48] Ms. Nicola Foran (08 November 2023), Statement of Evidence on behalf of Manawa Energy Limited in the matter of pTTPP Topic 6: Contaminated Land and Hazardous Substances, paras. 4-7

98. I accept Ms Eason's recommendations relating to HS whole chapter, and the inclusion in the pTTPP of both the Planning Standards "*hazardous substance*" definition, and a "*major hazard facility*" definition, (using the wording from FFNZ and HNZ), as well as a cross reference to the new "*major hazard facility*" definition in the HS chapter Overview section, for all of the reasons contained in her s42A.

99. I have amended "*Major Hazardous facility* "to read *Major Hazard Facility* for readability reasons, and where this text appears in the Overview, I have used the word facilities for the same reason.

Recommendation

100. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the following changes to the **Definitions chapter** and the **Hazardous Substances chapter**.

Term	Definition
Hazardous Substances	**has the same meaning as in section 2 of the RMA (as set out below):** **includes, but is not limited to, any substance defined in section 2 of the Hazardous Substances and New Organisms Act 1996 as a hazardous substance. The Hazardous Substances and New Organisms Act 1996 defines hazardous substances as meaning, unless expressly provided otherwise by regulations or an EPA notice, any substance—** **(a) with 1 or more of the following intrinsic properties:** **i) explosiveness:** **ii) flammability:** **iii) a capacity to oxidise:** **iv) corrosiveness:** **v) toxicity (including chronic toxicity):** **vi) ecotoxicity, with or without bioaccumulation; or** **(b) which on contact with air or water (other than air or water where the temperature or pressure has been artificially increased or decreased) generates a substance with any 1 or more of the properties specified in paragraph (a)**[49]
Major Hazard Facility	**means any facility deemed a Major Hazard Facility under the Health and Safety at Work (Major Hazardous Facilities) Regulations 2016.**[50]

[49] FENZ (S573.004)
[50] Manawa Energy (438.059 and S438.021), Fuel Companies (S613.003), Whyte Gold Limited (S607.093), BRML (S604.111), BCML (S601.119), SFFL (S441.007), Horticulture New Zealand (S486.024) and FFNZ (S524.040)

Hazardous Substances - Ngā Matū Mōrearea

Overview

Hazardous substances are used for many agricultural, industrial and some domestic activities. Hazardous substances of various kinds are in widespread use on the West Coast/Te Tai o Poutini and for some activities are an essential part of everyday life. By their nature, hazardous substances carry an inherent risk of adverse effects on people and the environment, should an accident occur**, with the risk greater at major hazard facilities.**[51]

The Hazardous Substances and New Organisms Act 1996 (HSNO) and related regulations are the principal legislation controlling the introduction, manufacture, use, storage and disposal of hazardous substances. The District Councils have limited powers and responsibilities under HSNO, which is administered by other agencies, including the West Coast Regional Council particularly in terms of the use and application of hazardous substances in working situations.

The chapter contains an objective and policies, which will be referenced when resource consents are applied for activities that involve hazardous substances (for example in relation to natural hazards).

3.2. Hazardous Substances Objectives

Submissions and Further Submissions

101. 15 submission points and six further submission points relating to **HS–O1** were summarised in a Table on pages 15 and 16 of the s42A Report. 12 submissions supported the retention of the objective as notified, with HNZ's submission supported by one further submission. Three submissions sought an amendment to the objective. The amendment sought by BCG and Ms. Inta was opposed by two separate further submissions. The amendment sought by the Fuel Companies was supported by one further submission but opposed by two further submissions.

102. Two submission points and three further submission points relating to a **new HS policy (HS–O2)** were summarised in a Table on pages 16 and 17 of the s42A Report. The two submissions proposed the same policy, with BCG's submission opposed by two further submissions and Ms. Inta's submission opposed by the third further submission.

103. I adopt the summary of these submissions and further submissions detailed in the s42A Report, and I have considered all the relevant submissions and further submissions.

Section 42A Report

Objective 1

104. Ms. Easton acknowledged a submission[52] supporting the retention of HS–O1 as notified.

[51] Manawa Energy (S438.059)
[52] Mr. Geoff Volckman (S563,008), BDC (S538.092), Te Mana Ora (S190.149), Mr. Peter Langford (S615.025), Karamea Lime Company (S614.025), Ms. Catherine Smart Simpson (S564.011), Mr. William McLaughlin (S567.092), Mr. Chris and Ms. Jan Coll (S558.735), Chris J Coll Surveying Limited (S566.735), Ms. Laura Coll McLaughlin (S574.735), HNZ (S486.023) and FFNZ (S524.039)

105. She recommended rejecting submissions[53] from BCG and Ms. Inta to amend the objective, arguing that the phrase "*or any other*" activities would inappropriately broaden the objective to include activities not suitable for pTTPP regulation (i.e., refuelling a lawn mower with petrol).

106. Ms. Easton recommended rejecting the Fuel Companies' submission[54], arguing it is inappropriate to remove environmental references from the objective and limit focus to major hazard facilities. She noted hazardous substances have environmental effects and councils must help manage those effects. While the HS chapter does not contain rules (relying primarily on HSNO), she highlighted activities involving hazardous substances may require resource consent under other pTTPP sections, making consideration of the HS objectives and policies appropriate in those circumstances.

107. Given [105] and [106] above, Ms. Easton recommended accepting the further submissions[55] opposing the amendments proposed to the objective proposed by Ms. Inta, BCG, and the Fuel Companies.

108. No recommendation was detailed in the s42A Report regarding the further submissions[56] on the Fuel Companies' submission to amend the objective.

New HS objective

109. Ms. Easton recommended rejecting submissions[57] from BCG and Ms. Inta seeking a **new HS objective**, noting that hazardous substance handling and disposal are already managed under the HSNO and WCRP, largely falling outside the pTTPP remit.

110. Given [109] above, Ms. Easton recommended accepting the further submissions[58] opposing the new HS objective proposed by BCG and Ms. Inta.

Hearing and Submitter Evidence

111. Ms. Inta[59] acknowledged hazardous substances are regulated elsewhere, but argued Ms. Easton's rejection of the new HS objective (proposed by herself and BCG) was flawed. She contended that hazardous substances affect well-being, a focus of both the HS chapter and RMA. Given the widespread use of hazardous substances throughout West Coast, Ms. Inta maintained that the pTTPP should address safe and efficient handling and disposal of hazardous substances. She requested that either include the proposed new objective "To encourage and promote the safe and efficient handling and disposal of hazardous substances throughout the district" or amend HS-O1 to cover "any other activities".

112. Mr. Kennedy[60] advised at the hearing that he generally supported Ms. Easton's recommendations to accept Westpower's further submission points on the HS objectives.

Reporting Officer Reply Evidence

[53] Ms. Frida Inta (S553.046) and Fuel Companies (S613.002)
[54] Fuel Companies (S613.002)
[55] Westpower (FS222.0123, FS222.012 and FS222.013), SFFL (FS101.005 and FS101.009), Ms. Frida Inta (FS223.021) and BCG (FS224.021)
[56] Ms. Frida Inta (S223.021) and BCG (FS224.021)
[57] BCG (S552.047) and Ms. Frida Inta (S553.047)
[58] SFFL (FS101.005) and Westpower (FS222.012 and FS222.0124)
[59] Ms. Frida Inta (06 December 2023), Notes for Hearing Contaminated Land, Hazardous Substances, Notable Trees, pp. 1-2
[60] Mr. Martin Kennedy, Notable Trees planning evidence, dated 6 November 2023, section 7.2

113. In paragraphs [6] to [11] of the Reply, Ms. Easton explained the following.

(a) Hazardous substances are not extensively covered in the pTTPP because they are primarily regulated under the HSNO (administered by the EPA) and the HSWA (administered by WorkSafe), which govern their life cycle and workplace management. MfE's Guidance Note advises councils not to duplicate the HSNO and HSWA regulations, and any additional local controls must be justified under s32 of the RMA.

(b) Accordingly, the pTTPP focuses on local matters such as the siting of major hazard facilities near sensitive activities and zoning. Ms. Easton viewed the new HS objective proposed by Ms. Inta and BCG as a duplication of function and inappropriate under the MfE's Guidance Note.

114. For clarification, paragraph [10] of the Reply incorrectly stated that a policy from the operative Buller District Plan was proposed for inclusion, when it was an objective Ms. Inta and BCG sought to replicate in the pTTPP.

Hearing Panel's Evaluation

115. I agree with Ms Easton's reasons for recommending rejection of submissions seeking amendments to HS-O1 and her reasons for accepting further submissions that opposed original submissions for the reasons given in the s42A Report.

116. I agree with her rejection of the submission from BCG and Ms. Inta seeking a **new HS objective**, noting that hazardous substance handling and disposal are already managed under the HSNO and WCRP, largely falling outside the pTTPP remit. I also support and agree with the explanation included within the Reply

Hearing Panel's Recommendation

117. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the **Hazardous Substances objective** be retained as notified.

3.3. Hazardous Substances Policies

Submissions and Further Submissions

118. A Table on pages 17 and 18 of the s42A Report records 10 submission points and two further submission points relating to the **HS policies (as a whole)**. Seven submissions supported the HS policies (as a whole) as notified. Three submissions proposed a new HS policy, with BCG's submission opposed by two further submissions.

119. Six submission points and two further submission points relating to **HS–P1** were summarised in a Table on pages 18 and 19 of the s42A Report. Three submissions supported the policy as notified. Three submissions proposed amendments to the policy, with the submissions from BCG and Ms. Inta both opposed by separate further submissions.

120. Seven submission points relating to **HS–P2** were summarised in a Table on page 19 of the s42A Report. Five submissions supported the policy as notified, and two submissions proposed amendments to the policy.

121. A Table on pages 19 and 20 of the s42A Report records 12 submission points and five further submission points relating to **HS–P3** but includes two errors. The submissions[61] from RML and PRL related to the entire HS chapter, not specifically HS–P3. The correct count is 10 submission points and five further submissions. Five submissions supported the policy as notified, although one sought an amendment. One submission supported in part the policy, seeking an amendment. Four submissions sought an amendment to the policy, with TiGa's proposed amendment opposed by five further submissions.

122. Seven submission points relating to **HS–P4** were summarised in a Table on page 21 of the s42A Report. Six submissions supported the policy as notified, and one submission sought an amendment to the policy.

123. I have considered all the relevant submissions and further submissions, and I adopt the summaries in the s42A Report.

Section 42A Report

Policies (General)

124. Ms. Easton acknowledged submissions[62] supporting the retention of the HS policies as notified.

Policy 1

125. Ms. Easton noted the submission[63] supporting the retention of HS–P1 as notified.

126. She recommended rejecting the submissions[64] from BCG and Ms. Inta on HS–P1, arguing it is inappropriate to require avoiding residual risk since such risk cannot be completely avoided in most circumstances.

127. Ms. Easton also recommended rejecting the Fuel Companies' submission[65], arguing it is inappropriate to focus the policy only on major hazard facilities as hazardous substances have environmental effects that councils must manage. She opposed replacing "*minimising*" with "*managing*" residual risk, noting "*manage*" lacks a standard to measure against and provides less certainty of outcome than "*minimising*," which better meets community expectations.

Policy 2

128. Ms. Easton noted the submission[66] supporting the retention of HS–P2 as notified.

129. She recommended accepting EQC's submission[67], supporting the policy applying to all hazardous facilities, which Ms. Easton believes should be located away from significant natural hazards. She also endorsed clarifying the term "*significant natural hazard*" by referencing natural hazard overlays instead.

[61] RML (S474.029) and PRL (S500.018)
[62] Ms. Catherine Smart-Simpson (S564.012), Mr. William McLaughlin (S567.093), Mr. Geoff Volckman (S563.009), Mr. Chris and Ms. Jan Coll (S558.736), Chris J Coll Surveying Limited (S566.736), Ms. Laura Coll McLaughlin (S574.736), and BDC (S538.093)
[63] Mr. Peter Langford (S615), Karamea Lime Company (S614), and Te Mana Ora (S190.150)
[64] BCG (S552.049) and Ms. Frida Inta (S553.049)
[65] Fuel Companies (S613.004, S613.015, and S613.016)
[66] Fuel Companies (S613.005), Heritage New Zealand Pouhere Taonga (S140.013), Te Mana Ora (S190.151), Mr. Peter Langford (S615.027) and Karamea Lime Company (S614.027)
[67] EQC (S612.020)

130. Ms. Easton recommended accepting in part Ngāi Tahu's submission[68], supporting the location of new or expanded major hazard facilities away from surface water due to the specific risks hazardous substances pose to waterbodies and wetlands.

131. She recommended the following amendment.

HS–P2 - Ensure that new or expanded major hazard facilities are located away from natural, historic, ~~and~~ cultural overlay areas**, surface waterbodies and wetlands and, that where practicable, all hazard facilities are located outside of natural hazard overlays** ~~away from locations that are subject to significant natural hazards, where practicable,~~ taking into account the operational and functional needs of activities to locate in these areas.

Policy 3

132. Ms. Easton acknowledged submissions[69] supporting the retention of HS–P3 as notified.

133. She recommended accepting submissions[70] from WMS Group, TiGa, Birchfield Coal Mines Ltd, Straterra, RML, and PRL, supporting the recognition of hazardous substance facilities located at mining operations. Ms. Easton indicated that inserting the Mineral Extraction Zone and Buller Coalfield Zone in the policy would correct the mistaken omission.

134. Ms. Easton recommended accepting SFFL's submission[71] to limit reverse sensitivity effects from sensitive activities to only those that exist, aligning with the pTTPP's broader approach to protect important employment and economic activities from reverse sensitivity effects. She recommended the following amendment.

HS – P3 - Provide for the establishment and expansion of major hazard facilities within the Industrial, Port, **Mineral Extraction, Buller Coalfield** and General Rural Zones, where adequate separation distances are maintained from **existing** sensitive activities and valued natural, cultural and historic heritage features.

Policy 4

135. Ms. Easton acknowledged submissions[72] supporting the retention of HS–P4 as notified.

136. She recommended rejecting Straterra's submission[73], opposing the replacement of "*avoided*" with "*remediated, mitigated or offset*" in the policy. She found it entirely inappropriate for residential or visitor accommodation activities to be located near major hazard facilities, as the policy aims to protect these facilities from reverse sensitivity effects.

New HS policy

137. Ms. Easton recommended rejecting the submissions[74] from Ms. Inta, and BCG, and the Fuel Companies.

[68] Ngāi Tahu (S620.097)
[69] Fuel Companies (S613.005), Heritage New Zealand Pouhere Taonga (S140.014), Te Mana Ora (S190.152), Mr. Peter Langford (S615.028) and Karamea Lime Company (S614.028)
[70] WMS Group (S599.035), TiGa (S493.031), Birchfield Coal Mines Ltd (S601.029), Straterra (S536.065), RML (S474.029) and PRL (S500.018)
[71] SFFL (S441.013)
[72] Fuel Companies (S613.005), Te Mana Ora (S190.153), Mr. Peter Langford (S615.029), Karamea Lime Company (S614.029), SFFL (S441.014) and Ministry of Education (S456.014)
[73] Straterra (S536.066)
[74] Ms. Friday Inta (S553.048), BCG (552.048), and the Fuel Companies (S613.006)

138. Ms. Easton acknowledged that while following approved codes and national guidelines for using, storing, and transporting hazardous substances (as proposed by Ms. Inta and BCG) is desirable, this is not a pTTPP matter. She noted that no implementation method was proposed, the Councils lack hazardous substance expertise for implementation or compliance management, and that Worksafe has the appropriate expertise with HSNO regulations being the suitable framework for this issue.

139. Ms. Easton was unsupportive of the Fuel Companies' proposed policy, noting that the HSNO does not cover all environmental matters and the HSWA and regulations are not focused on environmental effects.

140. Also, she considered the Fuel Companies' proposed policy unnecessary as the Councils have already minimised regulatory duplication by limiting HS provisions, have avoided overlapping with WCRC functions, and only apply the HS objectives and policies when resource consent is required by other pTTPP sections.

Pre-Hearing Statement

141. SFFL's pre-hearing statement supported Ms. Easton's recommendations on the HS policies.

Hearing and Submitter Evidence

142. Ms. Inta[75] opposed Ms. Easton's rejection of the new HS policy (proposed by herself and BCG) requiring compliance with approved codes, guidelines, and standards for hazardous substance activities. She argued this policy directly supports HS–O1, and such compliance would minimise environmental and health risks from subdivision, use, and development involving hazardous substances, making the proposed policy appropriate.

143. Ms. Inta[76] objected to Ms. Easton's recommended amendment to HS–P2, arguing that "*significant natural hazards*" encompasses natural hazard overlays, but the overlays may not account for all natural hazards, which can be dynamic. She also noted a grammatical error. She proposed further amendments to Ms. Easton's recommended policy wording as detailed below.

HS–P2 - Ensure that new or expanded major hazard facilities are located away from natural, historic and cultural overlay, surface waterbodies and wetlands and~~,~~ that**,** where practicable, all hazard facilities are located ~~outside of natural hazard overlays~~ away from locations that are subject to significant natural hazards~~, where practicable,~~, taking into account the operational and functional needs of activities to locate in these areas

Reporting Officer Reply Evidence

144. Ms. Easton's Reply does not directly address the proposed HS policy from Ms. Inta and BCG, as paragraph [10] refers to their proposed HS objective. However, Ms. Easton's conclusions are summarised in paragraphs [(a)] and [(b)] of that report, also apply to the proposed HS policy.

145. Additionally, Ms. Easton noted that Worksafe:

[75] Ms. Frida Inta (06 December 2023), Notes for Hearing Contaminated Land, Hazardous Substances, Notable Trees, p. 2
[76] Ms. Frida Inta (06 December 2023), Notes for Hearing Contaminated Land, Hazardous Substances, Notable Trees, p. 3

(a) Provides guidance, certification regime, and detailed, technical rules for some hazardous substances;

(b) Enforces the ecotoxic and disposal requirements in the workplace, which are set out in the HSNO; and

(c) Help businesses meet their obligations.

146. Ms. Easton considered that the inclusion of the proposed HS policy would also be a duplication of function and inappropriate under the MfE's Guidance Note.

Hearing Panel's Evaluation

147. For the reasons detailed within Ms Easton's s42A and Reply reports I agree no amendments are required for HS-P1.

148. I agree with her recommendations for amendments to HS-P2 and HS-P3, as detailed in her s42A and reply reports.

149. I agree with Ms Easton's reasons for why a new policy is not required.

Hearing Panel's Recommendation

150. For the reasons outlined above, and subject to my consideration of Part 2 of the RMA, I recommend the following changes to the **Hazardous Substances Policies**:

Hazardous Substances Policies	
HS - P2	Ensure that new or expanded major hazard facilities are located away from natural, historic, and cultural overlay areas**, as well as surface waterbodies and wetlands**[77] **and, that where practicable, all major hazard facilities are located outside of natural hazard overlays**[78],[79] ~~away from locations that are subject to significant natural hazards, where practicable,~~[80] taking into account the operational and functional needs of activities to locate in these areas.
HS - P3	Provide for the establishment and expansion of major hazard facilities within the Industrial, Port, **Mineral Extraction, Buller Coalfield**[81] and General Rural Zones, where adequate separation distances are maintained from **existing** [82]sensitive activities and valued natural, cultural and historic heritage features.

[77] Ngāi Tahu (S620.097)
[78] EQC (S612.020)
[79] Clause 16(2) of Schedule 2 RMA
[80] EQC (S612.020)
[81] WMS (S599.035), TiGa (S493.031), BCML (S601.029), Straterra (S536.065), RML (S474.029) and PRL (S500.018)
[82] SFFL (S441.013)

Paul Rogers

Hearings Panel - Chair

Date: 26/06/2025

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS

Term	Definition
Hazardous Substances	**has the same meaning as in section 2 of the RMA (as set out below):** **includes, but is not limited to, any substance defined in section 2 of the Hazardous Substances and New Organisms Act 1996 as a hazardous substance. The Hazardous Substances and New Organisms Act 1996 defines hazardous substances as meaning, unless expressly provided otherwise by regulations or an EPA notice, any substance—** **(c) with 1 or more of the following intrinsic properties:** **vii) explosiveness:** **viii) flammability:** **ix) a capacity to oxidise:** **x) corrosiveness:** **xi) toxicity (including chronic toxicity):** **xii) ecotoxicity, with or without bioaccumulation; or** **(d) which on contact with air or water (other than air or water where the temperature or pressure has been artificially increased or decreased) generates a substance with any 1 or more of the properties specified in paragraph (a)**[83]
Major Hazard Facility	**means any facility deemed a Major Hazard Facility under the Health and Safety at Work (Major Hazardous Facilities) Regulations 2016.**[84]

Contaminated Land - Ngā Whenua Tāhawahawa
Overview Contaminated land is land that has a hazardous substance in or on it that could have an adverse effect on human health or the environment. Land can become contaminated when hazardous substances are not used, stored or disposed of in an appropriate way. Contaminated land is commonly associated with past activities such as the manufacture and use of pesticides, timber treatment, sheep dipping sites and the disposal of wastes in landfills. While industrial activities are the predominant users of hazardous substances, and therefore lead to greater likelihood of contamination, certain commercial, agriculture/forestry or mining activities can cause contamination.

[83] FENZ (S573.004)
[84] Manawa Energy (438.059 and S438.021), Fuel Companies (S613.003), Whyte Gold Limited (S607.093), BRML (S604.111), BCML (S601.119), SFFL (S441.007), Horticulture New Zealand (S486.024) and FFNZ (S524.040)

People can be exposed to contaminated land by direct contact with contaminated soil, swallowing food or water from contaminated environments and breathing vapours or contaminated dust. As well as endangering health, contamination can limit the use of land or cause corrosion that may threaten buildings and property.

The Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011 (NESCS) provides a rule framework for managing certain activities on land affected or potentially affected by soil contaminants and references the Hazardous Activities and Industries List (HAIL). The HAIL is a compilation of activities and industries that are considered likely to cause land contamination resulting from hazardous substance use, storage or disposal. The HAIL is intended to identify most situations in New Zealand where hazardous substances could cause, and in many cases have caused, land contamination

The District Councils are responsible for administering the NESCS. Any proposal to subdivide, use or develop contaminated or potentially contaminated land may require consent under the NESCS.

This chapter provides an objective and policy direction for the assessment of any resource consent application made under the NESCS.

Role of West Coast Regional Council

~~Information on the locations of known Contaminated Land on the West Coast is held by the West Coast Regional Council~~**The West Coast Regional Council holds information on the locations of known Contaminated Land on the West Coast**[85]. In some instances,[86] activities in or on Contaminated Land may also require a resource consent from the West Coast Regional Council.

The West Coast Regional Council also holds the information on whether a site is on the Hazardous Activities and Industries List – known as HAIL. The West Coast Regional Council has an electronic register – the Selected Land Use Sites (SLUS) register. Sites that are included on this register may be affected by the rules in NESCS and also the policies that apply in this chapter. An electronic link to the West Coast Regional Council webpage and how to access the SLUS register can be found here: [insert link][87]

Contaminated Land Objective	
CL–O1	To ensure that contaminated land is used, subdivided, developed,[88] or managed in a way that avoids,[89] **remedies**[90],[91] or mitigates adverse effects on the environment and human health.
Contaminated Land Policies	
CL-P1	At the time of subdivision, change of use or development, identify sites that may be subject to potential contamination as a result of historical land use and activities and investigate the risks to human health and the environment.

[85] Clause 16(2) of Schedule 2 RMA
[86] Clause 16(2) of Schedule 2 RMA
[87] Consequential change from HNZ (S486.022)
[88] Clause 16(2) of Schedule 2 RMA
[89] Clause 16(2) of Schedule 2 RMA
[90] SFFL (S441.011)
[91] Clause 16(2) of Schedule 2 RMA

CL-P2	Ensure that when contaminated land is used, subdivided and/or developed, the land is managed or remediated in a way that avoids or mitigates adverse effects on the environment and manages the risk to human health to a level that is appropriate for the intended use.
CL–P3	**Protect the environment and population health from adverse effects of contaminated land, particularly used and closed landfills by:** **1. Taking a precautionary approach to subdivision, development, or activities within the margins of a used or closed landfill; and**[92] 2. **Ensuring that new and future landfill sites are developed in areas that have lower risk of being impacted by natural hazards, including flooding.**[93]
Contaminated Land Rules	
Refer to the Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011	

Hazardous Substances - Ngā Matū Mōrearea	
Overview Hazardous substances are used for many agricultural, industrial and some domestic activities. Hazardous substances of various kinds are in widespread use on the West Coast/Te Tai o Poutini and for some activities are an essential part of everyday life. By their nature, hazardous substances carry an inherent risk of adverse effects on people and the environment, should an accident occur**, with the risk greater at major hazard facilities.**[94] The Hazardous Substances and New Organisms Act 1996 (HSNO) and related regulations are the principal legislation controlling the introduction, manufacture, use, storage and disposal of hazardous substances. The District Councils have limited powers and responsibilities under HSNO, which is administered by other agencies, including the West Coast Regional Council particularly in terms of the use and application of hazardous substances in working situations. The chapter contains an objective and policies, which will be referenced when resource consents are applied for activities that involve hazardous substances (for example in relation to natural hazards).	
Hazardous Substances Objective	
HS–O1	The benefits associated with the use of hazardous substances are recognised while ensuring that risks to the environment and human health arising from subdivision use and development activities involving hazardous substances are minimised.

[92] Clause 16(2) of Schedule 2 RMA
[93] Te Mana Ora (S190.144)
[94] Manawa Energy (S438.059)

Hazardous Substances Policies	
HS-P1	Activities and facilities involving the use and storage of hazardous substances shall be designed, located, constructed and operated so as to minimise residual risk to people and the environment.
HS-P2	Ensure that new or expanded major hazard facilities are located away from natural, historic, and cultural overlay areas**, as well as surface waterbodies and wetlands**[95] **and, that where practicable, all major hazard facilities are located outside of natural hazard overlays**[96],[97] ~~away from locations that are subject to significant natural hazards, where practicable,~~[98] taking into account the operational and functional needs of activities to locate in these areas.
HS-P3	Provide for the establishment and expansion of major hazard facilities within the Industrial, Port, **Mineral Extraction, Buller Coalfield**[99] and General Rural Zones, where adequate separation distances are maintained from **existing** [100]sensitive activities and valued natural, cultural and historic heritage features.
HS-P4	Avoid locating sensitive activities adjacent to major hazard facilities unless it can be demonstrated that any reverse sensitivity effects and residual risks are avoided.

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS 287

PART A – INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Introduction

1. Our appointment and other preliminary matters applicable to all Hearing Panel's recommendations on all chapters of the Proposed Te Tai o Poutini Plan (**pTTPP** or 'the Plan') are recorded and addressed in Recommendation Report 1.

2. This Recommendation Report relates to the three chapters: Energy - Te Pūngao (**ENG**), Infrastructure - Te Tūāhanga (**INF**), and Transport - Te Tūnuku (**TRN**) in the Energy, Infrastructure, and Transport section in Part 2 - District Wide Matters - Te Wāhanga 2 - Ngā Kaupapa ā-Rohe Whānui of the pTTPP. The TRN Chapter is to be read in conjunction with Appendix One: Transport and Performance Standards of the pTTPP.

3. This Report contains the Hearing Panel's evaluations and recommendations to the TTPP Committee on the submissions and further submissions received on the ENG, INF and TRN Chapters of Part 2 of the Plan.

4. The Section 32 Report[1] provided an evaluation of the options for the management of ENG, INF, and TRN through the pTTPP, including the regulatory framework, key resource management issues, the evidence base (research and basis for the pTTPP provisions, consultation, information and analysis undertaken) and evaluation of the options.

5. The Section 42A Report[2]('s42A Report') was prepared and co-authored by Ms Grace Forno and Ms Melissa McGrath, Planners with Barkers & Associates, acting as the Reporting Officers. The s42A Report was circulated before the hearing. It analysed submissions and further submissions received and recommended changes to the notified plan provisions, with Appendix 1 showing the notified plan provisions with recommended deletions shown as ~~strikethrough~~ and additions shown in **bold and underlined** text. Appendix 2 provided a summary of the decision requested and the Reporting Officers' recommendation to accept/accept in part/reject each individual submission point and further submission point.

6. The s42A Report stated that responding to every submission point was inefficient due to the large number of submissions received. Therefore, a 'thematic response' had been taken by grouping submission points and providing responses and recommendations on key issues. It provided an analysis of the requested relief sought and made recommendations on changes sought in relation to key issues. It also included recommendations on definitions in the pTTPP relating to the ENG, INF and TRN Chapters.

7. The s42A Report did not provide summaries of all submission points and further submission points received in a table, or record the number received. The recommended changes to the

1 Te Tai o Poutini Plan – Section 32 Evaluation Report Two Energy, Infrastructure and Transport Te Pūngao, Te Te Tūāhanga, me Te Tūnuku Report 2

2 13 October 2023

notified provisions in Appendix 1 were not footnoted to the submission point or further submission points accepted.

8. Following the circulation of the original s42A Report, the Reporting Officers received instructions to undertake prehearing meetings with submitters to resolve outstanding matters early. A s42A Addendum Report (dated 23 November 2023) was circulated following these prehearing meetings, providing details of further recommended amendments in response to matters raised in evidence, including pre-hearing meeting notes (as Attachment 1) and recommended amendments to the Plan provisions (as Attachment 2). Attachment 2 included the original recommended s42A Report amendments, and additional amendments in response to the pre-hearing and submitter evidence shown in purple underlined text. Recommended corrections to the s42A Report recommendations were also shown in green text.

9. During the hearing, the Panel requested annotation of the original s42A Report to cross-reference updated positions, including changes to recommendations on Plan provisions. This Annotated s42A Report (dated 28 November 2023) also included an updated version of the notified plan provisions of the ENG Chapter, with the original s42A Report recommendations shown as tracked changes, further text changes resulting from prehearing conferencing (shown in purple) and corrected errors (shown in green).

10. Following adjournment of the hearing, the Panel directed expert witness conferencing (**EWC**) between the parties' planning experts, which occurred on 19 December 2023 and 18 January 2024. Following this, a Joint Witness Statement (**JWS**) dated 26 January 2024 was issued, and the Reporting Officers subsequently circulated a Position Statement dated 8 February 2024. Attachment 2 of the Position Statement showed all recommended changes to the notified provisions, including the original s42A Report, Annotated s42A Report and additional changes since EWC shown in yellow highlight with underlining and deletions in yellow highlight and strikethrough.

11. Ms Pull for Ngai Tahu circulated a position statement paper on 2 February 2024, and the reporting officers met online with her on Friday, 26 January 2024. The officer's position statement addressed both the position paper and the online meeting.

12. The Panel reconvened the hearing by internet connection on 15 February 2024, before which we circulated written questions.

13. The Reporting Officers' Right of Reply Report (dated 8 March 2024) responded to the Panel's questions and outstanding matters relating to submissions and evidence presented at the hearing, including at the JWS. The Reply Report included the Reporting Officers' final recommendations for amendments to the Plan provisions in a tracked change version as Attachment 1, and a clean version for the recommended provisions as Attachment 2. Attachment 1 utilised bold and underlined text for additions and strikethrough for deletions. No coloured text was used to assist in identifying the origins of the change. The Reporting Officers' recommended amendments to the Plan provisions were not footnoted to identify the submission points relied on for the amendment.

14. The complete list of s42A Reports and their sequence is as follows:

(a) Section 42A Report Part 2- District Wide Matters - ENG, INF, TRN dated 13 October 2023 - Grace Forno and Melissa McGrath (Reporting Officers);

(b) Section 42A Addendum Report dated 23 November 2023 - Reporting Officers. ('Addendum Report');

(c) Section 42A Annotated Report dated 28 November 2023 - Reporting Officer, (Annotated Report);

(d) Section 42A '*Position Statement*' Section 42A Report dated 8 February 2024 - Reporting Officers; and

(e) Section 42A Right of Reply Report dated 8 March 2024 – Reporting Officers ('Reply Report').

15. The Panel collectively refers to the above reports as 'the s42A Reports'.

16. At the hearing, the Reporting Officers presented a Planning Summary Statement noting that after considering all written evidence, some recommended wording amendments to the Plan provisions had changed. The Reporting Officers advised that these recommended changes were detailed in the s42A Addendum Report, and unless otherwise stated, the Reporting Officers' recommendations in the s42A still stood.

17. The matters raised by submitters were grouped in the s42A Report for each of the three Chapters ENG, INF and TRN as follows:

(a) General/Whole Section;

(b) Definitions;

(c) Section Overview;

(d) Objective;

(e) Policies;

(f) Standards/Rules: and for TRN;

(g) Appendix One: Transport Performance Standards; and

(h) Associated Planning Maps.

18. However, before addressing submissions on the three chapters, the s42A Report provided an overview of submissions received broadly on all three chapters and identified three key issues - general issues, the definition of '*Critical Infrastructure'*, and subdivision Rule SUB-R8.

19. This Recommendation Report follows the same structure as the s42A Report. It summarises the issues raised in submissions and further submissions; the s42A Report, Annotated Report, Addendum Report and Position Statement analyses and recommendations; submitter statements and evidence (including the JWS); and the Reporting Officers' right of reply

evidence before providing the Panel's evaluation and recommendations. The Panel's recommendations address each of the three chapters separately.

20. This Recommendation Report should be read with the s42A Reports listed in paragraph 14 above and the recommended tracked change version of the notified Plan provisions attached as Appendix 1 to this Report.

21. Appendix 1 of this Recommendation Report records the Panel's recommended amendments to the notified pTTPP provisions as tracked changes, with additions in **bold and underlining** and deletions shown with a ~~strikethrough~~. If there is any discrepancy between this Recommendation Report and the tracked change version of the Plan shown in Appendix 1 of this Report, the tracked change version of the Plan shown in Appendix 1 of this Report prevails.

22. This Recommendation Report contains the reasons for the Panel's recommendations. These are comprised of either adopting the Reporting Officers' reasoning and recommendation or the specific reasoning and recommendation of the Panel in response to a submission point or a further submission point.

23. Where the Panel recommends the pTTPP provisions should remain as notified, it is because:

    (a) The Panel adopts the reasoning and recommendation of the Reporting Officers to retain the provision as notified in the Reports listed in paragraph 14 above; or

    (b) The Panel recommends retaining the provision as notified for reasons set out in this Recommendation Report.

24. Where there is a recommended change to a notified provision in the pTTPP, it is because:

    (a) The Panel adopts the reasoning and recommendation of the Reporting Officers to change the notified provisions; or

    (b) The Panel recommends a change to a provision for reasons set out in this Recommendation Report in response to a submission point or further submission point; or

    (c) A consequential change has been necessary following on from a decision in either (a) or (b).

25. Where there may be a different recommendation between the s42A Reports set out in paragraph 14 above (i.e., the recommendation of the Reporting Officers has changed in response to the evidence/statements of submitters), unless the Panel's recommendation specifically adopts the reasoning and recommendation of the s42A Report or later reports, the reasoning and recommendation in the Reply Report has been adopted and it must be taken to prevail.

26. If there are circumstances where the Panel consider that alternative relief is more appropriate than that requested in submission points and further submission points to give effect to the RMA, NZCPS, National Policy Statements and/or RPS, but are still within the scope of the relief sought, this Recommendation Report records the Panel's reasoning and recommendation.

27. If any changes are recommended to the provisions (since the Section 32A Report or any Reporting Officers' section 32AA evaluation was completed), a further evaluation, if required, under section 32AA of the RMA, has been undertaken by the Panel. This Recommendation Report refers to any such circumstances in sufficient detail to demonstrate that further evaluation was undertaken.

28. Where the Panel recommends accepting the Reporting Officers' recommendation or a submission point and/or further submission point to change a notified pTTPP provision, the Panel also accepts the Reporting Officers' and/or submitters' accompanying s32 and/or s32AA evaluation, included with the evidence/statement, without repeating the evaluation.

29. Clause 16(2) of the First Schedule of the RMA enables the Panel to recommend amendments to alter information, where such an alteration is of minor effect, or may correct any minor errors. In the Panel's recommendations and the tracked changes to the notified Plan provisions (Appendix 1 of this Report), record any such minor amendments.

30. Appendix 1 records each change with a footnote to a submission point or further submission point, or Clause 16 of the First Schedule of the RMA.

1.2. Terminology in this Report

31. Throughout this Report, the following abbreviations will be used:

BDC	Buller District Council
BEL	Buller Electricity Limited
Councils	Buller District Council, Grey District Council, and Westland District Council
Director General	Director General of Conservation
DOC	Department of Conservation
ENG	Energy Chapter
Forest & Bird	Royal Forest & Bird Protection Society of NZ Inc
GDC	Grey District Council
HNZPT	Heritage New Zealand Pouhere Taonga
INF	Infrastructure Chapter
Kainga Ora	Kainga Ora - Homes and Communities
KiwiRail	KiwiRail Holdings Limited
Manawa	Manawa Energy Limited
MINZ	Mineral Extraction Zone

NZ Energy	New Zealand Energy Limited
NPSFM	National Policy Statement for Freshwater Management 2020
NESF	National Environmental Standard for Freshwater
NESCS	Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011
NESETA	National Environmental Standards for Electricity Transmission Activities 2009
NESSHDW	National Environment Standards for Sources of Human Drinking Water 2007
NESCF	National Environmental Standard for Commercial Forestry
NESTF	National Environmental Standards for Telecommunications Facilities 2016
NFL	Natural Features and Landscapes
NPSET	National Policy Statement on Electricity Transmission 2008
NPSFM	National Policy Statement for Freshwater Management 2020
NPSHPL	National Policy Statement for Highly Productive Land 2022
NPSIB	National Policy Statement for Indigenous Biodiversity 2023
NPSREG	National Policy Statement for Renewable Electricity Generation 2011
NPSUD	National Policy Statement on Urban Development 2020
NZECP 34:2001	New Zealand Electrical Code of Practice for Electrical Safe Distances 2001
NZDF	New Zealand Defence Force
NZCPS	New Zealand Coastal Policy Statement
ONF	Outstanding Natural Feature
ONFL	Outstanding Natural Features and Landscapes
ONL	Outstanding Natural Landscape

Poutini Ngāi Tahu	Te Rūnanga o Ngāi Tahu, Te Runanga o Ngāti Waewae, Te Rūnanga o Makaawhio
pTTPP	Proposed Te Tai o Poutini Plan
RLTP	Regional Land Transport Plan 2021 – 2031
Planning standards	National Planning Standards
RMA or the Act	Resource Management Act 1991
RPS	West Coast Regional Policy Statement 2020
RTC	West Coast Regional Transport Committee
SNA	Significant Natural Area
SASM	Sites and Areas of Significance to Māori
Transpower	Transpower New Zealand Limited
TRN	Transport Chapter
Waka Kotahi NZTA	NZ Transport Agency Waka Kotahi
WCRC	West Coast Regional Council
WDC	Westland District Council
Westpower	Westpower Limited

1.3. Hearing Arrangements

32. The hearings into the submissions and further submissions received on the ENG, INF and TRN Chapters were held on 27 and 28 November 2023 at the West Coast Regional Council's offices in Paroa, and remotely by internet connection on 15 February 2024.

1.4. Procedural Steps and Issues

33. There were no procedural issues.

1.5. Appearances

Section 42A the Reporting Officers

- Ms Melissa McGrath, Planner with Barkers & Associates
- Ms Grace Forno, Planner with Barkers & Associates

Manawa Energy Limited

- Ms Nicola Foran, Environmental Policy Manager
- Ms Stephine Styles, Planner with Boffa Miskell Limited

Bathurst Resources Limited (Bathurst) and BT Mining Limited (BT)

- Mr Joshua Leckie, Counsel

Ms Frida Inta for herself and the **Buller Conservation Group** (BCG)

Mr Paul Finlay

Mr Peter Langford (via internet connection)

Mr Martin Kennedy

Ms Kair Lippiatt

Buller Electricity Limited (BEL) – Mr Mark Lile, Planner with Landmark Lile Ltd (via internet connection)

Westpower Limited

- Mr Roger Griffiths, General Manager - Generation and Technology with Westpower
- Ms Sylvia, Technical Administrator with Westpower
- Mr Martin Kennedy, Planner

Chorus New Zealand Limited, Spark New Zealand Trading Limited, One New Zealand Group Limited and Forty South ('the Telecommunications Companies')

- Mr Chris Horne, Resource Management Consultant with Incite Limited
- Mr Graeme McCarrison, Environment and Planning Manager with Spark
- Mr Colin Clune, Resource Management Manager with Forty South
- Mr Andrew Kantor, Environmental Planning and Engagement Manager with Chorus

New Zealand Transport Agency Waka Kotahi (NZTA Waka Kotahi)

- Mr Stuart Pearson, Senior Planner with NZTA Waka Kotahi
- Mr Robert Swears, Technical Principal – Road Safety and Traffic Engineering with WSP New Zealand Ltd (via internet connection)

New Zealand Energy Limited (NZEL)

- Mr David Inch
- Mr Peter Mulvihill

Transpower New Zealand Limited

- Ms Pauline Whittney, Planner with Boffa Miskell Ltd
- Ms Rebecca Eng, Technical Lead – Policy with Transpower
- Mr Jordan Shortland-Witehira, Engineer with Transpower

Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio and Te Rūnanga o Ngāi Tahu ('Poutini Ngāi Tahu')
- Ms Katherine Viskovic, Counsel
- Ms Rachael Pull, Senior Environmental Advisor with Te Rūnanga o Ngāi Tahu

Royal Forest and Bird Protection Society of New Zealand (Forest & Bird) – Ms Nicky Snoyink for (via internet connection)

Ms Inger Perkins for Herenga ā Nuku, the Outdoor Access Commission (via internet connection)

KiwiRail Holdings Limited – Ms Michelle Grinlinton-Hancock, RMA Team Leader with KiwiRail

1.6. Overview of submitter evidence and statements received

34. Legal submissions were received from:

    (a) Mr Joshua Leckie for Bathurst Resource Limited and BT Mining Limited ('*Bathurst'*) (dated 13 November 2023);

    (b) Ms Alex Booker for Birchfield Mines Limited, Papahaua Resources Limited, and Rocky Mining Limited. Tiga Minerals and Metals Limited, WMS Group (HQ) Limited, and WMS Land Company Limited (dated 13 November 2023); and

    (c) Ms Sarah Scott for Poutini Ngai Tahu.

35. Before the hearing, we received a tabled statement or evidence from:

    (a) West Coast Regional Council (**WCRC**) dated 30 October 2023;

    (b) KiwiRail Holdings Limited (**'KiwiRail'**) dated 3 November 2023;

    (c) The New Zealand Defence Force (**NZDF**) dated 24 November 2023; and

    (d) **Forest & Bird** dated 28 November 2023.

36. The Reporting Officers tabled a Planning Summary Statement at the commencement of the hearing on 27 November 2023.

37. For those appearing at the hearing, the following evidence and statements were received:

    (a) Ms Nicola Foran, Environmental Policy Manager for Manawa (dated 30 October 2023);

    (b) Ms Stephine Styles, Planner for Manawa (dated 30 October 2023);

    (c) Ms Frida Inta for BCG and herself (dated 27 November 2023);

    (d) Mr Paul Findlay for himself (27 November 2023);

(e) Mr Martin Kennedy, Planner for Westpower (dated 29 October 2023);

(f) Mr Mark Lile, Planner for BEL (dated 30 October 2023);

(g) Mr Chris Horne, Planner for the Telecommunication Companies (dated 27 October 2023);

(h) Mr Graeme McCarrison, Mr Andrew Kantor Chorus and Mr Colin Clune – Joint Statement of Evidence (dated 27 October 2023);

(i) Mr Stuart Pearson, Senior Planner for NZTA Waka Kotahi (dated 3 November 2023);

(j) Mr Robert Swears, Technical Principal – Road Safety and Traffic Engineering for NZTA Waka Kotahi (dated 3 November 2023);

(k) Ms Pauline Whitney, Planner for Transpower (dated 30 October 2023);

(l) Ms Rebecca Eng, Technical Lead – Policy for Transpower (dated 30 October 2023);

(m) Mr Jordan Shortland-Witehira, Engineer for Transpower (dated 30 October 2023);

(n) Ms Rachael Pull, Senior Environmental Advisor for Poutini Ngāi Tahu (dated 30 October 2023);

(o) Ms Inger Perkins for Herenga ā Nuku Aotearoa the Outdoor Access Commission (dated 28 November 2023);

(p) Ms Michelle Grinlinton-Hancock, RMA Team Lead for KiwiRail (dated 3 November 2023); and

(q) Ms Nicky Snoyink for Forest & Bird (dated 28 November 2023).

1.7. Site Visit

38. The Panel undertook site visits throughout the pTTPP process, including those relevant to this hearing.

1.8. Objective and Policy Language

39. Throughout the hearings, the Panel discussed with Reporting Officers, submitters and witnesses the appropriateness of language within the objectives and policies in all three chapters. The Panel examined the use of '*minimise*' throughout the ENG, INF, and TRN objectives and policies, and whether '*manage*' or '*avoid, remedy and mitigate'* would be more appropriate and provide greater flexibility. The Panel also considered using the words '*incompatible'* and when to use '*enable'* and *'provide'* throughout the hearing. To maintain some order in our recommendations, the Panel discusses using such terms below, considering the specific objectives and policies affected. For completeness, the Panel notes that the Reporting Officers' Reply Report at section 3.0 (pages 3-6), provides their final recommendations relating to the use of such terms.

PART B - STATUTORY REQUIREMENTS AND DOCUMENTS

2. RMA STATUTORY REQUIREMENTS AND DOCUMENTS TO BE CONSIDERED

40. Energy, Infrastructure, and Transport are one of seven sections located in Part 2—District-Wide Matters—Te Wāhanga 2—Ngā Kaupapa ā-Rohe Whānui. The section contains three chapters with objectives, policies, and rules for ENG, INF, and TRN that apply across the districts.

41. The Section 32 Report outlined the relevant statutory considerations applicable to Energy, Infrastructure, and Transport Activities and the relationships between the sections of the RMA and higher-order documents that the Panel must give effect to in making our recommendations. It also provided a section 32 evaluation of the pTTPP provisions for the three chapters.

42. The s42A Report highlighted relevant sections 6, 7 and 8 matters of the RMA, and provided details on the following higher-order statutory documents and relevant documents:

- National Policy Statement for Renewable Energy Generation 2011 (**NPSREG**);
- National Policy Statement for Electricity Transmission 2008 (**NPSET**);
- New Zealand Coastal Policy Statement 2010 (**NZCPS**);
- National Policy Statement for Freshwater Management 2020 (**NPSFM**);
- National Policy Statement for Highly Productive Land 2022 (**NPSHPL**);
- National Policy Statement for Indigenous Biodiversity 2023 (**NPSIB**);
- National Policy Statement for Urban Development 2020 (**NPSUD**);
- Resource Management (National Environmental Standard for Electricity Transmission Activities) Regulations 2009 (**NESETA**);
- Resource Management (National Environmental Standard for Telecommunications Facilities) Regulations 2016 (**NESTF**);
- Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011 (**NESCS**);
- Iwi Management Plans, Mana Whakahono a Rohe; and
- West Coast Regional Policy Statement 2020 (**RPS**).

43. The Reporting Officers referred the Panel to the Regional Land Transport Plan 2021-2031 (**RLTP**), a plan in which local and regional authorities, the Department of Conservation (**DOC**),

and NZTA Waka Kotahi work together to identify and prioritise investment in the land transport network; and Te Whanaketanga Te Tai Poutini West Coast 2050 Strategy. Te Whanaketanga is a collaborative document developed by Development West Coast, the West Coast Councils and Poutini Ngāi Tahu. It sets out key strategic directions for the West Coast around economic development, regional identity and stronger communities.

44. Clause 10 of the First Schedule of the RMA, states that providing decisions on individual submissions is unnecessary. The Panel's recommendations are made within the scope of requested relief, either individual submissions or groups of submissions making similar requests, as specified in the reasons for recommendation.

45. The New Zealand Planning Standards mandatory direction 7.5 requires provisions relating to ENG, INF and TRN that are not specific to the '*Special Purpose zones*' chapter or sections must be located in one or more chapters under the heading '*Energy, Infrastructure and transport'*; and may include statements about the status of transport corridors, noise related metrics and noise measurement methods, and the management of reverse sensitivity effects. Mandatory direction 7.6 requires that the ENG, INF and TRN chapters include cross-references to any energy, infrastructure and transport provisions in a Special Purpose Zones chapter or sections. Mandatory direction 7.7 requires that zone chapters include cross-references to relevant provisions under the energy, infrastructure and transport heading. Mandatory direction 7.8 requires that all chapters must be included alphabetically. The Panel is satisfied that the pTTPP structure is consistent with this National Direction.

46. In written legal submissions dated 13 October 2023, Ms de Latour (Wynn Williams) addressed the general approach to considering changes to district plans. The Panel agrees with those submissions and applies the approach outlined concerning the ENG, INF and TRN chapter provisions.

PART C – SUBMISSIONS, EVIDENCE, EVALUATION AND RECOMMENDATIONS

3. DEFINITIONS - CRITICAL INFRASTRUCTURE

47. The pTTPP Strategic Direction Chapter objectives for Connections and Resilience recognise the strategic importance of energy, infrastructure, and transport resources to the West Coast.

48. The Strategic Direction in Part 2, combined with objectives within the relevant topic chapters, ensures that they provide a coherent, overarching strategic direction and state the intended outcomes for the West Coast districts. With these strategic directions and objectives in place, the articulation of location-specific and activity-specific objectives and policies is enabled in other pTTPP chapters consistent with the strategic objectives.

49. The Connections and Resilience section of the pTTPP Strategic Direction Chapter contained four objectives, three of which reference critical infrastructure. '*Critical infrastructure'* is defined in the pTTPP as follows –

> *the rail network, state highways, special-purpose roads, airports, wastewater treatment plants, reticulated water systems, stormwater treatment plants, and electricity transmission and distribution assets.*

50. Section 2.2 of the Strategic Direction of the s42A Report discussed use of the term '*critical infrastructure'* and submissions received regarding the appropriateness of the term '*critical infrastructure'* concerning the Strategic Direction Chapter. It noted that any proposed amendments to this definition would result in consequential amendments throughout the pTTPP.

51. The Strategic Direction s42A Report recommended using the term '*critical infrastructure'* in all objectives in the Connections and Resilience section. However, it stated -

> *I am aware that there are a range of submissions on the definition of Infrastructure and Energy Activities to be dealt with in the Energy Infrastructure and Transport Chapter. If this results in Energy Activities being excluded from the definition of Infrastructure, I would support this addition as a consequential amendment.*

Submissions and Further Submissions

52. The s42A Report identified six submission points and one further submission point[3] supporting the definition of '*Critical Infrastructure'* as notified.

53. Manawa (S438.003, S430.007, and S438.024) sought to replace the 'Critical Infrastructure' definition with 'Regionally Significant Infrastructure' (RSI) based on the RPS definition. Transpower (FS10.005), RNZ (FS141.001 and FS141.006), Westpower (FS222), WMS Group (HQ) Limited and WMS Land Company Limited (FS231.004) and Buller District Council (BDC) (FS149.068) supported submission S438.024 and sought to use RSI utilising the RPS definition.

[3] S442.001, S450.001, S440.01, S451.006, S478.063, S663.001 and FS149.008

54. NZDF (FS31)[4] opposed submission points S438.003, S438.024, and S608.006 because the pTTPP definition of '*Critical Infrastructure'* includes defence facilities and the RPS definition of RSI does not include NZDF facilities.

55. KiwiRail (S476.001) and Grey District Council (**GDC**) (FS1.271) supported the definition of *'Critical Infrastructure'*; however, they sought to include radiocommunication networks as provided for in the RPS.

56. WCRC (S488.005) sought to amend the '*Critical Infrastructure'* definition to include '*environmental monitoring facilities'* and '*natural hazard mitigation*'.

57. BDC (S538.010), Forest & Bird (FS34.063), and GDC (FS1.411) sought that '*ports'* be provided for in the definition of '*Critical Infrastructure'.*

58. Federated Farmers of New Zealand (S524.006), Murray Stewart (FS115.3), and GDC (FS1.257) sought to amend the definition of 'Critical Infrastructure', in particular, a description of 'Critical Infrastructure' with a non-exhaustive list of types of critical infrastructure, being "*those necessary facilities, services and installations which are critical or of significance to either the West Coast or New Zealand*".

59. Forest & Bird (S560.061) sought the definition of '*Critical Infrastructure'* be reworded so that it is limited to specific entities and infrastructure that deliver a service operated by a '*lifeline utility*' (as defined in the Civil Defence Emergency Management Act 2002), because the current wording was considered to be too broad and could capture infrastructure which is not '*critical*'. NZDF (FS31.005) opposed Forest & Bird's submission because the definition of a lifeline utility under the Civil Defence Emergency Management Act 2002 does not include NZDF facilities and NZDF facilities are included under the pTTPP definition of '*Critical Infrastructure'*.

60. Poutini Ngāi Tahu (S620.028) generally supported the notified definition for '*Critical Infrastructure'* but also sought to clarify the meaning of '*special purpose roads'* within the defined term '*Critical Infrastructure'*.

Section 42A Reports

61. The s42A Report noted the recommendations of the Strategic Direction s42A Report and considered the submission and further submission points received regarding the ENG, INF, and TRN provisions. It recommended adopting the RPS definition of RSI and accepting the relief sought by the relevant submitters, thereby achieving consistency with higher-order policy documents and giving effect to the RPS.

62. The RPS defines RSI as follows -

> *Regionally significant infrastructure means:*

4 FS31.002, FS31.003, FS31.004

(a) The National Grid (as defined by the Electricity Industry Act 2010);

(b) Other electricity distribution and transmission networks defined as the system of transmission lines, sub-transmission and distribution feeders and all associated substations and other works to convey electricity;

(c) Facilities for the generation of more than 1 MW of electricity and its supporting infrastructure where the electricity generated is supplied to the electricity distribution and transmission networks;

(d) Pipelines and gas facilities used for the transmission and distribution of natural and manufactured gas;

(e) The State Highway network, and road networks classified in the One Network Road Classification Sub-category as strategic;

(f) The regional rail networks;

(g) The Westport, Greymouth, and Hokitika airports;

(h) The Regional Council seawalls, stop banks and erosion protection works;

(i) Telecommunications and radio communications facilities;

(j) Public or community sewage treatment plants and associated reticulation and disposal systems;

(k) Public water supply intakes, treatment plants and distribution systems;

(l) Public or community drainage systems, including stormwater systems;

(m) The ports of Westport, Greymouth and Jackson Bay; and

(n) Public or community solid waste storage and disposal facilities

63. The s42A Report did not support amending the RSI definition to include defence facilities because no major defence facilities are on the West Coast. It is considered that the underlying zone would provide for future defence facilities and that the amendment sought by the NZDF was inconsistent with the RPS. It recommended that NZDF's further submission points be rejected.

64. The s42A Report agreed with the relief sought by WCRC (S488.005), KiwiRail (S476.001), BDC (S538.010), Forest & Bird (FS34.063) and GDC (FS1.411) to delete the definition of '*Critical Infrastructure'* and replace it a new definition of '*Regionally Significant Infrastructure,*' based on the RPS definition; and recommended accepting these submission and further submission points.

65. The s42A Report noted Federated Farmers of New Zealand ('Federated Farmers') (S524.006), Murray Stewart (FS115.3), and GDC (FS1.257) sought to amend the definition of '*Critical Infrastructure'* but considered the recommended deletion of the definition of '*Critical Infrastructure'* and replacement with RSI rendered these submission points redundant.

Similarly, it considered the Forest & Bird (S560.061) and Poutini Ngāi Tahu (S620.028) submission points were no longer applicable given the recommended use of RSI.

66. In response to a question from the Panel, the Reporting Officers considered, that within the scope of the ENG, INF and TRN provisions, the use of RSI did not broaden the scope of activities enabled.

67. In response to Mr Kennedy's evidence regarding S457.00, the s42A Addendum recommended rejecting the submission to retain the definition of '*Critical Infrastructure'*.

Hearing and submitter evidence, including the JWS.

68. Legal submissions[5] from Ms Viskovic (and Ms Sarah Scott), for Poutini Ngāi Tahu, addressed replacing the definition of '*Critical Infrastructure'* with the RPS definition of RSI. While generally supporting the change to align with the RPS definition of RSI, they considered there was little in the way of supporting analysis to support the change. They raised concern that the change recommended had the potential to significantly extend the application of enabling provisions that apply to critical infrastructure such as SASM-P13, ECO-P7 and Rules ECO-R1, NFL-R3, NFL-R9 and SUB-R4. They also submitted that there should not be different infrastructure definitions within the pTTPP, enabling plan users to easily identify the provisions that apply to any given type of infrastructure.

69. Ms Pull, for Poutini Ngāi Tahu, considered replacing the notified definition of '*Critical Infrastructure*' with RSI would broaden the range of activities included and provided a table[6] of a comparison of the two definitions showing that RSI was broader in its reach. She was critical the s42A Report did not detail the impact of this change on the wider plan or within the ENG Chapter. She was concerned the change to RSI could impact on the Sites of Significance to Māori (**SASM**) Chapter and that no assessment had been undertaken by the Reporting Officers. She noted that some RSI would be managed by designations but that some may not; and that some are managed by a requiring authority and some may not be. She highlighted that there were rules in the SASM Chapter that refer to similar terms to RSI such as 'Network Utility Structures' and that confusion could arise from the use of multiple terms. While she acknowledged the use of RSI in the RPS, she considered the pTTPP did not have to use the same term. She proposed that the definition of '*Critical Infrastructure*' should be expanded to include some of the features of both RSI or s8 of the Infrastructure Funding and Financing Act 2020, subject to the impacts of any such change being considered on a plan wide basis.

70. Ms Pull highlighted that the RMA definition of *'Infrastructure'* was very broad and distinguished lifeline infrastructure from other infrastructure.

71. In expert conferencing, Ms Pull requested to limit RSI to statutory agencies or requiring authorities because of concern that other entities other than statutory authorities could utilise the RSI definition to use enabling provisions with limited or no oversight applied.

[5] Dated 13 November 2023 paragraphs 3.1- 3.3
[6] Rachael Pull Statement of Evidence dated30 October 2023 Table 1 page 11

72. The JWS records Ms Pull's agreement to replace the definition of '*Critical Infrastructure*' with RSI on the condition that implications of the change are assessed on a plan wide basis and considered throughout the hearings on other chapters of the Plan. However, Ms Pull sought to restrict the scope of RSI to three waters infrastructure, and wastewater storage and disposal facilities managed by the Council to ensure long term effects on the community are managed. The JWS also records that Ms Pull sought clarity as to which roads are 'special purpose roads' and was advised by the Reporting Officers that these are roads subject to NZTA funding.

73. The JWS records Manawa and WCRC's planning experts expressed concern at limiting RSI to statutory agencies and requiring authorities, given that Manawa is not a requiring authority and the need to deal with waste in emergency situations. In response, Ms Pull noted that with an exclusion, Manawa's activities would still fit under the normal infrastructure provisions but not the most enabling RSI provisions.

74. The JWS records that Mr Horne, on behalf of the Telecommunications Companies, considered RSI clause (i) should include '*network and facilities'* to cover fibre and that the Reporting Officer did not oppose this.

75. NZDF's tabled written statement noted defence facilities were included within the pTTPP definition of '*Critical Infrastructure*' and that other district plans made provision for defence facilities (e.g. Selwyn District Council for the NZDF firing range and Burnham Military Camp).

76. Ms Snoyink, for Forest & Bird, considered simply replacing use of '*critical infrastructure*' with RSI in these three chapters, and consequently replacing the use of that term throughout the pTTPP, would increase the potential for conflict with other plan provisions and inconsistency with the NZCPS and Chapter 7 of the RPS. She noted the recommendation had not considered the full scope of infrastructure included under the RPS RSI definition and had not recognised that the RSI does not include all energy activities such as facilities generating less than 1 MW of electricity. Whereas the pTTPP definition of '*Energy Activity*' includes any energy generation, on any scale.

77. Ms Snoyink highlighted that the Reporting Officers had relied on the NPSET, the NPSREG and the RPS, regarding RSI, in considering provision wording for '*Energy Activities'*. She noted the pTTPP definition of '*Energy Activities*' was broad, and while not opposed to a broader definition, that the Chapter overview should clarify this and use terms, such as national grid, critical infrastructure, or renewable electricity generation, in appropriate circumstances. She noted Forest & Bird contend that not all energy infrastructure should be treated equally. A refinement in terminology was required, she said, to better align with the NZCPS and the RPS, while also aligning with the NPSET and NPSREG. She considered that treating all '*Energy Activities*' the same increases the potential for conflicts with the NZCPS and RPS, and that the plan also needs to address the different directions of the NPS.

78. Ms Snoyink was critical that Reporting Officers had not considered Chapter 7, Ecosystems and Indigenous Biological Diversity, of the RPS and noted the RPS overview for Chapter 6 on RSI clearly states that all relevant provisions of the RPS must be considered when managing the adverse effects of RSI activities.

79. Mr David Inch, for NZEL, highlighted that the RSI definition excluded community facilities generating less than 1 MW of electricity, such as those at Haast, Turnball Gorge, and Fox. He considered that resource consent should not be required for small community facilities providing essential services. He also noted that the use of backup generators should not be limited to 24 hours under Rule ENG-R9 and that under Rule INF-RX1, this was 48 hours.

80. Mr Kennedy, for Westpower, considered replacing the definition of '*Critical Infrastructure*' with RSI appropriate, but noted that this was a fundamental amendment to the pTTPP that needed to be understood. Ms Styles, for Manawa, and Ms Whitney, for Transpower, also supported the use of RSI and noted that its use and the use of 'infrastructure' and 'energy activities' required careful consideration throughout the Plan.

Reporting Officers' Position Statement and Reply Evidence

81. The s42A Report recommendation was to adopt the RPS definition of RSI and accept the relief sought by the relevant submitters, thereby achieving consistency with higher-order policy documents and giving effect to the RPS. In Reply, the Reporting Officers noted general agreement between expert witnesses participating in the EWC that the term '*Critical Infrastructure'* should be replaced with RSI, in general accordance with the RPS definition of RSI. They highlighted that the JWS recorded expert witnesses' differing opinions concerning appropriate further amendments to the RSI definition to refine it to a district level.

82. The Reporting Officers' Position Statement considered the RPS definition could be refined to a district level whilst giving effect to the RPS and recommended the following refinements of the RPS definition:

    (a) Inclusion of '*Special Purpose Roads as identified on the planning maps'*; and

    (b) Amendment of clause (I) to include '*telecommunication network and facilities'* to include the fibre network.

83. In Reply, the Reporting Officers remained of the view that defence facilities should not be included in the definition of RSI because there are no major defence facilities on the West Coast, and future defence facilities would be provided for by the underlying zone. Furthermore, the Reporting Officers considered that such an inclusion would be inconsistent with the RPS.

84. The Reporting Officers disagreed with Ms Pull's view of limiting RSI to statutory agencies or requiring authorities because many infrastructure providers are neither. They considered that such a restriction would result in the definition of RSI not giving effect to the RPS.

85. The Reporting Officers' recommended refinements to clauses (j), (k) (l) and (n) to remove '*community*' and add '*council owned*' to clarify that applicable infrastructure was public and council administered to remove ambiguity that a small-scale communal facility could be defined as regionally significant.

86. In addition, the Right of Reply of Ms Easton, the reporting officer in the Sites and Areas of Significance to Māori (SASM) hearing, records issues raised by the planners in that hearing, through their Joint Witness Statement, regarding the multiplicity of infrastructure definitions

in the plan and the need to rationalise them for consistency. Ms Easton recorded that the planners as a whole identified a range of terms, including "critical infrastructure", "infrastructure" (RMA definition), "network utility operator" (RMA definition), "lifeline utilities", "network utilities", "network infrastructure", "network utility structures", "public network utilities", "reticulated network utility systems" and "temporary network utilities", as well as terms supported in s42A Reports such as "regionally significant infrastructure" and "network utility infrastructure". Ms Easton recommended looking holistically across the Plan to resolve the appropriate terminology in each instance.

Hearing Panel's Evaluation

87. The Panel considers that Ms Viskovic's concerns regarding the lack of reasons to support the change from '*Critical Infrastructure*' to RSI were addressed by the planning experts in EWC and recorded in the JWS, and that such a change has merit. Reasons included that there is an existing familiarity with the term RSI, given its use within the RPS; and its use would address concerns about ensuring consistency, avoiding ambiguity, and making the pTTPP easier to use.

88. The Panel examined whether the RPS definition of RSI was sufficient and whether it could be amended to reflect infrastructure at a district scale during the hearing. The Reporting Officers considered that the RPS definition of RSI could be refined at a district level in a manner that continued to give effect to the RPS policy outcomes. Refinements discussed during the hearing process included:

(a) inclusion of '*special purpose roads*';

(b) inclusion of NZDF facilities;

(c) amendment to clause (i) to include '*Telecommunications network and facilities and radio communications facilities*'; and

(d) limiting of RSI to those managed by statutory agencies or requiring authorities.

89. Ongoing discussions during the hearing considered alternative refinements of the RSI definition to remove ambiguity, enable small-scale communal facilities to be included, and clarify whether infrastructure included should be public and council owned. Alternative language options were also discussed during the hearing, including infrastructure owned, leased, or administered by the Council.

90. The Panel acknowledge that the expert planning witnesses participating in the EWC generally agreed that the definition of '*Critical Infrastructure'* should be replaced with the RPS definition of RSI but disagreed on whether further amendments to the RSI definition were necessary to refine it to a district level to address smaller scale infrastructure.

91. The Panel considers Ms Pull's request to restrict the definition of RSI to apply only to those managed by statutory agencies is inappropriate because public or community infrastructure providers may not be statutory agencies or requiring authorities. The Panel agree with the Reporting Officers that such a limitation would restrict the definition of RSI to the extent that it no longer gives effect to the outcomes sought by RPS provisions. The Panel agrees that to give effect to the RPS, the pTTPP definition of RSI does not need to copy the RPS wording

exactly, and we are satisfied the recommended amendments to the RSI definition gives effect to the RPS.

92. The Panel accepts the opinions of the expert planning witnesses that Ms Pull's request to limit the definition of RSI to those managed by statutory agencies or requiring authorities could present workability issues and impact on the use of facilities in emergency situations. The Panel accepts that non-statutory parties may manage important public or community services and facilities, and it does not follow that they will not comply with Plan provisions and/or conditions of consent in a manner different from a statutory agency.

93. The Panel agrees with the Reporting Officers' recommendation to delete the pTTPP definition of 'Critical Infrastructure' and add a new definition of RSI based on the RPS definition for the reasons stated in the s42A Report and the Reply Report. The Panel agrees that the RPS definition of RSI can be refined at a district level while implementing the RPS policy outcomes.

94. The Panel accepts the Reporting Officers' recommendation to replace '*community*' with '*council owned*' in clauses (j), (l) and (n); and to add '*council owned*' to clause (k) of the RSI definition to increase clarity and improving effectiveness.

95. The Panel accepts the Reporting Officers' recommended amendment to clause (i) to add '*networks and facilities*' to clarify that the fibre network is included, as noted by Mr Horne in the JWS.

96. The Panel agrees with the Reporting Officers that, for the reasons they put forward, there is no need to limit the definition of RSI to statutory agencies and requiring authorities.

97. The Panel disagrees with the Reporting Officers that defence facilities should not be included because currently there are no facilities. We accept the NZDF request (S519.004) to include defence facilities based on the request to retain the definition of '*Critical Infrastructure*', as notified, because it includes defence facilities. We consider it appropriate to include all the activities covered in the definition of '*Critical Infrastructure*', regardless of what facilities currently exist. We agree that any new defence facilities would be subject to the relevant zone provisions but consider it should be subject to the provisions for RSI for its ongoing operation.

98. In addition to these specific submission points and further submission points, the Panel considers the replacement of '*Critical Infrastructure*' with RSI within the context of each ENG, INF and TRN provision, where relevant. The Panel noted that concerns raised regarding the need for a plan-wide assessment of the implications of this change are considered in each of the Panel's recommendation reports on individual chapters of the pTTPP. However, the new RSI definition replaces the term '*Critical Infrastructure*' throughout the TTPP, as a consequential amendment.

99. The Panel agrees with the recommendation of Ms Easton, reporting officer in the SASM hearing, that there should be consistent use of terminology across the plan and a reduction in the number of terms used to describe infrastructure, with corresponding definitions. Not all of the terms listed in her Reply Evidence for the SASM hearing are defined in the Plan. We have addressed these later in this recommendation.

Hearing Panel's Recommendations

100. The Panel recommends deleting the definition of '*Critical Infrastructure'* from the Plan and adding a new definition for '*Regionally Significant Infrastructure'*, as set out below.

~~CRITICAL INFRASTRUCTURE~~

~~means:~~

~~the rail network, state highways, special-purpose roads, airports, wastewater treatment plants, reticulated water systems, stormwater treatment plants, and electricity transmission and distribution assets.~~ [7]

REGIONALLY SIGNIFICANT INFRASTRUCTURE

means:

(a) The National Grid (as defined by the Electricity Industry Act 2010);

(b) Other electricity distribution and transmission networks defined as the system of transmission lines, sub-transmission and distribution feeders and all associated substations and other works to convey electricity;

(c) Facilities for the generation of more than 1 MW of electricity, including the Turnbull Hydro Power Station and Fox Hydro Power Station, and their supporting infrastructure where the electricity generated is supplied to the electricity distribution and transmission networks;

(d) Pipelines and gas facilities used for the transmission and distribution of natural and manufactured gas;

(e) The State Highway network, and road networks classified in the One Network Road Classification Sub-category as strategic;

(f) The regional rail networks;

(g) The Westport, Greymouth, and Hokitika airports;

(h) The Regional Council seawalls, stop banks and erosion protection works;

(i) Telecommunications networks and facilities and radio communications facilities;

(j) Public or council owned sewage treatment plants and associated reticulation and disposal systems;

(k) Public or council owned water supply intakes, treatment plants and distribution systems;

[7] Manawa Energy Limited S438.003 and S438.007

(l) Public or council owned drainage systems, including stormwater systems;

(m) The ports of Westport, Greymouth and Jackson Bay;

(n) Public or council owned solid waste storage and disposal facilities;

(o) **Special Purpose Roads as identified on the planning maps; and**[8]

(p) Defence Facilities[9]

4. ENERGY

4.1. Energy - General/Whole Chapter

Submissions and Further Submissions

101. The s42A Report identified 18 submission points and 13 further submission points[10] relating to general matters/whole ENG Chapter.

102. Three submission points and one further submission point[11] supported the ENG provisions as notified. DOC (S602.06) was neutral on the ENG Chapter as notified, as the provisions did not affect priority conservation values, biodiversity values or DOC interests.

103. Lynley Hargreaves (S481.025), supported by NZEL (FS127.023) sought to retain the ENG provisions supporting a low carbon lifestyle.

104. Te Mana Ora (Community and Public Health) of NPHS / Te Whatu Ora (S190.037) sought to include objectives and policies supporting renewable energy generation development in the ENG.

105. Inger Perkins (S462.031) sought to include methods (other than rules) in the pTTPP that support installing clean energy at a micro-scale.

106. Forest & Bird (S560.441) sought the deletion of '*Strategic Objectives'*. Westpower (FS222.0228) opposed the relief sought.

107. Forest & Bird (S560.125, S560.126, S560.127 and S560.128) sought to amend the discretionary matters to provide for biodiversity and other natural values. Westpower (FS222)[12] opposed this submission because it duplicated issues.

[8] Manawa Energy Limited S438.003, S438.007 and S438.024
[9] Ministry of Defence 519.004
[10] S190.037, S190.037, S299.027, S481.025, S560.108, S560.125, S560.126, S560.127, S560.128, S560.129, S560.130, S560.442, S560.444, S560.439, S620.087, S620.088, S620.089, S620.090, FS34.026, FS127.025, FS222.0226, FS222.0227, FS222.0229, FS222.0233, FS222.0241, FS222.0242, FS222.0243, FS222.0244, FS222.0245, FS222.0246, FS230.067
[11] S181.001, S190.037, S581.012, FS34.018
[12] Westpower FS222.0241, FS222.0242, FS222.0243, FS222.0244

108. Poutini Ngāi Tahu (S620.087, S629.088, S620.089 and S620.090) sought an additional matter of discretion for the restricted activity rules (ENG-R11, ENG-R12, ENG-R13 and ENG-R14) as follows:

> *The degree to which the proposed activity will cause significant adverse effects on Overlay chapter matters* ***and sites listed in Appendix 10****.*

109. Transpower (S299.027) did not support the reference to other rules in the pTTPP in the overview of the ENG, submitting that it should stand alone. Poutini Ngāi Tahu (FS41.104) opposed this submission, submitting that the ENG should not be read in isolation from other portions of the pTTPP. They supported the cross-referencing approach used within the overviews of the pTTPP to clarify the relationship between chapters, particularly in relation to the SASM chapter and advice notes within rules. Forest & Bird (FS34.026) also opposed this submission because the relief sought was inconsistent with the NZCPS and RPS.

110. Paul Finlay (S408.001) sought to ensure that provision is made for the critical need for reliance on hydropower generation, particularly regarding resilience pre- and post-alpine fault rupture, and climate change-required irrigation.

111. John Walsh (S527.001) sought a planning map provision for the National Grid Lines overlay to be removed from 169 Alma Road, as they appeared to be no longer part of the National Grid and may limit future development of the relevant site. Transpower (FS110.051) supported this submission point as the Waimangaroa Westport (WMG-WPT-A) 100kv line will be divested and no longer owned or operated by Transpower, and a section of the Inangahua Westport B (IGH-WPT-B) 100kv line will be decommissioned and dismantled.

112. Manawa (S438.127) supported the inclusion of provisions related to renewable electricity generation/regionally significant infrastructure in each of the relevant zone chapters, including ENG. Westpower (FS222.0198) opposed this submission because the pTTPP clearly states – '*Area Specific Provisions (Zone Chapters) do not apply to energy activities',* which relates to the entire chapter, not just the standards

113. Frank and Jo Dooley (S478.058) and Buller Electricity Limited (**BEL**) (S451.001) sought the corridor protection rules that relate to energy to be included within the zone chapters.

Section 42A Reports

114. The s42A Report acknowledged Lynley Hargreave's submission and considered that the pTTPP appropriately provided for a low-carbon lifestyle.

115. The s42A Report acknowledged the Te Mana Ora (Community and Public Health) of NPHS /Te Whatu Ora submission and considered that pTTPP appropriately supports renewable energy generation development.

116. Regarding Inger Perkins' submission, the s42A Report considered the installation of clean energy at a micro-scale was provided for within the pTTPP, including rules ENG-R1, ENG-R5, and ENG-R14. It was noted that these rules provide sufficient scope for micro-scale clean energy and that the submitter had provided insufficient rationale to justify the change requested.

117. The s42A Report recommended rejecting the relief sought by Forest & Bird (S560.441) to delete '*Strategic Objectives*' because this amendment would be inconsistent with the entirety of the pTTPP.

118. The s42A Report recommended rejecting Forest & Bird's (S560)[13] requests to add new matters of discretion to provide for biodiversity and other natural values, which was supported in part by Poutini Ngāi Tahu's (FS41) further submissions. It accepted Westpower's (FS222) further submission that this would duplicate relevant matters and considered specifying chapters of the pTTPP would limit and restrict assessments when the pTTPP should be read in full. It noted the overview at the start of the ENG Chapter guides Plan users to read other chapters. It considered that this would be duplication as it was also included under specific standards.

119. In respect of Transpower's submission (S299.027), s42A Report agreed with Poutini Ngāi Tahu's further submission point that the pTTPP should be read as a whole document and not as chapters in isolation; and rejected the request to remove references to other rules in the pTTPP.

120. Regarding Paul Finlay (S408.001), the s42A Report considered that the pTTPP, including rules ENG-R1, ENG-R5, and ENG-R14, sufficiently provided for hydropower generation.

121. Regarding John Walsh (S527.001), the s42A Report noted Transpower's further submission in support and the formalisation of the designation relinquishment and recommended removing the overlay, as requested.

122. The s42A Report acknowledged Manawa's submission (S438.127) and Westpower's (FS222.0198) further submission, but did not recommend amending the current wording because it considered the current pTTPP wording addressed the intent of both submitters.

123. The s42A Report did not support the relief sought by Frank and Jo Dooley (S478.058) and BEL (S451.001) because parts of the pTTPP should not be read in isolation but as a whole document.

124. Regarding general matters, the Reporting Officers agreed with submitters that the notified ENG and INF provisions overlap. Therefore, amendments were recommended to ensure all aspects of Energy Activities are contained within the ENG chapter.

Hearing and Submitter Evidence

125. Ms Foran's evidence, for Manawa, detailed Manawa's assets, interests and locations on the West Coast; and emphasised the importance of renewable electricity development to the country and the West Coast. She identified targets for renewable energy and reductions in greenhouse gas emissions, which have been enshrined in legislation. She highlighted the reviews of the NPS-REG, the NZ Infrastructure Commission, and the West Coast Energy Action Group, all of which she noted focus on significant increases in renewable electricity generation. She noted that for these targets and commitments to be met, rapid electrification

[13] Royal Forest and Bird Protection Society S560.125, S560.126, S560.127, and S560.128

of the economy, coupled with a coordinated policy response, including a district plan policy framework, is required.

126. Ms Styles, for Manawa, supported the approach provided in the pTTPP, whereby the ENG provisions are largely self-contained, and the INF provisions are unrelated to energy activities. She considered this approach an important step in simplifying the Plan provisions, avoiding unnecessary duplication in provisions, and supporting the enablement of renewable energy generation (**REG**).

127. Ms Styles expressed concern about the complexity of the ENG chapter and sought simplification. She noted several of Manawa's submission points related to simplification and separation of issues but that the general approach had been retained with several clarifications provided within the recommendations in Appendix 1 to the s42A Report. She noted that the recommendations within the s42A Report appeared to be in conflict. She acknowledged the retention of the statements of clarification within the overview section and the zone chapters, noting that these must be retained to help simplify and clarify what rules applied to energy activities.

128. Mr Finlay, for NZEL, addressed the need for the pTTPP to provide hydro power generation on DOC and other lands, subject to reinstatement and bonding provisions. He provided details on the challenge of conveying West Coast water to the East Coast for irrigation, including power generation.

129. Ms Eng, for Transpower, confirmed that the Waimangaroa-Westport B transmission line, which traverses 169 Alma Road Westport, was currently being dismantled between the Waimangaroa Substation and Westport and that once complete the National Grid corridor provisions in the pTTPP would not apply. She advised that the Waimangaroa-Westport B transmission line between Orowaiti 'Tee' and Westport had been transferred to the ownership of BEL in June 2023 and was no longer part of the National Grid. Therefore, the corridor provisions of the PTTPP would not apply. She provided Appendix B showing the transmission limes traversing 169 Alma Road. She advised that Transpower would provide updated mapping and shape files to the Panel before the hearing on outstanding matters. The Panel understands this has now been provided.

130. Ms Whitney, for Transpower, considered the miscellaneous submission points (S299.027 and 299.028) relating to the need for the ENG Chapter provisions to be stand-alone were now considered to be resolved by the s42a recommendations. She confirmed Mr Walsh's concerns relating to 169 Alma Road had also been resolved, as outlined in Ms Eng's evidence.

Reporting Officer Reply Evidence

131. The Reporting Officers' Reply Report did not cover any additional response to ENG general matters.

Hearing Panel's Evaluation

132. The Panel considers the need for additional matters of discretion as requested by Forest & Bird in relation R-12, R13, R14, below.

133. The Panel considers the Poutini Ngai Tahu request '*and sites listed in Appendix 10*' for R11-14 below.

134. The Panel is satisfied that the issues raised in the submission and further submission points concerning ENG general matters/whole chapter are addressed by the Reporting Officers' recommendations in the s42A Report.

Hearing Panel's Recommendations

135. For the reason detailed in the 42A Report, the Panel recommends no changes to the ENG Chapter from submission and further submission points addressed as ENG general matters/whole chapter.

4.2. Energy- Definitions

Submissions and Further Submissions

136. Details of the submission and further submission points and requested decisions are provided in the s42A Report, at paragraphs 136 to 159, and should be read in conjunction with this Report.

Section 42A Reports

137. The s42A Report noted Transpower's support (S299)[14] for the retention of the definitions for '*Energy Activity', 'Network Utility Operator', 'Significant Electricity Distribution Line',* and *'Upgrading*', as notified; and Manawa's support (S438.009) for retaining the definitions of '*Energy Activity'* and amending '*Upgrading'* by adding '*Upgrading/upgrade'* (S438.019).

138. The s42A Report did not support adding '*Upgrade'* because it considered the current wording consistent with the NZ Planning Standards. However, the Addendum s42A Report accepted that the evidence of Ms Styles provided further reasoning and accepted the addition would improve implementation while not changing the meaning.

139. In relation to submission points from Frank and Jo Dooley supported (S478)[15], the s42A Report noted the support for the definitions referenced in their submission and agreed that the term '*network utility operator'* should be consistently referenced throughout the pTTPP.

140. The s42A Report acknowledged Westpower (S547)[16] and BEL's (S451)[17] submission points supporting retention of definitions referenced in their submissions but noted they had recommended some amendments.

141. The s42A Report also acknowledged BEL (S451.016) and BDC's (S538.004) submission points to include a definition of '*Network Utility'*; and RNZ (FS141.004 and FS141.008) and KiwiRail's

14 S299.004, S299.011, S299.015, S299.019

15 S478.069, S478.070, S478.071, S478.072

16 S547.021, S547.029, S547.034, S547.038, S547.040, S547.041

17 S451.005, S451.007, S451.009, S451.012, S451.013, S451.014, S451.015

(FS236.002) further submission points supporting a new definition, and Westpower's (FS222.046) opposing the BDC submission. The s42A Report supported the inclusion of a new definition for a 'Network Utility' to provide clarity and support the implementation of the provisions.

142. The s42A Report recommended accepting Westpower's (S547.02) request to amend the definition of '*Energy Activity'* because the amendment clarified what is categorised as an energy activity. However, the Addendum s42A Report noted that a new rule was recommended to provide for customer connections as a permitted activity. It therefore recommended the definition of '*Energy Activity'* be retained as notified.

143. The s42A Report recommended rejecting Westpower's (S547.127) request to include a new definition of '*Major Dam'* because the NZ Planning Standards do not specify definitions of dams or major dams, and other district plans do not specify such a definition.

144. The s42A Report recommended rejecting Forest and Bird's (S560.063 and S560.107) submission points to delete the definition of '*Energy Activity*' or amend the definition to be specific to the National Grid, or electricity transmission, distribution and REG activities, because it would be inconsistent with the NPS-REG. It is recommended to accept Westpower's (FS222.0225) and BDC's (FS149.061) further submission points opposing these submissions.

145. The s42A Report recommended rejecting Westpower's (S547.001) request to rationalise and ensure consistency of terms related to energy activities undertaken by Westpower due to a lack of technical evidence to demonstrate what the issue is. It recommended accepting the further submissions in opposition to this submission point (FS223.009 and FS224.009)

146. The s42A Report recommended rejecting Forest and Bird's (S560.075 and S560.421) request to amend the 'Renewable Electricity Generation Activities' definition because it was inconsistent with the NPSREG.

147. Regarding requests for new definitions[18] of '*Small and Community-Scale Distributed Electricity Generation', 'Large Scale', 'Minor Upgrade'* and *'Regionally Significant Infrastructure'*, the s42A Report supported inclusion of the NPS-REG definition '*Small and Community-Scale Distributed Electricity Generation'*. Still, it noted it did not provide a scale limit. It noted the pTTPP definition of '*Small Scale*' in relation to energy means REG with a capacity no greater than 20kW and Reporting Officers considered that this capacity limit would ensure viable generation is provided for and encouraged. However, the Panel notes that this recommendation was later changed.

148. The s42A Report considered the recommendation to amend the definition of *'Small Scale'* consequentially triggered the need to amend the definition of '*Large Scale'* to '*Large-Scale Distributed Electricity Generation*' for consistency and to avoid discrepancies between the small, community-scale, and large-scale distributed energy electrician generation of 20 kW to 100 kW.

18 S438.002, S438.006, S438.012, S438.018, S438.046, S478.067, S560.129, FS141.007, FS149.0150, FS34.055, FS34.063, FS110.007, FS127.033, FS138.0010, FS222.0151, FS222.0172, FS222.0175, FS222.0176, FS222.0179, FS222.0180

149. The s42A Addendum Report acknowledged the evidence of Ms Styles and Mr Kennedy but remained of the view that a definition of '*Small and Community-Scale Distributed Electricity Generation'* is required to improve interpretation; and recommended the NPSREG definition and relying on the effects-based rules and zone rules to manage effects.

150. The s42A Report recommended rejecting Westpower's (S547.043) request to amend the definition of '*Upgrading'* because the amendment sought did not provide further clarity and inappropriately focused the definition on electricity lines, and accepting RNZ's (FS141.009) opposition to this submission. Similarly, the s42A Report did not support Frank and Jo Dooley's (S478.075) and BEL's (S451.018) requests to amend the definition of '*Upgrading'* because they considered it limiting and more specific to energy infrastructure.

151. The s42A Addendum Report reconfirmed the recommendation to reject Westpower's (S547.043) request to amend the definition of '*Upgrading'.* It changed the Reporting Officers' recommendation from reject to accept in part Manawa (S438.022) and Westpower's (S547.004) request to add a new definition for '*minor upgrading'* because the amendments to the definition of '*Upgrading*' partly addressed these submission points.

152. The s42A Report recommended accepting Manawa's (S438.016) request to amend the definition of '*Non-Renewable Electricity Activities'* because its inclusion supports the definition of '*Energy Activity*' and provides clarification for Plan users.

153. The s42A Report recommended accepting Transpower's (S299.017) request to amend the 'Substation (Zone)' definition to ensure it did not include substations directly connected to the National Grid. It considered that this clarifies the difference between the substation (zone) and the National Grid subdivision corridor and accepts in part Forest & Bird's (FS34.023) further submission in support of this submission. However, the s42A Addendum Report changed this recommendation after considering the pre-hearing meeting discussions and the evidence of Ms Whitney and Mr Kennedy. It recommended no amendment to the 'Substation (Zone)' definition.

154. The s42A Report recommended accepting Transpower's (S299.008) request to amend the definition of '*National Grid'* to have the same meaning as provided in the NPSET to ensure the definition remains consistent with the NPSET without requiring a plan change if the NPSET definition is updated at any point during the life of the plan. It also accepted Transpower's (S299.009) request to amend the definition of the '*National Grid yard'* to include '*outer <u>visible</u> edge*'; the request (S299.01) to amend the definition of '*National Grid Subdivision Corridor'* to remove the reference to '*and distribution';* and the request (S299.018) amend the definition of '*Transmission Lines'*, which were all consistent with the NPSET.

155. The s42A Addendum Report agreed with Ms Whitney that the clarification of measurement of the setback included in the definition of '*National Grid Yard*' should also be included in the definition of '*National Grid Subdivision Corridor';* and recommended accepting Transpower's submission S299.010.

156. The s42A Report recommended accepting Manawa's (S438.016) request to amend the 'Renewable Electricity Generation Activities' definition to include '*earthworks, vegetation clearance'* as ancillary components and activities to make the provision consistent with the NPSREG.

157. The s42A Report recommended rejecting Horticulture New Zealand ('Hort NZ') (S486.006) and Federated Farmers' (S524.023) requests to amend the definition of '*Significant Electricity Distribution Line'* to a voltage of 66 kV or greater because it would be inconsistent with the New Zealand Standards. It also rejected Hort NZ's (FS55.7) further submission in support of S524.023.

158. Westpower's request (S547.035) to amend the definition of '*Renewable Electricity Generation Activities'* to include reference to large-scale activities was recommended to be accepted in the s42A Report to provide clarity regarding the status of large-scale activities. However, it recommended rejecting the Westpower's request (S547.044) to add a new definition of '*Minor Upgrading'* for distribution lines and Forest & Bird's (S560.081) request for a new definition for *'Minor Upgrade'* because both propose to limit the extent of minor upgrading to specific activities, which is inconsistent with the pTTPP.

Hearing and Submitter Evidence/Statements

Energy Activity

159. Ms Styles, for Manawa, emphasised the importance of using terms clearly and accurately throughout the Plan, ensuring that these terms align with the higher-order documents and national direction. She focused on the defined term '*Energy Activity'*, noting that it was used in many places within the ENG Chapter where its use was sometimes inaccurate, inappropriate, or misleading.

160. Ms Styles considered '*Energy Activity'* to be an umbrella term that was logically broad in scope. In her view, it encompassed all activities that generate renewable or non-renewable electricity, energy investigations, transmission, and distribution. She also noted that the term applied within the notified ENG Chapter and had implications that, in her view, had not been fully considered. She considered this had resulted in some of the activities included in the definition being treated equally and in an undifferentiated way. By way of example, she noted it was unclear that the planned direction for REG is to provide for or enable such activities but that such enablement is inappropriate for non-renewable electricity generation. Her view was that using an umbrella term is inappropriate and inconsistent with the direction of national policy.

161. Ms Styles emphasised that treating renewable and non-renewable energy activities in the same manner within the Plan does not support international or national commitments and national direction regarding the phasing out of non-renewable energy activities. She considered that the Plan needed to include a policy that clearly states the intent to avoid the development of non-renewable electricity generation activities on the West Coast and to facilitate the replacement of non-renewable energy sources (including the use of fossil fuels) in energy generation. Furthermore, she believed that this policy approach should be given effect by including an additional rule to make non-renewable electricity generation activities non-complying.

162. Ms Styles noted that the Manawa issues relating to the use of terminology and the approach to non-renewables had been addressed in the s42A Report[19]. However, the requests were rejected. She questioned whether the Reporting Officers misunderstood the issue raised in the submissions, assumed that there is no need to address this issue clearly and in a directive manner, or had given insufficient consideration of the national direction context.

163. Ms Styles noted comments from other submitters and the Reporting Officers that there will always be a need for non-renewable energy sources. She expressed concern that this opinion had been given weight in the development of this Plan, and such an approach was contrary to the national directive to reduce fossil fuel use and replace it with renewable energy as a matter of urgency.

164. Ms Styles highlighted that district planning provisions do not cover restrictions on small-scale activities, such as burning wood or coal in a home heating device and are subject to Regional Council controls on home heating and discharges from the same under regional planning provisions. She noted these activities would not be captured by the rules included within the ENG Chapter and that temporary use of devices such as diesel-powered generators to deal with a power outage was provided for as temporary activities or through regional plan provisions. As for industrial activities, such as using coal for steam generation, she noted that this was not an issue relating to electricity generation, but rather part of an industrial process, managed by controls on the industrial process through air discharge regulations set by the Regional Council. She emphasised the issue at hand, for the pTTPP is whether electricity generation, such as a coal-fired power station, would, under the notified provisions, be treated like hydro, wind or solar.

165. Ms Styles emphasised that the pTTPP needs to be premised on a clear separation between renewable and non-renewable energy sources, with REG activities explicitly provided. She was concerned that there was no direction in the notified provisions to state that non-renewable energy should be treated differently from REG. She contended that this distinction would be appropriate to help provide clear outcome expectations, rather than leaving the perception that such activities are acceptable if their effects can be managed. She emphasised that the pTTPP needs to relate to the roles and responsibilities of District Councils, not Regional Council responsibilities, and to give effect to national direction.

166. Ms Inta presented on her own behalf and for Buller Conservation Group. She considered the definitions of '*Large scale'* and '*Small Scale'* should be reinstated because these were referenced many times in the pTTPP.

167. Mr Kennedy, for Westpower, referenced paragraph 141 of the s42A Report, which accepted in part Westpower's (S547.024) request to amend the definition of '*Energy Activity'* to provide more clarity of activities categorised under the term, including connecting and supplying electricity to consumers and energy activities related to infrastructure and assets. However, he noted no amendment in the s42A Report (or Appendix 1) to enable him to provide comment. He sought an amendment to the definition of the outcome sought in submissions.

19 Section 42A Report paragraph 166, paragraph 233, paragraph 177, paragraph 195, paragraph 202, paragraph 209.

168. Mr Kennedy maintained that the terms used throughout the Plan needed to be rationalised and consistent to achieve the outcomes sought and acknowledged that the use of RSI would go some way towards this.

169. Ms Whitney, for Transpower, was agnostic about the all-encompassing nature of the definition of '*Energy Activities'* and noted support (S299.004) for the definition as notified. Her main concern was ensuring that any rationale for the energy activity provisions relies solely on the NPSET, where the provision is specific to the National Grid, and the NPSET is not used as a policy instrument to seek or justify broader changes that are not National Grid-specific.

170. Ms Snoyink, for Forest & Bird, continued to express concerns that the s42A Report amendment to the definition of '*Energy Activity*' did not resolve the uncertainty in terms of which activities the definition is intended to capture, beyond those caught by the definition of RSI and renewable energy generation. Forest & Bird did not suggest alternative wording.

Small Scale

171. Ms Styles, after acknowledging the Reporting Officers accepted submissions to amend the definition of small scale to small and community scale, remained concerned that the definition would continue to apply an extremely small-scale threshold (20 kw capacity), without considering the effects or benefits of the same. She strongly preferred removing these definitions and associating references to capacity-based scales in the rules. She said that if the definition of small and community-scale activities is retained, her preference would be not to apply an arbitrary capacity limit.

172. Mr Kennedy noted that Westpower submitted that the definitions in the plan dealing with 'Small Scale', 'Community Scale', and 'Large-Scale' should be retained. He acknowledged the Manawa submissions, which sought to change these terms to align them more consistently with the NPSREG. However, he believed that removing scale provisions, for example, 20 kw capacity and 100 kw capacity, would fundamentally change the regulatory regime they had proposed through the pTTPP's development. He disagreed with that approach, preferring the approach proposed in the notified pTTPP to be retained with a minor amendment to bring the terminology into line with the NPSREG.

Large-Scale Distributed Electricity Generation

173. The s42A Report recommended a consequential amendment to '*Large-Scale Distributed Electricity Generation*' was needed because of the recommended new definition of '*Small Scale*'.

Substation (Zone)

174. Mr Kennedy sought the definition of '*Substation (Zone*)' was retained given it had been established through consultation in developing the Plan. He considered that the recommended amendments would impact certain substations owned and operated by Westpower, directly connected to the National Grid, that NPSET or NESETA did not cover. He noted that the implications of this change on the local electricity distribution network had not been assessed.

175. Ms Whitney noted that on review of the Transpower (S299.017) submission point, she preferred alternate relief that the definition be amended to apply to all substations. She accepted the s42A Addendum Report recommendation not to add a new sentence but also requested the deletion of '*sub-*', as shown in paragraph 6.7 of her evidence.

Upgrading and Minor Upgrading

176. Ms Styles stated that the term '*upgrading'* should be amended to include '*upgrade'*. She argued that the two words are used interchangeably throughout the Chapter, and the single-word upgrade is used in many provisions. She considered it necessary to be clear that the two terms mean the same thing.

177. Additionally, she contended that the term '*Minor Upgrade'* needs clarification. She contended that including a definition for '*Minor Upgrading'* would ensure that activities that proceeded under that definition remain within clear parameters and would enable works to be undertaken to improve REG without undue consenting processes

178. Mr Kennedy's evidence on this definition noted that the amendment sought by Westpower was due to the proposed definition being inappropriate in enabling Westpower to provide for the community that it serves and to manage and operate its network. He maintained that the amendments should be included within the definition, particularly since they related to electricity lines.

179. Regarding '*Minor Upgrading'*, Mr Kennedy was concerned that rejecting the Westpower submission would prevent the provisions from achieving some Westpower activities that could be undertaken as minor upgrading. He believed a definition of '*Minor Upgrading*' is needed, particularly for distribution lines.

Infrastructure

180. Mr Kennedy highlighted that the s42A Report had not addressed Westpower's (S547.028) requests to add an advisory note to the definition of *'Infrastructure*', but that the submission point had been rejected in Appendix 1.

Network Utility

181. Mr Kennedy did not support a new definition for '*Network Utility*' (FS222.046) due to concern that an additional term for the same or similar activities would result in complexity and would not improve interpretation.

Network Utility Operator

182. Mr Kennedy highlighted that the s42A Report had not addressed Westpower's (S547.031) request to add an advisory note to the definition of '*Network Utility Operator,*' However, the submission points had been rejected in Appendix 1.

Major Dam

183. Mr Kennedy disagreed with the conclusion in the s42A Report that no new definition is required for 'Major Dam', given that it is used in the Plan, and it is unclear what was intended.

He noted the National Planning Standards do not preclude a definition and therefore sought the new definition requested in the submission.

Reporting Officers' Reply Evidence

Energy Activity

184. Addressing the issue of whether the definition of '*Energy Activity*' encompasses both renewable and non-renewable energy, the Reporting Officers agreed that there was a lack of clarity in the ENG provisions regarding what constitutes an energy activity. The Reply recommendation reverted to the notified wording of the definition but recommended consequential amendments to provisions to list appropriate activities and remove the generic use of '*energy activities'*. They supported this by recommending the inclusion of a new definition of '*Non-Renewable Electricity Generation Activity'.*

Small and community-scale renewable energy and large-scale renewable energy

185. The Reply noted that in their notified form, the definitions of *'Small Scale' and 'Large-scale'* for renewable energy sources included a capacity limit. It highlighted that many submissions sought to amend those capacity limits to increase or decrease. The Reporting Officers recorded that they were not technical experts concerning electricity generation and could not comment on what capacity level may or may not be appropriate.

186. The Reporting Officers referred their original recommendations in the s42A.[20] The report recommends that capacity figures be removed from both definitions and amended to be consistent with the NPSREG. The Reporting Officers retained this recommendation.

Upgrading/Upgrade or Upgrading

187. The Reply noted that the notified plan interchangeably uses the terms '*upgrading', 'upgrade' and 'minor upgrade*.' The Reporting Officers disagreed with Mr Kennedy's evidence regarding alternative provisions for minor upgrading within the ENG because they considered his definitions would result in complexity.

188. The Reporting Officers remained of the view that their original recommendation was most preferred. They also did not support Westpower's amendments to the definition of upgrading to include additional clauses allowing the increase of voltage and an increase in character scale and intensity of the activity, because it would add further complexities. However, they reconfirmed support for Manawa's amendment to the definition of upgrading to include '*upgrade*' for clarity. They considered accepting this evidence would improve the plan's readability.

Hearing Panel's Evaluation

189. The Panel has carefully considered the matters relating to the definition of '*Energy Activity*'. We note that the Reporting Officers final position was to retain the definition as notified but

20 s42A Report, page 43, paragraph 146

make consequential amendments to provisions to list appropriate activities and remove the generic use of 'energy activities' and support this by the inclusion of a new definition of '*Non-Renewable Electricity Generation Activity*'. We are therefore mindful of the level of scope provided to undertake such amendments. In this context we note that Forest & Bird (S560.063) sought to delete the definition of '*Energy Activity*' and that Manawa (S438.035) sought to amend all objectives and policies by removing reference to *'energy activities*' and replacing it with a reference to *'renewable electricity generation activities'.*

190. The Panel therefore accept that a consequence of deleting the definition of 'Energy Activity' could be for that wording it to be removed from the Plan altogether. We note however that the wording is used extensively throughout the Energy Chapter and in other chapters and its overall removal would potentially require a significant rewrite of the chapter and other wider amendments.

191. The Panel acknowledge that there is scope from the Manawa submission to introduce 'renewable electricity generation activities' as a definition and into the provisions and agree that is appropriate and would go some way towards resolving concerns. However, we do have concerns about making wide ranging "consequential amendments" to provisions based on retaining the definition of Energy Activity as notified. While there maybe some merit in those amendments, we consider that would be stretching the extent of scope too far.

192. The Panel therefore accepts the amendments to the definitions recommended by the Reporting Officers within the s42A Reports and the Reply Report, which includes retaining the definition of '*Energy Activity*' unamended. We consider the amendments proposed to definitions will ensure the Plan's language is consistent with higher order documents such as the NPSET and NESETA.

193. The Panel notes that Ms Whitney accepted the reporting officers' recommendation not to add an additional sentence to the definition of '*Substation (Zone)*', as Transpower initially sought in submissions. However, the Reply did not consider the alternative relief sought to delete '*sub'* from the definition, and this amendment was not shown in Appendix 1 of the Reply. The Panel accept the evidence of Ms Whitney and consider this alternative relief is appropriate.

194. The Panel notes in relation to the evidence of Ms Styles that we accepted the Reporting Officers recommendation to include a definition of '*minor upgrade'* in the Natural Features and Landscapes recommendation as follows:

> *minor upgrade*
>
> *means increasing the carrying capacity, efficiency, security, or safety of a network utility, or renewable electricity generation activity where the effects of the activity are the same or similar in character, intensity and scale as the existing structure or activity. This includes increasing generation, transmission or distribution capacity and includes replacing support structures within the footprint of existing lawfully established activities.*

Hearing Panel's Recommendation

195. For the reasons outlined above, and subject to consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are

accepted or accepted in part and recommends the following changes to the definitions related to the Energy Chapter.

Term	Definition
INFRASTRUCTURE	has the same meaning as in section 2 of the RMA (as set out below), means a. pipelines that distribute or transmit natural or manufactured gas, petroleum, biofuel or geothermal energy; b. a network for the purpose of telecommunication as defined in section 5 of the Telecommunications Act 2001; c. a network for the purpose of radiocommunication as defined in Section 2(1) of the Radiocommunications Act 1989; d. facilities for the generation of electricity, lines used or intended to be used to convey electricity, and support structures for lines used or intended to be used to convey electricity, excluding lines and support structures if a person- i. uses them in connection with the generation of electricity for the person's use; and ii. does not use them to generate any electricity for supply to any other person; e. a water supply distribution system, including a system for irrigation; f. a drainage or sewerage system; g. structures for transport on land by cycleways, rail, roads, walkways, or any other means; h. facilities for the loading or unloading of cargo or passengers transported on land by any means; i. an airport as defined in section 2 of the Airport Authorities Act 1966; j. a navigation installation as defined in section 2 (1) of the Port Companies Act 1988; **and** k. **facilities for the loading or unloading of cargo or passengers carried by sea, including**

	a port related commercial undertaking as defined in section 2(1) of the Port Companies Act 1988;[21] l. anything described as a network utility operation in regulations made for the purposes of the definition of network utility operator in section 166. **Note:** **Electricity activities are addressed in the Energy Chapter of the Plan.**[22]
ENERGY ACTIVITY	means the use of land, buildings and structures for the purpose of energy investigation, generation, transmission and distribution. This includes all types of renewable electricity generation.
LARGE SCALE **DISTRIBUTED ELECTRICITY GENERATION**	means~~, when applied to provisions in the Energy Chapter,~~ electricity generation activities utilising renewable energy sour~~c~~es ~~with a capacity of greater than 100kW~~ **which are not Small and Community Scale Electricity Generation Activities**[23] for the purposes of exporting electricity directly into the distribution network or National Grid. It includes all ancillary components and activities such as lines, poles, structures, substations, climate / environmental monitoring equipment, earthworks, roading, maintenance buildings, temporary concrete batching plants, internal transmission and fibre networks, and site rehabilitation works
NATIONAL GRID	**has the same meaning as provided in the National Policy Statement on Electricity Transmission 2008**[24] **(as set out below)** means the assets used or owned by Transpower NZ Limited
NATIONAL GRID SUBDIVISION CORRIDOR	means the area measured either side of the centreline of above ground National Grid transmission ~~and distribution~~ lines as follows (and

21 Variation 1 to the pTTPP

22 Consequential amendment Transpower S299.052

[23] Consequential amendment to Manawa Energy Limited S438.006 and S438.018

[24] Transpower S299.008

	illustrated in green below): a. 14m for 66kV or 110kV transmission lines on single poles; b. 16m for 110kV transmission lines on pi poles; and c. 32m for 110kV transmission lines on towers (including tubular steel towers where these replace steel lattice towers). **The measurement of setback distances from the National Grid transmission lines must be undertaken from the centre line of the National Grid transmission line. The centre line at any point is a straight line between the centre points of the two support structures at each end of the span.**[25]
NATIONAL GRID YARD	means as illustrated in red below: a. the area located 10m either side of the centreline of an overhead 66kV or 110kV National Grid transmission line on single poles; b. the area located 12m in any direction from the outer **visible**[26] edge of a support structure for an overhead 66kV or 110kV National Grid transmission line; and c. the area located 12m either side of the centreline of any 66kV or 110kV overhead National Grid transmission line on pi poles or towers (including tubular steel towers where these replace steel lattice towers). The measurement of setback distances from the National Grid transmission lines must be undertaken from the centre line of the National Grid transmission line and the outer visible edge of any support structure. The centre line at any point is a straight line between the centre points of the two support structures at each end of the span.
NETWORK UTILITY	**means a project, work, system or structure that is a network utility operation undertaken by a network utility operator.**[27]
NON-RENEWABLE ELECTRICITY GENERATION	**means the construction, operation and maintenance of structures associated with electricity generation**

[25] Transpower S299.010
[26] Transpower S299.009
[27] Buller District Council S538.004

ACTIVITY	**from non-renewable energy sources.**[28]
RENEWABLE ELECTRICITY GENERATION ACTIVITIES	means the construction, operation, maintenance and upgrading of structures associated with renewable energy generation. This includes**, along with large scale activities,**[29] small and community-scale distributed renewable electricity generation activities and the system of electricity conveyance required to convey electricity to the distribution network and/or the national grid and electricity storage technologies associated with renewable electricity. It includes all ancillary components and activities such as substations, climate/environmental monitoring equipment, **earthworks, vegetation clearance,**[30] roading, maintenance buildings, temporary concrete batching plants, internal transmission and fibre networks, and site rehabilitation works.
SMALL **AND COMMUNITY** SCALE **ELECTRICITY GENERATION**	~~means, in relation to energy, renewable electricity generation activities at a capacity of no greater than 20kW for the purpose of using or generating electricity on a particular site, or exporting from a site.~~ **means renewable electricity generation for the purpose of using electricity on a particular site, or supplying an immediate community, or connecting into the distribution network.**[31]
SUBSTATION (ZONE)	means the ground-mounted equipment used to convert ~~sub~~[32] transmission voltage (33kV and higher) to distribution voltages (22 or 11kV), and this equipment is generally enclosed in a fenced yard.
TRANSMISSION LINE~~S~~	**has the same meaning as provided in the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (as set out below).** means: a. the facilities and structures used for, or associated with, the overhead or

[35] Manawa Energy Limited S438.019

4.3. Energy Chapter Overview

Submissions and Further Submissions

196. There were nine submission and 21 further submission points[36] received in relation to the Overview. The submission points and further submission points are assessed in the s42A Report in paragraphs 161 to 167. The Panel has considered the relevant submissions and further submissions received; and adopts the summaries provided within the S42A report.

Section 42A Reports

197. The s42A Report agreed with Manawa (S438.035) and NZEL (FS127.024) to amend the Overview to reference the NPSREG correctly.

198. The s42A Report agreed with Hort NZ (S486.013), and Forest & Bird's (FS34.059) further submission point in support, that the requirement for the '*protection*' of RSI should be removed from the Plan because the NPSET seeks to '*recognise and provide*' for RSI. It noted the RPS does not specify the protection of RSI but provides for its ongoing development, operation, maintenance, and upgrading.

199. The s42A Report did not support the amendments sought by Westpower (S547),[37] supported by NZ Energy (FS177)[38], to provide further context relating to the West Coast within the Plan because it considered sufficient context had already been provided and any further wording would be unnecessary given it is simply an Overview paragraph.

200. The s42A Report did not support Westpower (S547.070), supported by NZEL (FS127.053), to amend the reference to financial contributions by referencing energy, not infrastructure; and the request (S547.071) to remove the reference to '*activities on surface water'*. It stated the wording is intended to provide for infrastructure because infrastructure is what financial contributions pay for, not energy. It rejected the deletion of '*activities on surface water'* because the reference to surface water ensures that any activity proposed on surface water considers the relevant provisions of the pTTPP. The Annotated s42A Report and Addendum Report reconfirmed this position.

201. The s42A Report did not support Transpower's (S299.027 and S299.028) submission to have the ENG self-contained with no reference to other chapters, ensuring that the different chapters do not apply to the National Grid. It noted several further submissions opposed[39] that submission because it would fragment the pTTPP, which would affect its function and implementation; and agreed with the opposing further submissions that the Plan is intended to be read as a whole document. It supported Poutini Ngāi Tahu's further submission (FS41.039 and FS41.107) to retain cross-referencing because the Plan would be fragmented and could not provide for exclusions without it. Further, it stated exclusions can be

[36] S299.028, S438.035, S438.047, S547.066, S547.067, S547.068, S547.069, S547.070, S547.071, FS110.015,FS451.09, FS486.013, FS560.107, FS560.437,FS560.438,FS34.027, FS34.044, FS34.059, FS41.39, FS41.50, FS127.025, FS127.024, FS127.049, FS127.050, FS127.051, FS 127.052, FS127.053, FS230.068, FS230.0373, FS222.0225.
[37] S547.066, S547.067 and S547.068
[38] FS127.049, FS127.050 and FS127.051
[39] FS41.039, FS41.104, FS41.107, FS34.026, FS34.027

appropriately provided where provisions do not apply to the National Grid. The Annotated s42A Report confirmed this position.

Hearing and Submitter Evidence/Statements, including JWS

202. Ms Styles supported the approach provided in the pTTPP, stating that the ENG Chapter is self-contained, and the INF provisions and zone chapter rules do not relate to energy activities. She considered this approach an essential step in simplifying plan provisions and avoiding unnecessary duplication in provisions supporting REG enablement. However, she noted that some recommendations in the s42A Report appeared to conflict.

203. Ms Snoyink's statement for Forest & Bird noted that the s42A Addendum Report continued to include the word '*protection*' within the overview. She said that Forest & Bird considers any protection of RSI to be from reverse sensitivity effects, which is not the same as protection for an RMA s6 issue. Forest & Bird contended there is no mandate for the Council to protect RSI beyond reverse sensitivity, and the wording as to the extent of that protection should be more precise.

204. Mr Kennedy noted that Westpower supported the Overview in part but requested three amendments to reflect higher-order policy documents, the context of the West Coast, and the layout and interpretation of the ENG Chapter of the Plan. He disagreed with removing the word *Protection*, referencing Chapters 5 and 6 of the RPS, which provided specific recognition and *Protection* of RSI. He considered that recognition and protection should be retained in the pTTPP to give effect to the RPS.

205. Mr Kennedy addressed the Plan interpretation and clarification issues. He wanted to ensure that the INF Chapter, area-specific provisions, and zone chapters do not apply to energy activities. More particularly, his concern was the appropriate location within the Plan for such a direction. He sought the provision of an explanatory note to clarify the applicability of provisions that do not specifically reference activities. In particular, he pointed out that the Plan contained numerous terms that may apply to energy activities, so he considered the clarification he sought would better assist plan users and administrators.

206. Mr Kennedy also addressed energy activities on surface water. As we understood his evidence, he agreed that any energy activity proposed on surface water would require consideration of the other provisions of the pTTPP that applied to surface water activities.

207. Ms Pull in her evidence considered the Reporting Officers' approach to be inconsistent. She noted that the Reporting Officers supported cross-referencing in the overviews of the ENG and INF chapters, but not the TRN chapter. The Panel addresses this issue in the Transport section of this Report.

Reporting Officers' Reply Evidence

208. After considering Mr Kennedy's requested wording for the Overview circulated after EWC, the Reporting Officers recommended the following amendments to the Overview:

> *~~Energy activities, including r~~**R**enewable electricity generation, **electricity** transmission, and distribution ~~and operation~~ are recognised as regionally significant infrastructure in the West Coast Regional Policy Statement. As such they require specific recognition and*

> *protection, as they are critical to the social, cultural and economic wellbeing of people and communities.* ***Operation, maintenance and repair of existing energy activities contribute to the resilience of the West Coast.***

209. Responding to Mr Kennedy's evidence relating to clarity of plan provisions, the Reporting Officers considered that the recommended amendments to the ENG Chapter provided sufficient clarity concerning energy activities, as defined within the provisions of the Chapter. The Reporting Officers also considered that the Overview clarified the relationship with the INF Chapter and that further clarification was a Plan integration matter, which was beyond the scope of this topic.

210. The Reporting Officers considered Mr Kennedy's request to insert additional paragraphs into the ENG Overview too lengthy and detailed for an overview. They noted that the Overview has no legal effect and highlighted that it is one of the longest in the pTTPP.

211. In their Position Statement and Reply Report, the Reporting Officers accepted that the Overview did not reference the importance of existing activities. Therefore, they recommended inserting a new sentence at the end of the first paragraph to remedy this, as Westpower requested. However, Mr Kennedy's request to include a reference to the West Coast context was not supported.

212. Responding to Westpower's submission regarding financial contributions, the Reporting Officers referred to the expert JWS (Annexure A, pages 9-10), where participants agreed that this concern could be resolved by deleting the last four words of the sentence, being*, which impact on infrastructure* that provides for financial contributions located at the end of the Overview section headed Financial Contributions.

213. Responding to Panel questions, the Reporting Officers agreed that cross-references to other national regulations and standards in the Overview could be removed to avoid duplication and support streamlining the Chapter.

214. The Reply did not specifically respond to Forest & Bird's hearing statement concerning their further submission point supporting Hort NZ's request to replace '*protection*' with '*recognise and provide for'* in the Overview. The Panel notes this was recommended to be deleted in the s42A Report[40] and is shown in a strikethrough in Appendix 1. However, this deletion was shown as a new addition with underlining in Attachment 1 of the Reply Report, which is incorrect. Notwithstanding this, the Panel have amended wording along the lines sought by Horticulture NZ.

Hearing Panel's Evaluation

215. The Panel considers the wording of the Overview should use language consistent with RPS Chapter 6 for RSI, which seeks to enable the safe, efficient and integrated development, operation, maintenance, and upgrading of regional and nationally significant infrastructure

[40] S42A Paragraph 163 page 48

(Objective 1). The policy language used is to '*recognise*' and '*provide for*' RSI; and RSI are to be '*protected*' from reverse sensitivity effects from other activities.

216. The Panel disagrees with Mr Kennedy that the '*protection*' of RSI is consistent with the provisions of the RPS given it is limited to ensuring RSI are protected from reverse sensitivity effects.

217. The Panel agree with Hort NZ and Forest & Bird that '*recognition and protection*', as used in the first paragraph in the Overview is inconsistent with the outcomes sought by the RPS; and accepts these submission and further submission points. The Panel rejects Transpower's (FS110.015) further submission point.

218. The Panel recommends the following amendment, as requested by Hort NZ (S486.013):

> *As such they **need to be recognised and provided for** ~~require specific recognition and protection,~~ as they are critical to the social, cultural and economic wellbeing of people and communities.*

219. The NPSET seeks to '*recognise*' the national significance of electricity transmission and directs that decision-makers '*recognise and provide'* for transmission benefits and the effective operation, maintenance, upgrading, and development of the electricity transmission network.

220. The Panel also agrees with Hort NZ and Forest & Bird that 'recognition and protection', as used in the second paragraph of the Overview, is inconsistent with the outcomes sought by the NPSET.

221. The Panel recommends the following amendment, as requested by Hort NZ (S486.013):

> *The National Policy Statement for Electricity Transmission ~~Activities~~ requires **that the National Grid is recognised and provided for** ~~specific recognition and protection of the National grid, with renewable electricity recognised in the National Policy Statement on Renewable Energy Generation.~~*

222. However, the Panel recommends adding '2008' to the NPSET reference for accuracy and accepts the Reporting Officers' recommended amendment to the REG part of the sentence, as requested by Westpower (S547.067).

223. The Panel considers it is appropriate to recommend a consequential amendment to the amendments sought by Hort NZ's (S486.013) in paragraph 3 of the Overview to add '*including its protection from reverse sensitivity effects*' to be consistent with the RPS.

224. The Panel accepts the Reporting Officers' recommendation to add the last sentence to the second paragraph of the Overview but note that in Attachment 1 of the Reply Report it was missing '*significance of **renewable** electricity*', as requested by Westpower (S547.068).

Hearing Panel's Recommendation

225. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are

accepted or accepted in part, and recommends the following changes to the **Energy Overview:**

Energy - Te Pūngao
Overview

~~Energy activities, including r~~ Renewable electricity generation, **electricity** transmission, **and** distribution ~~and operation~~ are recognised as regionally significant infrastructure in the West Coast Regional Policy Statement. As such they **need to be recognised and provided for,** ~~require specific recognition and protection,~~[41]as they are critical to the social, cultural, and economic well-being of people and communities. **Operation, maintenance, and repair of existing energy activities contribute to the resilience of the West Coast.**[42]

The National Policy Statement for Electricity Transmission **2008**~~Activities~~ requires **that the National Grid is recognised and provided for**. ~~specific recognition and protection of the National grid, with renewable electricity recognised in the~~[43] **The** National Policy Statement on Renewable ~~Energy~~ **Electricity**[44] Generation **recognises the national significance of renewable electricity generation activities, including the need for and benefits from, renewable electricity generation.**[45]

Certain activities must also comply with the rules managing activities which may compromise the operation, maintenance and upgrading of the National Grid transmission lines, including **its protection from**[46] reverse sensitivity effects**.** ~~**The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001)** contains mandatory restrictions on activities in relation to the National Grid and electricity distribution lines. Compliance with the rule requirements of Te Tai o Poutini Plan does not ensure compliance with NZECP 34:2001 or vice versa~~.

~~Vegetation planted in the vicinity of the National Grid or electricity distribution lines must comply with the **Electricity (Hazards from Trees) Regulations 2003.**~~

~~Where an activity relates to the operation, maintenance and upgrading of existing National Grid transmission lines, the Resource Management Regulations 2009 (National Environmental Standards for **Electricity Transmission Activities) apply**.~~[47]

The Energy Chapter contains the objectives, policies, rules for managing energy activities - the Infrastructure Chapter rules and the Area Specific Provisions (Zone chapters) do not apply to energy activities, however the Overlay chapters and other District Wide rules also apply where relevant.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-wide Matters chapters also contain provisions that may be relevant for energy activities, including:

- **Overlay Chapters** - the Overlay Chapters have relevant provisions in relation to Sites of Significance to Māori, Ecosystems and Indigenous Biodiversity; Landscape and Natural Features; Natural Character and Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an energy activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.
- **Subdivision** - The Subdivision chapter sets out the requirements for the development of new electricity connections as part of subdivision activities.
- **Financial Contributions** - The Financial Contributions Chapter sets out the requirements for contributions of costs for activities ~~which impact on infrastructure~~.[48]
- **General District Wide Matters** - provisions in relation to Activities on the Surface of Water, Noise and Earthworks in particular may be relevant to energy activities.

4.4. Energy Objectives

Submissions and Further Submissions

226. The s42A Report at paragraph 168 identifies submission and further submission points[49] that supported the Energy Objectives collectively, and those submitters[50] that supported the ENG Objectives as notified.

ENG-01

227. Paragraphs 169-171 of the S42A detailed the submission and further submission points requesting amendments to ENG-01.

228. Manawa (S438.037), supported by NZEL (FS127.027), sought amendments to ENG-01 to provide greater clarity for Plan users and align ENG-01 with the NPSREG, specifically the NPSREG Objective and Policy A, by adding '*by providing for their development*'. Similar requests to add '*and recognise*' were made by Westpower (S547.074), Frank and Jo Dooley (S478.077), and BEL (S451.020), supported by NZEL (FS127.008).

229. Westpower (S547.074) sought to amend ENG-01 to recognise electricity's national benefits. For clarity, Westpower submitted that ENG-01 should be separated into two new Objectives.

[48] Westpower S547.070
[49] S451.023, S478.080, S538.017, S547.073, S547.075, S547.077, S558.428, S566.428, S567.048, S574.428 and FS127.007
[50] S538, S558, S566, S567 and S574

ENG-02

230. The s42A Report identified submission and further submission points[51] relating to ENG-O2. Te Mana Ora (Community and Public Health) of NPHS/Te Whatu Ora (S190) and Transpower (S299) support ENG-O2 as notified.

231. Forest & Bird (S560.110) sought to delete or amend ENG-O2 to ensure energy activities covered are limited to energy distribution, supply, and energy generation. In addition, Forest & Bird (S560.108) and Manawa (S438.037) sought '*minimise'* be replaced with '*avoid, remedy or mitigate'* under the ECO Chapter and District Wide Chapters of the Plan.

232. BEL (S451.021), supported by NZEL (FS127.009), and Frank and Jo Dooley (S478.078) sought to reword ENG-O2 as follows:

> *Have particular regard to the constraints imposed by the technical, locational, and operational requirements when seeking to avoid, remedy, or mitigate adverse effects on communities and the environment from an energy activities design and location.*

233. Westpower Limited (S547.076) sought to amend ENG-O2 as follows:

> *To recognise and provide for the technical, functional ~~and~~ operational, locational needs associated with the location and design of Energy Activities, including Critical Infrastructure~~, and to minimise the adverse effects of these activities on communities and the environment.~~*

ENG-03

234. The s42A Report identified submission and further submission points[52] regarding ENG-O3. Te Mana Ora (Community and Public Health) of NPHS / Te Whatu Ora (S190) and Transpower (S299) support ENG-O3 as notified.

235. Manawa (S438.038), supported by NZEL (FS127.029) sought to amend ENG-O3 as follows:

> *…upgrade of energy renewable electricity generation activities and…incompatible subdivision, use and development.*

236. BEL (S451.022), supported by Kāinga Ora (FS58.012) and NZEL (FS127.010), and Frank and Jo Dooley (S478.079) seek to amend ENG-O3 to give effect to the RPS as follows:

> *To ~~provide for~~ enable the development, operation, maintenance and upgrade of energy activities ~~and to protect them from the adverse effects of incompatible subdivision and development.~~*

51 S190.039, S299.030, S438.037, S451.021, S478.078, S547.076, S560.110, S560.445, S560.446, FS127. 009, FS127.028

52 S190.040, S299.030, S438.038, S451.022, S478.079, S486.015, S524.033, S547.078, S560.111, S560.447, FS34.060, FS55.15, FS55.16, FS58.012, FS58.013, FS58.014, FS58.015, FS127.0010, FS127.029

237. Hort NZ (S486.014), supported by Kāinga Ora (FS58.013) and Forest & Bird (FS34.060) Federated Farmers (S524.033), sought to amend ENG-O3 to remove the protection focus as follows:

> *…upgrade of energy activities and ~~to protect them from~~ ensure they are not compromised by the adverse effects of incompatible subdivision, use and development.*

238. Forest & Bird submitted that ENG-O3 is too broad and should be limited to electricity generation, distribution and supply and renewable energy generation. The submitter requested to delete or amend ENG-O3 as follows:

> *To provide for the development, operation, maintenance and upgrade of electricity generation, distribution and supply and renewable energy generation ~~energy activities~~ where adverse effects can be appropriately avoided, remedied or mitigated in accordance with the Natural Environment and District Wide Chapters of this Plan and to protect them from the adverse effects of incompatible subdivision and development.*

239. Forest & Bird noted this objective was a blanket enabling provision and does not address adverse effects. Kāinga Ora (FS58) supported this and considered that energy activities should appropriately avoid, remedy or mitigate adverse effects.

240. Westpower Limited (S547.078) sought a new objective and a reworded ENG-O3 as follows:

> *To enable the safe, efficient and integrated development, operation, maintenance and upgrading of Energy Activities, including Infrastructure and Critical Infrastructure, to meet the needs of the West Coast/Te Tai o Poutini.*
>
> *To protect Energy Activities, including Critical Infrastructure, from the adverse effects of incompatible subdivision, use and development.*

241. Westpower considered ENG-O3 to combine two matters that should be addressed separately for clarity. Kāinga Ora (FS58.014) and Hort NZ (FS55.16) opposed this request as they considered the proposed amendments were overly restrictive.

ENG-04

242. The s42A Report identified nine submission and further submission points[53] relating to ENG-O4.

243. BEL (S451.024), supported by further submissions by Kāinga Ora (FS58.017) and NZEL (FS127.011) and opposed by Transpower (FS127.011) and Frank and Jo Dooley (S478.081), sought to amend ENG-O4 to include '*incompatible*' in relation to subdivision, use and development.

New Objective

53 S190.041, S299.032, S451.024, S478.081, S486.016, S524.034, FS58.017, FS58.018, FS58.019, FS110.016, FS127.00111

244. BEL (S451.023), supported by NZEL (FS127) and opposed by Kāinga Ora (FS58.020), and Frank and Jo Dooley (S478.080) sought a new objective to implement the RPS, as follows:

> *Energy activities, including their operation, maintenance, upgrading, or development, are protected from the adverse effects of incompatible subdivision and development.*

245. Westpower (S547.073), support by NZEL (FS127.055) sought a new objective to give effect to the RPS because there is no objective for coordinating the provision and use of energy activities at the time of subdivision and development, as follows:

> *To ensure the efficient provision and use of Energy Activities, including Critical Infrastructure, for communities by coordinating the provision of Energy Activities with the subdivision, use and development.*

Section 42A Reports

246. Concerning **ENG-01**, the s42A Report supported the amendment sought by Manawa because it would provide greater clarity for plan users and align with the NPSREG, specifically its Objective and Policy A.

247. The s42A Report partially supported Westpower's submission by agreeing to include '*national benefits'* within ENG-O1 to be consistent with the RPS Chapter 6, Objective 1. However, it considered the separation of ENG-O1 and adding a new objective unnecessary, as it is provided under ENG-O4.

248. In relation to **ENG-02**, the s42A Report did not support Forest & Bird's submission to amend ENG-O2 to replace '*minimise'* with '*avoid, remedy or mitigate'* because it considered '*avoid, remedy or mitigate*' is too general for an objective. Forest and Bird thought '*minimise'* reflects that there are scenarios where it is not possible or practical to avoid, remedy or mitigate all effects of energy activities due to their technical, functional, operational and locational constraints. The Reporting Officers considered '*minimise'* provides greater certainty and is consistent with the approach taken throughout pTTPP. It also did not support the balance of the amendment sought because specifying chapters of the pTTPP limits and restricts the assessment, while the pTTPP should be read in full. Further, it noted that the ENG Overview guide states that other chapters are to be read in conjunction with the ENG, and it would be a duplication to include it under specific objectives and policies.

249. For the reasons provided in the preceding paragraph, the s42A Report did not support the request from BEL, Frank and Jo Dooley and NZEL to amend ENG-O2 to replace '*minimise'* with '*avoid, remedy or mitigate'*.

250. The s42A Report did not support the amendments sought by Westpower because it considered the RMA to require minimising adverse effects on communities and the environment of activities. It noted that the NZ Planning Standards define functional and operational needs, encompassing technical and locational needs. It considered the submitter had not provided sufficient reason for the relief sought.

251. The s42A Addendum confirmed the recommendation to reject Westpower's request to amend ENG-02 and split it into two objectives.

252. Concerning **ENG-03**, the s42A Report agreed with Manawa and NZEL that ENG-03 should recognise the need to provide for renewable electricity generation and to protect renewable electricity generation activities from reverse sensitivity effects, in accordance with the NPSREG. It therefore supported inclusion of '*use'* to provide consistency with the RMA but considered it unnecessary to specify '*renewable electricity generation*' as this is captured in the definition of '*Energy Activity'* as defined in Part 1 of the pTTPP as follows:

> *means the use of land, buildings and structures for the purpose of energy investigation, generation, transmission and distribution. This includes all types of renewable electricity generation*.

253. However, the s42A Addendum Report noted that based on further clarification and justification in the pre-circulated evidence and further pre-hearing discussions, it now accepted the request to amend the objective by deleting references to '*energy activities*' and replacing this with '*renewable electricity generation, energy investigation, distribution, and transmission'*. The Addendum considered that the amended objective would provide further clarity in relation to the various activities encompassed in the umbrella definition of '*Energy Activities*'; and that the amendment would be consistent with national direction.

254. In relation to BEL and Frank and Jo Dooley's submission points, the s42A Report considered '*provide for'* had a comparable policy directive to '*enable'* and that both would result in the same outcome, and on this basis, it did not accept the amendments sought. It also did not support deleting the second portion of ENG-O3 as notified, because they considered protection from adverse effects to provide a greater policy directive.

255. The s42A Report did not support the amendment requested by Hort NZ and Federated Farmers except for the inclusion of '*use'*, which is consistent with the RMA. It considered that the provision of protection ensures that energy activities will not be compromised and that the current wording appropriately provides for the intent of the submissions.

256. The s42A Report did not support the amendment sought by Forest & Bird because specifying chapters of the pTTPP limits and restricts the assessment, while the pTTPP should be read in full. It considered the overview at the start of the ENG guides reference to other relevant chapters, and it would therefore be a duplication to include it under specific objectives and policies.

257. In relation to Westpower's request to reword ENG-03 and split it into two objectives, the s42A Report rejected this amendment because it considered the current wording provides for the protection of energy activities more transparently. However, this position changed in the s42A Addendum, where, in response to evidence, the Report Officers recommended the use of *'to enable'* in ENG-03.

258. The Addendum recorded that the Reporting Officers remained of the view that splitting the objective was not necessary, but did accept, based on the pre-circulated evidence, that there was an inconsistency between the INF objectives and the energy objectives with respect to enabling energy activities in accordance with the RPS.

259. In relation to **ENG-04**, the s42A Report did not support BEL (S451.024)[54] and Frank and Jo Dooley's (S478.081) request for the inclusion of the word '*incompatible*' because it limits the scope of the objective, solely to incompatible subdivision, use and development, where any subdivision, use and development should actively consider effects.

260. The s42A Report recommended rejecting BEL and Frank and Jo Dooley's request for a **new objective** to address protection from reverse sensitivity effects because this was provided for in ENG-03.

261. The s42A Report also did not support a new objective as proposed by Westpower for coordinating the provision of energy activities. However, the Addendum Report changed this position in response to pre-circulated evidence and pre-hearing discussions. It recommended that, with a refinement in the approach to types of Energy Activities, a new objective supporting coordination and the efficient provision of electricity distribution and transmission activities would link policies ENG-P5 and ENG-P9. Attachment 2 to the Addendum Report recommended the following new Objective ENG-05:

> *To ensure the efficient provision and use of distribution and transmission activities by co-ordinating the provision with subdivision, use and development.*

Hearing and Submitter Evidence/Statements, including JWS

ENG-01

262. Ms Whitney, for Transpower, noted support for the objective as notified but accepted the amendment recommended in the s42A Report.

263. Mr Kenndy was critical that ENG-01 and ENG-04 did not provide for enabling energy activities as envisaged by the RPS Chapter 6, Objective 1. He contrasted this with INF Objectives, which give effect to the RPS by seeking to enable activities under that section. He was unclear why an enabling outcome was not sought or considered appropriate for energy activities, as with other infrastructure, given the significance of energy activities to the region and nationally, and to achieve community and environmental outcomes. He considered the recommendations of the S42A Report relating to energy and infrastructure to be inconsistent and do not reflect the outcomes sought for the region on an integrated basis.

264. Mr Lile, for BEL, supported the amendments recommended in the s42A Report.

ENG-02

265. Ms Styles expressed concern that the pTTPP provisions did not provide a clear separation between renewable and non-renewable energy sources to provide for REG specifically. She referred to ENG-02 and ENG-03, where recognition of functional and operational needs and provision for development, operation, maintenance, and upgrade applied to all energy activities. She believed such provision should not be given to non-renewable electricity generation. She believed the objective should be to apply this enablement to REG and energy

54 Supported by Kāinga Ora (FS58.017) and NZ Energy (FS127.011) and opposed by Transpower NZ Ltd (FS110.016)

investigation, distribution, and transmission activities. She said such an amendment to the objectives is required to specify the activities enabled correctly and give effect to national direction for REG and electricity transmission, without transferring the same benefits to non-renewables, which do not have national importance and conflict with aspirations to reduce fossil fuel use nationally.

266. Ms Styles considered the term '*minimise*', which is used in the Plan as a direction for managing effects, should be amended to '*avoid remedy or mitigate'*, to reflect the terminology of the RMA. In addition to this change in terminology, she said she would also recognise the approach to effects management hierarchies and that various aspects of the effects management hierarchy may be appropriate in different circumstances. She disagreed with the s42a Report, which considered the term 'minimise' very general and lacking direction. She thought the word is unclear as to what degree effects should be minimised, questioning whether it should be as far as possible or as much as desired, and in whose opinion. In contrast, she said the use of '*avoid remedy or mitigate'* is well understood, supported by case law, and aligned with the effects management hierarchy approach, which is commonly expressed in recent national direction.

267. Ms Whitney noted support for the objective as notified.

268. Mr Kennedy considered that ENG-02 should be split into two matters: one to deal with functional operational needs, and the other to deal with minimising effects. He also thought the objective should provide for functional, operational, technical, and locational needs consistent with the RPS.

269. Mr Kennedy considered the term '*minimising*' was unclear because there was uncertainty about what was being used to determine whether effects were minimal. Given the requirements of energy activities, he considered that it may not always be possible to achieve minimal effects. He thought the better approach was that those effects must be '*managed*'.

270. Mr Lile accepted the Reporting Officers' assessment and supported the amendments recommended in the s42A Report.

271. Mr Leckie, in legal submissions[55] for Bathurst, supported the discussion in the S42A Report concerning functional and operational needs, and consistency of language, noting that functional and operational needs, as defined in the NZ Planning Standards, encompassed technical and locational needs. He submitted that the terms '*functional need and operational needs'* should be used in place of the terms '*constraints or requirements'* because this is consistent with the language of the Planning Standards.

272. Ms Snoyink, for Forest & Bird[56], acknowledged the s42A Report recommendation to delete the word 'minimise' and considered this was an improvement, but noted that it was inadequate without policy direction to avoid, remedy or mitigate adverse effects.

55 Dated 13 November 2023 paragraphs 16 and 17

56 Forest & Bird Statement of Evidence 28 November 2023 paragraph 31

ENG-03

273. In response to the s42A Report recommendation to remove the word '*incompatible*', Ms Styles was of the view it should remain within the objective because the use of the word seeks to provide direction and ensures that the objective and its related policy does not apply to any activities seeking to locate close to REG, transmission and distribution activities recognising that some activities can appropriately locate near such activities. Further, she said the inclusion of the word is a test for determining what subdivision use and development would lead to reverse sensitive problems and what would not. She considered including the word within ENG-03 and its related policies would support rules with another chapter to control specific activities close to this type of infrastructure.

274. Ms Styles's evidence sought to delete the reference to '*energy activities*' and replace it with '*renewable electricity generation, energy investigation, distribution, and transmission'*. She considered this amendment required correctly specifying the activities enabled to give effect to the national direction for both the REG and electricity transmission, without transferring the same benefit to non-renewables.

275. Ms Whitney noted Transpower's support for the objective as notified but accepted the amendment recommended in the s42A Report.

276. Mr Kennedy's evidence on ENG-03 focused on splitting the objective into two parts, seeking to separate matters into two distinct objectives: to enable and protect energy activities. He considered this approach would provide clarity of outcome and consistency of approach and give effect to the RPS.

277. Mr Lile accepted the s42A Report assessment and the reasons given.

278. Ms Snoyink, for Forest & Bird, expressed concern regarding the clarity of ENG-03, particularly if the objective is limited to renewable electricity generation activities. Forest & Bird opposed the inconclusion of the term enable, referencing Policy 6 of the NPSREG, which directs district plans to provide for as distinct from enable. Forest & Bird made the point based on the recent Port Otago decision that the word '*enable*' is a directive word and was not appropriate in the context of the ENG provisions.

279. The JWS records that the Reporting Officers and the expert planners for Transpower, Manawa and BEL agree that '*provide for*' development in ENG-03 reflects NPSET and NPSREG; and that '*enable'* is appropriate for the operation, maintenance and upgrade of REG, energy investigation, distribution and transmission. It notes the INF provisions do not follow the guidance of the NPSET and NPSREG and therefore do not need to align with the ENG provisions.

280. The JWS records that Mr Kennedy preferred only the use of '*enable*' to be consistent with the RPS and INF-01 and INF-O2.

ENG-04

281. Ms Whitney noted that ENG-04 is specific to the National Grid, and Transpower's support for the objective as notified.

282. Mr Lile accepted the assessment in the s42A Reports and its recommended amendment to ENG-04.

Reporting Officers' Reply Evidence

ENG-01

283. The Reporting Officers made no further recommendations in Reply.

ENG-02

284. The Reporting Officers reviewed the evidence received and the discussions at the hearing. They recommended replacing the term '*minimise'* with '*manage*, which, in their view, provides a clear target while remaining consistent with the higher order policy direction, such as the NPSET. The Reporting Officers considered that management can be achieved via avoidance, remediation, or policy mitigation.

ENG-03

285. Having reconsidered the original recommendation that the inclusion of the word '*incompatible'* in this objective was not supported due to the limitation of the scope of the objective, the Reporting Officers now recommended that the word '*incompatible'* be retained in ENG-03. They reasoned that inclusion would enable compatible subdivision, use, and development in certain circumstances, which they considered sufficient to afford the protection of the relevant infrastructure. Furthermore, they considered this consistent with Chapter 6 Policy 4 of the RPS.

286. The Reporting Officers also reconsidered the earlier recommendation to change this objective to include the words '*to enable*'. Considering submitted evidence and the JWS, the Reporting Officers considered that the provision should link directly to the nature of the activity proposed, the potential for adverse effects and the consenting pathway. They thought the words '*to provide*' indicate provision within the plan via a consenting pathway, more appropriately applied to developing new renewable electricity generation, energy investigation, distribution, and transmission activities. They considered the words '*to enable*' indicate the Plan enables the activity via a permitted activity rule, which is more appropriately applied to the operation, maintenance, and upgrading of existing renewable electricity generation, energy investigation, distribution and transmission activities.

ENG-04

287. The Reporting Officers' Attachment 1 recommended including *'incompatible'* in ENG-04, as BEL and Frank and Jo Dooley requested.

New Objective ENG-05

288. Attachment 1 of the Reply recommended the following slightly amended wording for new Objective ENG-05:

> *To ensure the efficient provision and use of distribution and transmission activities by co-ordinating ~~the provision~~ with subdivision, use and development.*

289. The Reporting Officers accepted that including this new objective would be consistent with objective INF-03, policy INF-P4, and SUB-P2.

Hearing Panel's Evaluation

ENG-01

290. The Panel accepts the recommended changes to ENG-01, shown in Attachment 1 to the Right of Reply, and considers these amendments to address the submitter's concerns and provide a greater degree of clarity.

ENG-02

291. The Panel considers the wording of ENG-02, as notified, particularly regarding functional or operational needs, appropriate. We do not consider that including further words relating to functional or operational need will assist in any meaningful way, given that these terms are defined in the PTTPP. The Panel considers it should be '*functional **need or** operational needs'* given both terms are defined in the pTTPP and it is '*or*' not '*and*'.

292. The Panel generally accepts the Reporting Officers' recommendation and Manawa's submission (S438.037) to replace '*energy*' with '*renewable electricity generation, energy investigations, distribution and activities*'. However, we consider this should be changed slightly to '*renewable electricity generation, investigation, and distribution and transmission'* to give effect to national direction of the NPSREG and NPSET, and the RPS. We agree with Ms Styles that, given the definition of 'energy activities' includes non-renewable electricity generation, it would not be appropriate to recognise the operational need for energy activities broadly.

293. The Panel accepts the recommended changes to the subject of the objective because it is appropriate that the focus is on renewable electricity generation to give effect to national direction.

294. Having considered the differing views, the Panel considers the word '*manage'* is preferred to the word '*minimise'* because the word '*minimise'* requires assessment and definition as to what extent. The word '*manage'* we consider enables full consideration of means to avoid, remedy or mitigate effects as appropriate. The Panel also agrees that the policies provide further guidance and direction on how and what adverse effects should be avoided, remedied or mitigated.

ENG-03

295. The Panel agree with the Reporting Officers' Reply recommendation. We agree that retaining the words '*to provide*', as notified, signals a consenting pathway for new development. We agree that including the words '*to enable'* relates to existing development and signals a permitted activity pathway for those identified activities. We also agree that using the word 'incompatible' in relation to subdivision, use and development is appropriate because it enables an assessment of the reverse sensitivity effects on renewable electricity generation activities to determine if those effects are acceptable.

ENG-04

296. The Panel accepts the submission points of BEL (S451.024) and Frank and Jo Dooley (S478.081) and the Reporting Officers' recommendation to include *'incompatible'* in ENG-04, for the abovementioned reasons concerning ENG-03.

New Objective ENG-05

297. The Panel finds that providing a new objective relating specifically to non-renewable energy activities is unnecessary. We agree that, as notified, the pTTPP did not provide direction for non-renewable energy activities. We also acknowledge that the NPSREG supports and promotes renewable energy, but we do not read that support as resulting in the outright avoidance of non-renewable energy activities.

298. The Panel accepts Mr Kennedy's evidence and the Reporting Officers' recommendation to include a new objective supporting coordination and the efficient provision of electricity distribution and transmission. We agree this new objective is consistent with Objective INF-03 and Policy INF-P4. We acknowledge that subdivision, use, and development require energy provision and that coordinating energy supply with that development is essential to ensure efficiency. We note that an accompanying new policy ENG-PX3 to support this new objective is addressed below.

299. The Panel is satisfied the recommended wording for the new objective, as shown in Attachment 1 of the Reply Report, is appropriate to give effect to the NPSREG and the RPS. However, the Panel recommend adding '*electricity*' for clarity.

Hearing Panel's Recommendation

300. The Panel is satisfied that the recommended changes to the objectives give effect to the NPSET, NPSREG and the RPS. We have examined them in accordance with section 32AA and conclude, as amended, that they are the most appropriate to achieve the outcomes sought.

301. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommends the following changes to the **Energy objectives**:

Energy Objectives	
ENG – O1	To recognise the local, ~~and~~ regional **and national**[57] benefits of electricity transmission, distribution and renewable electricity generation activities, **by providing**[58] for their development, operation, maintenance and upgrading to meet the needs of Te Tai o Poutini/the West Coast.
ENG – O2	To recognise the functional **need or** operational needs associated with

[57] Westpower Limited S547.074
[58] Manawa Energy Limited S438.036

	the location and design of **renewable electricity generation, investigation, and distribution and transmission** ~~energy~~[59] activities, and to ~~minimise~~ **manage**[60] adverse effects of these activities on communities and the environment.
ENG – O3	To provide for **development and enable** the ~~development~~, operation, maintenance and upgrade of **renewable electricity generation and investigation, and electricity distribution and transmission** ~~energy~~ [61]activities and to protect them from the adverse effects of incompatible subdivision**, use**[62] and development.
ENG – O4	To recognise and provide for the national, regional and local significance and benefits of the National Grid, by ensuring the safety, efficiency, operation, maintenance, repair, upgrade and development is not adversely affected by **incompatible**[63] subdivision, use and development.
ENG-O5	**To ensure the efficient provision and use of electricity distribution and transmission activities by co-ordinating with subdivision, use and development.** [64]

4.5. Energy Policies

Submissions and Further Submissions

ENG-P1

302. The s42A Report, at paragraphs 188 to 192, identifies seven submission and five further submission points[65] and summarised the relief sought in relation to Policy ENG-P1. Te Mana Ora (S190.042) and Transpower (S299.033) sought to retain the policy as notified. BEL (S451.025), supported by NZEL (FS127.013), and Frank and Jo Dooley (S478.082) sought to include '*Provide for and enable*' to give effect to the NPSET.

303. Westpower (S547.084), supported by NZEL (FS127.060), requested amendments to include all Energy Activities, including related Infrastructure and Critical Infrastructure aspects.

304. Manawa (S438.00144) sought to replace '*Provide for*' with '*Enable*'; add '*electricity*' and delete '*and assets'*; and add '*while recognising the positive, social, economic, cultural and environmental benefits of renewable electricity generation and transmission*'. This was opposed by Poutini Ngāi Tahu (FS34.054) and Forest & Bird (FS34.054).

[59] Manawa Energy Limited S438.037
[60] Manawa Energy Limited S438.037, Royal Forest and Bird Protection Society S560.446
[61] Manawa Energy Limited S438.038
[62] Manawa Energy Limited S438.038
[63] Buller Electricity Limited S451.024, Frank and Jo Dooley S478.081
[64] Westpower Limited S547.073
[65] S438.045, S451.034, S478.091, S538.018, S547.080, S547.081, S547.082, S547.083, S547.439, S558.439, S560.440, S566.439, S567.049, FS58.021, FS127.056, FS127.057, FS127.058, FS127.059

305. Forest & Bird (S560.112) requested adding '*while addressing adverse effects in accordance with the Natural Environment and District Wide chapters of this Plan'*. This was opposed by Transpower (FS110.017) and Westpower (FS222.0234).

ENG-P2

306. The s42A Report, at paragraphs 193 to 200, identifies 19 submission and further submission points relating to Policy ENG-P2 and summarised relief sought. Transpower (S299.034) and Toke Tū Ake/EQC (S612.009) sought to retain the Policy as notified. Te Mana Ora (190.043) sought to provide a weighting to the benefits where there is conflict. Manawa (S438.039), supported by NZEL (FS127.042), sought to replace '*energy*' with '*renewable energy generation, electricity transmission and distribution*'; and to add '*renewable*' in clause (a).

307. Suzanne Hills (S443.015) sought to amend the policy to reflect the cumulative effect of multiple hydro schemes on waterways. NZEL (FS127.047) opposed this because developments should be assessed on a case-by-case basis. Inger Perkins (S462.028) sought to amend the policy to support micro-renewables and distributed energy generation.

308. BEL (S451.026) and Frank and Jo Dooley (S478.) sought to add '*infrastructure and assets provide for*'; and '*or*' after each clause. This was supported by NZEL (FS127.014) and opposed by Poutini Ngāi Tahu (SFS41.106).

309. Westpower (S547.085) sought to amend the wording and to split clause (a) into two, as follows:

When managing the development and operation of new and existing energy activities have particular regard to the benefits to be obtained from the proposal including:

(a) Maintaining and/or increasing security of renewable electricity supply;

(aa) Providing for a diversity of the type and location of renewable electricity generation;

310. Westpower (S547.085) also sought to add '*including to consumer*' to clause (e).

311. Forest & Bird sought to delete '*particular*' (S560.448); include '*maintain, upgrade'* (S560.449)*;* add a new clause '*opportunities to reduce environmental impacts'* (S560.450)*;* and add '*development*' to clause (a) (S560.451). Transpower (FS11018) opposed the last submission point.

ENG-P3

312. The s42A Report identified eight submissions and nine further submission points and summarised the relief sought in relation to Policy **ENG-P3** in paragraphs 201-206. One submission sought to retain ENG-P3 as notified. Manawa (S438.040), supported by NZEL (FS127.030) and Kainga Ora (FS58.022), sought to replace '*Minimise*' with '*Avoid*'; add *'incompatible';* replace '*energy*' with '*renewable energy generation, electricity transmission and distribution*'; and delete '*and protect energy activities from adverse effects to ensure their ongoing operation, maintenance, upgrade or development*'.

313. BEL (S451.027), opposed by Kāinga Ora (FS58.023), and Frank and Jo Dooley (S478.084) sought to reword the policy as follows:

> *Avoid reverse sensitivity effects from subdivision, use and development on electricity distribution and transmission assets, existing renewable electricity generation activities and associated infrastructure, and protect such infrastructure from adverse effects of activities on the operation, maintenance, upgrading or development of that infrastructure.*

314. Westpower (S547.088), supported by NZEL (FS127.061) and opposed and supported in part by Kāinga Ora (FS58.026 and FS58.077), sought to amend the ENG-P3 as follows:

> *Protect energy activities, including energy aspects of infrastructure and critical infrastructure, from the reverse sensitivity effects arising from incompatible new subdivision, use and development, and the adverse effects of other activities, which would compromise the effective operation, maintenance, upgrading or development of energy activities and associated infrastructure.*

315. Federated Farmers (S524.035) supported by Kāinga Ora (FS58.025), and Hort NZ (S486.017) supported by Kāinga Ora (FS58.024) and Forest and Bird (FS34.061), sought to delete '*protect energy activities from adverse effects to*' and to add '*is not compromised'* at the end of ENG-P3.

316. Transpower (S299.035) sought a definition for '*minimise*' in the context ENG-P3.

ENG-P4

317. The s42A Report identifies and summarises 11 submission and 11 further submission points relating to Policy ENG-P4 in paragraphs 207-212. Three submissions supported Policy ENG-P4 as notified because they considered it would minimise any actual or potential adverse effects between sensitive adjacent land uses.

318. Forest & Bird (S560.114), supported by Kāinga Ora (FS58.32 and FS58.083), sought ENG-P4 be deleted because adverse effects are insufficiently dealt with, and effects must be managed in accordance with the RPS.

319. BEL (S451.028), opposed by Kāinga Ora (FS58.029), and Frank and Jo Dooley (S478.085), sought to amend '*Minimise*' with '*Manage*' in ENG-P4.

320. Westpower (S547.089) sought to amend ENG-P4, as follows.

> *~~Minimise~~Manage adverse effects on the environment from energy activities by:*
>
> *(a) Having regard to the values associated with areas identified as having significant environmental values, ~~urban amenity, areas of high recreation value~~ outstanding and high natural character areas outstanding landscapes and features, Poutini Ngai Tahu and heritage sites, and significant natural areas;*
>
> *(b) [ ]*

> *(c) Maintaining ongoing access to grid and distribution ~~elements and structures~~ infrastructure and assets for operation, maintenance and upgrading works;*

321. Manawa (S438.042), supported by NZEL (FS127.031) and opposed by Kāinga Ora (FS58.028), sought to replace '*Minimise*' with '*Avoid, remedy or mitigate'*; and to replace '*energy*' with '*renewable energy generation, electricity transmission and distribution*'.

322. Poutini Ngāi Tahu (S620.084) sought to include the words '*sites and areas of cultural landscapes'* in the policy.

323. Transpower (S299.036) sought a definition for '*minimise*' in the context of ENG-P4.

ENG-P5

324. Eleven submission points and six further submission points[66] were identified in the s42A Report relating to Policy ENG-P5 and the relief sought was summarised in paragraphs 213-218. One submission (S190.046) supported the policy as notified.

325. Forest & Bird (S560.454), opposed by Westpower (FS222.0236), sought to amend the policy to remove conflicts and improve integration with overlay provisions for s6 matters; and to amend clause (a) (S560.453), opposed by Westpower (FS222.0235), as follows:

> *~~Recognise their functional constrains and operational requirements~~ Recognise that natural character, outstanding and significant natural values are to be protected and that adverse effects on the environment are to be avoided, remedies or mitigated in accordance with the Natural Environment and District Wide chapters of this Plan*.

326. Forest & Bird (S560.115) also sought to limit the definition of energy activities in the context of ENG-P5.

327. Transpower (S299.036) sought to replace '*transmission infrastructure'* with '*significant electricity distribution lines'* in ENG-P5.

328. Manawa (S438.043) sought to replace '*energy*' with '*renewable energy generation';* and '*constraints*' and '*requirements*' with '*needs*', which was supported by NZEL (FS127.043)

329. Westpower (S547.092 and S547.093) sought to amend ENG-P5, as follows:

> *When managing the development, operation, maintenance and upgrading of new and existing energy activities:*
>
> *a. Have particular regard to function, location, technical and operation constraints and requirements of the related activities and infrastructure;*

[66] S190.046, S299.037, S438.043, S451.029, S478.086, S547.092, S547.093, S560.115, S560.453, S560.454, S560.455, FS127.043, FS127.065, FS222.0235, FS222.0236, FS222.0237, FS222.0237

330. BEL (S451.029) and Frank and Jo Dooley (S478.087) sought to replace '*energy*' with '*renewable energy'*; '*Recognise*' with '*Have regard to the constraints imposed by*'; and '*minimised*' with '*managed*'.

ENG-P6

331. Eight submission points and three further submission points[67] were identified in relation to Policy ENG-P6, and the relief sought was summarised in the s42A Report in paragraphs 219-221. Six submissions and one further submission point supported the Policy as notified.

332. Manawa (S438.044) sought to delete '*small, community and large scale'*, which was supported by NZEL (FS127.032).

333. Forest & Bird (S560.443), opposed by Transpower (FS110.009), sought to amend the policy by adding '*where the adverse effects are avoided, remedied, or mitigated in accordance with the Natural Environment and District Wide chapters of this Plan'* to the end of clause (b).

ENG-P7

334. The s42A Report identified six submission points and one further submission point[68] The s42A Report, paragraphs 222-224, summarises the submissions received on Policy ENG-P7. Three submission points supported the Policy as notified.

335. Transpower (S299.039), opposed by Forest & Bird (FS34.028), sought to add '*for new National Grid infrastructure or major upgrades to existing National Grid infrastructure*' to clause (c)(ii).

336. Forest & Bird (S560.117) sought ENG-P7 be deleted or amended (S560.452) to include *'avoid, remedy and mitigate in accordance with the Natural Environment and District Wide chapters of this Plan'*

ENG-P8

337. The s42A Report identified 12 submission points and seven further submission points[69] received on Policy ENG-P8 and summarised the relief sought in paragraphs 225-228. Three submission points supported the Policy as notified.

338. Transpower (S299.035), opposed by Forest & Bird (FS34.029 and FS34.030) and Poutini Ngāi Tahu (FS41.040), sought ENG-P8 be amended as follows:

> *(b) Seeking to avoid adverse effects on areas identified in Schedules <u>1-8</u>;*
>
> *(c) Where the National Grid has a functional or operational need to locate within the Coastal Environment, manage adverse effects by:*

[67] S190.047, S299.038, S438.044, S451.030, S478.087, S547.094, S560.166, S560.443, FS110.009, FS127.032, FS127.066
[68] S190.048, S299.039, S451.031, S478.088, S560.117, S560.452, FS34.028
[69] S190.049, S299.040, S451.032, S478.089, S560.118, S560.456, S560.457, S560.458, S560.459, S560.460, S620.085, FS34.029, FS34.030, S602.034, FS110.019, FS122.013, FS41.40, FS149.097, FS230.069

(a) Seeking to avoid adverse effects on Overlay Chapter areas identified in Schedules 1-8 and where it is not practicable to avoid, to remedy or mitigate;

(b) Where it is not practicable to avoid adverse effects on the values of the areas identified in Schedules 1-8 because of the functional needs or operational needs of the National Grid, remedy or mitigate adverse effects on those values.

(c) Seeking to avoid significant adverse effects on: other areas of natural character natural attributes and character of other natural features and natural landscapes indigenous biodiversity values that meet the criteria in Policy 11(b) of the NZCPS 2010; and

(d) Recognise that there may be some areas within the sites and areas identified in Schedules 1-8 where avoidance of adverse effects is required to protect the identified values and characteristics; and

(e) Remedy or mitigate any adverse effects from the operation, maintenance, upgrade, major upgrade or development of the National Grid which cannot be avoided, to the extent practicable. In the event of any conflict with any other objectives and policies within the Plan, Policy ENG-P8 takes precedence.

339. Forest & Bird (S560.456), supported by Susan Hall (FS35.7), sought amendments to make it clear that it is not only scheduled areas that are considered, as the majority of SNAs are not identified on a schedule. They also sought to replace '*Seeking to avoid*' with '*Avoid*' (S560.457), supported by DOC (FS122.013); and to amend clause (d) to give effect to NZCPS Policy 11 and NPSET (S560.458), as follows:

> *Recognise that there may be some attributes, character and biodiversity values ~~areas within the sites and areas identified in Schedules~~ where avoidance of adverse effects is required to protect the ~~identified~~ attributes, ~~values and~~ characteristics or values.*

340. Forest & Bird (S560.459) sought clarification regarding the terms 'substantial', 'major upgrade', 'substantial upgrade', 'minor upgrade' and 'upgrade' in the context of ENG-P8. They also sought amendments to capture requirements for route, site and method selection process to consider alternatives to locating in important natural areas (S560.460).

341. DOC (S602.034), supported by BDC (FS149.097) and opposed by Transpower (FS110.019), sought to delete clause (d) and amend clause (b) as follows:

> *(b) Seeking to avoid adverse effects on areas and values identified in Schedules SNAs, and Overlay Areas and applying the effects management hierarchy where adverse effects cannot be avoided*

ENG-P9

342. The s42A Report identified six submission points and three further submission points[70] received on Policy ENG-P9 and summarised the relief sought in paragraphs 229-231. Three submission points and one further submission point supported the Policy as notified.

343. Hort NZ (S486.018) opposed by Transpower (FS110.020), and Federated Farmers (S524.036) opposed by Transpower (FS110.021), sought to add '*Avoid to the extent reasonably practicable*' to clause (e) to be consistent with Policy 10 of the NPSET.

344. Transpower (S299.041) sought to amend ENG-P9 as follows:

> *(b) Avoid ~~incompatible~~ land use, buildings and structures that may directly affect or otherwise compromise the National Grid or result in reverse sensitivity effects on the National Grid;*
>
> *(c) Manage subdivision within the National Grid Subdivision Corridor to avoid subsequent land use activities from compromising the operation, maintenance, upgrading and development of the National Grid;*
>
> *[ ]*
>
> *(d) Maintain ongoing access for maintenance and upgrading works on the National Grid; and Avoid potential for reverse sensitivity effects on the National Grid.*

New Policies

345. The s42A Report identified five submission points and two further seeking to include new policy direction.

346. Manawa Energy (S438.033), sought a new policy that addresses and discourages establishing non-renewable energy activities. It considered the current wording encompassed non-renewable energy activities within the definition of '*energy activity*,' which does not align with international and national directives to discourage non renewables. It suggested the following wording:

> *Avoid developing non-renewable electricity generation activities on the West Coast and facilitate the replacement of non-renewable energy sources, including fossil fuels.*

347. Westpower (FS222.0181) supported this submission in part, to enable renewable electricity generation but considered the scope of the amendment was fundamental to the purpose of the pTTPP. NZEL (FS127.026) opposed this submission because it considered non-renewable energy sources will always be needed.

348. BEL (S451.034), supported by NZEL (FS127.012), sought an additional policy to be included as follows:

> *Avoid, radio, electric and magnetic fields that do not meet the applicable New Zealand or international standards or guidelines, or National Environmental Standards.*

[70] S190.050, S299.040, S451.033, S478.090, S486.018, S524.036, FS55.17, FS110.020, FS110.021

349. Westpower (S547.081, S547.082 and S547.083), supported NZEL (FS127.057, FS127.058, and FS127.059) and opposed by Kāinga Ora (FS58.021 in relation to S547.081), sought three new additional policies to be included as follows:

> *Manage activities in and around Significant Electricity Distribution Lines to:*
>
> *(a) Ensure the safe and efficient operation, maintenance, repair, upgrading and development of the lines are not compromised by subdivision, use and/or development;*
>
> *(b) Avoid incompatible land use;*
>
> *(c) Achieve compliance with the NZECP34:2001 and avoid health and safety risks from distribution lines; and*
>
> *(d) Avoid potential reverse sensitivity effects on distribution lines.*
>
> *Ensure that subdivision and development is adequately serviced including:*
>
> *(a) Supply of electricity using a method that is appropriate to the type of subdivision and/or development, including consideration of alternative methods on a case-by-case basis, and*
>
> *(b) Where new energy infrastructure is developed and/or installed, adequate provision is made for ongoing access, operation, and maintenance, including granting and reserving easements.*
>
> *Provide flexibility for energy activities, including energy aspects of infrastructure and critical infrastructure, to adopt new technologies that:*
>
> *(a) Improve access to, and efficient use of, networks and services;*
>
> *(b) Allow for the re-use of redundant services and structures where they are safe and operating to required standards;*
>
> *(c) Increase resilience, safety or reliability of networks and services;*
>
> *(d) Result in environmental benefits and/or enhancements; or*
>
> *(e) Promote environmentally sustainable outcomes including green infrastructure and the increased utilisation of renewable resources.*

350. Westpower sought to include these new policies to ensure the provision of significant electricity distribution lines, including relevant policies, and to adopt new technologies.

Section 42A Reports

ENG-P1

351. The s42A Report considered that '*provide for'* is a comparable policy directive to '*enable'* and directs the same outcome; and concluded it was unnecessary to provide further wording. It noted that the words '*provide for'* are consistent with ENG-01. However, after considering

evidence and statements from submitters at the hearing, the Addendum s42A Report changed this view and recommended including '*and enable'*.

352. The s42A Report considered it unnecessary to differentiate the specific energy activities within the Policy because the definition of 'Energy Activity' encompassed all relevant energy activities, and differentiation could create ambiguity.

353. The Reporting Officers rejected submission points seeking to address adverse effects in accordance with the natural environment and district-wide Chapters of the plan because, in their view, specifying chapters of the Plan limits and restricts any assessment, when the evaluation should be undertaken plan-wide.

354. The s42A Report did not support submission points to recognise the positive social, economic, cultural, and environmental benefits of renewable electricity generation and transmission. To do so, it considered, would be inconsistent with section 7 of the RMA, which requires particular regard to the benefits of using and developing renewable energy.

355. The s42A Report recommended retaining ENG-P1 as notified, except for including the words '*and enable'*.

ENG-P2

356. The s42A Report did not support submission points other than those by Westpower, amending ENG-P2 to remove references to the proposal and splitting clause (a) to provide clarity for plan users. It agreed that the Policy intends to manage adverse effects and recommended amendments to the wording to support that intent.

357. In the Addendum Report, in response to Manawa's evidence, the Reporting Officers accepted the Plan provisions needed to address non-renewable energy activities, including a policy and a rule directing avoidance of non-renewable energy activities.

ENG-P3

358. The s42A Report supported deleting the word '*minimise'* and replacing it with '*manage*' because it was more consistent with Policy 10 of the NPSET. It did not support the inclusion of the word '*incompatible*' before the word subdivision because doing so would limit the scope of the policy solely to incompatible subdivision use and development, where any subdivision use in development should be assessed.

359. The s42a Report accepted the request to delete the last portion of the sentence (following the word activities) because this was more consistent with Policy 10 of the NPSET. It recommended rejecting other submission points seeking amendments because these were inconsistent with Policy 10 of the NPSET. It considered there was no need to define '*minimise'* given the recommendation to replace it with '*manage*'.

ENG-P4

360. The s42A Report recommended rejecting the submission seeking to have this policy deleted because it considered that reliance on other district-wide chapters was insufficient. It also

considered this Policy was necessary to give effect to Policy 1 of the NPSET and Chapter 6 Policy 5 of the RPS.

361. The s42A Report supported the removal of the word '*minimise*' because it was inconsistent with the objectives of the NPSET and the RPS. It preferred '*manage'* because it aligned with the policy wording of the NPSET, including its objective, which seeks to manage adverse environmental effects. However, the s42a Addendum Report amended that recommendation to replace '*minimise*' with '*avoid remedy or mitigate'*, as sought by Manawa, to be consistent with the NPSREG.

362. The s42a Report did not consider it necessary to specify renewable electricity generation, transmission, and distribution within the Policy, as it considered this wording captured in the definition of 'Energy Activity' as defined in Part 1 of the pTTPP.

363. The s42A Report did not support removing the word 'communities' because energy activities can potentially adversely impact urban communities, and this should be considered. It noted that clauses (a) – (d) should be read as a whole and provide direction on how the effects of energy activities should be addressed. However, in the Addendum Report, the Reporting Officers accepted the evidence provided that deleting the '*communities'* was appropriate because the definition of environment in the RMA includes people and communities.

364. The s42A Report accepted in part the amendments sought by Westpower to clause (c) by recommending deleting '*elements*' and adding '*infrastructure and structures for operation'*.

365. The s42A Report did not support the inconclusion of '*sites and areas and cultural landscapes'* because it considered the submitter's justification for seeking this amendment insufficient, and no evidence had been provided in the submission to support the relief.

ENG-P5

366. The s42A Report did not support the submission from Forest & Bird, which sought the inclusion of the protection of natural character and outstanding and significant natural values and referencing the natural environment and District-Wide chapters of the plan.

367. The s42A Report agreed that the words 'transmission infrastructure' should be replaced with 'significant electricity distribution lines' because this was consistent with Policy 5 of the NPSET, as sought by Transpower. It also agreed that clause (a) required rewording to give effect to Chapter 6, Policy 3 of the RPS and provide consistency of wording and interpretation. However, the s42A Report did not accept all the amendments proposed by Westpower regarding '*function, location, technical, and operational constraints'*.

368. The s42A Report considered that use of the word '*manage*' was appropriate because it aligned with the policy of the NPSET, including its objective, which seeks to manage adverse environmental effects. It did not consider whether it is necessary, as Manawa sought, to reference renewable electricity rather than energy generally, because renewable electricity generation was captured in the definition of '*Energy Activity'* as defined in Part 1 of the pTTPP.

ENG-P6

369. The s42A Report recommended deleting the words '*small community and large scale'* because, as Manawa pointed out, no distinction is made between the varying scales.

ENG-P7

370. The s42A Report noted support for the Policy as notified, and recommended it was retained as notified. It did not support the amendments sought by Transpower and Forest & Bird.

371. The Addendum Report focused on the words '*minor upgrading'.* Still, it remained for the view the definition of '*upgrading*' was sufficiently broad enough to provide for all the matters listed by the submitters in support of defining '*minor upgrading'*. However, as a solution, it recommended deleting '*minor*' from clause (a) and making a consequential amendment to clause (b) by deleting '*other upgrades and'.*

ENG-P8

372. The s42A Report noted ENG-P8 deals with developing the National Grid in sensitive areas where upgrading could adversely affect both the areas and values of those areas. It recommended acceptance of the amendment to refer to Schedules 1- 8 rather than referring to the overlay chapters because that provided further clarity.

373. Initially, the s42A Report did not accept the extent of change sought by Transpower. However, after considering Ms Whitney's evidence, the Reporting Officers accepted that the relief sought would afford consistency of language in policy direction while giving effect to NPSET and NZCPS.

374. The Addendum Report recommended deleting references to *minor upgrading* to avoid confusing terms and clarify the rules.

ENG -P9

375. The s42A Report noted ENG-P9 addresses reverse sensitivity effects on the National Grid, manages subdivision within the National Grid subdivision corridor, and maintains access to the National Grid for maintenance and upgrading works. The recommendations in the s42A Report were amended in the Addendum, accepting submission points from Transpower and the evidence of Ms Whitney. It recommended deleting '*incompatible'* in clause (b) and amending the wording to clarify the avoidance of land-use, buildings and structures that may directly affect or otherwise compromise the National Grid is required. Similarly, managing subdivisions within the National Grid subdivision corridor was recommended for an amendment. It noted the relief sought was accepted because it would afford consistency of language and policy direction and give effect to NPSET Policy 10.

New Policies

376. The s42A Report recommendation rejected Manawa's request for a new policy to avoid developing non-renewable electricity generation activities and facilitate the replacement of non-renewable energy sources, including using fossil fuels in electricity generation. However, in the Addendum Report, following consideration of pre-hearing discussions and the pre-circulated evidence, the Reporting Officers accepted that the policy direction promoted by Manawa was necessary to give direction to consent assessments under section 104 of the

RMA. The Reporting Officers did not support an avoid policy for non-renewable energy sources without clear directions under section 6 of the RMA, and they noted the silence in direction in the NPSREG and RPS.

377. The s42A Report recommended rejecting BEL's request for a new policy focused on radio-electric magnetic fields that do not meet applicable New Zealand or international standards or guidelines, and the submitter had not provided sufficient rationale, and ENG-P4 appropriately managed those effects.

378. The s42A supported Westpower's request for a new policy to provide for significant electricity distribution lines, protection from incompatible land uses, and potential reverse sensitivity effects, given that this was not explicitly provided for. However, the other new policies requested were rejected primarily because the matters they addressed were already the focus of other existing policies.

Hearing and Submitter Evidence, including JWS

ENG-P1

379. Ms Styles highlighted that renewable energy is a matter of national significance; and that the pTTPP is required to have particular regard to the benefits to be derived from the use and development of renewable energy under s7(j) RMA and to give effect to the policy directions in the NPSREG, including to recognise and provide for renewable electricity generation activities. She considered that the notified version recommended to be amended by the Reporting Officers did not adequately give effect to the NPSREG or sufficiently provide for renewable electricity generation activity. She was critical of ENG-P1 because it mixed support for different energy activities with management of effects, and does not include a reference to renewable electricity generation activities. She also sought to replace the words '*provided for*' with the word '*enable'*.

380. Mr Kennedy challenged the s42A Report recommendation that it was not necessary to differentiate specific energy activities within ENG-P1 and other policies by including the words '*energy-related aspects of infrastructure' and 'critical infrastructure'* because the pTTPP definition of '*Energy Activity'* was sufficient. He stressed the submission points sought to ensure consistency of terms and provisions for the pTTPP.

381. Mr Lile sought to include '*and enable'* within ENG-P1. He considered the word enable to be more consistent with the NPSET and more readily linked to a permitted activity status than '*provide for'*.

ENG-P2

382. Ms Styles considered ENG-P2 was intended to give effect to the NPSREG to enable the development of new REG and the continuation of existing REG. This is clear, she said, from the specific use of REG wording in the sub-clauses and the inclusion of a reference to climate change obligations. By referring to '*energy activities'*, she considered that the Policy implies that it applies to non-renewable electricity generation. It was therefore contrary to meeting climate change obligations and irrelevant to other clauses. She considered that it resulted in an internal inconsistency within the Policy and was unsupported by any national direction.

383. Mr Kennedy sought the inclusion of a new clause (f) referencing consumer supply. He considered that the benefits of an effective electricity supply to the consumer is relevant, and it is appropriate to include them in a new clause. He also sought to amend the opening preamble of ENG-P2 by including the words '*managing the development and operation of';* and to amend clause (a) by splitting it into two parts.

384. Ms Inta did not support the s42A Report's recommended amendments and suggested some grammatical changes.

385. Ms Snoynik, for Forest & Bird, addressed the Addendum Report and sought deletion of '*particular'* because it was inappropriate to give higher consideration to energy activities than RMA s6 matters or where this regard would conflict with an RMA s7 matter. She noted that considering s7 benefits is restricted to benefits derived from using and developing renewable energy, not energy activity, as defined in the pTTPP. She submitted that both ENG-P2 and P3 have broader applications than just renewable energy and therefore require direction that adverse effects must be avoided, remedied or mitigated. On this basis, she considered the recommendations within both the s42A Report and Addendum Report were inappropriate.

ENG-P3

386. Ms Styles sought to delete '*minimise'* and replace it with '*avoid';* include '*incompatible'* before subdivision; delete '*energy*' and replace it with '*renewable electricity generation'*. She noted that Policy 3 relates to reverse sensitivity but that the Reporting Officers' assessment relied on the wording of the NPSET, which is not directly relevant to this Policy because Policy 4 deals with the National Grid and includes a reference to reverse sensitivity issues. She was firm in her view that avoiding reverse sensitivity is the appropriate direction for this Policy to give effect to Policy 3 of the NPSREG, which uses the word '*avoid*'. She considered the Policy needed to be clear and directive, and if the outcome sought is avoidance of reverse sensitivity, then the Policy needs to state this. She considered using another term, such as 'minimise' or 'manage', would underplay the importance of the requirement to avoid and does not provide sufficient direction.

387. Ms Styles clarified that she sought to include the term '*incompatible'* because this provided additional guidance on understanding the risk of reverse sensitivity effects. She considered its inclusion was intentional as it seeks to provide direction and ensure the policy does not apply to all activities seeking to be located close to REG, transmission, and distribution activities, thus recognising that some activities can appropriately be located near such activities. She considered including this word at a policy-level test for determining what subdivision, use, and development would lead to reverse sensitivity problems and what would not, was appropriate.

388. Ms Inta considered there was no need to include both adverse effects and reverse sensitivity in the Policy because reverse sensitivity means an adverse effect. She favoured the notified version of this Policy.

389. Mr Kennedy continued to seek the amendments sought by Westpower outlined in the s42A Report to ensure ENG-P3 gave effect to the RPS.

390. Mr Lile considered ENG-P3 was inconsistent with Policy 10 of the NPSET and sought to include the words '*activities to avoid'.*

391. Ms Whitney supported the s42A Report recommendations to amend to ENG-P3.

392. According to the JWS records, the planning experts agreed that ENG-P3 did not require the word '*adverse*' before the words reverse sensitivity.

ENG-P4

393. Ms Inta sought the deletion of '*minimise'* to be replaced with '*manage';* and the words '*urban amenity'* and *'recreational area'* recommended to be deleted by the s42A Report, be reinstated.

394. Mr Kennedy also sought deletion of '*minimise'* and its replacement with '*manage';* deletion of '*communities*'; and amendments to clauses (a) and (c).

395. Mr Lile noted that the s42A Report accepted BEL's request on ENG-P4.

396. Ms Snoyink highlighted that the Reporting Officers did not support deletions sought by Forest & Bird and considered that relying on the overview wording as an alternative, as suggested by Officers, was inappropriate, given it did not have the force of policy wording. In referencing the Addendum, she considered adding '*avoid, remedy or mitigate'* adverse effects, but thought that problematic because the assessment required consideration of the matters listed in the policy, and further limiting the policy to renewable electricity generation did not make that approach appropriate. She also noted that the matters listed were not the same requirements as those in the ECO Chapter or Chapter 7 of the RPS.

397. Ms Pull identified ENG-P4 clause (a) had incomplete wording and recommended adding '*sites of significance to Māori*' to assist implementation.

ENG-P5

398. Ms Styles sought deletion of '*energy'* and inclusion of '*renewable electricity generation, energy investigation, distribution, and transmission'* in ENG-P5 to ensure that the pTTPP gave effect to higher order documents which recognised and provided for renewable energy, as distinct from non-renewable energy.

399. Mr Kennedy sought several wording changes he considered consistent with other plan provisions and the wording in the RPS. He also considered that, given that significant distribution lines were already mapped within the pTTPP, ENG-P5 should not apply to these.

400. Mr Lile accepted the s42A Report's recommended changes.

401. Ms Whitney accepted the s42A Report's recommended amendments, as shown in Appendix 1.

402. Forest & Bird noted the same issues with ENG-P5 as outlined for ENG-P4.

403. The JWS records disagreement on wording for ENG-P5 but notes the matter was to be further addressed at the reconvened hearing.

ENG-P6

404. Ms Styles and Mr Kennedy noted the amendments sought in relation to ENG-P6 were supported in the s42A Report.

ENG-P7

405. Mr Lile supported ENG-P7 as notified.

406. Ms Whitney opposed the s42A recommendation of no amendments. She sought additional wording to be included in clause (c)(ii) to clarify the Policy applied to the National Grid and to reflect the policy directive within NPSET Policy 4.

ENG-P8

407. Ms Whitney partly supported the s42A recommendation to amend ENG-P8 and the recommendation not to accept Director General's submission. However, she continued to seek additional wording in clause (c)(ii) to clarify that this only applies to proposals for new National Grid infrastructure and major upgrades to the existing National Grid infrastructure. She considered this reflected Policy 4 of the NPSET.

ENG-P9

408. Ms Whitney supported the s42A recommendations to amend clause (f) but maintained Transpower's submission that further amendments were needed to ensure the effects of other activities on the National Grid were addressed and that ENG-P9 gave effect to NPSET Policies 2, 10, and 11.

New Policies

409. Ms Styles sought a new policy to avoid developing non-renewable electricity generation activities and a new associated rule that made such activities non-complying.

410. Mr Kennedy continued to request the three new policies sought in Westpower's submission, in particular he maintained that proposed policy on Significant Electricity Distribution Lines should include either the term '*avoid*' or '*protect*' in subclauses b and d in order to achieve the outcomes sought by the RPS.

411. The JWS records disagreement between the expert planners in relation to the new policies.

Reporting Officers' Reply Evidence

ENG-P1

412. The Reply noted '*provide for'* indicates that there is provision within the pTTPP via a consenting pathway for developing new renewable electricity generation, energy investigation, distribution and transmission activities and the '*enable'* indicates provision via

a permitted activity rule, which is more appropriately applied to the operation, maintenance, and upgrading of new renewable electricity generation, energy investigation, distribution, and transmission activities. Since ENG-P1 applies to both new and existing, the Reporting Officers recommended amending the provision as follows:

> *ENG-P1 Provide for and enable the development, operation, maintenance, and upgrading of existing and new electricity transmission, distribution, and renewable generation infrastructure and assets.*

ENG-P2

413. The Reply noted the Panel's query regarding the use of '*manage'* or '*avoid, remedy, or mitigate'* and which would be more appropriate and provide more flexibility. The Reporting Officers consider policies to be the course of action to achieve an objective, and they can be flexible or inflexible, broad or narrow. They noted that including '*avoid'*, '*remedy'*, or '*mitigate*' in policies provided for a wide range of options to achieve the objectives. They cautioned that the scope and intent of the policies should be carefully considered when determining appropriate policy language.

414. The Reply recommendation for ENG-P2 was to delete '*considering' and replace* it with '*manage',* reflecting the breadth of this policy. It considered that '*manage'* provided a better link with the related objective ENG-02, which partly concerned managing the adverse effects of energy activities. The Reply also supported Mr Kennedy's evidence to divide clause (a) into two parts, creating a new clause (b). Attachment 1 showed the following recommended amendments:

> *ENG-P2 ~~When considering proposals to develop and operate new and existing~~ When managing adverse effects from the ~~or~~ development of new energy activities or the operation, maintenance or upgrading of existing energy activities, have particular regard to the benefits ~~to be obtained from the proposal~~, including;*
>
> *(a) Maintaining or increasing security of renewable electricity supply ~~by diversifying the type and/or location of electricity generation~~;*
>
> *(b) Providing for diversity of the type and location of electricity generation;*
>
> *(c) Maintaining or increasing renewable electricity generation capacity while avoiding, reducing or displacing greenhouse gas emissions;*
>
> *(d) Economic, social, environmental or cultural wellbeing;*
>
> *(e) The contribution the proposal will have towards New Zealand meeting its renewable electricity generation targets;*
>
> *(f) Effective transmission and distribution of electricity supply;*
>
> *(g) Facilitation and use of renewable energy;*
>
> *(h) Security of electricity supply; and*
>
> *(i) Meeting New Zealand/Aotearoa me Te Waipounamu's climate change obligations.*

ENG-P3

415. In Reply, the Reporting Officers considered that changing the policy to strictly *'avoid reverse sensitivity effects'* would be inconsistent with Policy 10 of the NPSET, which seeks *'to the extent reasonably possible, manage activities to avoid reverse sensitivity effects'*. They considered *'manage'* was consistent with higher-order policy documents (e.g. Policy D, NPSREG).

416. The Reply, Attachment 1, recommended the following amendments:

> *ENG-P3 ~~Minimise reverse sensitivity effects from~~ Manage activities to avoid ~~adverse~~ reverse sensitivity effects from subdivision, use and development on renewable electricity generation ~~energy~~ activities ~~and protect energy activities from adverse effects to ensure their ongoing operation, maintenance, upgrade or development~~.*

ENG-P4

417. The Reply noted that Poutini Ngāi Tahu sought amendments to ENG-P4 to include references to '*Poutini Ngāi Tahu values, sites, areas and cultural landscapes'*. It noted that based on EWC and further discussions with Ms Pull, agreement had been reached on an alternative solution of adding '*Sites and Areas of Significance Māori*', which would ensure consistency with the matters (essentially RMA s6 matters) listed in Policy 4.

418. In response to the Panel's questions about why ENG-P4(a) did not refer to Schedules 1 – 8 and whether *'urban amenity'* could be a stand-alone clause, the Reporting Officers noted that submitters had not requested this specific relief. However, they considered that such a refinement was supportable because it did not change the scope of the policy and refined the language to ensure consistency across the pTTPP.

419. The Reply noted that clauses (a) to (d) of ENG-P4, incorporate a wide range of actions, ranging in significance from RMA s6 matters to implementing industry best practices. The Reporting Officers did not support the replacement of '*minimise'* with '*manage'* as '*avoid, remedy, mitigate'* affords the ability to apply a course of action appropriate to the matter being considered. Furthermore, the Reporting Officers noted that '*avoid, remedy, mitigate'* was consistent with NPSREG.

420. The Reply, Attachment 1, recommended the following wording for ENG-P4:

> *ENG-P4 Minimise, Avoid, remedy, mitigate adverse effects on ~~communities and~~ the environment from renewable electricity generation, energy investigation, distribution, and transmission ~~energy~~ activities by:*
>
> *(a) Having regard to the effect on urban amenity;*
>
> *~~(b)~~ Having regard to the effect on areas and values associated with identified in Schedules 1 – 8; ~~areas identified as having significant environmental values, urban amenity, areas of high recreational value, outstanding and high natural character areas, outstanding landscapes and features, Poutini Ngāi Tahu and heritage sites, and SNA;~~*
>
> *(c) Implementing industry best management practices around electrical safe distances;*

(d) Maintaining ongoing access to grid and distribution ~~elements~~ infrastructure and structures for operation, maintenance and upgrading works; and

(e) Avoiding exposure to health and safety risks.

ENG-P5

421. The Reply noted that ENG-P5 incorporates a wide range of courses of action, which range in significance scale. The Reporting Officers did not support the replacement of '*minimise'* with '*manage*' but considered that '*avoid, remedy, mitigate*' affords the ability to apply a course of action appropriate to the matter being considered and is consistent with NPSREG.

422. The Reporting Officers disagreed with Mr Kennedy's view that, because significant distribution lines are mapped, ENG-P5 did not apply to these, and noted ENG-P5 is an assessment policy which directs the consideration of resource consent for new significant electricity distribution lines.

423. The Reply, Attachment 1, recommended the following wording amendments:

ENG-P5 When ~~considering proposals to develop, operate, maintain and upgrade new and~~ avoid, remedy or mitigate adverse effects from the development of new or ~~development~~, the operation, maintenance or upgrading of existing renewable electricity generation, energy investigation, distribution and transmission ~~energy~~ activities by:

(a) Recognising their functional ~~constraints,~~ needs and operational ~~requirements~~; and

(b) Where new transmission infrastructure and major upgrades to transmission infrastructure are proposed, the extent to which any adverse effects have been minimised in the route, site, and method selection will be considered.

ENG-P6

424. The Reply, Attachment 1, recommended the following amendments:

ENG-P6 Provide for the development, upgrading, maintenance and operation of:

(a) A range of ~~small, community and large-scale~~ renewable electricity generation activities; and

(b) Activities that seek to investigate, identify and/or assess potential sites and energy sources for renewable electricity generation.

ENG-P7

425. The Reply, Attachment 1, recommended the following minor amendments to address the request from Manawa for a definition of '*minor upgrade'* and the evidence of Ms Whitney:

ENG-P7 Recognise and provide for the national, regional, and local benefits of the National Grid, including by:

(a) Enabling the operation, maintenance, and ~~minor~~ upgrading requirements of existing National Grid assets;

(b) Providing for ~~other upgrades~~ and the effective development of new National Grid assets; and

(c) When considering measures to avoid, remedy and mitigate adverse effects of National Grid activities, have regard to:

i. The technical and operational constraints of the National Grid; and

ii. The extent to which proposals have avoided, remedied and mitigated effects through the route, site and method selection.

ENG-P8

426. The Reply largely accepted the Transpower's amendments, which sought to provide for the National Grid's development by recognising functional and operational needs. The Reporting Officers recommend the wording was simplified by referencing Schedules 1-8; and amended to recognise that there will be circumstances when adverse effects cannot be avoided, and that where this occurs effects must be remedied or mitigated to the extent practicable. The Reply, Attachment 1 recommended the following amendments:

ENG-P8 Manage the adverse effects of the <u>development of the</u> National Grid by:

(a) Where appropriate, using substantial upgrades as an opportunity to reduce existing adverse effects.

(b) Seeking to avoid adverse effects on areas <u>and values</u> identified in Schedules <u>1 – 8</u>;

(c) Where the National Grid has a functional need or operational need to locate within the Coastal Environment, manage adverse effects by:

i. <u>Seeking to avoid</u> adverse effects on areas <u>and values</u> identified in ~~s~~<u>S</u>chedules <u>1 – 8</u> ~~Overlay Chapter areas~~ and where it is not practicable to avoid <u>because of functional needs or operational needs of the National Grid</u>, to remedy or mitigate;

ii. <u>Seeking to avoid</u> significant adverse effects on other areas of natural character, natural attributes and character of NFL and indigenous biodiversity values that meet the criteria in Policy 11(b) of the NZCPS 2010; and

iii. Recognise that there may be some areas within the sites and areas identified in Schedules <u>1 – 8</u> where avoidance of adverse effects is required to protect the identified values and characteristics.

iv. Remedy or mitigate any adverse effects from the operation, maintenance, upgrade or development of the National Grid which cannot be avoided, to the extent practicable.

(d) <u>Remedy or mitigate any adverse effects from the operation, maintenance, upgrade or development of the National Grid which cannot be avoided, to the extent practicable.</u>

ENG-P9

427. Concerning reverse sensitivity effects on the National Grid, the Reporting Officers reconsidered their earlier recommendation based on the evidence presented at the hearing and further discussions with the expert planners. They now recommended that the word '*incompatible'* should be retained to provide the ability to enable compatible subdivision, use and development in certain circumstances, which the Reporting Officers considered was sufficient to afford protection of the relevant infrastructure and to be consistent with Chapter 6, Policy 4 of the RPS.

428. The Reply also supported the amendments sought by Transpower to better provide for operational circumstances.

429. The Reply, Attachment 1, recommended the following amendments to ENG-P9:

> *ENG-P9 Manage activities within the National Grid Yard and the National Grid Subdivision Corridor to:*
>
> *(a) Ensure the safe and efficient operation, maintenance, repair, upgrading and development of the National Grid is not compromised;*
>
> *(b) Avoid ~~incompatible~~ land use, buildings and structures that may directly affect or otherwise compromise the National Grid;*
>
> *(c) Manage subdivision within the National Grid Subdivision Corridor to avoid subsequent land use activities from compromising the operation, maintenance, upgrading and development of the National Grid;*
>
> *(d) Achieve compliance with the NZECP34:2001 and avoid exposure to health and safety risks from the National Grid; and*
>
> *(e) Maintain ongoing access for maintenance and upgrading works on the National Grid, and*
>
> *(f) Avoid the potential for reverse sensitivity effects on the National Grid to the extent reasonably possible.*

New Policies PX1, PX2 and PX3

430. In Reply, the Reporting Officers acknowledged the pTTPP was silent on non-renewable electricity generation. They acknowledged that the NPSREG supports and promotes renewable energy only, but that no national direction required the avoidance of non-renewable electricity generation. As Manawa requested, they did not support an outright avoidance policy for non-renewable electricity generation due to a lack of higher-order statutory direction. However, they recommended an alternative new policy ENG-PX2 and an associated rule with a non-complying activity status.

431. The Reply, based on the evidence of Mr Kennedy and Ms Styles, supported the inclusion of three new policies as follows:

> *ENG-PX-1 Manage activities in and around Significant Electricity Distribution Lines to:*

(a) Ensure the safe and efficient operation, maintenance, repair, upgrading and development of the lines are not compromised by subdivision, use and/or development;

(b) Achieve compliance with the NZCEP 34:2001 and avoid health and safety risks from Significant Electricity Distribution Lines; and

(c) To protect the lines from potential reverse sensitivity effects.

ENG-PX-2 Discourage the development of non-renewable electricity generation activities by first avoiding adverse environmental effects, where avoidance is not practicable, adverse effects shall be remedied or mitigated.

ENG-PX-3 Ensure that subdivision and development is adequately serviced including;

(a) Infrastructure networks have sufficient capacity to accommodate the additional development, and require any necessary upgrades to be completed at the time of subdivision; and

(b) Infrastructure is installed at the time of subdivision, except for onsite infrastructure, which cannot be determined until the allotment is developed.

Hearing Panel's Evaluation

432. The Panel agrees that the words '*avoid, remedy or mitigate'* in a policy provide broad flexibility to meet the outcome of the related objective. We agree with the Reporting Officers that it is best practice to write an objective to provide a clear target of what policies should achieve, stating what is to be achieved, when, and where. We agree with the Reporting Officers that objectives need not repeat the wording of the Act. Policies should detail the course of action to achieve an objective and can be subject to the outcome of the objective, flexible, inflexible, broad, or narrow.

433. The inclusion of '*avoid, remedy, or mitigate*' provides a wide course of action to achieve objectives. The Panel has endeavoured to apply these outcomes throughout the ENG as well as INF and the TRN chapters.

ENG-P1

434. The Panel agrees with the Reporting Officers' reasoning regarding the circumstances in which the words '*provide for*' or '*enable*' are appropriate. The Panel also agrees that, given the breadth of ENG-P1, which covers existing and new activities, both *'provide for'* and '*enable*' are appropriate. The Panel recommends the amendments shown in Attachment 1 of the Reply.

ENG-P2

435. As notified, the Panel notes that ENG-P2 was concerned with the benefits of new and existing energy activities when considering proposals. However, the recommended amendments change the focus of the policy from '*When considering proposals*' to '*When managing adverse effects'*. The Panel considers this suggests that when managing adverse effects from a proposal a decision-maker should have 'particular regard' to the benefits concerning

offsetting any adverse effects, which is significantly different to having regard to the benefits of a proposal.

436. When considering an application for resource consent for a proposal, section 104 of the RMA requires a decision-maker to consider of the actual and potential environmental effects of the activity (s104(1)(a)), any positive effects of the activity to offset or compensate for any adverse effects (s104(1)(ab)), relevant statutory provisions (s104(1)(b)), and any other matter the consent authority considers relevant (s104(1)(c)). This requires separate considerations and does not allow for adverse effects to be managed or balanced by having regard to the benefits of a proposal when assessing adverse effects.

437. The NPSET (Policy 1) directs that decision-makers must recognise and provide for the national, regional, and local benefits of sustainable, secure, and efficient electricity transmission; environmental effects are managed under separate policies. The RPS is consistent with this direction.

438. The NPSREG directs that decision makers must recognise and provide for the national significance of renewable electricity generation activities by providing for the development, operation, maintenance and upgrading of new and existing renewable energy activities. It also requires decision-makers to provide and recognise the national, regional and local benefits relevant to renewable electricity generation.

439. The Panel considers that the intent of ENG-P2 should remain on the consideration of proposals, as notified, given that it is intended to give effect to the NPSREG and NPSET. The Panel generally agrees with Ms Styles that '*energy*' should be replaced with '*renewable electricity generation, energy investigation, distribution and transmission'* to give effect to national direction and the RPS. It also aligns with the clauses focused on renewable energy generation, transmission, and distribution. However, as discussed above in relation to ENG-O2, the Panel considered this should be changed slightly to '*renewable electricity generation, investigation, and distribution and transmission'* to give effect to the national direction of the NPSREG and NPSET, as well as the RPS.

440. There is no national direction to '*have particular regard to*' the benefits of all '*Energy Activities*', as defined in the pTTPP. However, now the recommended wording of ENG-P2 is focused on renewable energy generation, the Panel considers the words '*have particular regard to*' align with the wording of RMA s7(j), which requires decision-makers to '*have particular regard*' to the benefits to be derived from the use and development of renewable electricity. We accept this is appropriate and therefore reject Forest & Bird's submission (S560.448) to delete '*particular*'.

441. The Panel notes that the Reporting Officers have recommended the deletion of the words '*to be obtained from the proposal*', however we have been unable to find any submission that supports that deletion and therefore we have recommended it be retained.

442. The Panel accepts the Reporting Officers' recommendations to split clause (a) into two parts, as requested by Westpower. However, for the reasons outlined regarding the national direction, the Panel considers this should be '*renewable*' electricity generation.

443. The Panel agrees with the Reporting Officers that adding '*to the consumer*' to clause (e) is unnecessary.

444. The Panel also agrees with the Reporting Officer that it is not necessary to amend the policy to address cumulative effects on waterways, given that this would require assessment on a case-by-case basis. The Panel is also satisfied that the policy is sufficient to support micro-renewables and distributed energy generation.

445. The Panel notes that Mr Lile accepted 'and' and not 'or' as appropriate in the context of ENG-P2.

ENG-P3

446. Discussion at the hearing and questions from the Panel focused on whether it was necessary to include '*adverse'* reverse sensitivity effects. The Reporting Officers recommended deleting '*adverse*' and replacing '*Minimise reverse sensitivity effects from'* with '*Manage activities to avoid reverse sensitivity'* to give effect to Policy D of the NPS-REG and Chapter 6, Policy 4 of the RPS.

447. The Panel questioned the Reporting Officers at the hearing as to whether relying on the strategic directions in the plan would be possible if reverse sensitivity policies were added to the overarching chapter. The Reporting Officers acknowledged that reverse sensitivity is an important issue for the West Coast and supported including a policy in the Strategic Direction Chapter. However, the Reporting Officers considered that the ENG and INF Chapters should retain reverse sensitivity policies because a higher-order policy direction is more nuanced than what might be expected from a policy within the Strategic Direction Chapter. Furthermore, the Reporting Officers considered that resource consent applications should assess policies in a comprehensive manner.

448. The Panel agrees with the Reporting Officers' reasoning in the Reply that *'Managing activities to avoid reverse sensitivity'* is preferable to the notified ENG-P3 which sought to '*minimise*' reverse sensitivity effects. The Panel considers the Reply version provides more scope; and gives effect to Policy D of the NPS-REG and Chapter 6, Policy 4 of the RPS.

449. The Panel accepts the evidence of Mr Lile that to give effect to Policy 10 of the NPSET the Policy should also include '*and electricity transmission and distribution activities'*.

450. The Panel considers it appropriate to include 'incompatible' in relation to reverse sensitivity for the reasons outlined by Ms Styles and accepted by the Reporting Officer concerning ENG-P9.

ENG-P4

451. The Panel acknowledges that clauses (a) to (d) of ENG-P4 incorporate a wide range of courses of action, ranging in significance from RMA s6 matters to implementing industry best practices. The Panel agrees with the Reporting Officers that it is inappropriate to delete these, as requested by Forest & Bird, and considers that the Plan must be read as a whole in terms of managing adverse effects on RMA s6 matters.

452. The Reporting Officers did not support the replacement of '*minimise'* with '*manage*'. They recommended the use of '*avoid, remedy, mitigate*' because this affords the ability to apply a course of action appropriate to the matter being considered. The Panel agrees; however, we recommend that '*avoid, remedy or mitigate*' is appropriate.

453. The Panel accept that including the reference to Schedules One to Eight appropriately responds to Ms Pull's evidence seeking inclusion of SASM and we note that as a consequence of other recommendations relating to Ngāi Tahu submissions on the rules we have included Appendix 10 into this and other policies.

454. The Panel also note that as a consequence of submissions from Forest and Bird and the Director General our recommendations expand the consideration of areas not included in Schedules One to Eight and Appendix 10 so as to give effect to the WCRPS and the NPSIB and we have amended the policy (and ENG-P8) to enable consideration of those areas.

ENG-P5

455. Given the broad coverage of ENG-P5, the Panel agrees with the Reporting Officers that '*avoid, remedy, mitigate'* affords the ability to apply a course of action appropriate to the matter(s) being considered. We agree that '*manage*' is more constraining. Furthermore, the Reply noted that *'avoid, remedy, mitigate'* is consistent with NPS-REG, which we accept.

456. The Panel agrees with the Reporting Officers that the amendments requested by Forest & Bird are not necessary given the Plan provisions must be read as a whole when considering a proposal.

457. The Panel accepts the recommended amendments by the Reporting Officers, in response to Manawa, are appropriate given the direction of the NPSREG, NPSET and the RPS. Chapter 6, Policy 3 of the RPS relates to regionally and nationally significant electricity transmission, distribution and renewable electricity generation. We consider 'Energy Activities' is wider than this direction.

458. The Panel also agrees that Westpower's requested additional wording, while consistent with the wording of the RPS, is not necessary given the pTTPP definitions of 'functional need' and 'operational need'. The Panel recommends '*functional need or operational need'.*

ENG-P6

459. The Panel accepts the Reporting Officer's recommendation to accept Manawa's request to delete 'small, community and large scale' from ENG-P6, given that the words relating to size and scale are unnecessary in this context.

ENG-P7

460. The Panel agree with deleting '*minor*' as alternative relief to Manawa's request for a definition of '*minor upgrade'*; and deletion of '*other upgrades'* because this is unnecessary in the context.

461. The Panel considers that the evidence from Ms Whitney gives sufficient justification for the amendment to clause (c)(ii) sought by Transpower. We accept that this is consistent with Policy 4 of the NPSET and clarifies that it does not apply to existing transmission infrastructure.

462. For the reasons outlined above concerning ENG-P4 and ENG-P5, the Panel accepts the Reporting Officers' recommendation to reject the amendment requested by Forest & Bird.

ENG-P8

463. The Panel agrees with the amendments to ENG-P8 requested by Transpower, as accepted by the Reporting Officers. The amendments also recognise that there will be circumstances when adverse effects cannot be avoided. Hence, the policy seeks to remedy or mitigate them to the extent practicable, which we consider appropriate.

464. The Panel notes that the recommended amendments shown in Attachment 1 of the Reply differ slightly from the wording requested in the evidence of Ms Whitney. The Panel accepts Ms Whitney's evidence, including '*development and major upgrade*', which is consistent with the wording of the NPSET.

465. As referred to above, the Panel acknowledges the Forest & Bird's concern regarding significant natural values not identified in SNA and that this needs to be addressed in INF-P8. We consider this needs to be addressed on a plan-wide basis with subsequent consequential amendments made accordingly.

ENG-P9

466. The Panel agrees with the Reporting Officers that the word '*incompatible'* in clause (b) of ENG-P9 should be retained because it provides clarity and is consistent with RPS Chapter 6, Policy 4. However, the Panel noted that this change in recommendation was not reflected in Attachment 1 of the Reply. We accept this is an oversight given the Reporting Officers' evaluation.

467. The Panel also accepts Ms Whitney's evidence and the Reporting Officers' recommended amendments, which were recorded in the Reply.

New Policies

468. The Panel accepts the evidence and Reporting Officers recommendation supporting the inclusion of three new policies, as recommended in Attachment 1 of the Reply. The Panel recommends that these become new policies ENG-10, ENG-P11 and ENG-P12. We consider the amendments made to proposed ENG-10 to include '*protect*' in subclause c. addresses the concerns of Mr Kennedy.

469. The Panel adopts the Reporting Officers' RMA section 32AA evaluation of the new Policies at page 103 of the s42A Report. The Panel is satisfied that the section 32AA evaluation corresponds to the scale and significance of the recommended changes. We accept that, having considered the new policies' efficiency and effectiveness, the amendments are the most appropriate for implementing the objectives and are in line with the purpose of the objectives.

470. The Panel considers ENG-P11 is appropriate but does not consider reference to how adverse effects are addressed is required within the policy. The Panel therefore recommends the following wording:

Discourage the development of non-renewable electricity generation activities.

471. The Panel has considered the other new policies requested by BEL and Westpower and agrees with the Reporting Officers that these additional policies are not necessary to give effect to the RMA and higher-order statutory direction.

Hearing Panel's Recommendations

472. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in footnotes below are accepted or accepted in part, and recommends the following changes to the **Energy Policies**:

Energy Policies	
ENG – P1	Provide for **and enable**[71] the development, operation, maintenance and upgrading of existing and new electricity transmission, distribution and renewable generation infrastructure ~~and assets~~.[72]
ENG – P2	When considering proposals to develop and operate new and existing **renewable electricity generation, investigation, and distribution and transmission**[73]activities have particular regard to the benefits to be obtained from the proposal, including; a. Maintaining or increasing security of renewable electricity supply ~~by diversifying the type and/or location of electricity generation~~;[74] b. **Providing for diversity of the type and location of renewable electricity generation;**[75] c. Maintaining or increasing renewable electricity generation capacity while avoiding, reducing or displacing greenhouse gas emissions; d. Economic, social, environmental or cultural wellbeing; e. The contribution the proposal will have towards New Zealand meeting its renewable electricity generation targets; f. Effective transmission and distribution of electricity supply; g. Facilitation and use of renewable energy; h. Security of electricity supply; and i. Meeting New Zealand/Aotearoa me Te Waipounamu's climate change obligations.

	risks from Significant Electricity Distribution Lines; and c. **Protect the lines from potential reverse sensitivity effects.**[110]
ENG-P11	**Discourage the development of non-renewable electricity generation activities.**[111]
ENG-P12	**Ensure that subdivision and development is adequately serviced including:** **a. Infrastructure networks have sufficient capacity to accommodate the additional development, and requiring any necessary upgrades to be completed at the time of subdivision; and** b. **Infrastructure is installed at the time of subdivision, except for on- site infrastructure that cannot be determined until the allotment is developed.**[112]

4.6. Energy Rules

Submissions and Further Submissions

473. The s42A Report identified 18 submission points and seven further submission points[113] in relation to the Energy Standards and the relief sought, it was summarised on pages 83-84 of the s42A Report. All submission points sought changes to the rules, standards and or advice note wording.

474. The s42A Report identified six submission points and one further submission point[114] relating to **ENG-R1** and summarised the relief sought on page 85 of the s42A Report. Three supported the provisions and three sought changes to the rules, standards and advice note wording.

475. The s42A Report identified nine submission points and four further submission points[115] relating to **ENG-R2** and summarised the relief sought on pages 85-86. Five supported the provisions as notified and four sought changes supported by the further submissions.

476. The s42A Report identified six submission points and two further submission points[116] relating to **ENG-R3** and noted that all supported the provisions as notified. The Panel notes this is incorrect, as it excludes Forest & Bird's submission point (S560.119) opposed in part, which was opposed by Westpower (F222.0238)

477. The s42A Report identified 11 submission points and five further submission points[117] relating to **ENG-R4** and summarised the relief sought on pages 86-87 of the s42A Report. One supported the provisions as notified, and the other sought changes to the rule.

478. The s42A Report identified four submission points and three further submission points[118] relating to **ENG-R5** and summarised the relief sought on pages 87-89. Two supported the rule as notified, and two sought changes supported by the further submissions.

479. The s42A Report identified nine submission points and three further submission points[119] relating to **ENG-R6** and summarised the relief sought on pages 89- 90. One supported the rule as notified and the others sought changes supported by the further submissions.

480. The s42A Report identified 10 submission points and two further submission points[120] relating to **ENG-R7** and summarised the relief sought on pages 91-92. Two supported the provision and the others sought changes to the rule.

481. The s42A Report identified five submission points[121] relating to **ENG-R8** and summarised the relief sought on page 92. Four supported the provision as notified, and one sought to change the rule.

482. The s42A Report identified five submission points and two further submission points[122] relating to **ENG-R9** and the relief sought was summarised on pages 92-93. Two supported the rule as notified and the others sought changes supported by the further submissions.

483. The s42A Report identified five submission points and four further submission points[123] relating to **ENG-R10** and the relief sought was summarised on pages 93-94 of the s42A Report. Two supported the rule as notified and the others sought changes supported by the further submissions.

484. The s42A Report identified five submission points and four further submission points[124] in relation to **ENG-R11** and summarised the relief sought on page 94 of the s42A Report. Two supported the rule as notified, and the others sought changes supported by the further submissions.

485. The s42A Report identified five submission points and three further submission points[125] relating to **ENG-R12** and summarised the relief sought on pages 94-95. One supported the rule as notified, and the others sought changes supported by the further submissions.

486. The s42A Report identified three submission points and one further submission point[126] relating to **ENG-R13** and the relief sought was summarised on page 95. Two supported the rule as notified, and the other sought a change, which was supported by the further submission.

487. The s42A Report identified four submission points and two further submission points[127] relating to **ENG-R14** and summarised the relief sought on pages 95-96. Two supported the rule as notified, and two sought changes, supported by the further submissions.

488. The s42A Report identified four submission points and three further submission points[128] relating to **ENG-R15** and summarised the relief sought on pages 96-97. Two supported the rule as notified, and two sought changes, supported by the further submissions.

489. The s42A Report identified three submission points and one further submission point[129] relating to **ENG-R16** and summarised the relief sought on page 97. Two supported the rule as notified, and one sought change, supported by the further submission.

490. The s42A Report identified three submission points and two further submission points[130] relating to **ENG-R17** and summarised the relief sought on pages 97-98. Two supported the rule as notified, and one sought change, supported by the further submissions.

491. The s42A Report identified two submission points relating to **ENG-R18** and noted on page 98 that these supported retaining the rule as notified.

492. The s42A Report identified five submission points and two further submission points[131] relating to **ENG-R19** and summarised the relief sought on page 98. Two supported the rule as notified, and the others sought changes, supported by the further submissions.

493. The s42A Report stated five submitters submitted on **ENG-R20**, with one in support of retaining the rule as notified and the others seeking changes. The Panel records that there were five submission points and four further submission points[132], with two seeking to retain the rule as notified, and the others sought changes, supported by the further submissions.

494. The Report identified several submissions seeking the addition of **new standards**. These are summarised below.

Section 42A Reports

126 S190.063, S538.032, S547.116, FS127.083

127 S190.064, S438.052, S538.033, S547.117, FS127.083, FS127.084

128 S190.065, S438.053, S538.034, S547.118, FS127.038, FS127.085, FS222.0184

129 S190.066, S438.054, S538.035, FS222.0185

130 S190.067, S438.055, S538.036, FS127.040, FS222.0186

131 S190.069, S299.050, S486.021, S524.038, S538.038, FS110.025, FS110.026

132 S547.120, S560.131, S190.070, S438.056, S538.039, FS127.087, FS222.0247, FS127.041, FS222.0187

495. The Reporting Officers opened with a planning summary statement that recorded agreement with submission points and noted that the notified ENG and INF overlap. They recommended amendments to ensure all aspects of energy activities are contained within the ENG Chapter.

496. The Reporting Officer noted several amendments were recommended to improve the provisions' effectiveness, efficiency, or clarity, including:

(a) Specifically referencing the types of energy activities, establishing context and scope of each provision;

(b) Introduction of a new policy to discourage non-renewable electricity generation activities and a new noncomplying rule;

(c) Clarification of the scope of upgrading and minor upgrading, including amendments to the rules; and

(d) Clarifying the scope and definition of small-scale, community-scale, and large-scale renewable electricity generation, including amendments to the rules.

Overall Energy Standards

497. The s42A Report did not support Westpower's (S547.096) request to reformat the rules to enable a more efficient assessment of compliance and for ease of use and implementation because the structure of the pTTPP had been established in accordance with the NPS.

498. The s42A Report did not support the relief sought by Buller Conservation Group (S552.043) to make all rules a discretionary activity because there was no specific reference to which standard they requested to change.

ENG-R1

499. The s42A Report rejected the amendment by BEL (S541.036) and Frank and Jo Dooley (S478.093), supported by NZEL (FS127.015) to provide for inclusion of revisions and updates of any relevant New Zealand Standards or National Environmental Standards because this would be needed in all provisions throughout the pTTPP and a plan change process is appropriate for responding to new or revised legislation.

500. The s42A Report accepted the BDC (S538.019) submission point that the heading of ENG-R1 is amended to '*Energy Activity Performance Standards*' because the inclusion of *'Permitted'* was unnecessary.

ENG-R2

501. The s42A Report rejected the Westpower's (S547.099) request, supported by NZEL (FS127), to include *'new works and/or upgrades'* clause (2) because it considered the scope of this was too broad and undefined, and there was potential for unintended consequences, particularly given this is a permitted activity standard. It did not address part of this submission point requesting adding '*or any new building works or upgrade to buildings that are undertaken within the existing building envelope'*.

502. The s42A Report supported the deletion of *'upgrade to an existing substation (zone)'* requested by Westpower (S547.100), supported by NZEL (FS127.070), because this was covered by clause (2). It accepted that landscaping should be limited to any substation located outside of the Industrial Zone, as substations are consistent with the purpose of the Industrial Zone; and therefore, recommended adding '*existing*' (S547.104 in part) and '*located outside the Industrial Zones*' (S547.101) to clause (3)(ii). However, it disagreed with the inclusion of '*earth bunds*' (S547.104 in part) because it considered this additional wording was unnecessary and was captured by '*landscaping*' in clause (3).

503. The JWS records that all the planning experts agreed to amend clause (3) by adding the words '*or upgrade to an existing substation (zone)'*.

ENG-R3

504. The s42A Report recommend ENG-R3 be retained as notified because of support for rule.

505. However, the Panel notes that the s42A Report did not address Forest & Bird's submission (S560.119), opposed by Westpower (FS222.0238), to include a requirement to meet the permitted vegetation clearance standards in the ECO Chapter. However, this is shown as rejected in Appendix 1 of the s42A Report.

506. The Addendum Report accepted Mr Lile's evidence (for BEL) requesting the replacement of *'Zone'* with '*Distribution*' in the heading for clarity.

ENG-R4

507. The s42A Report agreed with Transpower (S299.045) that there is an interpretation issue and supported the inclusion of *'new'* to provide clarification when interpreting this rule. Appendix 1 showed the recommended changes to the heading to address other submission points, removing the word '*existing*'.

508. The s42A Report accepted in part the submission points of BEL (S451.039) and Frank and Jo Dooley (S478.096), supported by NZEL (FS127.016), to include a point of measurement to clause (4) to improve clarity, efficiency and effectiveness of the standard. It did not support the amendment to clause (5) to provide for up to five additional poles because it considered it provided unnecessary restriction, and the submitters had not provided sufficient evidence to support such an amendment.

509. The s42A Report accepted BDC's (S538.022) request, supported by NZEL (FS127.003), to simplify the heading of the rule to '*Operation Maintenance, Repairs and Removal of Existing Above Ground Energy Activities'.* However, the Panel notes that the s42A Report Appendix 1 change does not replicate this submission, given that other amendments are recommended.

510. The s42A Report rejected the submission points of Westpower (S547.105), supported by NZEL (FS127.089), requesting replacement of '*three times that of the replaced pole'* with '*5 metres*' in clause (4) because they considered 5 metres was too large and could result in significant visual effects. It also rejected the request to allow an uncontrolled number of intermediate poles because of the potential for adverse visual and amenity effects. It noted that this issue is managed by the standards in clauses (2) and (3).

511. The s42A Report did not support Forest & Bird's (S560.461) submission point regarding the use of '*minor upgrading*' because this matter was addressed in relation to recommendations on definitions. It did not address the submitter's (S560.462) request to delete *'building and minor utility structure'* from the rule. However, this is shown as rejected in Appendix 1 of the s42a Report.

512. The Panel also notes that the s42A Report did not address Forest & Bird's submission (S560.119), opposed by Westpower (FS222.0238), to include a requirement to meet the permitted vegetation clearance standards in the ECO Chapter. However, this is shown as rejected in Appendix 1 of the s42A Report.

513. The Addendum Report supported the evidence of Ms Styles (for Manawa) seeking clarification of the meaning of the terms '*upgrading*' and '*minor upgrading*'. It therefore recommended consequential amendments to ENG-R4 to delete '*minor*' (as recommended in the s42A Report) and to add '*repair*'.

ENG-R5

514. The s42A Report accepted Manawa's (S438.049) request, supported by NZEL (FS127.035) and in part by Westpower (FS222.0182), to add '*repair'* into the heading because it is consistent with the Energy Policies. However, because of the recommended amendment to the definition of '*small scale'* in Section 6.2.2 of the s42A Report, it accepted the amendment sought by Manawa. Still, it considered this showed a gap concerning small-scale renewable energy generation. It therefore recommended to include a permitted activity standard for community-scale renewable electricity generation activities to address this gap.

515. The Addendum changed this recommendation replacing the notified heading with '*Renewable Electricity Generation Activity'*, and substantial changes to the rule to reflect this change in focus on community-scale REG.

516. The Addendum also recommended consequential changes to ENG-R15 to include new and existing large-scale REG activities.

ENG-R6

517. The s42A Report accepted Westland Milk Product's submission (S63.019) that ENG-R6 is too restrictive, with clause (2) imposing that any non-energy activity requires resource consent as a non-complying activity. It therefore recommended to delete clause (2) because this did not affect the directive of ENG-P3 and the NPSET. However, it did not support the inclusion of *'non-habitable industrial buildings'* due to the potential risks and complications associated with industrial buildings and the lack of evidence from Westland Milk Products to support this amendment.

518. In relation to the submission points[133] seeking that ENG-R6 be included within the zone provisions where significant distribution lines exist, the s42A Report considered there was a risk that the provisions contained in the ENG of the pTTPP would be missed and, therefore,

[133] S541.002, S478.059, S547.107, FS127.076.

rejected that amendment. It also noted that this would result in unnecessary cross-referencing and risk introducing inconsistency across the pTTPP, which is intended to be read in its entirety. It highlighted that significant lines are mapped, which it considered provided a sufficient trigger for plan users.

519. The s42A Report recommended rejecting Hort NZ's (S486.019) and Federated Farmers' (S524.019) request to delete clause (4) and rely on clause (5) because the 12-metre setback was consistent with Regulation 14 of the NESETA.

520. BDC (S538.026), supported by NZEL (FS127.004), sought to include an additional sub-clause under clause (3) for agricultural and horticultural, provided earthworks are undertaken to ensure no reduction of ground clearance distances from overhead lines. The s42A Report did not support this because the Earthworks Chapter includes limits for earthworks near the National Grid but not significant electricity distribution lines, which it noted was a gap in the pTTPP. It recommended a consequential amendment to the Earthworks Chapter to address; and therefore, no amendment was recommended to ENG-R6 to address the relief sought.

521. The s42A Report noted ENG-R6 is very restrictive, with any energy activity not achieving compliance with the standards defaulting to a non-complying activity. It recommended deleting clause (2) due to it being overly restrictive and not giving effect to the directive of ENG-P3 and the NPSET. It noted that based on this amendment, agricultural and horticultural activities can occur when compliant with clause (5) of ENG-R6.

522. Responding to Westpower's submission (S547.107), supported by NZEL (FS127.076), requesting to add '*and*' at the end of clause (3)(iv) and replace '*transmission'* with '*distribution'*, the s42A Report rejected the inclusion of '*and'* because clauses (3) and (4) are two standalone standards, which seek to manage two different effects - under conductors and within proximity to support structures. It did accept the replacement of '*transmission'* with '*distribution'* as this was consistent with the balance of the pTTPP and other higher order planning documents.

523. The JWS records the views of the planning experts in relation to the default activity status where compliance is not achieved and whether this should be non-complying or discretionary. The Reporting Officers and Mr Lile (for NZEL) considered this should be discretionary because significant electricity distribution lines do not have the same level of national protection as other non-complying activities. Mr Kennedy considered that, given the objectives and policies that relate to these significant electricity lines, it is appropriate default is non-complying, as notified.

ENG-R7

524. The s42A Report rejected Westland Milk Products (S63.020) and Isaac Construction Ltd (FS106) that sought ENG-R7 be amended to clause (iv) of standard (1) as follows: *'… Non-habitable industrial, farm or…'*, the inclusion of *'non-habitable industrial buildings'* due to the potential risks and complications associated with industrial buildings and the lack of evidence to support this amendment.

525. As to the Transpower submission, the Reporting Officers supported the relief sought because it is consistent with the NPSET and provides clarity to improve readability and application of

ENG-R7. In the Addendum, in response to Ms Whitney's evidence, the Reporting Officers recommended amendments to the clauses (1)(iv) and (2)(iii). It noted that submitters (S63.020, S486.020) had sought various amendments to clause (1)(iv) to include/exclude various activities but remained concerned that there appears to be limited justification for the listed activities which were not defined terms in the Plan.

526. The s42A Report recommended rejecting BEL (S451.003), opposed by Transpower (FS110.024), and Frank and Jo Dooley (S478.060), supported by NZEL (FS1270.18) to include this Rule within the zone provisions where significant distribution lines exist because there is a risk that the provisions contained in the ENG of the pTTPP would be missed. It considered that because the National Grid Yard is mapped this provided a sufficient trigger for plan users. Further, it noted that ENG-R7 is related to the National Grid Yard, not Significant Electricity Distribution Lines.

527. In relation to Hort NZ's (S486.020) request, opposed by Transpower (FS110.002), to delete '*produce packing facilities'*, the Reporting Officers agreed that the non-complying activity status is onerous and recommended that non-compliance be provided as a discretionary activity. It noted that at a discretionary activity status would allow for a complete and fulsome consideration of an activity and its associated effects; and allows the council to impose appropriate conditions of consent or decline resource consent if required. The Reporting Officers noted that this amendment was consistent with the recommendation for ENG-R6.

528. The s42A Report recommended rejecting the submissions of Martin & Lisa Kennedy (S545.011), opposed by Transpower (FS110.023), and Nick Pupich & Sandy Jefferies (S546.011) to replace the rule with the rules in the operative Grey District Plan in relation to the National Grid. It noted the proposed provisions are more nuanced and give effect to the NPS. It is considered that the standards in the pTTPP provided greater clarity and removed wording irrelevant within the ENG, such as the extent of earthworks, which is covered in the Earthworks Chapter.

529. The s42A Report accepted Poutini Ngāi Tahu's (S620.086) submission to correct the spelling of '*height'* in clause (2)(iii)(b). However, this correction was not shown in Appendix 1.

ENG-R8

530. The s42A Report recommended rejecting the BDC submission (S538.028) requesting to amend the cabinet size limit from 1.4m^2 to 10m^2 because Regulation 20 of the NESTF cabinets requires a footprint of 1.4m^2, and it is appropriate to be consistent with this maximum. It is considered that 10m^2, combined with the 2m height limit, would be too permissive.

531. The JWS records that the Reporting Officers did not support a change from 1.4m^2 to 10m^2 because a large-scale cabinet with consequent effects could result. It records that, as Mr Kennedy understood it, the change came about from a submission requesting a 10m^2 area limit when the pTTPP as notified, because the rule did not have a limit on area. Mr Kennedy was unclear on what basis a further reduced area is proposed, as none was requested. Mr Kennedy understands that 10m^2 is a current provision within the region.

ENG-R9

532. The s42A Report recommended rejecting Transpower's (S299.047) submission requesting amendments to enable rehabilitation within six months of the temporary activity ceasing, because it considered six months was too long to remove a temporary structure. It noted that it was necessary to set a time and recommend that the requirement for the site to be rehabilitated is within one month of the activity ceasing, which is consistent with Rule TEMP-R2.

533. The s42A Report recommended rejecting Manawa's submission (S438.050), supported by NZEL (FS127.036), because electricity generation is included in the 'Energy Activity' definition. It considered that the relief sought would limit the scope of ENG-R9, and it is noted that it may be necessary to establish a temporary transmission activity following a state of emergency.

534. The Addendum Report recommended adding a new clause (4) to address concerns that emergency back-up generators should be provided as a permitted activity.

ENG-R10

535. The s42A Report recommended rejecting the amendments sought by Manawa (S438.051), supported by NZEL (FS127.037), because it did not consider $4m^2$ to be 'slimline' and a height of 10m would be excessive within some environments (such as the Residential Zone). It considered that the current wording gives effect to Policy G of the NPSREG, which requires district plans to provide for activities associated with the investigation.

536. The s42A Report recommended rejecting BDC's (S538.029) request, supported by NZEL (FS127.005), to delete ENG-R10 based on the provision for environmental and meteorological facilities within the INF Chapter. It considered that the Rule was necessary to give effect to the Overview, which states that the infrastructure rules do not apply to the ENG Chapter.

537. The s42A Report recommended ENG-R10 be retained as notified.

538. In response to the evidence of Ms Styles (for Manawa), the Addendum Report highlighted the Rule applied district-wide, across the full range of zones that seek different character and amenity outcomes. It remained concerned that a maximum height of 10m, as a permitted activity, may not be appropriate in all locations. As an alternative relief, the Reporting Officers recommended the inclusion of a new clause (3) that requires compliance with the relevant zone structure or building height limits. However, the Reporting Officers noted that these may well be subject to change following zoning hearings.

539. The Addendum also recommended changing the default activity status from non-complying to restricted discretionary when compliance with the standards is not achieved.

ENG-R11

540. The s42A Report did not support Transpower's (S299.048), opposed by Poutini Ngāi Tahu (FS41.041), request to add '*or otherwise not provided for*' to the heading of this rule because the amendment is considered unnecessary and does not improve the efficiency or effectiveness of the plan. However, in the Addendum Report, in response to Ms Whitney's evidence regarding substations, the Reporting Officers changed their recommendation to

accept this submission. However, this was not shown as a tracked change in Attachment 2 of the Addendum Report.

541. The s42A Report noted Poutini Ngāi Tahu opposed Transpower's request to amend the heading because the effects need to be assessed against the overlay chapters and not just Schedule 1-8.

542. Poutini Ngāi Tahu (S620.087, S620.088, S620.089, S620.090) sought the matter of discretion for Restricted Discretionary activities (ENG-R11, ENG-R12, ENG-R13 and ENG-R14) be amended to include the following matter of discretion: '*The degree to which the proposed activity will cause significant adverse effects on Overlay Chapter matters and sites listed in Appendix 10.'* The s42A Report considered this submission point concerning general matters for the ENG Chapter. The Reporting Officers believed that the reference to other chapters in the Overview provided for those values, which was sufficient for them to be considered.

543. The Addendum Report noted Poutini Ngāi Tahu's request to include a new matter of discretion concerning Poutini Ngāi Tahu values would be addressed within the Reply. It was recommended that the words 'areas and values listed in schedules 1-8 be added to clause (g), which was agreed to be added, following discussion with Ms Pull, ensuring adequate effects assessment. The Reporting Officers disagreed with Ms Pull's view that ENG-R11 was broad in its application. They considered the Rule had a narrow focus, resulting in an outcome unlikely to significantly impact the Poutini Ngāi Tahu values.

544. The s42A Report rejected Westpower's (S547.113) request, supported by NZEL (FS127.080), to delete clause (e). However, the Addendum Report changed position and accepted this deletion, considering Mr Kennedy's evidence that contamination is usually by way of discharge, which is generally managed through regional provisions.

545. The s42A Report accepted Westpower's request (S547.112), supported by NZEL (FS127.079), to add *'functional'* to clause (b).

ENG-R12

546. The s42A Report rejected Transpower's (S299.049) request to delete *'transmission and'* from the heading because there would be no default rule for the National Grid Yard if accepted. However, in the Addendum Report, having considered the evidence of Ms Whitney, the Reporting Officers recommended including *'and upgrading'* and adding '*not managed by the National Environmental Standards for Electricity Transmission Activities*' in ENG-R12.

547. The s42A Report supported BDC (S538) and NZ Energy's (FS127) submissions to amend the rule's heading, noting that ENG-R4 must be amended consequentially.

ENG-R13

548. The Reporting Officers accepted Westpower and NZ Energy's submission to include *'functional'* because it gives effect to the Energy objectives and policies and is consistent with the Energy standards.

ENG-R14

549. The Reporting Officers did not support Manawa's relief as sought because ENG-R5 requires a default rule. However, they did acknowledge that the heading of ENG-R14 refers to '*renewable energy investigation activity'*, which does not have a Permitted Activity standard reference. The Reporting Officers recommended the deletion of *'renewable energy investigation activity*' from the rule heading, as this could be captured by temporary energy activities or energy activities generally.

550. In the Addendum Report, in response to Ms Styles' evidence, the Reporting Officers considered that listing 'l*andscape measures'* as a matter of discretion in clause (e) was unhelpful as it is unclear what is expected or what would be achieved. They also considered clause (c) relating to benefits to the community needed refinement, but did not support Ms Styles' recommendation for clause (e) to provide an alternative.

551. The s42A Report accepted Westpower and NZEL submissions to amend clause (d) to include '*locational, technical'* because it gives effect to the Energy objectives and policies and is consistent with the energy standards.

ENG-R15

552. The s42A Report noted the amendment sought by Manawa (S438.053), supported by NZEL (FS127.038) and supported in part by Westpower (FS222.0184), to give effect to the NPSREG and deal with the circumstance of no rule providing for the maintenance, repair, operation and minor upgrading of existing renewable electricity generation activities. It agreed there was no permitted pathway for maintenance, repair, operation, or minor upgrading of existing renewable electricity generation activity, which reasonably should be provided for in the ENG rules. It recommended the inclusion of a new permitted activity rule for these activities.

553. The s42A Report noted that new large-scale renewable electricity generation activities would continue to be provided as a discretionary activity. It did not support the specific relief sought by Manawa to amend ENG-R15 because it considered this created unnecessary confusion and cross-referencing provisions. It noted that large-scale renewable electricity generation activities could have adverse effects that require management and assessment.

554. The s42A Report accepted Westpower's (S547.008), supported by NZEL (FS127.085), to add *'not meeting Permitted Activity standards*', which clarified ENG-R15 and ensured consistency with other energy rule standards (e.g., ENG-R11 – ENG-R14, ENG-R19).

555. In response to Ms Styles' evidence, the Addendum changed this position to recommend amendments to ENG-R15 to provide for new and existing large-scale REG not meeting the permitted activity standards and to remove the exclusion of wind, given the amendments proposed to ENG-R5 to include all REG activities.

ENG-R16

556. The s42A Report rejected the relief sought by Manawa (S438.054), supported by NZEL (FS127.039) and supported in part by Westpower (FS222.0185), to amend status of the rule from discretionary to restricted discretionary due to the lack of evidence provided by submitters to support their request and the risk of potential adverse effects associated with a

large-scale wind farm. It considered a discretionary activity status was appropriate and noted that ENG-R5 provides for small-scale wind farms as a permitted activity.

557. In response to Ms Styles' evidence, the Addendum changed this position to recommending deleting ENG-R16, as a consequential amendment to recommended amendments to ENG-R5 and ENG-R15.

ENG-R17

558. The s42A Report rejected the amendments sought by Manawa (S438.055), supported by NZEL (FS127.040) and supported in part by Westpower (FS222.01865), to replace '*energy*' with '*renewable energy generation'* due to the lack of evidence provided by submitters to support this request and the risk of potential adverse effects associated with a wind farm which does not comply with New Zealand Standards NZS6806:2010 Acoustics – Wind Farm Noise. It considered a non-complying activity status was appropriate and noted that ENG-R5 provided for small -scale wind farms as a permitted activity.

559. In the Addendum Report, in response to Ms Styles, the Reporting Officers agreed there was a need to integrate all of REG activities together with the same level of enablement. They recommended ENG-R17 be deleted, relying upon effects-based rules and zone bulk and location rules to manage potential effects.

ENG-R18

560. The s42A Report recommend ENG-R18 be retained as notified, given the submissions in support of this Rule.

ENG-R19

561. The s42A Report accepted Transpower's (S299.049) request to replace '*in and around*' with '*within*' the National Grid Yard to provide greater clarity and to amend the heading wording to be consistent with ENG-R6 and ENG-R7. This amendment was not shown correctly in Appendix 1 of the s42A Report.

562. The s42A Report rejected Hort NZ's request (S486.021), opposed in Transpower (FS110.026), and Federated Farmers' request (S524.038), opposed in part by Transpower (FS110.025) and supported by Hort NZ (FS55.20), to change the rule status from non-complying to restricted discretionary. However, it was considered a non-complying activity status was too onerous and recommended amending the rule activity status to discretionary.

563. However, in the Addendum Report, in response to Ms Whitney's evidence, the Reporting Officers changed their view and recommended retaining the notified non-complying activity status because of the direction of the NPSET. The Reporting Officers accepted that this would ensure consistency with the NPSET and the approach in other district plans. They also noted the discrepancy between the default activity status and rules providing for National Grid activities and activities within the National Grid.

564. The s42A Report did not specifically address Transpower and Hort NZ's request to delete *'Significant Electricity Transmission Lines*' from ENG-R19. However, Attachment 2 of the Addendum recommended that this be deleted. It recommended a new non-complying activity

Rule ENG-RX10 for activities in and around significant electricity distribution lines that do not comply with the permitted activity standards.

ENG-R20

565. The s42A Report rejected Manawa's request (S438.056), opposed by NZEL (FS127.041) and supported in part by Westpower (FS222.0187), seeking to delete '*energy*' and 'ENG-R14' so that REG activities are not included as non-complying activities. It considered there was a lack of evidence within the submission to support the requested amendment and potential adverse effects resulting from non-compliance with restricted discretionary activity standards. In their opinion, it is appropriate that a gateway test provides an assessment through the policy pathway.

566. The s42A Report rejected the Westpower (S547.120), supported by NZEL (FS127.087), to incorporate ENG-R20 within ENG-R18 due to the lack of evidence. It noted ENG-R18 was limited to energy activities generating electric or magnetic fields, whereas ENG-R20 deals with substations, transmission and distribution lines, structures and foundations, electricity cabinets, community-scale renewable electricity generation structures and temporary energy activities. On this basis, the Reporting Officers did not consider it appropriate to combine ENG-R18 and ENG-R20.

567. The s42A Report rejected the relief sought by Forest & Bird (S560.131) to add 'for activities that do not meet ENG-R15 and ENG-R16 because it would result in unnecessary duplication across the rules.

568. In response to the evidence of Ms Styles regarding non-renewable energy generation and the need for a new policy and a rule directing avoidance, in the Addendum Report, the Reporting Officers accepted that the relief sought would be consistent with national direction. They also recommended further amendments to refine references to 'Energy Activities' in the rules to remove the default non-complying activity status for REG activities because it would not give effect to NPSREG direction and is inconsistent with the standard approach taken to REG in other district plans.

569. Ms Styles also considered upgrades (that are not minor) and new REG activities (that are not domestic in scale) to be restricted discretionary activity.

New Standards

570. The s42A Report accepted Transpower's request (S299.051), supported in part by Forest & Bird (FS34.031), sought the insertion of a new non-complying activity rule to capture any energy activities not explicitly provided for, as follows:

> *ENG-RX: Any energy activity that is not permitted, controlled, restricted, discretionary, or discretionary.*
>
> *Activity Status Discretionary Activity status where compliance is not achieved: N/A*

571. The s42A Report considered this new rule would give clarity and direction to plan users. The Addendum included this as a new rule, ENG-RX-11.

572. Manawa (S438.057), and opposed by NZEL (FS.034), sought the insertion of a new non-complying activity rule to capture energy activities that do not involve renewable electricity generation, as follows:

> *ENG-RX: Non-renewable Electricity Generation Activities Activity Status Non-Complying*

573. The s42A Report rejected this because it considered it too onerous and inconsistent with the Energy objectives and policies. However, in response to Ms Styles' evidence, the Addendum changes this position by accepting Manawa's submission and recommends inserting a new Rule ENG-RX9.

574. BDC (S538.023) sought the insertion of a new permitted activity rule to provide for the operation, maintenance and repairs of existing below ground energy activities or provision for installation of new facilities, as follows:

> *ENG-RX: Installation of Above Ground Energy Activities*
>
> *Activity Status Permitted*
>
> *Where:*
>
> *(1) the performance standards in Rule INF-R1 are met;*
>
> *(2) these are located in a GRUZ-General Rural Zone or LINZ-Industrial Zone, and poles do not exceed a height of 25 metres and towers do not exceed a height of 15 metres; and*
>
> *(3) these are not an extension of existing overhead lines that involve no more than five poles in areas where services are already above ground provided that written approval from landowners within a 22 metre radius of new poles has been obtained and provided to Council within 10 working days before activities commencing.*

575. The s42A Report rejects BDC's submission because it considered Rule ENG-R4 sufficiently provided for these activities. However, it recommended a new rule for the construction of distribution lines and transmission lines not managed by NESET, which was shown in Appendix 1.

576. In response to Ms Whitney's evidence, the Addendum recommended further amendments to the new rule covering the construction of distribution and transmission lines by removing the reference to NESET because it does not apply to new National Grid transmission lines or electricity distribution assets. Attachment 2 of the Addendum showed this new rule as ENG-RX3.

577. Concerning ENG-RX-1, the JWS records that all expert planners agree to removing the reference to the NESET. It records that Mr Kennedy considered that distribution lines should be deleted but noted no corresponding discretionary rule. Mr Lile considers that distribution lines should remain in.

578. Westpower (S547.097), supported by NZEL (FS547.098), sought the insertion of a new permitted activity rule because ENG-R4 was silent as to when new lines are required to be placed underground or aboveground, as follows:

ENG-RX: Distribution Lines (including connection to consumers)

Activity Status Permitted

Where:

1) *New lines are underground where located in RESZ-Residential, or CMUZ-Commercial and Mixed-Use Zones; or*

2) *Existing above ground lines are located within the zones identified in (1) and are extended by no more than five poles; or*

3) *Are above ground within SASM sites within the zones identified in (1) to maintain the values of the SASM site; and (4) poles for above ground lines do not exceed a height of 25m.*

Activity status where compliance is not achieved: Restricted Discretionary.

579. The s42A Report accepted Westpower's submission. In response to evidence, the Addendum recommended amending the heading to '*New Customer Connections*' and changing 30mm to 36mm.

580. The JWS records agreement to amend the heading, but Mr Lile considered that this rule needed to stay in the ENG as not all new connections are made at the time of subdivision. It records that Mr Kennedy supported, including seven additional performance standards, and that he noted there is no corresponding discretionary rule.

581. Westpower (S547.098) sought the insertion of a new Permitted Activity standard to provide for large scale generation in the Industrial Zone, as follows:

ENG-RX: The construction, operation, maintenance and upgrade of community and large-scale energy activities excluding wind

Activity status Permitted

Where:

1) *Performance standards in Rule ENG-R1 are complied with;*

2) *The activity is located within the Industrial Zone; and*

3) *All buildings and generating structures comply with building coverage, height and setback requirements for the zone; and*

4) *Buildings and generating structures are screened by fencing and/or landscaping (including earth bunds) along any road frontage and the side boundary of a site that adjoins a RESZ-Residential, SET Settlement, OSZ-Open Space or MUZ-Mixed Use zone.*

Activity status where compliance is not achieved: Discretionary.

582. The s42A Report accepted in part Westpower's request but considered that applying the new rule should be limited to the General Industrial Zone instead of all Industrial zones. It noted

that industrial zones would capture the light industrial zone, which is predominantly located in undeveloped areas with a higher degree of amenity effects and requires greater management. Appendix 1 recommended adding a requirement for compliance with GIZ-R1 in clause (1); and replacing 'Industrial Zone' with 'General Industrial Zone'. However, the Addendum recommended deleting this new rule based on evidence, the EWC, and other recommended changes to the provisions.

583. Westpower (S547.119), supported by NZEL (FS127.086), sought the insertion of a new Non-Complying Activity standard to provide for activities that do not comply with ENG-R6, as follows:

> *ENG-RX: Activities in and around the Significant Electricity Distribution Lines that do not comply with Permitted Activity standards, Activity Status Non-Complying.*

584. The s42A Report rejected Westpower's request for this new rule to provide for activities that do not comply with ENG-R6 because it considered this was unnecessary, as activities that do not comply with ENG-R6 default to Rule ENG-R19. However, as requested, the Addendum appears to change this position and recommends a new rule, ENG-RX10, but as a discretionary activity rule.

585. NZEL (S463.001 and S463.002) and Inchbonnie Hydro Limited (S540.001 and S540.003), supported by NZEL (FS127.021 and FS127.022), sought to provide for existing Hydroelectric Infrastructure in a specific special zone and provide rules to support this, consistent with the RPS and NPSREG. The s42A Report rejected these submissions due to a lack of an RMA section 32 evaluation to support a Special Purpose Zone in this instance. It noted that under the mandatory direction of the NPS, a Special Purpose Zone must only be applied if it is impractical to manage proposed land use activities through another zone or combination of spatial layers. It considered the Energy provisions explicitly provide for such activity, therefore, Hydroelectric Infrastructure did not need a Special Purpose Zone.

Hearing And Submitter Evidence/Statements

Manawa Energy

586. In her opening remarks, Ms Styles noted that the pTTPP specifies that the INF rules do not apply to energy activities. She said that this separation is important to ensure that there is no unnecessary overlap in provisions for energy activities that also fit under the definition of infrastructure.

587. Ms Styles also addressed infrastructure scale issues, namely using terms such as '*small*' '*community*' or '*large scale*' in the rules. She contended these definitions should be removed and, if necessary, replaced with one definition of '*small and community scale*' to align with NPSREG Policy F, which encourages such activities.

588. Ms Styles also discussed renewable and non-renewable energy sources, seeking a clear separation between them and for the pTTPP to provide for REG specifically. She proposed a new rule for constructing, operating, maintaining, and upgrading community and large-scale renewable electricity generation activities. She also recommended an additional rule within

the ENG relating to non-renewable electricity generation activities, seeking to ensure those activities had a non-complying activity status.

589. Ms Styles detailed concerns relating to activity status and rule layout. She was concerned that the activity status applied to REG activities did not adequately give effect to the NPSREG and that the rule provisions were unnecessary and complex, which would, in turn, lead to confusion in the interpretation and application of the pTTPP. She was particularly concerned about the activity status structure, and she detailed in Appendix 4 an activity status structure she considered appropriate for REG activities. She considered Appendix 4 comparable to other district plans and gave effect to national guidance. She provided a helpful 'line-of-sight' table within Appendix 5 detailing how she considered the provisions should fit together to give effect to higher-order documents and national direction.

590. Regarding ENG-R5, Ms Styles noted a lack of analysis on the submission point seeking an increase in the permitted area/footprint for buildings, structures, and services associated with hydroelectricity generation to increase from the notified 25m^2 to 100m^2.

591. Concerning ENG-R10, which dealt with monitoring and meteorological facilities, Ms Styles sought an increase in the permitted scale for masts and towers. She recognised that the notified height restriction of 4m was very low and insufficient to provide meaningful investigations into meteorological conditions. Her preferred position was 10m.

592. Regarding the methods of discretion that apply to restricted discretionary activities for REG, Ms Styles noted that they could be better refined to reflect appropriate considerations. She used '*landscaping measures'* as an example, which she considered unhelpful because that term was unclear, as to what is expected to be achieved or what would be assessed. She refined these matters in her Appendix 3.

593. Ms Styles was critical of how the notified provisions treated wind farms differently from other forms of electricity generation, especially concerning noise generated by a wind farm. She noted that this difference was expressed by excluding wind from the permitted activity rule ENG-R5, discretionary activity rules ENG-R15 and ENG-R16 and the wind farm noise-specific non-complying activity ENG-R17. She believed placing a more restrictive activity status on wind farms was inappropriate, and she noted this differentiation is not common in other comparable district plans. She further stated that other activities that exceeded noise standards within the TTPP are not treated as non-complying but as restricted discretionary. Again, she noted that this approach to wind farm noise differs from that in comparable district plans.

Buller Conservation Group and Frida Inta

594. Ms Inta criticised many of the energy rules primarily because she considered the standards in those rules unduly permissive. In relation to the proposed new rules, she expressed concern about the lack of certainty regarding default status, where compliance with permitted activity was not achieved. She did not support the new permitted activity rule enabling the construction, operation, maintenance, and upgrade of community and large-scale energy activities, excluding wind. She considered that any large-scale energy activity should require a consent process.

Paul Finlay

595. Mr Finlay sought provisions in the pTTPP to enable the use of the DOC land, including National Park land, for a water inlet and tunnel irrigation and power generation scheme supplying the West Coast and other areas with electricity and irrigation water. He noted pTTPP provisions would need to include proven need be demonstrated along with acceptable reinstatement of such works, including bond requirements.

Martin and Lisa Kennedy

596. Mr Kennedy detailed his concerns about ENG-R7 regarding building structures and activities within the National Grid Yard. He was particularly concerned about the scope of the permitted activity standards, wanting to ensure that activities on his land would not be unduly constrained.

Buller Electricity Limited

597. Mr Lile's evidence on the energy rules supported recommendations and amendments included within the s42A Report. His evidence focused on a limited number of discrete matters that he considered would improve the workability and efficiency of the energy provisions. He noted that while BEL supported ENG-R3 as notified, '*Zone*' should be replaced with *'Distribution'* in the heading to clarify the difference between ENG-R2 and ENG-R3.

New Zealand Energy Limited

598. Mr David Inch and Mr Peter Mulvihill presented evidence through PowerPoint slides focusing on the power systems at the Turnbull River near Haast and the Fox Glacier. They noted these power schemes were included in Schedule 13 of RPS and that under RPS Rule 54, a separate criterion for re-consenting is provided. They requested the provision of a Special Purpose Zone or highlighting existing hydroelectric schemes as a scheduled activity within the pTTPP to be consistent with RPS. This would support the ongoing management of such schemes, further development, and new opportunities. They referenced other district plans that provided specific provisions for hydro schemes and queried whether these schemes should be scheduled under the pTTPP so they could become a controlled activity. A query also arose about whether a designation should cover these power schemes.

599. Mr Inch and Mr Mulvihill questioned whether the two power schemes highlighted should be recognised as RSI despite their small scale. They noted that the definition of RSI only captures schemes generating more than 1 MW, which would exclude these important community schemes. They also emphasised the power schemes at Griffen Creek, Harold Creek, and Littleman Creek, as well as extensions to the Turnbull Hydro Electric Scheme. They considered all these schemes to be exceedingly small and had minor impacts. They considered these were regionally significant for those who derive electricity from them and serve isolated settlements and tourism.

Transpower

600. Ms Whitney noted discussions with the Reporting Officers had resulted in many of Transpower's submission points being satisfied through amendments recommended by the

Reporting Officers in the Addendum. Her addendum evidence confirmed there were only two outstanding provision points and one point of clarification. The outstanding points related to Rule ENG-R4 clause (4) and Rule ENG-R7 clause (1)(iv), and a point of clarification about Rule ENG-RX3.

601. Ms Whitney explained the issue with Rule ENG-RX3 was that there is no clear, specific discretionary rule for the construction of new lines, so the concern was that the default non-complying activity rule ENG-R11 would apply. She understood the Reporting Officers had no concerns with a discretionary activity status and would support providing a specific discretionary role to provide clarity. She provided suggested rule drafting to address this.

602. Concerning ENG-R4, Ms Whitney explained that the West Coast region is unique in that it has a line that is not subject to NESETA (as the line was not owned and operated by Transpower when the NESETA came into effect). This line is the 110kv Dobson Tee A line, which runs from the Dobson substation east of Greymouth to Reefton and is significant in length, as shown in light blue in her Figure 1. She noted that ENG-R4 is very important to ensure an appropriate rule framework is provided in the pTTPP for Transpower to undertake work on the line to ensure safe and efficient electricity transmission (as required by the NPSET). She noted that apart from clause (4), she was comfortable with all the clauses within ENG-R4, noting that the majority aligned with the regulations within the NESETA. She explained the issue with clause (4) was clarifying what effect the standard sought to manage, and interpretation issues as to how the standard would be applied. Ms Whitney proposed two solutions that involved additional wording to clause (4).

603. Ms Whitney explained that the second outstanding issue related to the Reporting Officers' recommendation to delete clause (1)(iv) of ENG-R7, which excludes commercial greenhouses, protective canopies, wintering barns, produce packing facilities, and dairy and milking sheds. Having read the Hort NZ submission, she understood they sought to permit sorting and packing sheds and not to delete references to farm and horticultural buildings. Ms Whitney noted that, as outlined in the evidence of Ms Eng and Mr Shortland-Witehira, Transpower takes a risk-based approach to determining whether a particular type of building or structure may be safely located underneath high voltage conductors. She explained that such an approach included consideration of not just the scale of the building but also the intensity of the activity, the structure/typical construction material, and the extent of human occupation or use of the building. She noted when the building is used for longer durations; is more frequently accessed; is used by more people; and/or includes more sophisticated services (water, fibre, power supply); the effects in respect of disruption to the activities within the building (where Transpower needs to undertake maintenance or repair works) and risks associated with electrical hazards such as step and touch voltages and earth potential rise are more significant. In this way, she said a produce packing facility's characteristic can be distinguished from a (complying) hay barn or implement storage shed.

604. Ms Whitney provided alternative wording and explained the substantive change to the rule was to replace the term '*non-habitable farm or horticultural buildings or structures*' with '*Agriculture, pastoral/livestock farming, dairying and horticulture activities, and associated non habitable buildings and structures (meaning they are not usually occupied but may be accessed from time to time)*'. She said the latter is derived from the pTTPP definition of '*Agricultural, Pastoral and Horticultural Activities*' and therefore provided alignment to the terminology used in the pTTPP. She explained the second substantive change to the clause

was to provide guidance/clarification as to what is '*non habitable*' (i.e. meaning they are not usually occupied but may be accessed from time to time). The Panel questioned the need to include 'wintering barns' given that their use on the West Coast was very unlikely, and she considered that this should be deleted.

605. Ms Whitney supported amendment to the default non-complying rule ENG-R19 to make it clear activities not otherwise provided for are non-complying, as follows:

> *ENG-R19 Activities in ~~and around~~ the National Grid Yard ~~and between the Significant Electricity Transmission Lines~~, that do not comply with Permitted Activity standards or not otherwise provided for.*

Poutini Ngāi Tahu

606. Ms Viskovic's legal submissions acknowledged that including Poutini Ngāi Tahu values as a matter of control and discretion for all controlled discretionary activities would create an additional step requiring an extra level of analysis to be undertaken by the resource consent applicant. She submitted that this was acceptable because the potential effects on those values meant that any costs associated with undertaking this work are justified. She considered the plan provisions needed to include a reference to these values, particularly where the activity status was restricted discretionary.

607. Ms Viskovic noted that the pTTPP does not comprehensively map or identify all Poutini Ngāi Tahu values so there may be an impact/effect on those values through an activity that is not located within a managed overlay such as a site in areas of significance to Māori (**SASM**).

608. Ms Pull outlined the relevant statutory direction supporting recognition of Poutini Ngāi Tahu as tangata whenua and as holding rangatiratanga within the takiwā of Ngāi Tahu Whenua, including the Mana Whakahono a Rohe, which recognises the principles of Te Tiriti o Waitangi and the NTCSA and, among other things, seeks incorporation of those principles into Council planning instruments. She also referenced how the RPS gives effect to those statutory directions and agreements, concluding that one of the roles of pTTPP is to recognise those values.

609. Ms Pull noted that one of the pTTPP's roles is to recognise Poutini Ngāi Tahu values and cultural landscapes and to provide for these values and landscapes across all pTTPP provisions by giving effect to Part 2 of the RMA, the NPS, and the RPS. She considered the s42A Report failed to give effect to the RPS because it has focused primarily on enabling efficient infrastructure.

610. Although the term *'sensitive activities'* is used within the ENG (including a recommended addition to ENG-R7 in the s42A Report), Ms Pull noted Poutini Ngāi Tahu is primarily concerned about how this term will be applied in relation to the plan's noise provisions.

611. Ms Pull noted Poutini Ngāi Tahu seeks the addition of a new matter of control/matter of discretion to the controlled activity and restricted discretionary activity rules throughout the pTTPP to ensure that Poutini Ngāi Tahu values, as identified in the Tangata Whenua Chapter can be considered in decision making on any relevant resource consents. She provided a full breakdown of Poutini Ngāi Tahu values as identified in the Regional Planning documents at her Appendix Three. She further noted that the s42A Report for hearing topics one and two

recommended this submission point is considered on a case-by-case basis in relation to the relevant rules in each chapter.

612. Ms Pull clarified that Poutini Ngāi Tahu's further submissions on the rules in the ENG, INF and TRN Chapters were limited to including the overlay chapters and sites listed in Appendix 10 in the matters of discretion for rules ENG-R11-R14. She noted the section 42A Report did not support this relief.

613. Ms Pull disagreed with the reasons outlined in the s42A Report to reject the submission because:

(a) The use of '*and*' does not restrict an assessment; it is an addition to the other matters of discretion;

(b) When considering a restricted discretionary activity, the consent authority's assessment is limited to the matters of discretion in the specific rule; the chapter overview is not a consent consideration;

(c) Adding the ability to consider the impact on the sites identified in Appendix 10 in any of the other matters of discretion is not considered to be a duplication of the advice note at the front of the Chapter (which has no legal weight); and

(d) No rules in the pTTPP specifically apply to sites identified in Appendix 10, meaning that the other Chapters cannot consider the impact of an energy activity on those sites. Appendix Ten informs that the area has historical and cultural associations to be considered.

614. For these reasons, Ms Pull sought the inclusion within Rules ENG-R11-R14 of the following matter of discretion be added:

> *The degree to which the proposed activity will cause significant adverse effects on Poutini Ngāi Tahu values.*

615. In her addendum evidence, Ms Pull noted the limitation to '*significant*' adverse effects was about providing for and enabling energy activities as identified in Chapter 6 of the RPS, while balancing the objectives, polices and Method 5 of Chapter 3 in the RPS to add conditions to resource consents where appropriate to avoid, remedy or mitigate adverse effects on iwi values. She was critical that the Reporting Officers had not correctly applied all the relevant Chapters of the RPS when considering how to provide for Iwi values.

616. Ms Pull noted ENG-O2 includes a requirement to minimise adverse effects on communities and the environment, and that to achieve this, regard must be had to Policies P2, P4 and P8 relating to Poutini Ngāi Tahu culture and values. As set out in her Table 1 in Appendix 1, Ms Pull identified that restricted discretionary activities could impact Poutini Ngāi Tahu values. However, she noted that discretion did not address the requirement to minimise adverse effects on the environment as set out by ENG-O2 and only has regard to Poutini Ngāi Tahu values within the limits of the identified SASM areas. She noted the Energy Chapter restricted discretionary activities that used the threshold of *'significant*' were ENG-R11 and ENG-R14.

617. Ms Pull noted that the benefits of including the matter of discretion for Poutini Ngāi Tahu values are better implementation of the RPS, effective consideration of the Strategic Direction POU-O4 and improved cultural and environmental outcomes. She considered the costs would relate to a more detailed assessment being required on the potential cultural impacts and/or discussion with representatives of the relevant Rūnanga. However, given this is limited to only two ENG rules, which can potentially cause significant adverse effects on Poutini Ngāi Tahu values, then the cost is minimised and reasonable, as well as being efficient compared to the restoration of the values if damaged.

618. At the reconvened hearing, the Panel had a wide-ranging conversation with Ms Pull about including an additional matter of discretion for Rules ENG-R11 and ENG-R14. We discussed whether including a reference to Schedule 1-8 would suffice. Ms Pull considered there was a need to consider the effects of activities on sites not included in Schedules 1-8. She also considered that the reference to Poutini Ngāi Tahu in Chapter 3 would not be appropriate because Chapter 3 was very general in describing those values and how those values were impacted depending upon the nature of the application.

619. Discussion revolved around resource consent applicants needing to undertake or engage Poutini Environmental to undertake a cultural impact assessment and whether that approach would differ from applicants needing to undertake a landscape assessment. Discussion also explored the value of utilising advice notes to guide applicants regarding the Rule requirements.

Forest and Bird

620. Ms Snoyink's statement focused on the Addendum Report and Appendix 1. She provided comment on amended changes to Rules ENG R4, R5, R9, R15 and New Rules RX1, RX2, RX3 and RX9. Forest & Bird remain concerned the rules only address significant effects on identified values and do not give effect to the RMA and NZCPS.

Westpower

621. Mr Kennedy provided comprehensive and detailed evidence on many of the rules that Westpower had submitted upon and addressed submission points accepted, accepted in part and or rejected. The evidence also discussed further submissions made by Westpower. Attached to his evidence was Appendix 1, which provided a summary of the s42A Report recommendations relating to all Westpower submissions.

622. We invited Mr Kennedy to consider and respond to the Annotated s42A Report. He did so in writing on 8 December 2023. In relation to rules, he noted that a range of matters, including substations (zone), lines, generation, electricity cabinets, temporary activities, significant distribution lines, and aggregation of rules, were outstanding. He also provided a Westpower Network map and a marked-up version of the Energy provisions. He offered his preferred wording for plan provisions, dated 12 January 2023.

623. Regarding ENG-RX1, Mr Kennedy expressed concern that the recommended rule framework would force Westpower to underground all distribution lines to avoid a discretionary activity resource consent for the construction of new above-ground lines.

624. Before the reconvened hearing, the Panel issued several questions for discussion at that hearing. Mr Kennedy responded to a question relevant to Westpower, relating to ENG-R4(ii)(c), where the Panel noted that three new terms are introduced that do not appear anywhere else in the plan – *'earth wire', 'earth grid'* and *'earth peak'* ; and explored whether there was an alternative means of addressing the matter that did not introduce new terms and increase uncertainty. In response, Mr Kennedy recommended the following rewording:

> *(a) Wires and associated equipment, both above and below ground, for earthing (or grounding) required to ensure electrical safety to people and property. Such wires may also contain telecommunications lines.*

625. Mr Kennedy referenced his map of Westpower's assets and his marked-up version of the ENG rules. The Panel worked its way through the rules in sequence, asking questions of planners and asking the Reporting Officers to respond to matters within their reply.

626. In relation to new ENG-RX2, which permits the construction of distribution lines and transmission lines within the industrial zone, Mr Kennedy understood it to be acceptable for transmission lines. He noted there was no Westpower submission regarding transmission lines. However, he noted there was no corresponding discretionary rule.

627. Mr Kennedy noted that the new permitted activity rule for new distribution lines, including customer connections, as proposed by Mr Kennedy, included several performance standards to achieve permitted activity status. His document, dated 12 January 2024, contained additional comments on distribution and customer connections, the need for these performance standards, and removing the advice note from the standards.

Kair Lippiatt

628. Ms Lippiatt sought to amend ENG-R5 to ensure hydro generation is only permitted on rivers already modified by generation, mining, or other human modifications. She considered that where there is a proposal for installing hydro generation on a 'wild river', with no existing structures, this must be notified. She reasoned that even when water flow is removed from the river and piped to the generator this modifies the local flora and fauna environment.

Reporting Officers' Reply Evidence

ENG-R1- Energy Activity Performance Standards

629. The Panel noted at the reconvened hearing that many of the energy rules use compliance with ENG-R1 performance standard to trigger consent or a higher activity status and queried whether this one performance standard, formatted as a rule, could be deleted by incorporating it into any relevant rules.

630. The Reply considered that this amendment would improve the flow and readability of the pTTPP and recommended amendments to the rules accordingly. The Reporting Officers noted that although no submission point sought this amendment, they considered it a formatting change rather than a change in the rules' effect.

ENG-RX1 - Below Ground Energy Activities

631. The Reporting Officers noted in their Reply that establishing new distribution lines underground would ensure that potential effects would be mitigated, such that providing for these as a permitted activity was appropriate. They considered that new above-ground lines could result in adverse effects that warrant a discretionary activity status under new ENG – RX4.

632. Attachment 1 of the Reply recommended the following wording for new ENG-RX1:

> ***The construction, operation, maintenance and repair of Below Ground Energy Activities***
>
> ***Activity Status Permitted***
>
> *Where:*
>
> *An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007.*
>
> ***Activity status where compliance not achieved: Non-complying***

ENG-RX3 – The construction of new distribution lines and transmission lines

633. In their Position statement, the Reporting Officers responded to Mr Kennedy's point that rule ENG-RX2 does not have a corresponding default discretionary activity rule. The Reporting Officers rechecked the recommended provisions and provided updated provisions in Attachment 2. Essentially, the Reporting Officers now recommend that ENG-RX2 be renumbered to ENG-RX3 and that the default activity status, where compliance was not achieved, is discretionary, as provided for by ENG-RX4.

634. The Reply noted that due to establishing a clear differentiation between the ENG and INF, the Reporting Officers had identified that the INF had a permitted activity rule (INF-R8) '*new network utility customer connections'.* They highlighted that with the recommended separation of the ENG and INF Chapters, this permitted activity would not be available to Energy Activities and that to address this, they recommended including new ENG-RX3.

635. In response to Westpower's request to include '*customer connections*' within the ENG-R4 or to amend the definition of '*minor upgrading*' to clarify that distribution lines included customer connections, the Reporting Officers considered that this was unnecessary because a connection is simply part of the distribution network and was sufficiently provided for by new permitted activity rule ENG-RX3.

636. Attachment 1 of the Reply maintained this recommendation. It recommended the following wording for new ENG-RX3:

> ***The construction of new distribution lines and transmission lines***
>
> ***Activity Status Permitted***
>
> *Where:*

1. *An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007.*

2. *The line will comply with the requirements of NZECP 34:2001 3.*

3. *The construction or establishment of any tower, pole, mast, aerial, panel, element or dish operationally associated with electricity lines that have a maximum height above ground level of 7. 4.*

4. *Installation or modification of a sign at a height no greater than 2m above ground level and no larger than 1m² associated with an electricity network utility.*

Activity status where compliance not achieved: Discretionary

ENG-R5 Renewable Electricity Generation

637. In Reply, the Reporting Officers recommended further rewording the heading of the rule to apply to all REG activities and removing the detail and reference to '*small scale'*, in response to the evidence and statements at the hearing.

638. Attachment 1 of the Reply recommended the following wording for new ENG-R51:

Activity Status Permitted
Where:

1. ~~*Performance standards in Rule ENG – R1 are complied with.*~~***An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007;***[134]
2. ***The construction, operation, maintenance, repair and upgrading of small and community scale renewable electricity generation shall comply with the following standards:***
   a. ~~*Solar panels do not exceed the permitted building height in the relevant zone by more than 0.25m vertically*~~
   b. ~~*Small scale wind turbines comply with NZS 6808:2010 Acoustics - Wind Farm Noise;*~~
      i. Wind turbines do not exceed 8m in height;
      ii Solar panels and any land-based structure, building or impermeable surface for hydroelectricity generation must comply with building height and scale performance standards:
         a. NOSZ – R1;
         b. OSZ – R1;
         c. SARZ – R1;

1. ~~*Any building or structure must not be located within an existing esplanade reserve or strip*~~[135]

[135] Manawa Energy Limited S438.049

***Activity status where compliance not achieved**:*

*Restricted Discretionary where performance standard~~s 1 – 3 or 5 – 6 are~~ **is** not complied with. Discretionary where performance standard 2 is not complied with.*
~~Non-complying where with performance standard 4 is not complied with.~~

ENG-R6-Significant Electricity Distribution Lines

639. As notified, under ENG-R6, activities in and around significant electricity distribution lines defaulted to a non-complying activity. The s42A Report considered that the non-complying activity default was onerous and recommended a discretionary activity default.

640. The Reply detailed the reasons why the Reporting Officers supported a discretionary activity default for the following reasons:

(a) RPS Chapter 6 Objective 1 and associated policies 1, 2, 5 and 6 do not direct avoidance;

(b) RPS Chapter 6, Policy 4: Recognise that RSI is important to the West Coast's wellbeing needs to be protected from the reverse sensitivity effects arising from incompatible new subdivision, use and development, and the adverse effects of other activities, which would compromise the effective operation, maintenance, upgrading, or development of the infrastructure.; and

(c) NPS-ET, Policy 10 directs avoidance: In achieving the purpose of the Act, decision-makers must, to the extent reasonably possible, manage activities to avoid reverse sensitivity effects on the electricity transmission network and to ensure that operation, maintenance, upgrading, and development of the electricity transmission network is not compromised.

ENG-R7 - Buildings, Structures and Activities within the National Grid Yard

641. The Reply noted that Ms Whitney's evidence for Transpower had clarified the relief sought and had provided alternative wording in response to the s42A Report. The Reporting Officers considered that Ms Whitney's wording provided an appropriate balance to enable activities near the National Grid while protecting public health and safety.

642. The Reporting Officers also accepted Ms Whitney's view that because the rule protects the National Grid, the appropriate default activity status is non-complying, as notified.

643. Attachment 1 of the Reply recommended the following wording for ENG-R7:

Buildings, Structures and Activities within the National Grid Yard

Activity Status Permitted

Where:

1. *These are the following activities where they are also Permitted within the relevant zone and overlay:*

i. Fences less than 2.5m high;
ii. Alterations and additions to existing buildings and structures used for sensitive activities that do not involve an increase in the building or structure height or footprint;
iii. *Infrastructure undertaken by a Network Utility* ***operation*** ~~*Operator within a transport corridor*~~ *or any part of electricity* ***generation*** ~~*infrastructure*~~ *that connects the National Grid;*
iv ~~*Non-habitable farm or horticultural buildings or structures excluding commercial greenhouses, protective canopies, wintering barns, produce packing facilities, dairy and milking sheds*~~ ***Agriculture, pastoral/livestock farming, dairying and horticulture activities, and associated non habitable buildings and structures (meaning they are not usually occupied but may be accessed from time to time), excluding:***
a. Buildings and structures used for intensive indoor primary production,
b. Dairy and milking sheds
c. Commercial greenhouses
d. Produce packing facilities
e. Protective canopies; and
f. Wintering barns.

v. ***The activity is not a sensitive activity****;*
vi. An accessory building or structure associated with an existing residential activity that is less than 10m^2 and 2.5m in height;

2. All buildings, structures and activities permitted by 1. above must have:
i. A minimum vertical clearance of at least 10m below the lowest point of a conductor - or meet the electrical distances required by NZECP 34: 2001 under all transmission line and building operation conditions;
ii. Not result in the loss of vehicle access to a National Grid support structure;
iii. Be located ***at least 12 metres from the outer visible edge of a foundation of a National Grid transmission support structure*** ~~*National Grid Yard*~~ *except where it is:*
a. Infrastructure undertaken by a network utility operator, or any part of electricity infrastructure that connects the National Grid;
b. A fence not exceeding 2.5m in heigh that is located at least:
I. 6m from the outer visible edge of a foundation of a National Grid transmission line tower; or
II. 5m from the outer visible edge of a foundation of a National Grid transmission line pole;
c. An artificial crop protection structure or crop support structure not exceeding 2.5m in height and located at least 8m from a National Grid transmission line pole that:
I. Is removable or temporary to allow a clear working space of 12m from the pole for maintenance; and
II. Allows all weather access to the pole and sufficient area for maintenance equipment including a crane; or
d. A building or structure where Transpower has given written approval in accordance with clause 2.4.1 of NZECP34: 2001.

Activity status where compliance not achieved: Non-complying ~~*Discretionary*~~

ENG-R9 – Temporary Energy Activities

644. Due to s42A Report recommendations to add a new non-complying activity rule for non-renewable energy activities that do not meet permitted, controlled or restricted discretionary activity rules, submitters identified concerns that back-up generators providing electricity supply in emergency circumstances would be caught by this rule and would unintentionally be non-complying activities.

645. To address this concern, the Reporting Officers recommended the insertion of a clause in ENG-R9 Temporary Activities to provide for back-up generators as a permitted activity. The Reporting Officers acknowledged that, although they are not technical electricity experts, they recommended a permitted activity standard based upon the partially operative Selwyn District Plan's (Appeals Version) permitted activity rule for electricity generators (EI-R16). They recommended the addition of new clause (4), as shown in Attachment 1 of the Reply, based on this provision.

646. NZEL and Westpower's evidence raising concern that the recommended provision was too restrictive (noise standards and hours) to provide the ability to meet community needs, the Reporting Officers considered that ENG-R9 offered the ability to utilise backup generators in emergency circumstances with unlimited noise and operational hours, which was extremely permissive. They noted that submitters had not provided alternative recommendations supported by technical evidence; and that in the absence of specific changes to the provisions to consider, the Reporting Officers confirmed their recommendation was appropriate, efficient and effective.

ENG-R11 and ENG-R14 The inclusion of 'Poutini Ngāi Tahu values' within the matters of discretion and control

647. After further considering Ms Pull's evidence in particular limiting relief to ENG-R11 and ENG-R14 as well as linking matters of control or discretion to refer to the '*Poutini Ngāi Tahu values as described in the Tangata Whenua Chapter'* the Reporting Officers remained concerned that the relief sought would increase the complexity of resource consents for restricted discretionary and controlled activities under these provisions, having particular regard to the nature of these activities and their potential effects.

648. The Reporting Officers also considered that an informed and accurate assessment of a proposal's effects on Poutini Ngāi Tahu values would require Ngāi Tahu input into all applications. The Reporting Officers noted POU-P9 (also identified at paragraph 4.11 of the Ngāi Tahu legal submission) identifies that Poutini Ngāi Tahu, as specialists in tikanga, are best placed to convey their relationship with their ancestral lands, water, sites, wāhi tapu and other taonga.

649. The Reporting Officers noted if the Panel are of a mind to include the matter of control/discretion as recommended by Ms Pull, they recommend that an information requirement clause be added to the listed rules, requiring that a cultural impact assessment must accompany any resource consent application. They considered that a clear information requirement affords clarity of process for plan users, further ensuring that potential cultural effects are assessed by Poutini Ngāi Tahu, as specialists in tikanga of the West Coast

650. The Reporting Officers also responded to Ms Pull's suggestion to include a notification advice note in the rules, like the Selwyn District Plan (Appeals Version), to notify plan users that consultation with iwi is required. The Reporting Officers agreed that a note identical to the above could afford direction to a plan user. However, it was the Reporting Officers' view that this solution would not be practical to resolve the abovementioned matters because Poutini Ngāi Tahu values are not explicitly identified or mapped, resulting in uncertainty for plan users. Furthermore, they noted that proposals must comply with the SASM Chapter requirements.

ENG-R11, ENG-R12, ENG-R13, ENG-R14-Impact on Overlay Matters, Matters of Control and Discretion

651. In their Position Statement, the Reporting Officers agreed with Ms Pull (for Poutini Ngāi Tahu) that *'Landscape Measures*' was unclear. They recommended its replacement with '*The effects of the proposal on the amenity, character and landscape values of the underlying Zone*" in rule ENG-R11 and ENG-R14.

652. In response to Ms Pull's request to add to the rules '*The management of impacts on Poutini Ngāi Tahu values as set out in the Tangata Whenua Chapter',* as a matter of discretion, the Reporting Officers considered that, the *'Poutini Ngāi Tahu values'* as described in the Tangata Whenua Chapter, was broad and would reduce the certainty to plan users that is otherwise afforded by a controlled or restricted discretionary activity status. They remained concerned that the wording sought would increase the complexity of resource consents for restricted discretionary and controlled activities under these provisions, particularly given the nature of these activities and their potential effects.

653. The Reporting Officers noted that the POU-P9, also identified at paragraph 4.11 of the Ngāi Tahu legal submission, identifies that Poutini Ngāi Tahu, as specialists in tikanga, are best placed to convey their relationship with their ancestral lands, water, sites, wāhi tapu and other taonga. They considered that an informed and accurate assessment of a proposal's effects on Poutini Ngāi Tahu values would require Ngāi Tahu input into all applications.

654. The Reporting Officers noted that if we were to include the recommended matter of discretion/criteria, they suggested adding an information requirement clause to these rules, requiring a cultural impact assessment to accompany any resource consent application.

655. The Reporting Officers noted that Ms Pull had identified that rules ENG R11-R14 had inconsistent language within matters of control or discretion, and referencing overlay matters. They agreed that consistent wording is effective and efficient, improving the plan users' readability. The Reporting Officers supported deleting the word '*significant*', and any necessary consequential amendments to ensure consistency of wording across these rules. They agreed, confirming in the Reply that specific reference to Schedules 1 – 8 would provide direction to plan users, be consistent with other provisions, and afford appropriate consideration of SASM.

ENG-R19

656. In Reply, the Reporting Officers change their recommended amendments to ENG-R19 from that shown in Attachment 2 of the Addendum, to remove reference to '*significant electrical transmission lines'* and to add '*or otherwise not provided for'* in recognition of the evidence and statements at the hearing.

New Rules

657. Attachment 1 of the Reply recommended the following wording for new permitted activity rule **ENG-RX1**:

> *<u>The construction, operation, maintenance, and repairs of Below Ground Energy Activities</u>*
> *<u>Activity Status Permitted</u>*

Where:

1. *An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 200715;*

Activity status where compliance not achieved: Non-complying

658. Attachment 1 of the Reply recommended the following wording for new permitted activity rule **ENG-RX3**:

The construction of new distribution lines and transmission lines

Activity Status Permitted

Where:

1. *Electric and Magnetic fields – An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 200716;*

2. *The line will comply with the requirements of NZECP 34:2001*

3. *The construction or establishment of any tower, pole, mast, aerial, panel, element or dish operationally associated with electricity lines that have a maximum height above ground level of 7.*

4. *Installation or modification of a sign at a height no greater than 2m above ground level and no larger than 1m² associated with an electricity network utility.*

Activity status where compliance not achieved: Discretionary

659. Attachment 1 of the Reply recommended the following wording for new discretionary activity rule **ENG-RX4**:

Renewable energy investigation

Activity Status Restricted Discretionary

Where:

1. *An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836;*

2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007;

Discretion is restricted to:

a. Impacts on resilience of the community to natural hazards and climate change;

b. The benefits of the proposal to Aotearoa New Zealand meeting its Climate Change and Greenhouse Gas targets;

c. The benefits of the proposal to the local and regional community and to resilience for Te Tai o Poutini/ the West Coast;

d. Functional, location, technical and operational constraints;

e. The effects of the proposal on the amenity, character and landscape values of the underlying Zone; and

f. The degree to which the proposed activity will cause adverse effects on areas and values listed in Schedules 1-8.

Activity status where compliance not achieved: Non-complying

660. Attachment 1 of the Reply recommended the following wording for new restricted discretionary activity rule **ENG-RX5**:

Temporary energy activities not meeting Permitted Activity standards

Activity Status Restricted Discretionary

Where:

1. An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 200719;

Discretion is restricted to:

a. Impacts on resilience of the community to natural hazards and climate change;

b. The benefits of the proposal to Aotearoa New Zealand meeting its Climate Change and Greenhouse Gas targets;

c. The benefits of the proposal to the local and regional community and to resilience for Te Tai o Poutini/ the West Coast;

d. Functional, location, technical and operational constraints;

e. The effects of the proposal on the amenity, character and landscape values of the underlying Zone; and

f. The degree to which the proposed activity will cause adverse effects on areas and values listed in Schedules 1-8. Activity status where compliance not achieved: Non-complying.

661. Attachment 1 of the Reply recommended the following wording for new **ENG-RX6**:

Environmental monitoring and meteorological facilities associated with Energy Activities not meeting Permitted Activity standards

Activity Status Restricted Discretionary

Where:

1. An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007;

Discretion is restricted to:

a. Impacts on resilience of the community to natural hazards and climate change;

b. The benefits of the proposal to Aotearoa New Zealand meeting its Climate Change and Greenhouse Gas targets;

c. The benefits of the proposal to the local and regional community and to resilience for Te Tai o Poutini/ the West Coast;

d. Functional, location, technical and operational constraints;

e. The effects of the proposal on the amenity, character and landscape values of the underlying Zone; and

f. The degree to which the proposed activity will cause adverse effects on areas and values listed in Schedules 1-8.

Activity status where compliance not achieved: Non-complying

662. Attachment 1 of the Reply recommended the following wording for new discretionary activity rule **ENG-RX4**:

Construction of distribution lines and transmission lines not meeting Permitted Activity Standards

Activity Status Discretionary Activity status where compliance not achieved: N/A

663. Attachment 1 of the Reply recommended the following wording for new discretionary activity rule **ENG-RX10**:

Activities in and around Significant Electricity Distribution Lines, that do not comply with Permitted Activity standards

Activity Status Discretionary Activity status where compliance not achieved: N/A

664. Attachment 1 of the Reply recommended the following wording for new non-complying activity rule **ENG-RX9**:

Non-renewable Electricity Generation

Activities Activity Status Non-complying

Note: This rule shall not apply to back up generators that do not comply with permitted activity standards of ENG-R9. Activity status where compliance not achieved: N/A

665. Attachment 1 of the Reply recommended the following wording for new non-complying activity rule **ENG-RX11**:

Any Energy Activity which is not a Permitted, Controlled, Restricted Discretionary or Discretionary Activity

Activity Status Non-complying Activity status where compliance not achieved: N/A

666. The Panel notes the Reporting Officers recommended two new rules ENG-RX4, which are different new rules. The Panel has relabelled the recommended new non-complying rule ENG-RXX4 to distinguish between these new rules.

Hearing Panel's Evaluation

Permitted Activities

ENG-R1

667. The Panel acknowledges that it sought commentary on whether ENG-R1 rule could be deleted and the performance standard incorporated into the relevant rules. Having reviewed the amendments proposed by the Reporting Officers in the Right of Reply we now consider the change overall is not appropriate and would create higher levels of confusion, particular in relation to activity status. For these reasons, the Panel recommends retaining Rule ENG-R1, as notified.

668. Notwithstanding the above, in reviewing the issue of ENG-R1 the Panel have noted that restricted discretionary activity rules ENG-R12, ENG-R13 and ENG R14 all refer to compliance with ENG-R1 and have a non-complying default position. We consider that these are errors noting that:

i. non-compliance with Electric and Magnetic fields is determined within ENG-R1; and

ii. the matters of discretion all require subjective assessments and there is nothing which would necessitate defaulting to a non-complying status.

ENG-R2

669. This rule was both the subject of submitter evidence and agreement recorded in the JWS regarding additional wording in clause (3). The Panel agree that other minor wording changes under clause 16(2) of the First Schedule of the RMA are appropriate to improve readability. The Panel considers the new wording albeit with a further minor amendment is appropriate because it clarifies the rule is for upgrading an existing substation, whether it is located within an industrial zone or outside an industrial zone and requires that adverse visual effects are appropriately managed by landscaping, protecting views from roads and existing residential buildings. The Panel recommends that it be clarified that the visual screening from any existing residential building be in terms of such buildings located '*adjacent*' to the Industrial Zone, otherwise the rule could have a wide-ranging requirement well beyond the area of potential amenity impact. Subject to that change, we recommend amending Rule ENG-R1, as shown in Attachment 1 of the Reporting Officers' Reply, with a further amendment to clause (3)(ii) being '*Industrial Zone*', not plural.

ENG-R3

670. The Reporting Officers' Reply recommended a minor change to delete the words *'This is'* from clauses (2) and (3). The Panel accepts this recommendation as appropriate to improve the rule without changing the intent.

ENG-R4

671. The Panel notes that this rule (as notified) permits operating existing and new transmission and distribution lines, maintaining, minor upgrading, strengthening, upgrading and replacing support structures and foundation not managed under NESETA.

672. The JWS records that all the planning experts, except Mr Kennedy, agreed that concerns about the term '*minor upgrade'* are resolved through the proposed deletion of *'minor*' in favour of the general term upgrading. There was agreement that, in the context of this rule, the extent of upgrading is provided for through the performance standards and limits on increases to scale, size and extent/number. The Reporting Officer's position remained that there should be no definition of minor upgrading, and that the definition of upgrade should instead be relied upon. The Panel notes, as mentioned above, that we have recommended a definition of '*minor upgrading*' be included in the Plan.

673. Mr Kennedy's view and the relief sought is detailed in the JWS. The Panel considers this requested amendment too detailed and unnecessary given the rule's wording.

674. The Panel agrees with the position of the planning experts recorded in the JWS and the Reporting Officers' recommendation that the definition of 'Upgrading', combined with standards in the rule, provides appropriate limits for upgrading distribution lines and transmission lines, with a clear permitted baseline for upgrading. We consider it not desirable to have multiple definitions for various scales of upgrade.

675. The Panel note that Ms Whitney, while supporting the rule, expressed a note caution in terms of the application of '*transmission lines*' as a defined term in the rule given the recommended definition defers to the NESETA because the West Coast was unique in having transmission lines which are not regulated by the NESETA. She said a solution would be to either retain the definition of Transmission line as notified, or to not hyper link it to the defined term within

rule ENG-R4. The Panel note that it is not possible to include the words '*Transmission Line*' without activating a hyperlink to the NESETA definition. We have resolved this issue by deleting the words transmission line within the rule and specifically identifying the Dobson Tee A line.

676. The Panel also accept the wording changes to the performance standards in clause (4) requested by Buller Electricity Limited and Frank and Jo Dooley and consider these provide clarification.

677. The Panel notes that Forest & Bird's request to delete '*building and minor utility structure'* from clause (2) was not addressed in the s42A Report. The Panel considers this is appropriate given it relates to distribution and transmission lines and includes structures. We agree that the reference to *'building or minor utility structure*' is not required.

678. The Panel recommends amending Rule ENG-R4, as shown in Attachment 1 of the Reporting Officers' Reply, with the exception that we consider clause 4 relating to replacement poles for distribution lines should be broken into two subclauses for clarity.

ENG- R5

679. As notified, the heading of this Rule relates to the construction, operation, maintenance, repair, and upgrade of renewable energy structures for small-scale use. Both *'small scale*' and *'large scale'* renewable energy definitions had capacity limits, and these attracted submissions seeking amendments to increase/decrease and delete capacity limits.

680. The Panel accepts the Reporting Officers' recommendation to remove capacity figures from both definitions and amend them to be consistent with the NPSREG. The primary concern regarding capacity figures is their accuracy. The Panel considers it preferable to implement the higher-order document while minimising debate about the numbers.

681. The Panel agrees with the Reporting Officers that Rule ENG-R5 establishes an appropriate permitted activity standard to manage the potential impacts of renewable electricity generation. We consider it is appropriate that, if an activity fails to comply with ENG-R5, small and community-scale generation activities will default to the restricted discretionary activity under Rule ENG-R14. This contrasts with large-scale generation activities, which will fall under the discretionary activity rule ENG-R15.

682. The Panel also supports including the pTTPP relevant zone building height and scale performance standards in the rule. This ensures that the activity will be appropriately regulated within the specified zone standards rather than setting height and scale performance standards separately, which is more conducive to a permitted activity status. We agree with Ms Styles that there was insufficient analysis regarding the submission to increase the permitted area or footprint for buildings, structures, and services associated with hydroelectric generation. Therefore, we consider this solution of referencing other zones for scale performance standards addresses that shortfall and is appropriate to deal with the effects of the activity within the context of the relevant zone.

683. However, the Panel considers it unnecessary to list all the potentially relevant zone rules in the rule and recommends simplifying it to add '*must comply with*' *the relevant performance standards in Rule R1 of the applicable zone or in the case of the:*

Settlement Zone - SETZ – R2

Buller Coalfield Zone BCZ – R3

Mineral Extraction Zone MINZ – R3

684. The Panel notes that this approach is also recommended for rule ENG-R10

685. In relation to wind turbine height, the Panel accept the evidence of Ms Styles and considers a small-scale wind farm would not exceed 8m in tower height and agrees with the amendment of this standard in clause (2)(b). We consider it is appropriate to clarify in the clause and recommend adding '*tower*' to the Reporting Officers' recommended wording for ENG-R5.

686. The Panel accept Ms Styles's evidence that the reference in clause (2) to the Acoustic Wind Farm Noise Standard should be deleted because it imposes a more restrictive activity status on wind farms, which is inappropriate and that such differentiation is uncommon in comparable district plans. We also accept her advice that other activities exceeding noise standards within the pTTPP are classified as restricted discretionary, rather than non-complying; and that such treatment of wind farm noise is inconsistent with similar district plans.

687. The JWS records that the appropriate activity status when compliance with standards is not achieved was discussed with the outcome being: restricted discretionary, where performance standard (1) is not complied with; discretionary, where performance standard (2) is not complied with; and non-complying, where performance standard (3) is not complied with. The Panel consider while this approach appropriately reflects the need for greater consideration of a proposal for the height and scale increase the activity status referred to in the JWS did not reflect the policy outcomes. As a result, we have made a consequential amendment to the default activity status for non-compliance with ENG-R5 provisions.

688. The Panel recommends amending Rule ENG-R5, as shown in Attachment 1 of the Reporting Officers' Reply.

ENG-R6 Activities in and around Significant Electricity Distribution Lines

689. In terms of the Reporting Officers recommendation to delete reference to Energy Activities in clause 2, the Panel are of the view that having retained the definition of Energy Activities there is no scope from the submissions received on this rule to delete this clause and we therefore recommend it be retained.

690. The Panel notes that the Reporting Officers' recommendation was to reclassify the default status of this rule from non-complying, as notified, to discretionary. The Reporting Officers and Mr Lile (as recorded in the JWS) agree that having a discretionary status allows for complete assessment of a proposal, including its suitability for conditions in and around significant electricity distribution lines. A discretionary status recognises some, but not all, activities will be acceptable in these locations.

691. In contrast, a non-complying status, as requested by Mr Kennedy, requires an assessment under the gateway test of RMA s104D. While the Panel acknowledges that this level of protection may not be required, particularly given that the NPSET does not apply to significant electricity distribution lines, the notified status is non-complying and no submitter has actually sought to change that status and indeed Westpower have sought it be retained and subsequently provided for in the non-complying rules. Put simply we do not consider there is scope to amend the notified non-complying status.

692. The Panel therefore recommends amending Rule ENG-R6, as shown in Attachment 1 of the Reporting Officers' Reply but that the status remain non-complying.

ENG-R7 Buildings, Structures, and Activities within the National Grid Yard

693. ENG-R7 provides for limited activities within the National Grid Yard as a permitted activity. Several submitters requested amendments to the standards to increase the range of permitted activities.

694. The Panel accepts the Reporting Officers recommendation to add a clause (1)(v) to the standards to exclude sensitive activities, as sought by Transpower (S299.046). However, the Panel considers the wording of clause (1)(iv) can be simplified by replacing '*Agriculture, pastoral/livestock farming, dairying and horticulture activities*' with '*Agriculture and horticulture activities*'.

695. The Panel accepts the Reporting Officer's recommendation to amend clause (1)(iii) as supported by Ms Whitney and considers that these amendments should also be made as a consequential change to clause (2)(iii)(a) for consistency.

696. The Panel considers that the NPSET provides sufficient policy direction to justify maintaining a non-complying activity status.

697. The Panel noted that the s42A Report did not address Poutini Ngāi Tahu's request (S620.086) to correct the spelling of '*height*' in clause (2)(iii)(b). The Panel accepts this submission point and recommends this is corrected.

698. The Panel recommends amending Rule ENG-R7, as shown in Attachment 1 of the Reporting Officers' Reply, with the minor amendments in the recommendation box below.

ENG-R8 Installation of Electricity Cabinets

699. This Rule deals with the installation of electricity cabinets. The key issue was the appropriate limit for the maximum dimensions of a cabinet for a permitted activity status.

700. BDC requested adding 10m^2. The Panel agrees with the Reporting Officers that this footprint, combined with the maximum 2m height, is too permissive for a permitted activity given the potential for adverse effects. The Panel considers a maximum area of 1.4m^2 appropriate, given that this is consistent with the NESTF, as recommended by the Reporting Officers.

701. The Panel has considered the concern raised by Mr Kennedy that BDC did not seek 1.4m^2 and questioned the scope for this amendment. We consider the BDC submission provides scope to consider an appropriate maximum cabinet size limit, and that it is open to the Panel to

determine what size is appropriate. The Panel is satisfied that other parties could make further submissions in relation to a maximum size limit and had the opportunity to respond to the limit proposed in the s42A Report.

702. The Panel notes that the Reporting Officers recommended 1.4m^2, which Mr Lile (for BEL) supported.

703. The Panel notes that where compliance is not achieved, the default activity status is restricted discretionary under Rule ENG-R13. We consider this to be appropriate to enable oversize cabinets and their effects to be assessed against the limited matters provided within Rule ENG-13. We consider this approach does not pose an unreasonable barrier for installing new, larger electricity cabinets and provides an appropriate balance.

704. The Panel recommends amending Rule ENG-R8, as shown in Attachment 1 of the Reporting Officers' Reply.

ENG – R9 Temporary Activities

705. The Panel agree with the Reporting Officers' recommendation to make wording changes to the standards to provide greater certainty as to what the scope and extent of '*temporary*' means within the context of the Rule and to provide for the use of backup generators.

706. The Panel is satisfied that the Reporting Officers have addressed concerns that back-up generators required in emergencies would inadvertently fall under Rule ENG-RX9 and be classified as non-complying activities if these are non-renewable energy activities. We received evidence regarding the operational duration of these generators and concur with the Reporting Officers' recommended wording, which allows generator use for testing, routine or scheduled maintenance, and emergencies.

707. The Panel consider the proposed new clause (4) provides appropriate limits for temporary activities and recognises this may be a longer period for emergencies. We note that the default position for activities not meeting INF-R9 is INF-R14 and in terms of standards to be met by back-up generators (hours and times of day) we consider as a consequential amendment there needs to be a further matter of discretion added to INF-R14 to address this. We have therefore recommended the following:

> *g. The level, hours of operation, duration and nature of the noise and any effects on the health and wellbeing of people*

708. The Panel agrees with the Reporting Officers that one month is a reasonable timeframe for removing any structure and rehabilitating the site after a temporary activity ceases.

709. The Panel recommends amending Rule ENG-R9 as shown below.

ENG – R10 Environmental Monitoring and Meteorological Facilities Associated with Energy Activities

710. While the Panel notes the reasoning provided by the Reporting Officers for retaining ENG-R10, we consider BDC has a point in that there is provision for environmental monitoring and

meteorological facilities within the Infrastructure Chapter and we see no need for the duplication and indeed the confusion that two separate rules will make.

711. The Panel agrees with the Reporting Officers that the Overview states that "*the Infrastructure Chapter rules and the Area Specific Provisions (Zone chapters) do not apply to energy activities".* However, we note that ENG-R10 actually requires that the "*all performance standards in Rule INF-R1 are complied with*" which seems in our view to contradict the Overview [emphasis added].

712. The Panel agrees with BDC that ENG-R10 is not necessary (and therefore proposed ENG-RX6 is not necessary) and that there is no specific need to single out environmental monitoring and meteorological facilities specifically for energy. We consider any such provision is better placed within the Infrastructure Chapter.

713. The Panel notes that BDC also have a submission on INF-R5 and INF-R6 requesting that no height or area standards are imposed and that the two rules be combined. We consider this provides sufficient scope to address the concerns of Manawa with regards the issue of height and we note that the default status for both INF-R4 and INF-R5 is already restricted discretionary which addresses their concerns on activity status.

ENG – RX1 Construction, Operation, Maintenance, Repairs, and Installation of Below Ground Energy Activities

714. The s42A Reporting Officers recommended accepting the BDC's submission (S538.023), which sought to include a new permitted activity rule for below-ground energy activities. They considered this addressed a gap in the notified Plan provisions.

715. The Panel notes Mr Kennedy's concern that Westpower would be required to place all new distribution lines underground due to the rule framework treating new lines as non-complying activities. While we note that the construction of new distribution lines and transmission lines is recommended to be permitted under new Rule ENG-RX3 which would address Mr Kennedy's concerns, we agree that ENG-RX1 could create uncertainty, and we are not convinced by its necessity.

716. The Panel is of the view that simply referencing '*above and below ground*' within the relevant rule headings would address BDC's concerns. While we acknowledge that almost all the standards will not be applicable to underground distribution and transmission facilities the amendments proposed will ensure a pathway for such facilities and we note that the earthworks provisions would still apply.

717. The Panel therefore recommends that proposed Rule ENG-RX1 is not include in the Plan and that amendments are made to Rules ENG-R4, ENG-RX3, ENG-R12 and ENG-RX4 to refer to both above and below ground distribution and transmission lines.

ENG – RX3 Construction of new distribution lines and transmission lines

718. New Rule ENG-RX3, as recommended in Attachment 1 of the Reply, permits the construction of new distribution lines and transmission lines subject to performance standards.

719. The JWS records disagreement between the planning experts on whether the rule should be amended to remove *'distribution lines'* because it is not subject to the NPSET. It records that Mr Kennedy (for Westpower) and Mr Lile (for BEL) considered *'distribution lines'* should stay in.

720. The Panel accepts and relies on Ms Whitney's evidence, which established the necessity for this new rule and its discretionary default status for constructing distribution lines, as a permitted activity. The Panel notes that the reporting officer's recommendation differs from Ms Whitney's in that it includes '*transmission lines*'. The Panel prefers the amendments recommended by Ms Whitney to amend ENG-RX3 by removing transmission lines and adding a new discretionary activity rule for new National Grid Assets and transmission lines not otherwise provided for, which is discussed below.

721. The Panel recommends amending Rule ENG-RX3, as shown in Attachment 1 of the Reporting Officers' Reply, with the minor correction shown in the recommendation box below

Other Rules

722. The Panel notes that three other permitted activity rules detailed in Attachment 2 to the Position Statement were not included within Attachment 1 of the Reporting Officers' Reply because those rules were no longer required based on evidence and statements received at the hearing, and the updated Reporting Officers' recommendations.

723. The Panel accepts the Reporting Officers' recommendation to reject the submissions seeking further new permitted activity rules. We are satisfied that the new rules recommended in Attachment 1 of the Reply address any gaps in the rule framework.

Restricted Discretionary Activities

ENG - R11 Substation (Zone and Distribution) Not Meeting Permitted Activity Standards

724. The Panel agree with the Reporting Officers' recommendation that clause (a) '*Landscape measures'* is unclear and should be replaced. The Panel notes at this point that as part of a Plan wide amendment stemming from a submission by Manawa (S438.100) reference to 'landscape measures' and 'landscape treatment' have been removed from the matters of discretion and replaced with 'measures to mitigate landscape effects' because this provides clarity. Similarly, we also support the inclusion of '*functional*" in clause (b).

725. The Panel agree with the Reporting Officers' recommendation to delete clause (e) because discharges are a matter for the Regional Council and do not have a place within a district plan.

726. The Panel agree with deleting the word '*significant'* from clause (g) because this aligns with other plan provisions and acknowledges that all adverse effects must be assessed. The Panel also agrees with the inclusion of references in clause (g) to '*areas and values listed in Schedules 1-8'* because this will provide more explicit guidance to plan users, maintain consistency with other provisions, and ensure appropriate consideration of significant values and areas identified, including SASM.

727. The Panel asked other planners for their views on Ms Pull's request to include Poutini Ngāi Tahu's values as a matter of discretion for Rules ENG-R11 to ENG-R14. Those who responded noted concerns about certainty relating to the potential breadth of issues to be considered and uncertainty as to what values existed where.

728. The Panel agree with the Reporting Officers' recommendation not to add an additional matter of discretion '*Poutini Ngai Tahu values'*, as requested by Ms Pull. Having reviewed the submission we consider that there is no scope available to us to implement what is being sought by Poutini Ngāi Tahu in that submission given it restricted to incorporating reference to Appendix Ten. We have considered this submission in relation to rules ENG R11 to ENG R14 and determine that the approach should be consistent Plan wide. We consider it is appropriate to include Appendix Ten in all four of the rules as requested. We also note new rules ENG-RX4, ENG-RX5 and RX6 includes reference to Schedules One to Eight and consider Appendix 10 Ten should be included as a consequential amendment.

729. The Panel notes the Addendum Report changed the s42A Report recommendation and accepted Transpower's (S299.048) request to add '*or not otherwise provided for*' to the end of the heading. We note this was not included in either Attachment 2 of the Addendum or Attachment 1 of the Reply. The Panel accepts this is an oversight and recommends adding the words to the heading as requested but has also included "*in another rule*" to make it clear and deleted the words Permitted Activity which are considered to be unnecessary. However, given this is the only rule applying to substations, we consider there should be a broad matter of discretion relating to adverse effects generally and not only those identified in Schedules One - Eight to give effect to the RMA.

730. Forest & Bird (S560.126), opposed by Westpower (FS22.0242), request changes to the matters of discretion to include adverse effects on overlay matters, areas meeting the significance criteria in Appendix 1 of the RPS, and NZCPS Policy 11, Policy 13 and Policy 15 matters. The Panel considers this matter can be addressed by ensuring that the effects on the underlying zoning are assessed where activities are of a larger scale. Accordingly, we have amended the relevant rules to address this.

731. The Panel notes that the concerns raised in Ms Whitney's evidence regarding ENG-11 are addressed by the recommended changes to the definition of Substation (Zone).

732. The Panel recommends amending ENG-R11, as shown in Attachment 1 of the Reporting Officers' Reply, with the additional changes in the recommendation box below.

ENG-R12 Operation, maintenance, repair and upgrading of distribution lines and transmission lines not managed by the National Environmental Standard for Electricity Transmission Activities or not meeting Permitted Activity standards

733. The Panel accepts the evidence of Ms Whitney and the Reporting Officers' recommended amendments to ENG-R12 to clarify that the rule applies to distribution and transmission lines not managed by the NESETA. We are satisfied these changes are consistent with the NPSET because the higher order direction distinguishes between different distribution lines and transmission lines.

734. The Panel accepts consequential amendments to the provision to provide consistency across the rules.

735. The Panel recommends amending Rule ENG-R12, as shown in Attachment 1 of the Reporting Officers' Reply.

ENG-R13 Installation of electricity cabinets not meeting Permitted Activity Standards

736. The Panel accepts consequential amendments to the provision to provide consistency across the rules.

737. The Panel recommends amending Rule ENG-R13, as shown in Attachment 1 of the Reporting Officers' Reply.

ENG – R14 The construction, operation, maintenance, repair and upgrading of small and community scale renewable electricity generation not meeting permitted activity standards Construction of distribution lines and transmission lines not meeting Permitted Activity Standards

738. The Panel accepts the Reporting Officers' recommendation to ensure the Rule covered repairs.

739. This rule also attracted discussion of minor upgrades and upgrading. The submission also sought to include the word 'small' to particularise the scale of community renewable electricity generation and distinguish it from 'large scale'. The Reporting Officers' recommendation was to deal with that issue via the definitions and by amending '*upgrade*' to '*upgrading*'.

740. The Panel accepts the Reporting Officers recommendation to amend clause (c) to include recognition of the benefits to the local and regional communities and resilience for the West Coast.

741. The Panel notes the Reporting Officers recommendation to clause (d) to add '*location, technical'* for consistency with other rules; and to replace *'landscape measures*'. However we Panel notes at this point that as part of a Plan wide amendment stemming from a submission by Manawa (S438.100) reference to 'landscape measures' and 'landscape treatment' have been removed from the matters of discretion and replaced with 'measures to mitigate landscape effects'.

742. Finally, the Panel accepts that the clause (f) requires consequential amendments to delete the word '*significant'* and add the words '*areas and values listed in Schedules One to Eight'.*

743. The Panel recommends amending Rule ENG-R14 as shown below.

ENG – RX4 Renewable energy investigation

744. The Panel note that the s42A report initially recommended, in response to Manawa's submission to delete ENG-14, that '*renewable energy investigation activity*' be deleted from the rule heading of ENG-R10 as it could be captured by temporary energy activities or energy activities generally. Subsequently, in the Addendum it was recommended that Renewable

energy investigation be introduced as a restricted discretionary activity, however there was no reasoning provided for that amendment.

745. As noted by Ms Styles energy investigation would most commonly be meteorological measurements which would be covered by ENG-R10.

746. Given other amendments, in particular our recommendation to delete ENG-R10 and rely upon rules in the Infrastructure Chapter, the Panel considers proposed ENG–RX4 is also not necessary, and we recommend it not be included in the Plan.

ENG-RX5 Temporary energy activities not meeting Permitted Activity standards

747. The Reporting Officers have proposed to separate out '*Temporary energy activities*' from ENG-R14 into a new restricted discretionary rule on their own (ENG-RX5). The Panel have been unable to establish any reason for this amendment within the material provided by the Reporting Officers, and we note the change simply appeared in their position paper dated 8th February 2024 without any explanation. Given that the assessment matters for ENG-R14 and ENG-RX5 duplicate each other the Panel see no reason for making this amendment and recommend that '*Temporary energy activities*' remain a part of ENG-R14.

Discretionary Activities

ENG–R15 New large scale renewable electricity generation activity and large-scale renewable electricity generation activity excluding wind not meeting Permitted Activity standards.

748. The Panel accepts the Reporting Officers' recommendation to amend ENG-R15 as a consequential amendment to the recommendation to amend ENG-R5 to apply to renewable electricity generation activities generally by deleting '*small scale'* and requiring compliance with the relevant zone building and structure height and scale performance standards. The Panel considers having one rule for new and existing large-scale REG, including wind, is appropriate.

749. The Panel considered Ms Styles evidence that upgrades (that are not minor) and new REG activities (that are not domestic in scale) should be treated as a restricted discretionary activity. While we have some sympathy for that approach, we consider the matters of discretion Ms Styles proposed are somewhat broad in their nature and this leads us to a conclusion that a discretionary status would be more appropriate. We acknowledge Ms Styles supports this as an alternative.

750. The Panel accepts the recommended wording for ENG-R15, shown in Attachment 1 of the Reporting Officers' Reply, but considers this can be simplified as follows:

> *New **and existing** large scale renewable electricity generation activity ~~and Large-scale renewable electricity generation activity excluding wind~~ not meeting Permitted Activity standards*

ENG-R16 Large-scale renewable electricity generation activity excluding wind

751. The Panel accepts the Reporting Officers' recommendation to delete ENG-R16 as a consequential amendment to the recommendation to amend ENG-R15 to include all large-scale renewable energy generation activities.

ENG-RX4 Construction of distribution lines and transmission lines not meeting Permitted Activity Standards

752. The Panel accepts the Reporting Officers' recommendation to a new rule ENG-RX4 at a discretionary activity status to address the construction of distribution lines not meeting the permitted standards. However, as addressed above in ENG-RX3 we agree with Ms Whitney that transmission lines should not be included in this rule and should be addressed separately.

ENG-RXX4 The construction of National Grid assets and transmission lines, not otherwise provided for

753. The Panel accepts Ms Whitney's evidence concerning the need for a new discretionary activity rule for new National Grid assets, including transmission lines, which is not otherwise provided for in the rules. This is a consequential amendment related to amending ENG-RX3 to only apply to distribution lines.

754. The Reporting Officers did not specifically address this; however, the Panel accepts Ms Whitney's evidence that the National Grid assets and transmission lines should have a separate discretionary activity rule given the direction of the NPSET.

755. The Panel recommends the following wording for new Rule ENG-RXX, based on Ms Whitney's version but with the inclusion of "*in another rule*" for clarity:

> ***The construction of National Grid assets, including transmission lines, not otherwise provided for in another rule.***
>
> ***Activity Status: Discretionary***

Non-Complying Activities

ENG - R17 Any energy activity which does not comply with New Zealand Standards NZS6808:2010 Acoustics - Wind Farm Noise

756. The Panel accepts the Reporting Officers' recommendation to delete ENG-R17 as a consequential amendment to the recommendation to amend ENG-R15 to include all large-scale renewable energy generation activities. The Panel is satisfied that the new Rule ENG-RX11 addresses any gap created by this deletion.

ENG - R18 Any energy activity generating electric or magnetic fields, that does not comply with Rule ENG - R1

757. The Panel recommend that ENG-R18 remain as notified.

ENG - R19 Activities in and around the National Grid Yard and between the Significant Electricity Transmission Lines, that do not comply with Permitted Activity standards.

758. The Panel accepts the evidence of Ms Whitney and the Reporting Officers that the policy direction of the NPSET supports a default activity status of non-complying to protect the National Grid. We consider that where buildings, structures and activities within the National Grid Yard cannot achieve compliance with permitted activity Rule ENG-R7, it is appropriate to consider the proposal under the gateway tests in RMA s104D.

759. The Panel noted the Reporting Officers' recommended amendments do not quite reflect the amendment sought by Transpower's (S299.049) to replace '*in and around*' with '*within*' the National Grid Yard. The Panel recommends making this correction. We also consider adding the words '*or not otherwise provided for*' will clarify the situation stemming from ENG-R7.

760. The Panel recommends amending Rule ENG-R19, as shown in Attachment 1 of the Reporting Officers' Reply, with minor amendments we now propose shown in the recommendation box.

ENG – R20 Energy Activities that do not meet Rules ENG - R12, ENG - R13 or ENG - R14.

761. Given the errors the Panel has identified in ENG-R1 we consider that reference to ENG-R12, ENG-R13 and ENG R14 in ENG-R20 is no longer necessary and we recommend it is deleted.

ENG – RX9 Non-renewable Electricity Generation Activities

762. The Panel accepts the Reporting Officers' recommendation to include new Rule ENG-RX to make non-renewable electricity generation activities a non-complying activity as requested by Transpower Limited (S299.051) (and supported by NZEL FS127.037). We agree with Ms Whitney that non-renewable electricity generation activities should not be included with REG activities. Given our findings in relation to the ENG Policies above, we consider it appropriate for any new non-renewable electricity generation activities to be considered under the gateway tests in RMA s104D, as a non-complying activity.

763. The Panel considers it appropriate to include '*Note: This rule shall not apply to backup generators that do not comply with permitted activity standards of ENG-R9*' as a consequential amendment to address concerns raised about the use of backup generators, particularly in emergency situations.

764. The Panel recommends adding new Rule ENG-RX9, as shown in Attachment 1 of the Reporting Officers' Reply.

ENG – RX10 Activities in and around Significant Electricity Distribution Lines, that do not comply with Permitted Activity standards

765. This new rule proposed by Westpower deals with activities in and around Significant Electricity Distribution Lines that do not comply with Permitted Activity standards. The issue was whether the activity status should be discretionary or non-complying. As discussed above, the Panel considers there is no scope to amend the status shown in ENG-R6 to discretionary from non-complying. The Panel recommends ENG-RX10 is a necessary insertion to address a gap in the provisions.

ENG – RX11 Any Energy Activity which is not a Permitted, Controlled, Restricted Discretionary or Discretionary Activity

766. The Reporting Officer's recommended a 'catch-all' non-complying activity status for Energy Activities not otherwise identified as Permitted, Controlled, Restricted Discretionary or Discretionary Activities. The amendment stems from a submission by Transpower, however the Panel notes, as pointed out by Ms Whitney in her evidence, that the submission sought a default discretionary rule for energy activities not otherwise provided for. While Ms Whitney said that there was no commentary provided on Transpower's submission, the Panel notes that the s42A Report at paragraph 321 did address the submission and recommended it be accepted and to ensure consistency across the Energy, Infrastructure and Transportation chapters recommended that the same rule be included in the Infrastructure and Transportation chapters.

767. What is unclear to the Panel is why the default position for this 'catch-all' rule became non-complying in the s42A Report. In our view there is no submission seeking a non-complying status and it is therefore beyond scope to include one. Further, there seems to be no justification provided for such an approach and we agree with Ms Whitney that a non-complying activity status does not give effect to the NPSET or the RPS.

768. The Panel recommends that a catch-all rule for Energy Activities be introduced as Rule ENG-RX11, as a Discretionary Activity. We consider the rule title can be simplified to "*Any Energy Activity not provided for in another rule*".

S32AA Evaluation for Rules

769. Section 32AA of the RMA requires a further evaluation to be undertaken in accordance with s32(1)-(4) if any amendment has been made to the proposal (in this case, TTPP) since the original s32 evaluation report was completed. Section 32AA requires that the evaluation be undertaken in a level of detail that corresponds to the scale and significance of the changes.

770. The Panel considers that the new and amended Rules will implement the policies and that they are the most appropriate when measured against the objectives considered as a whole. We consider the amended Rules efficient and effective for achieving the objectives.

Hearing Panel's Recommendation

771. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommends the following changes to the **Energy Rules:**

Permitted Activities	
ENG - R1	**Energy Permitted Activity Performance Standards**
Activity Status Permitted Where: 1. Electric and Magnetic fields – An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007.	

Activity status where compliance not achieved: Non-complying	
ENG - R2	**Substations (Zone)**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; and 2. ~~This is t~~ [136]**T**he operation, maintenance, repair and upgrade **is** of an existing substation (zone) where any upgrades are undertaken within existing switchyards or buildings, in any zone; or 3. ~~This is a~~[137]**A** new substation (zone) **is** ~~or upgrade to an existing substation (zone)~~:[138] i. Located in an Industrial Zone; and ii. The substation will be visually screened from the road and any **existing**[139] residential building **located adjacent to the Industrial Zone**[140] by fencing and / or landscaping.	
Activity status where compliance not achieved: Restricted Discretionary	
ENG – R3	**Substations (Distribution)**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; and 2. ~~This is~~ t [141]**T**he maintenance, repair, upgrade and operation **is**[142] of an existing distribution substation; or 3. ~~This is a~~ **A**ny[143] new distribution substation.	
Activity status where compliance not achieved: Restricted Discretionary	
ENG – R4	**~~Operating existing transmission and distribution lines, new distribution and transmission lines, maintaining, minor upgrading, strengthening, upgrading and replacing support structures and foundations~~ The operation, maintenance, repair and upgrading of distribution lines and 110kv Dobson Tee A line** [144] **above and below ground**[145] **not managed by the National Environmental Standard for Electricity Transmission Activities**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; **and** 2. Any realignment, relocation or replacement of a network utility pole, pipe, tower, and structure, ~~building or minor utility structure~~ is within 5m of the alignment or location of the original existing pole, tower, **and** structure, ~~building or minor utility structure~~;[146]

ENG – R7	Buildings, Structures and Activities within the National Grid Yard

Activity Status Permitted
Where:

1. These are the following activities where they are also ~~P~~**p**ermitted[162] within the relevant zone and overlay:
   i. Fences less than 2.5m high;
   ii. Alterations and additions to existing buildings and structures used for sensitive activities that do not involve an increase in the building or structure height or footprint;
   iii. Infrastructure undertaken by a Network Utility **operation** ~~Operator within a transport corridor~~ or any part of electricity **generation** ~~infrastructure~~ that connects the National Grid;
   iv. ~~Non - habitable farm or horticultural buildings or structures excluding commercial greenhouses, protective canopies, wintering barns, produce packing facilities, dairy and milking sheds~~ **Agriculture and horticulture activities, and associated non-habitable buildings and structures (meaning they are not usually occupied but may be accessed from time to time), excluding:**
   a. **Buildings and structures used for intensive indoor primary production;**
   b. **Dairy and milking sheds;**
   c. **Commercial greenhouses;**
   d. **Produce packing facilities;**
   e. **Protective canopies; and**
   f. **Wintering barns.** [163]
   v. **The activity is not a sensitive activity**; [164]
   vi. An accessory building or structure associated with an existing residential activity that is less than 10m^2 and 2.5m in height;
2. All buildings, structures and activities permitted by 1. above must ~~have~~[165]:
   i. **Have a** ~~A~~[166] minimum vertical clearance of at least 10m below the lowest point of a conductor
   - or meet the electrical distances required by NZECP 34: 2001 under all transmission line and building operation conditions;
   ii. Not result in the loss of vehicle access to a National Grid support structure;
   iii. Be located at least 12 metres from the outer visible edge of a foundation of a National Grid transmission support structure ~~National Grid Yard transmission support~~ except where it is:
      a. Infrastructure undertaken by a network utility **operation** ~~operator~~ or any part of electricity **generation** ~~infrastructure~~ that connects the National Grid;
      b. A fence not exceeding 2.5m in height**t**[167] that is located at least:
         i. 6m from the outer visible edge of a foundation of a National Grid transmission line tower; ~~or~~**and**[168]
         ii. 5m from the outer visible edge of a foundation of a National Grid

5. INFRASTRUCTURE

5.1. Infrastructure – General/Whole Chapter

Submissions and Further Submissions

772. The s42A Report identified five submission points and two further submission points relating to general matters/whole INF Chapter.

773. David Ellerm (S581.012) supported the Energy, Infrastructure and Transport Chapters as notified, while the Director General (S602.036) was neutral on the INF Chapter as notified because they did not affect priority conservation values, biodiversity values, or their interests.

774. David Ellerm (S581.065) also sought the identification of the Te Kinga Potable Supply Bore, located on Lot 4 DP 3957, and the development of a Te Kinga Groundwater Source Protection Zone. Davis Ogilvie & Partners Ltd (FS154) and Cashmere Bay Dairy Ltd (FS142) opposed this amendment as there is no provision under the National Planning Standards for a new *'Groundwater Source Protection Zone'*. They considered that no scientific evidence had been provided to indicate that groundwater flows towards this privately owned bore, and water supply sources are already adequately protected by the WCRC (i.e., Rule 79 of the Regional Land and Water Plan) and the NES-SHDW.

775. Buller Conservation Group (S552.010) and Frida Inta (S553.010) sought to amend the infrastructure chapter to include general municipal waste and management.

[208] Consequential amendment stemming from errors identified in ENG-R1
[209] Manawa S438.057
[210] Consequential amendment Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.021
[211] Westpower S547.119

Section 42A Reports

776. The Reporting Officers, in recommending the rejection of David Ellerm's submission, considered it was out of scope of what can be considered within the pTTPP under the RMA and outside of the regulatory function prescribed to a territorial authority under section 31 of the RMA.

777. In terms of the Buller Conservation Group and Frida Inta submissions, the Reporting Officers considered they provided insufficient detail, and they encouraged clarification at the hearing.

Hearing and Submitter Evidence/Statements

778. Frida Inta, in responding to the s42A Report, considered that waste management should be provided for within the pTTPP because it was an issue for every household. She was unsure where the best place within the Plan was to locate provisions on waste. She also considered that the Plan should encourage zero waste and encourage the reducing, reusing and recycling.

Reporting Officer Reply Evidence

779. General matters/whole chapter issues did not receive further consideration in the Reply

Hearing Panel's Evaluation

780. The Panel agrees that the submission by David Ellerm is out of scope for the reasons advanced by the Reporting Officers, Davis Ogilvie & Partners Ltd and Cashmere Bay Dairy Ltd.

781. Regarding Ms Inta's views on waste management, we consider the focus of the Infrastructure Chapter is at a higher level than the more detailed and specific approach she requested.

Hearing Panel's Recommendation

782. The Panel does not recommend any changes in response to submissions.

5.2. Definitions

Submissions and Further Submissions

783. There were several submitters[212] and further submitters who submitted on various definitions. The submission points and further submission points were summarised in the s42A Report at paragraphs 345 to 357. The Panel has considered the relevant submissions and further submissions received and adopted the summaries provided within the s42A Report.

784. Submitters supported notified definitions, seeking retention; others sought amendments, and others sought the addition of new definitions, notably '*Land transport infrastructure*' and '*telecommunications kiosk*.'

[212] S442.003, S442.006, S442.015, S476.004, S476.007, S476.011, FS110.007, S478.06, S581.007, FS222.069, S538.051, S538.052, S488.001, S608.507, S608.514, S608.516, S608.517, S608.520, S608.521, S608.522

785. We record submissions and evidence were received in the context of the Energy Chapter regarding the definition of '*minor upgrades* and *upgrading'*. This matter is also relevant to the Infrastructure Chapter, as '*upgrade'* is used within the INF rules. We discuss this issue when considering the Reply below.

Section 42A Report

786. David Ellerm (S581.007) sought a new definition of '*infrastructure*'. Westpower (FS222.069) opposed this submission because '*infrastructure'* was already defined in the pTTPP. The Reporting Officers agreed with Westpower and did not support David Ellerm's submission request.

787. WCRC (S488.001) sought the insertion of a definition of '*resilience infrastructure'* in alignment with the Infrastructure Funding and Financing Act 2020. The Reporting Officers did not support the relief sought as this is appropriately provided for by the '*natural hazard mitigation structure*' definition within the pTTPP.

788. GDC (S608.512) sought to amend the definition of '*wastewater'* to include the generation of greywater or blackwater. They also sought to amend the definition of '*height'* to include the specified reference points from which height would be measured i.e. existing ground level.

789. The Reporting Officers rejected the relief sought because the National Planning Standards specify the definition of '*wastewater'* and '*height'*, and following mandatory direction 14, these definitions may not be amended.

790. BDC (S538.007, S538.051) sought a definition to be provided for '*telecommunication kiosk'*, as follows:

> *means any structure intended for public use to facilitate telecommunications and includes boxes or booths for telephone, video or internet services.*

791. The Reporting Officers supported the relief sought, as they considered this was a unique term that may not be familiar to a layperson.

792. BDC (S538.008, S538.052) and GDC (S608.516) sought a definition to be provided for '*small cell utility'*. The Reporting Officers rejected the relief sought as a small cell utility was provided for and defined by the NESTF, and in their opinion, it was unnecessary to duplicate this definition.

793. BDC (S538.053) sought a definition to be provided for '*omnidirectional whip'*. The Reporting Officers rejected the relief sought as the NESTF does not refer to that term.

794. GDC (S608.517) sought a definition for '*Land Transport Corridor',* which was referred to once in under INF-R12. Considering the one instance of use, the Reporting Officers recommend amending INF-R12 to remove it and replace it with *'within legal road boundaries'* to be consistent with the pTTPP overall.

795. KiwiRail (S442.004) sought a definition be provided for '*Land Transport Infrastructure'* to ensure the pTTPP is interpreted correctly, as follows:

> means the infrastructure, goods and services facilitating transport on land by any means. This includes coastal shipping and all fixed components of a transportation system, including roadways and bridges, railways, ports, cycle trails and other physical elements.

796. The Reporting Officers agreed that a definition for '*land transport infrastructure'* should be included to delineate between the Infrastructure and Transport chapters. However, they did not support the inclusion of coastal shipping because they considered this was not related to land and '*goods and services'* was too broad a term. The Reporting Officers recommended the following definition:

> Any infrastructure, building, equipment or devices that support the movement of people and goods by land, including:
>
> (a) Cycle facilities including cycleways, cycle parking, cycle hire stations and cycle maintenance stands;
>
> (b) Pedestrian facilities and accessways, including footpaths, footways and foot bridges;
>
> (c) Railway tracks, bridges, tunnels, signalling, access tracks, retaining walls and facilities;
>
> (d) Roads including carriageways, pavements, bridges, tunnels, retaining walls, underpasses, overpasses, verge and berms;
>
> (e) Lighting, signals, signs and control structures and devices associated with intelligent transport systems including vehicle detection systems (electronic vehicle identification and infra-red vehicle occupancy counters), incident detection, emergency telephones, cables and ducting;
>
> (f) Safety devices including hand rails, bollards, cameras, road markings, rumble strips, barriers, fences, speed tables and speed cushions and traffic separators;
>
> (g) Other traffic control devices including traffic islands, level crossings, pedestrian crossings, roundabouts and intersection controls, traffic and cycle. monitoring devices;
>
> (h) Parking control devices;
>
> (i) Site access including vehicle crossings;
>
> (j) Street and rail furniture, artworks, passenger shelters and ticketing and tolling facilities;
>
> (k) Ancillary equipment and structures associated with public transport systems including seats, shelters, real time information systems and ticketing facilities, bicycle storage and cabinets; and
>
> (l) Stormwater management facilities, ventilation structures, drainage devices and erosion control devices.

797. Westpower (S547.028) sought an advice note be added to clause (d) of the '*Infrastructure'* definition to alert plan users to the fact that electricity activities are provided for in the Energy Chapter and that reference should be made to the '*Energy Activities'* definition in that regard. The Reporting Officers rejected this request because they considered the pTTPP is intended to be read in its entirety, and these chapters would be assessed where required.

798. NZDF (S519.003) sought to amend the definition of '*infrastructure*' to include '*defence facilities'*, as the NZDF is undertaking a nationwide project to ensure strategic defence facilities and infrastructure are appropriately recognised and provided for in district plans. The

Reporting Officers agreed that defence facilities should be provided for; however, they did not support the amendment to the *'infrastructure'* definition because this would be inconsistent with section 2 of the RMA, which defines '*infrastructure*'. They noted that providing for infrastructure and defence facilities within the INF Chapter, where applicable would be appropriate. They also noted that defence facilities were not excluded from the current provisions, with the Temporary Activities Chapter also providing for the activities described by the NZDF.

799. For completeness, the Panel note that Mr Kennedy, in his evidence considered the Westpower submission points, which were referenced in the recommendations summary as 'rejected', were not considered in the s42A Report's text. We consider the issue concerning *Infrastructure* is addressed in the s42A Report, as we have noted above, and the issue relating to '*Network Utility Operator'* is addressed in the Addendum Report (paragraphs 63-64).

Hearing and Submitter Evidence/Statements

800. Having considered the s42A Report recommendation relating to a new definition for '*land transport infrastructure'*, Ms Grinlinton-Hancock for KiwiRail recorded in her tabled statement that coastal shipping should be included within the definition because KiwiRail's relief was based on the definition of '*Land Transport and Infrastructure'* within the West Coast Regional Land Transport Plan 2021-2031. She stated that coastal shipping required land-based infrastructure, and she therefore considered it important that this reference was included within the definition.

801. Ms Inta made comments on some of the definitions however, the Panel notes she did not make any submission on these definitions. Similarly, Ms Pull commented on definitions, but we note Poutini Ngāi Tahu did not submit on any definitions relevant to the INF Chapter.

802. Mr Kennedy focused on seeking to add an advice note to the definition of '*Infrastructure'* to assist plan users in navigating and interpreting the plan given the wide range of terms, definitions and provisions for similar activities.

803. NZDF in a tabled statement did not support the s42A Report recommendation. They noted that there is no requirement to limit what is defined as '*infrastructure*' in the pTTPP, to the definition of '*infrastructure*' in Section 2 of the RMA. They noted there are a number of plans across New Zealand (such as the Auckland Unitary Plan and the Selwyn District Plan) that have used the RMA definition of '*infrastructure*' as a base, and expanded the definition to include other infrastructure, such as defence facilities. NZDF noted that defence facilities are nationally and regionally significant, playing an important role in both military training and civil defence.

Reporting Officer Reply Evidence

804. The Reporting Officers did not support Mr Kennedy's proposed new advice note under the infrastructure definition, considering that it was the role and purpose of the "How the Plan Works" Chapter to provide navigation direction. They considered the Overview of both the Energy and Infrastructure chapters clarified the scope of each chapter. They recommended rejecting Westpower's submission, but provided the following wording if the Panel were to disagree with their recommendation:

Note:

Electricity activities are addressed in the Energy Activities Chapter of the Plan.

805. The Reporting Officers noted that the definition of '*Infrastructure'* as notified did not correctly reflect the RMA definition, as clause (k) of the definition reads:

> *k. facilities for the loading or unloading of cargo or passengers carried by sea, including a port related commercial undertaking as defined in section2(1) of the Port Companies Act 1988.*

Hearing Panel's Evaluation

806. For the reasons advanced by the Reporting Officers in their various reports, the Panel generally agree with the recommendations regarding amendments to the definitions relating to the Infrastructure Chapter.

807. The amendment to the definition of '*Infrastructure*' highlighted by the Reporting Officers in the Reply addresses an error in the notified Plan and we recommend this is corrected by including the missing clause (k) and making existing clause (k) clause (l) to reflect the RMA. In our view, adoption of the RMA definition within the Plan also addresses some of Ms Pull's concerns.

808. The Panel accepts there is no requirement for a definition of '*Land Transport Corridor*', as sought by GDC. While we acknowledge the Reporting Officers suggested amendment to INF-R12 may overcome the need for such a definition, we consider due to our recommendation in the Transport Chapter to include a definition of '*Transport Corridor*' it is more efficient and pragmatic to simply delete the word '*Land*' from INF-R12, which ensures that GDC's concerns are addressed.

809. The Panel agrees with the Reporting Officers conclusions in relation to the WCRC, GDC and BDC submissions on '*resilience infrastructure'*, '*wastewater*' and '*height*', '*small cell utility'* and '*omnidirectional whip'* respectively and recommends these be rejected. The Panel notes there is no definition of '*wastewater*' in the Interpretation Chapter under Part 1 of the Plan. The issue lies with the e-Plan as the word '*wastewater'* has been hyperlinked automatically to a definition because '*wastewater*' is a standard National Planning Standards definition. We understand this is to be corrected in the e-Plan and do not recommend any change.

810. The Panel agrees with BDC regarding the need for a definition of '*telecommunication kiosk*' and recommends it be included.

811. In relation to the KiwiRail submission seeking a definition for '*Land Transport Infrastructure*', the Panel acknowledges the definition provided by the Reporting Officers. We agree that a definition could clearly delineate between the Infrastructure and Transport chapters. We have also given consideration to the issue of coastal shipping raised by Ms Grinlinton-Hancock and the West Coast Regional Land Transport Plan 2021-2031. We note that the definition of '*Land Transport'* in that document means:

> *(a) transport on land by any means,*

(b) the infrastructure, goods and services facilitating that transport. The definition also includes coastal shipping.

812. The Panel notes that the TTPP has no jurisdiction in relation to coastal shipping itself, however, we consider Ms Grinlinton-Hancock has a point in relation to land-based infrastructure associated with coastal shipping. We therefore recommend that a definition for '*Land Trasport Infrastructure*' be included in the Plan and it be amended to be the same as the RMA definition to read as follows:

> Any infrastructure, building, equipment or devices that support the movement of people and goods by land **or water**, including:
>
> (m) Land based Port facilities

813. In relation to the NZDF submission, the Panel notes we have recommended that defence facilities are included in the definition of Regionally Significant Infrastructure, which addresses the concern raised.

814. The Panel disagrees with Mr Kennedy that a new advice note cross referencing the Energy Chapter is necessary.

Hearing Panel's Recommendation

815. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommend the following amendments to the **definitions**:

INFRASTRUCTURE	has the same meaning as in section 2 of the RMA (as set out below) means … k. **facilities for the loading or unloading of cargo or passengers carried by sea, including a port related commercial undertaking as defined in section 2(1) of the Port Companies Act 1988;** [213] **l.** anything described as a network utility operation in regulations made for the purposes of the definition of network utility operator in section 166.
TELECOMMUNICATION KIOSK	**means any structure intended for public use to facilitate telecommunications and includes boxes or booths for telephone, video or internet services.**[214]
LAND TRANSPORT INFRASTRUTURE	**Means any infrastructure, building, equipment or devices that support the movement of people and goods by land or water, including:**

[213] RMA First Schedule, clause 16
[214] Buller District Council S538.007 & S538.051

	(a) **Cycle facilities including cycleways, cycle parking, cycle hire stations and cycle maintenance stands;** **(b)** **Pedestrian facilities and accessways, including footpaths, footways and foot bridges;** **(c)** **Railway tracks, bridges, tunnels, signalling, access tracks, retaining walls and facilities;** **(d)** **Roads including carriageways, pavements, bridges, tunnels, retaining walls, underpasses, overpasses, verge and berms;** **(e)** **Lighting, signals, signs and control structures and devices associated with intelligent transport systems including vehicle detection systems (electronic vehicle identification and infra-red vehicle occupancy counters), incident detection, emergency telephones, cables and ducting;** **(f)** **Safety devices including hand rails, bollards, cameras, road markings, rumble strips, barriers, fences, speed tables and speed cushions and traffic separators;** **(g)** **Other traffic control devices including traffic islands, level crossings, pedestrian crossings, roundabouts and intersection controls, traffic and cycle monitoring devices;** **(h)** **Parking control devices;** **(i)** **Site access including vehicle crossings;** **(j)** **Street and rail furniture, artworks, passenger shelters and ticketing and tolling facilities;** **(k)** **Ancillary equipment and structures associated with public transport systems including seats, shelters, real time information systems and ticketing facilities, bicycle storage and cabinets;** **(l)** **Stormwater management facilities, ventilation structures, drainage devices and erosion control devices; and** **(m)** **Land based Port facilities.**

5.3. Overview

Submissions and Further Submissions

816. There were five submission points[215] received on the text of the Infrastructure Overview detailed in paragraphs 358 to 363 in the s42A Report. The Panel has considered the relevant

[215] S140.011, S299.052, S560.132, S560.463, S608.500, S663.007

submissions and further submissions received and adopted the summaries provided within the s42A Report.

Section 42A Reports

817. GDC (S608.500) sought the correction of grammatical errors, regarding the bullet point for transport ('*in an around*'). The Reporting Officers accepted this submission request for reasons of planning efficiency and accuracy.

818. GDC (S608.009) sought the Overview remove reference to '*Site or Area of Significance to Māori'* because it had requested to remove the overlay and have the sites reassessed. Poutini Ngāi Tahu (FS41.2) opposed this submission on the basis cross-referencing within the Plan was essential for clarity. As there are specific rules concerning infrastructure activities in the SASM Chapter, the Reporting Officers considered it was appropriate to retain the reference within the Overview.

819. Transpower (S299.052), Forest & Bird (S560.132), and Chorus NZ Ltd, Spark NZ Trading Ltd and Vodafone NZ Ltd (S663.007) sought clarification regarding the activities addressed within the INF Chapter to avoid confusion. Transpower specifically requested wording to ensure that National Grid activities are addressed in the Infrastructure Chapter. Chorus NZ Ltd, Spark NZ Trading Ltd and Vodafone NZ Ltd specifically requested wording to outline that the zone chapters do not apply. The Reporting Officers accepted the rationale provided by these submitters to amend the Overview to clarify the activities covered within the INF Chapter.

Hearing and Submitter Evidence/Statements

820. Forest & Bird had considered the Reporting Officers amended Overview wording but remained concerned that the scope of the chapter was still not clear because:

(a) The Overview refers to regionally significant infrastructure but does not explain what aspects of RSI are addressed in this chapter.

(b) The "*range of specified infrastructure*" addressed in the INF Chapter is not set out and can only be determined by subtracting the activities addressed in other chapters from the definition of '*Infrastructure*'.

(c) The definition for '*Energy activities*' remains uncertain and that definition is relied on to understand the scope of the Infrastructure Chapter.

821. Forest & Bird considered that the INF Overview needed to be written to explain the scope of the chapter and how it addresses the differences with the Energy Chapter using different terms. As the Panel understood it, the breadth of infrastructure captured by the term "*Energy activity*" and the scope of the INF Chapter were the concerns for Forest & Bird.

Hearing Panel's Evaluation

822. For the reasons advanced by the Reporting Officers, we recommend the Overview is amended as detailed below. We acknowledge the concerns of Forest and Bird and note that we have recommended a definition Regionally Significant Infrastructure be included in the Plan which

goes some way towards addressing those concerns. Further, we consider sufficient clarity has now been provided around '*specified infrastructure activities*' and '*Energy activities*'.

Hearing Panel's Recommendation

823. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommend the following changes to the **Infrastructure Overview**:

Infrastructure - Te Tūahanga

Overview

Infrastructure is critical to the social, cultural and economic wellbeing of people and communities, including providing for their health and safety, and has national, regional and local benefits. The West Coast Regional Policy Statement requires specific recognition and protection of regionally significant infrastructure.

While infrastructure is often seen as a necessary and normal part of urban and rural environments, it can also have adverse effects on surrounding land uses and the environment. The sustainable management of natural and physical resources requires a balance between the effects of different land uses.

However, infrastructure also needs to be protected, where possible, from encroachment by incompatible activities that may result in reverse sensitivity effects. Some infrastructure has specific operational and functional needs that need to be accommodated for its operation.

Infrastructure includes a range of structures, services and activities as defined in Definitions – Ngā Tautuhinga.[216] The Infrastructure Chapter contains the objectives, policies, rules for managing a range of specified Infrastructure activities**, such as three waters, telecommunications networks and radio communication networks**.[217] Port Activities are however managed in the Port Zone and Airport Activities are managed in the Airport Zone. The Infrastructure Chapter also does not apply to energy activities **nor National Grid activities**[218] as these are addressed in the Energy Chapter nor does it apply to Transport Activities that are addressed in the Transport Chapter.

The Area Specific Provisions (Zone chapters) do not apply to the Infrastructure activities managed in the Infrastructure chapter. The Overlay chapters and other District-Wide rules do apply where relevant.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-wide Matters chapters also contain provisions that may be relevant for infrastructure activities, including:

- **Transport** - the Transport chapter sets out the requirements for activities in and around transport corridors that may be relevant to infrastructure.
- **Overlay Chapters** - the Overlay Chapters have provisions in relation to Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and

[216] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.007
[217] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.007
[218] Transpower Limited S299.052

Landscape; Natural Character and Margins of Waterbodies; Natural Hazards; Historic Heritage, Notable Trees and the Coastal Environment. Where an infrastructure activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.

- **General District Wide Matters -** provisions in relation to Activities on the Surface of Water and Earthworks in particular may be relevant to infrastructure activities.
- **Subdivision** - The Subdivision chapter sets out the requirements for the development of new infrastructure and connections as part of subdivision activities.
- **Financial Contributions** - The Financial Contributions chapter sets out the requirements for contributions of costs for activities which impact on infrastructure.

5.4. Objectives

Objectives as a whole

Submissions and Further Submissions

824. Nine submissions were received on the Infrastructure objectives, as a whole. Several submitters supported the infrastructure objectives as notified and others requested amendments to some provisions.

825. These submissions are detailed in s42A Report at paragraphs 364 to 368. The Panel has considered the relevant submissions and further submissions received and adopts the summaries provided in the s42A Report.

Section 42A Reports

826. BDC (S538.040) sought that reference to '*utility'* was removed from the objectives and policies as the definition of *'infrastructure'* encompasses network utility operations, therefore, references to *'utility'* were unnecessary. The Reporting Officers agreed that using the term '*utility'* within the Infrastructure Chapter may result in uncertainty and potential for misinterpretation by plan users, as it is captured by the definition of *'infrastructure'*. They supported BDC and RNZ's request and recommended amending policies INF-P4 and INF-P6 to address this.

827. RNZ (S476.044) sought that the objectives better recognise the following:

a) The critical contribution that infrastructure and network utility operations make to the social, economic and cultural well-being of the West Coast;

b) The technical and operational constraints that limit the geographic location in which network utilities in general can operate, particularly in relation to land use, subdivision and development; and

c) The need to avoid reverse sensitivity effects on network utilities to benefit the community.

828. The Reporting Officers did not support these submissions for the following reasons:

a) INF-O1 already recognises the contribution of infrastructure and network utilities on the West Coast;

b) INF-O5 provides for infrastructure and network utilities' functional and operational needs; and

c) INF-O3 affords appropriate protection of network utilities.

Hearing and Submitter Evidence/Statements

829. No specific evidence was received on the above matters.

Hearing Panel's Evaluation

830. The Panel agree with the Reporting Officers' recommended changes to INF-P4 and INF-P6 for the reasons advanced within the s42A Report. We note that these amendments are shown in the relevant policies themselves below.

831. The Panel accepts the conclusions of the Reporting Officers with regards the submissions of RNZ and further submission of NZEL and recommends these be rejected.

Hearing Panel's Recommendations

832. The Panel recommend no changes to the Objectives in response to submissions on the objectives as a whole. However, we agree with BDC that the word '*utilities*' is superfluous given this is included within the definition for '*Infrastructure*' and therefore recommend this is deleted from INF-O1 and INF-O2.

Objectives

Submissions and Further Submissions

INF-01

833. There were nine submission points[219] who submitted on Objective INF-O1. Several submitters supported INF-O1 as notified, however, the Panel notes there are recommended amendments in response to submissions as outlined below.

834. Forest & Bird (S560.135) sought that INF-O1 be amended as follows:

> *…to meet the needs of the West Coast/Te Tai o Poutini, where adverse effects can be appropriately managed in accordance with the Natural Environment and District Wide chapters of this Plan*.

835. BDC (S538.040) and RNZ (FS141.015) sought to amend INF-O1 to ensure the infrastructure meets both current and future needs.

[219] S538.040, S190.072, S442.020, S450.024, S476.014, S519.009, S560.135, S608.501, S663.009, FS141.015

INF-O2

836. Six submitters[220] submitted in support of Objective INF-O2. GDC (S608.502) sought for INF-O2 to be amended to clearly define '*incompatible*' in terms of the protection of utilities and infrastructure

INF-O3

837. There were four submission points[221] on INF-O3, which were mainly in support. GDC (S608.503) sought that INF-O3 be amended to clearly define this section as to where the onus is put (i.e., on the developers when subdividing).

INF-O4

838. There were eight submission points[222] in support of Objective INF-O4. Forest & Bird (S560.136) sought INF-O4 be amended as follows:

> *To consider natural hazard and biodiversity resilience and impacts of climate change in infrastructure location, design and provision*.

INF-O5

839. There were nine submission points[223] on Objective INF-O5.

840. Forest & Bird (S560.137) sought to amend INF-O5 as the RPS provides specific direction for considering biodiversity adverse effects as follows:

> *...~~minimised~~ avoided, remedied, and mitigated in accordance with the Natural Environment and District Wide chapters of this Plan, while recognising:*

841. RNZ (FS141.017) and KiwiRail (FS236.007) opposed the Forest & Bird submission as they considered '*minimise*' a more appropriate term because this recognised the importance of infrastructure and it would not always be possible to '*avoid, remedy or mitigate'* the effects of infrastructure.

842. Poutini Ngāi Tahu (S620.091) sought amendment to Objective INF-O5 to clarify that effects on the environment include Poutini Ngāi Tahu values and to ensure consistency with Policy INF-P2. They sought a further subclause as follows:

> *Poutini Ngāi Tahu requirements for discharge of wastewater to land*

843. Forest & Bird (S560.136), RNZ (FS141.017), and KiwiRail (FS236.007) sought to include the word '*needs"* after the word functional in clause (a).

[220] S190.073, S442.021, S450.025, S476.015, S519.010, S608.502, FS34.047
[221] S190.074, S450.026, S608.503, S663.011
[222] S190.075, S442.022, S450.027, S560.136, S608.504, S612.008, S663.012, FS34.052
[223] S190.074, S442.023, S450.028, S476.016, S519.011, S560.137, S608.505, S620.091, S663.013, FS141.017, FS236.007

Section 42A Reports

844. The Reporting Officers rejected the amendment sought by Forest & Bird on INF-O1 because they considered that specifying particular chapters of the pTTPP would limit and restrict the assessment and consideration required. They noted the Plan should be read in full and that the Infrastructure Chapter Overview provided guidance regarding what other chapters are to be read. They considered it would be a duplication to include it under specific standards.

845. In terms of the submission by BDC to amend INF-O1 to ensure infrastructure provides for both '*current and future needs',* the Reporting Officers were supportive of the wording requested.

846. In response to the GDC request to clearly define '*incompatible'* in INF-O2, the Reporting Officers noted that the pTTPP lacked provisions to enforce INF-O2, specifically what defines '*incompatible*'. For that reason, they recommended deleting '*incompatible*' which would be consistent with INF-P3.

847. The Reporting Officers considered that no amendment was required to INF-03. They noted in response to the GDC submission that the intent of the objective was the efficient and proficient use of infrastructure, which was achieved by coordinating the provision of utilities and infrastructure. Further, they noted that INF-P4 and INF-P5 enforce INF-O4; and that this policy direction was given effect to by both private development in accordance with Subdivision Chapter provisions and public development in accordance with the infrastructure provisions. They considered the relief sought by GDC would reduce the scope and intent of INF-03, consequently reducing the scope of standards that could be imposed.

848. The Reporting Officers did not support Forest & Bird' request to provide for '*biodiversity*' within INF-O4. In their opinion, the district-wide ECO Chapter would apply and provided sufficient direction on this matter. They considered Forest & Bird had not provided specific reasoning to outline the issue with INF-O4 and why this amendment was required. The Reporting Officers did accept the inclusion of *'location',* which was a key factor when considering how infrastructure may be affected by natural hazards and climate change.

849. In response to Forest & Bird's requested amendment to INF-O5, the Reporting Officers considered the district-wide ECO Chapter would apply to all activities and the pTTPP was intended to be read as a whole document. In their opinion, '*avoid, remedy or mitigate'* was inconsistent with the RPS, and therefore they did not support this amendment.

850. The Reporting Officers did not support the relief sought by Poutini Ngāi Tahu to INF-O5 because they considered INF-P2 provided appropriate recognition for Poutini Ngāi Tahu values. Further, they noted that INF-O5 was clear and provided a proper direction as an objective, setting out a direction for the effects on the environment. It is supported by INF-P2, which provides details as required.

851. While there is no discussion in the s42A Report of the submissions seeking to include the word '*needs*' INF-05 as sought by submitters, the word was included in the changes shown to INF-O5. However, when considering submission points[224] and evidence on other provisions that

[224] Manawa (S438.044), NZ Energy (FS127) at paragraph 217 of the s42A Report

included the words operational and or functional the Reporting Officers supported the inclusion of the word '*needs*' as doing so was consistent with the National Planning Standards.

Hearing and Submitter Evidence/Statements

852. Forest & Bird considered it was important to ensure appropriate wording was used to distinguish between and capture different types of infrastructure in provisions to give effect to higher order documents, including the NPSET, NPSREG, the NZCPS and the RPS, to effectively manage adverse effects and locational considerations.

853. Mr Leckie's legal submissions[225] noted that, while not directly relevant to Bathurst's relief, Bathurst supported consistent language where functional and operational needs formed part of the plan provisions. He noted these were defined in the National Planning Standards and that definition encompasses technical and locational needs.

854. Forest & Bird agreed that the ECO Chapter should be relied on with respect to adverse effects of ENG, INF and TRN activities on ecosystems and indigenous biodiversity. Ms Snoyink noted their submission sought to ensure that provision for activities in these chapters was made in the context of recognising that adverse effects would need to be "*avoided, remedied or mitigated*". She considered using these words provided for integration and avoided potential conflicts with provisions in other chapters. She noted their submission sought to replace the word "*minimise*" with "*avoid, remedy or mitigate".*

855. Ms Snoyink was critical of the Reporting Officers' approach, where in some circumstances they considered '*minimising'* as an alternative to '*avoiding, remedying or mitigating'*, and in other circumstances equated '*minimise*' with *'avoid, remedy or mitigate'*. She noted in paragraph 173 of the s42A Report in relation to ENG provisions they considered '*minimise*' reflected that there were scenarios where it was not possible or practical to avoid, remedy or mitigate all effects from energy activities. Also, in paragraph 175, she noted that the Reporting Officers consider that "*the RMA requires adverse effects on communities and the environment of activities to be minimised.*" She disagreed with these approaches.

856. Ms Snoyink noted that at paragraph 385, of the s42A Report concerning INF-O5, the Reporting Officers considered that "*In our opinion, 'avoid, remedy or mitigate' is inconsistent with the RPS and we therefore do not support this amendment."* She considered that it was not clear how they had reached that conclusion. However, she said, presumably it related to their interpretation of RPS Chapter 6 Regionally Significant Infrastructure provisions. However, even on that basis, she considered "*such reasoning does not stack up".* She noted that RPS Chapter 6 specifically states that *"All relevant provisions in this RPS must be considered in managing the adverse effects of RSI activities*." She considered this meant that any Plan provisions giving effect to the RPS provisions for RSI must be in the context of addressing adverse effects as directed under other chapters of the RPS, including Chapter 7 Ecosystems and Indigenous Biological Diversity. She noted all three effects management measures *"avoid, remedy or mitigate"* were relevant in this context. She noted '*Infrastructure*' as defined by the RMA, was broader than RSI (as defined by the RPS) and that INF-O5 refers to "*the adverse*

[225] Legal Submissions for Bathurst dated 13 November 2023 paragraphs 16 to 17

effects of infrastructure on the environment …". She noted RMA section 5 requires *"avoiding, remedying or mitigating*" adverse effects of activities on the environment.

857. Ms Snoyink noted in the updated Addendum s42A Report suggested that "*avoid, remedy or mitigate*" was not appropriate in Objective ENG-O2 because objectives should be directing an outcome sought and because of the wording of objectives in the NPSREG. She said Forest & Bird's position was that adverse effects being "*avoided, remedied or mitigated*" was a more appropriate outcome than "*minimised*". The former, she contended, was consistent with the RMA and the latter was uncertain as to how adverse effects would be "*avoided, remedied* or mitigated". She considered this uncertainty was reinforced in the case of INF-O5 by the lack of INF policy direction to "*avoid, remedy or mitigate*" adverse effects of infrastructure activities on the environment.

858. Ms Pull detailed how provisions of the RPS Chapter 3, notably Policies 2 and 3, recognised and provided for Ngai Tahu values, particularly in managing discharges, including wastewater. She noted the RPS provisions record that discharge to land, particularly when the discharge was sewage effluent, was preferred where practicable and where the effects are less than if the discharge were to water. Building on those provisions and to give effect to the RPS, she considered the pTTPP would need to include provisions relating to the cultural impacts of discharges.

859. Ms Pull sought that INF-O5 be amended to include Ngāi Tahu requirements for wastewater discharge to land as a new clause. She noted that the s42A Report recommended rejection because INF-P1 and INF-P2 recognised the importance of the wastewater discharge issue for Poutini Ngāi Tahu. However, Ms Pull noted these policies exist to implement infrastructure objectives, which are focused on the efficiency and positive effects of infrastructure rather than recognising or providing for environmental considerations.

860. Ms Pull recognised that INF-O5 aimed to minimise adverse environmental effects while recognising infrastructure needs and positive effects. However, she said it only stated '*environment'*, which she considered was an extensive term and it was unclear whether it included cultural wellbeing in this context. She further noted that INF-P2 clauses (a), (e) and (f) essentially repeated INF-O5 with the same wording, leaving the assumption that clause (c), which refers to Poutini Ngāi Tahu values, wis not connected to objective INF-O5. She therefore sought an amendment to INF-O5 to recognise Poutini Ngāi Tahu values, clarify that INF-O5 considers the well-being of communities in Te Tai o Poutini, and provide more clarity on the link between INF-O2 and the clauses of INF-P2.

861. Ms Pull sought was that INF-O5 was amended as follows:

> The adverse effects of infrastructure on the environment are minimised, while recognising:
>
> a. The functional and operational needs of infrastructure
>
> b. Poutini Ngāi Tahu requirements for discharge of wastewater to land; and
>
> c. The positive effects of infrastructure may be realised locally, regionally, or nationally.

Reporting Officers' Position Statement and Reply Evidence

INF-01

862. The Reporting Officers made no further recommendations in Reply.

INF-02

863. The Reply Report noted that the s42A Report recommendation and position discussed in the hearing was that the retention of the word '*incompatible*' in ENG-O3, ENG-P9 and INF-O2 was not supported due to the limitation of the scope of the objective or policy and the potential uncertainty of what was incompatible.

864. However, the Reporting Officers detailed their reconsideration of this recommendation[226] in light of the evidence presented[227] at the hearing and further discussions in EWC. They recommended that the word '*incompatible*' be included in these provisions, as it would provide the ability to enable compatible subdivision, use and development in specific circumstances, which they understood to be sufficient to afford protection of the relevant infrastructure. Furthermore, they considered retention of the word '*incompatible'* was consistent with RPS Chapter 6, Policy 4.

INF-03

865. The Reporting Officers made no further recommendations in Reply.

INF-04

866. The Reporting Officers made no further recommendations in Reply.

INF-05

867. The Reporting Officers stated that "*further to evidence and discussions at the hearing, we consider that replacing the term 'minimise' with 'manage' will provide a clear target whilst ensuring consistency with the Energy Chapter. Further manage can be achieved via avoidance, remediation or mitigation*." The Panel notes, however, that no wording change to that effect was shown in Attachment 1 of the Right of Reply.

868. Following EWC, the Reporting Officers and Ms Pull met online to conference outstanding issues raised by the Poutini Ngāi Tahu submission in relation to the Energy, Infrastructure and Transport chapters that were not addressed at the EWC. The outcome of that meeting was that Ms Pull produced a Position Paper, in which, among other things, she provided proposed wording for an amended INF-05.

869. The Reporting Officers (in their Position Statement of 8 February 2024) altered their position from that held in the s42A Report to acknowledge that the RPS requires district councils to manage land use, referring to Chapter 8 Policy 2, Chapter 8, Methods 2 and 3, and Objective 2 of Chapter 3. They noted that these provisions reference Ngai Tahu's preference for discharges to land over water where practicable; and also provide direction to district councils to consult and include in district plan policies, rules, guidelines and other information to avoid,

[226] Right of Reply Section 3.2 paragraph (18) page 6.
[227] Evidence of Stephanie Styles, paragraphs 7.1 - 7.4

remedy or mitigate the adverse effects of land use activities and management practices on water quality. The highlighted the subject of the direction to consult was to avoid, remedy or mitigate adverse effects originating from land and freshwater use on cultural values associated with fresh and coastal water, including by identifying significant mahinga kai and other taonga areas.

870. To give effect to the RPS, the Reporting Officers recommended amending INF-O5 as follows:

> The adverse effects of infrastructure on the environment are, minimised including (but not limited to) the adverse effects of land use activities and management practices on the Poutini Ngāi Tahu cultural values associated with fresh and coastal water, while recognising:
>
> a) The functional needs and operational needs of infrastructure; and
>
> b) That positive effects of infrastructure may be realised locally, regionally, or nationally.

871. The Reporting Officers noted that this wording differed from that detailed in Ms Pull's Position Paper but considered their wording reflected the RPS, whilst maintaining the intent of the objective.

872. The Reply Report confirmed this position.

Hearing Panel's Evaluation

INF-01

873. The Panel accepts the reasoning set out in the s42A Report[228] to reject the Forest & Bird submission to specifying particular chapters in INF-O1. We accept the BDC submission to add '*current and future needs'* to the objective which aligns with s5 of the RMA.

INF-02

874. The Panel accepts the reasoning, as set out in the Reply Report,[229] to reject the GDC submission to deal with the alleged uncertainty as to the meaning of the word '*incompatible'* by deleting it from the objective. We agree with the evidence of Ms Styles on this matter generally and the revised position of the Reporting Officers and recommend the word '*incompatible*' is retained.

INF-03

875. The Panel accepts the reasoning set out in the s42A Report[230] to reject the GDC submission.

INF-04

876. The Panel agree with Forest & Bird and Mr Leckie that the language in the plan provisions needs to be consistent and that it must also give effect to the National Planning Standards.

[228] S42A Report paragraphs 371 -372, page 113.
[229] Right of Reply paragraph 18, page 6
[230] S42A Report paragraph 378, page 114

The inclusion of the word '*location*' in INF-O4 enables consideration of the effects of a proposal on location and enables consideration of any technical and operational needs of a proposal that may have constrained or limited locational options due to those needs.

877. The Panel accepts the reasoning set out in the s42A Report[231] not to include biodiversity in INF-O4 as sought by Forest & Bird. We consider this objective is specific to natural hazards and associated infrastructure provision.

878. The Panel recommend accepting in part the Forest & Bird submission as a result of the above.

INF-05

879. The Panel agree in this context, retention of the word '*minimise'* within the objective is appropriate because it recognises the importance of infrastructure and that it will not always be possible to '*avoid, remedy or mitigate'* the effects of infrastructure.

880. The Panel agrees with the recommendation to include the word '*needs*' as it gives effect to the National Planning Standards and assists in making the objective clear.

881. The Panel agree with the Reporting Officers' revised recommendation and associated reasoning to address the Poutini Ngāi Tahu submission on discharge of wastewater to land. We consider the Reporting Officers' recommended wording better reflects the focus of the RPS provisions than that of Ms Pull. For example, she uses the word "*requirements*," which lacks clarity. Also, we consider the use of the word "*requirements*" is at odds with the RPS language, which uses words such as "*preference*" and "*where practicable*".

Panel's Recommendation

882. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommend the following changes to the **Infrastructure objectives**:

INF – O1	To enable the safe, efficient and sustainable development, operation, maintenance and upgrading of ~~utilities and~~ infrastructure, to meet the **current and future** needs of the West Coast/Te Tai o Poutini. [232]
INF – O2	To protect ~~utilities and~~ [233]infrastructure from the adverse effects of incompatible subdivision, land use and development.
INF – O3	To ensure the efficient provision and use of infrastructure for communities by co-ordinating the provision of utilities with subdivision, use and development of land.

[231] S42A Report paragraph 382, page 114
[232] Buller District Council (S538.040), Radio NZ (FS141.015)
[233] Buller District Council (S538.040)

INF – O4	To consider natural hazard resilience and impacts of climate change in infrastructure **location,**[234] design and provision.

INF – O5	The adverse effects of infrastructure on the environment are minimised, **including (but not limited to) the adverse effects of land use activities and management practices on the Poutini Ngāi Tahu cultural values associated with fresh and coastal water,**[235] while recognising: a. The functional **need** and operational needs[236] of infrastructure; and b. That positive effects of the infrastructure may be realised locally, regionally, or nationally.

5.5. Infrastructure Policies as a whole

Submissions and Further Submission

883. There were four submission points[237] in support of the infrastructure policies collectively.

884. RNZ (S476.045) sought that the infrastructure policies be amended to better recognise:

a) The critical contribution that infrastructure and network utility operations (such as RNZ's facilities) make to the social, economic and cultural wellbeing of the district, as well as health and safety;

b) The technical and operational constraints that limit the geographic location in which network utilities in general, and RNZ's facilities in particular, cooperate, particularly in relation to land use, subdivision and development; and

c) The need to avoid reverse sensitivity effects on network utilities for the benefit of the community.

Section 42A Reports

885. The Reporting Officers did not recommend amendments based on the RNZ submission because they considered that INF-P1 recognises the importance of infrastructure, INF-P2 recognises technical and operational needs, and INF-P3 recognises reverse sensitivity.

Hearing Panel's Evaluation and Recommendation

886. The Panel accepts the Reporting Officers' analysis and reasons. We do not recommend any changes in response to submissions on the policies as a whole.

Submissions and Further Submissions

[234] Forest and Bird (S560.136)
[235] Te Runanga o Ngai Tahu, Te Runanga o Ngati Waewae, Te Ruinanga o Makaawhio (S620.091)
[236] Forest and Bird (S560.137), Radio NZ (FS141.017), KiwiRail (FS236.007)
[237] S558.472, S566.472, S567.052, S574.472

INF-P1

887. There were eight submission points[238] on INF-P1, of which five were in support.

888. RNZ (S476) sought that INF-P1 be amended as follows:

> …utilities and infrastructure, <u>in particular critical infrastructure.</u>

889. Forest & Bird (S560.138) sought that INF-P1 be amended as follows because the RPS did not require the provision of RSI in all cases, nor for infrastructure in general:

> Recognise ~~and provide for~~ the positive social, economic, cultural and environmental benefits from the development, continued operation, and upgrading of utilities network and infrastructure.

890. RNZ (FS141.014) opposed this submission as it considered the inclusion of '*provide for'* was important.

891. GDC (S608.506) sought to amend Policy INF-P1 to provide for the maintenance of utilities and infrastructure to give effect to Objective INF-O1.

INF-P2

892. There were ten submission points[239] on Policy INF-P2 of which three were in support.

893. RNZ (S476.018) seek INF-P2 be amended as follows:

> The positive effects of infrastructure, <u>in particular critical infrastructure</u>;

894. This amendment is requested to support RNZ's relief sought in relation to the definition of *'critical infrastructure'*. RNZ specifically considers that INF-P2 ought to address the importance of critical infrastructure.

895. Forest & Bird (S560.139) sought Policy INF-P2 be amended as follows:

> Manage the design and location of network utilities and infrastructure, ~~including when sited in overlays,~~ in a way that considers:
>
> a. … ;
>
> b. <u>Whether there are alternative locations or a functional need to locate within an Overlay area or any Significant Natural Area (being areas meeting criteria in Appendix 1 of the WCRPS, whether mapped in the Plan or not);</u>
>
> c. Resilience <u>of the natural environment and of the infrastructure</u> to natural hazards and climate change;
>
> d. …

[238] S190.078, S442.023, S450.028, S476.016, S519.011, S560.137, S608.505, S663.013, FS141.014
[239] S190.079, S442.025, S476.018, S560.139, S594.003, S602.035, S608.507, S612.009, S620.411, S663.015, FS141.018, FS141.019, FS149.098

e. The need to minimise avoid, remedy, or mitigate adverse effects on the environment in accordance with the Natural Environment and District Wide chapters of this Plan.

f. …

896. Forest & Bird considered that '*minimise*' (in clause (e) above) was insufficient to give effect s5 of the RMA, which required adverse effects to be avoided, remedied, and mitigated on the environment. RNZ (FS141) oppose the relief sought by Forest & Bird as they considered '*minimise*' to be a more appropriate term, as it recognised the importance of infrastructure and also that it will not always be possible to '*avoid, remedy or mitigate'* the effects of infrastructure.

897. The Director General (S602.035) seek that the schedules, SNA and the overlay chapter areas were referred to concerning adverse environmental effects.

898. Janie Cook (S594.003) sought deletion of Policy INF-P2 as they considered homeowners would lose the right to consume rain that falls on their property

899. Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd (S663.015) sought deletion of clause (a) and replacement with '*operational need and functional need'* to reflect the National Planning Standards and the pTTPP definitions.

INF-P3

900. There were seven submission points[240] on Policy INF-P3, of which of which five were in support.

901. KiwiRail (S442.026) and RNZ (FS141.020) sought Policy INF-P3 be amended to provide for maintenance, repair, upgrading, removal and development of infrastructure because the current wording did not apply to all activities (i.e., rail activities) and it was limited to the operation (i.e., operation of the rail network). Kāinga Ora (FS58.033) opposed this submission as they considered that this would result in the requirement for subdivision, use and development to manage reverse sensitivity effects from planned or unplanned future infrastructure, rather than the infrastructure provider needing to assess the effects at the time of planning or development. They considered that this provision should only require the management of reverse sensitivity effects from the current operations.

902. RNZ (S476.019) and NZDF (FS31.008) sought that INF-P3 be amended to specifically reference '*critical infrastructure'* and strengthen the policy wording to replace '*manage*' with '*avoid*'. The submitters considered that it is important to provide more stringent wording, as reverse sensitivity can have a significant effect on infrastructure, which is difficult to address once the effect arises. Kāinga Ora (FS58.034) opposed this submission as it considers that the requirement to avoid reverse sensitivity effects from all subdivision, use and development was too onerous and went beyond what was required in the RPS.

INF-P4

[240] S190.080, S450.030, S476.019, S519.013, S608.508, S663.016, FS31.008, FS58.033, FS58.034, FS58.084, FS58.085, FS141.020

903. There were six submission points[241] on Policy INF-P4, of which four supported the policy.

904. BDC (S538.041) sought to amend Policy INF-P4 to ensure that subdivision and development were serviced to meet '*current and future'* needs and to include '*Water Service Entity*' as one of the listed parties with whom infrastructure could be vested.

905. Forest & Bird (S560) sought Policy INF-P4 be amended as follows:

> Ensure that subdivision and development ~~is~~ can be adequately serviced including:
>
> In site selection and design considerations, assessing the adverse effects of subdivision and development as well as adverse effects of services when determining whether the subdivision or development should occur in that location in the first place; and that adequate services includes:

906. Forest & Bird sought this amendment because they considered that before subdivision and development, there should be consideration of constraints, including where adverse effects on natural values could and should be avoided.

INF-P5

907. There were seven submission points[242] received on Policy INF-P5, of which five supported the policy as notified.

908. Poutini Ngāi Tahu (S620.093) sought Policy INF-P5 be amended to provide for onsite treatment, in addition to detention, as this aligned with Poutini Ngāi Tahu values and safeguards the community wellbeing.

INF-P6

909. There were six submission points[243] on Policy INF-P6, all in support of the policy as notified.

New Policy

910. Te Mana Ora (S190.077) sought an additional policy be included as follows:

> Minimise the risk of adverse effects by subdivision, development and activities on drinking water sources through a Drinking Water Source Protection Zone.

911. This new policy was sought in accordance with the NES-SHDW along with a Drinking Water Source Protection Zone which would ensure any drinking water supply was protected from potential adverse effects. The policy was supported by GDC (FS1.340) but not the overlay.

Section 42A Reports

INF- P1

[241] S190.081, S450.031, S538.041, S560.140, S612.010, S620.412, S663.017
[242] S190.082, S442.027, S450.032, S608.510, S612.011, S620.092, S620.093
[243] S190.083, S442.028, S476.020, S560.141, S608.511, S663.018

912. The Reporting Officers did not support Forest & Bird's requested amendments to Policy INF-P1 because they considered them inconsistent with the RPS. They considered that the issue of including critical infrastructure sought by RNZ had already been addressed in their s42A Report.

913. In terms of the GDC amendment to introduce '*maintenance*' into the policy the Reporting Officers supported the relief sought and recommend its inclusion.

INF-P2

914. The Reporting Officers did not support RNZ's submission to include critical infrastructure within the policy due to adopting the definition for RSI.

915. In respect of the Forest & Bird submission and the related submission of the Director General, the Reporting Officers did not support the amendment to provide for biodiversity within INF-P2, noting that the district-wide ECO Chapter applied to all activities. Further, they noted the Infrastructure Chapter Overview provided guidance regarding other chapters to be read, and therefore it would be a duplication to include it under specific standards.

916. The Reporting Officers also considered '*manage*' more appropriate than '*minimise*' and '*avoid, remedy or mitigate*' becasue this provided greater certainty, was consistent with the approach taken throughout pTTPP, and aligned with the RPS.

917. In response to Janie Cook's submission, the Reporting Officers considered that the policy did not specifically limit the ability for landowners to have onsite rainwater tanks, so they recommended rejecting the submission.

918. In response to the submission from Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd the Reporting Officers supported this submission to make amendments that would ensure consistency of language with definitions and the Energy Chapter, which will improve the Plan's effectiveness and efficiency.

INF-P3

919. The Reporting Officers did not support KiwiRail and RNZ and agreed with Kāinga Ora because the relief sought was inconsistent with the RPS (specifically Policy 4.5 and 4.8).

920. In relation to the amendments sought by RNZ and NZDF, the Reporting Officers did not support the changes proposed. They agreed with Kāinga Ora that '*manage*' provided appropriate policy direction because the RPS required protection, not avoidance, which was overly restrictive.

921. The Reporting Officers did not support the inclusion of '*critical infrastructure'* as sought by RNZ as the definition of infrastructure already encompasses critical infrastructure. They considered it was unnecessary to provide further wording within the policy to include this. They also noted that temporary military activities are provided for in the TEMP Chapter and considered it more appropriate that defence facilities continue to be managed in accordance with each zone's provisions.

922. The Reporting Officers recommended no amendments to the notified version of INF-P3.

INF-P4

923. The Reporting Officers supported BDC's request to include '*current and future'* needs because this was consistent with RPS Chapter 6, Policy 1. However, they considered it was not appropriate to include reference to '*Water Service Entity'* because it did not align with the policy wording (which did not refer to specific providers) and this entity did not currently exist.

924. The Reporting Officers did not support Forest & Bird's amendment because they considered the Subdivision Chapter policies SUB-P1 and SUB-P2 already addressed these matters, and the relief would result in unnecessary duplication of policy direction.

INF-P5

925. The Reporting Officers recommend retaining INF-P5 as notified. They did not support the Poutini Ngāi Tahu submission considering the current wording of INF-P5 already allowed for onsite treatment and detention and in their opinion no change was required.

INF-P6

926. The Reporting Officers recommended retaining INF-P6 as notified.

New Policy

927. The Reporting Officers did not support adding a new policy because they considered they did not have sufficient information, technical evidence or a section 32 evaluation to support the relief sought. Furthermore, they believed that the INF policies support the provision of safe drinking water. They left the matter open for Te Mana Ora to provide further information through evidence to support the relief sought.

Hearing and Submitter Evidence/Statements, including EWC

INF-P1

928. None of the submitters on INF-P1 presented evidence or appeared at hearings.

INF-P2

929. Ms Grinlinton-Hancock, for KiwiRail, opposed the Reporting Officers' recommendation to amend clause (a) to replace "*locational, technical and operational constraints*" with "*operational need and functional need*", relying on the reasons provided by Ms Heppelthwaite's evidence[244] for the Introduction and General Provisions and Strategic Direction hearing. Essentially, Ms Grinlinton-Hancock supported a more nuanced approach to operational and functional need and further considered these tests were more appropriately located in Part 2 Natural Environmental Values.

[244] Statement of Evidence of Catherine Heppelthwaite 2 October 2023 at 9.24 – 9.27

930. Ms Snoyink, for Forest & Bird, outlined preference and reasons for utilising '*avoid, remedy, and mitigate*' rather than using the word '*minimise*' within provisions such as clause (f) of INF-P2. She considered the interrelationship between the chapters and did not consider it was appropriate to rely on chapter overviews to provide guidance regarding what other chapters were to be read and considered when a proposal was being assessed. Forest & Bird sought to amend clause (b) to explicitly provide for that linkage.

931. Ms Inta supported retention of '*minimise*' in this policy because she considered it provided better protection than '*manage*' and wanted to see it retained.

932. Mr Horne, for the Telecommunication companies, noted the Reporting Officers supported their submissions on INF-P2.

INF-P3

933. Ms Grinlinton-Hancock disagreed with the Reporting Officers' position that KiwiRail's submission was inconsistent with RPS and noted RPS Chapter 6 Policies 4 and 8 were relevant. She suggested the RPS policy direction supported accepting the submission.

INF-P4

934. No submitter evidence was received on INF-P4.

INF-P5

935. Ms Pull agreed that if all development must comply with policies INF-P4 and INF-P5, stormwater treatment was covered in INF-P4. However, she sought clarification within INF-P5 regarding the required acceptable level of flooding risk and considered both policies should be amended to reference the treatment of stormwater.

INF-P6

936. No submitter evidence was received on INF-P6.

New Policy

937. No submitter evidence was received on the requested new policy.

Reporting Officers' Reply Evidence and Position Statement

INF-P1

938. INF-P1 was not addressed further in the Reply. The s42A recommendation remained unchanged.

INF-P2

939. In responding to evidence presented and discussion at the hearing regarding consistency with other Reporting Officers, the Reporting Officers, recommend that '*minimise*' in clause (f) be replaced with '*avoid, remedy, mitigate*' and that the Forest & Bird submission be accepted.

Furthermore, they considered that the range of potential adverse effects on the environment was very wide, and the wider action reflected this scope. However, the Panel notes this recommended change was not shown in Appendix 1 of the Reply.

940. The Reporting Officers also included the word "*all*' immediately before "*overlays*" in the Reply version of the amended Plan provisions to clarify that INF-P2 applied to all overlay chapters.

INF-P3

941. The Reply indicated that the Reporting Officers considered '*manage*' to be appropriate in INF-P3 as this was consistent with their recommendation for ENG-P3.

INF-P4

942. INF-P4 did not receive further consideration in Reply.

INF-P5

943. The Reports Officers did not alter their s42A Report recommendation to retain INF-P5 as notified. In Reply, they noted that no submissions have been received seeking to change '*minimise*' in this policy and as such considered there was no scope to recommend changes.

INF-P6

944. The Report Officers did not alter their s42A Report recommendation to retain INF-P6 as notified.

New Policy

945. The Reply did not address the inclusion of a new policy further.

Hearing Panel's Evaluation

946. In terms of the broader RNZ submission, the Panel agrees with the Reporting Officers that INF-P1, INF-P2 and INF-P3, collectively, sufficiently address the matters raised by RNZ. We agree and do not recommend any specific amendments in response to this submission.

INF-P1

947. The Panel have considered the deletion of '*provide for*' as sought by Forest and Bird. While we accept that '*provide for*' is utilised in the WCRPS specifically for energy supply (which is given effect to in the Energy Chapter), we agree that the WCRPS does not require the provision of Regionally Significant Infrastructure in all cases. In this context we note that Method 2 under Chapter 6 of the WCRPS refers to "*Through regional and district plan rules … recognise the positive benefits of RSI*". We therefore consider in relation to the Infrastructure Chapter '*provide for*' in INF-P1 should be removed.

948. We agree with the Reporting Officers reasoning and subsequent recommendations in relation to INF-P1 and recommend including '*maintenance*', as sought by GDC.

INF-P2

949. The Panel accept the recommendation to include '*all*' before reference to the overlays to clarify all overlays apply and consider this is an appropriate RMA Schedule 1, clause 16 in response to our questions that will improve clarity. While we agree with the Reporting Officers' reasons for rejecting both the Forest & Bird and Director General submission points and for explicitly including within the policy a reference to overlay areas and significant natural areas, the Panel notes that this change may in part address the concerns of Forest and Bird in relation to the overlays.

950. The Panel consider the amendment to clause (a) is appropriate and prefer '*operational need and functional needs*' over the notified '*locational, technical and operational constraints'* given the former terms are defined in the Plan. We also note that '*location*' is already covered in the opening paragraph. We consider the word '*technical*' is ambiguous and unclear and is encompassed by '*operational need and functional need*'. The Panel notes that alignment with the National Planning Standards also supports the recommended amendments and we do not consider a more nuanced approach, as sought by Ms Grinlinton-Hancock, is needed. We therefore agree with the Reporting Officers reasons within the s42A Report for accepting the telecommunications companies' submission to amend clause (a).

951. In terms of clause (f), the Panel agree with the revised recommendation of the Reporting Officers to replace '*minimise*' with '*avoid, remedy or mitigate*' to ensure consistency across the Plan. We consider this change addresses the concerns of Forest & Bird.

952. The Panel accepts the Reporting Officers' recommendation to reject Janie Cook's submission point for the reasons provided in the s42A Report.

INF-P3

953. The Panel considers INF-P3, as notified, assumes the utility or infrastructure is in place and that it is the potential reverse sensitivity effects from new subdivision, use and development that must be managed. Based on this intent, we agree with the Reporting Officers and Kainga Ora that the policy covers existing infrastructure, not new or proposed. We also agree that the word '*manage*' is preferred over '*avoid*' because avoid means not allowing, which excludes the ability to assess measures to manage potential reverse sensitivity effect. We consider that the assessment aspect of the policy is important and needs to be retained. We therefore recommend no changes to INF-P3.

INF-P4

954. The Panel agree the Reporting Officers' recommendation to accept in part the BDC submission and reject the submission of Forest & Bird, for the reasons set out in the s42A Report. We recommend deleting the words '*network utility*' from clause (i) in response to BDC's request.

INF-P5

955. The Panel accept the Reporting Officers' recommendation to retain INF-P5 as notified, for the reasons set out in s42A Report. We have considered Ms Pull's evidence but do not find the reasons outlined for amending the policy compelling. We consider that when an application

for resource consent is processed, both policies will need to be considered. Therefore, we consider stormwater treatment is provided for in both INF-P4 and INF-P5.

INF-P6

956. The Panel recommends the wording of this policy is retained as notified, except for recommending deleting the words '*network utilities*', sought by BDC.

New Policy

957. The Panel agree with the Reporting Officers' recommendation not to include a new policy, for the reasons set out in the s42A Report.

Hearing Panel's Recommendation

958. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommend the following changes to the Infrastructure Policies:

INF – P1	Recognise ~~and provide for~~[245] the positive social, economic, cultural and environmental benefits from the development, continued operation, **maintenance,**[246] and upgrading of ~~utilities and~~[247] infrastructure.
INF – P2	Manage the design and location of ~~utilities and~~ [248]infrastructure, including when sited in **all**[249] overlays in a way which considers: a. ~~Locational, technical and operational constraints~~ **Operational need and functional need**;[250] b. Resilience to natural hazards and climate change; c. Poutini Ngāi Tahu requirements for discharge of wastewater to land; d. Benefits of co-location of infrastructure; e. That positive effects of infrastructure may be realised locally, regionally, or nationally; and f. The need to ~~minimise~~ **avoid, remedy and mitigate**[251] adverse effects on the environment.
INF – P3	Manage reverse sensitivity effects from subdivision, use and development, on ~~utilities and~~ [252]infrastructure to ensure their safe, secure and efficient operation.
INF – P4	Ensure that subdivision and development, is adequately serviced **to meet the current and future needs**[253] including:

[245] Forest and Bird (S560.138)
[246] Grey District Council, S608.505
[247] Buller District Council (S538.040)
[248] Buller District Council (S538.040)
[249] RMA First Schedule Clause 16
[250] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd, S663.015
[251] Forest and Bird (S560.139)
[252] Buller District Council (S538.040)
[253] Buller District Council (S538.041)

	a. Safe and efficient vehicle access; b. Drinking water compliant with Safe Drinking Water Standards; c. Adequate water supply for firefighting; d. Treatment and safe disposal of stormwater that does not result in increased flooding and erosion risk; e. Treatment and safe disposal of wastewater with a preference for land-based treatment; f. Supply of electricity and telecommunications using a method that is appropriate to the type of development, location and character of the area including consideration of off-grid supply / wireless /satellite; g. Connections are made to wastewater, water supply and stormwater systems where they are available and there is capacity; h. Where new infrastructure is developed, that there is adequate provision for ongoing maintenance either by the vesting of the infrastructure in the relevant Council, or in the case of papakainga developments, that an ongoing hapū entity may be responsible for maintenance; and i. Financial contributions are provided where additional or upgraded ~~network utility~~[254] infrastructure is required to service development.
INF – P5	Minimise the effect of stormwater run-off associated with development activity, including requirements for onsite detention, upgrades to pump networks and roadside drainage networks where necessary, to reduce flooding risk to roads and property.
INF – P6	Provide flexibility for ~~network utilities~~ **<u>infrastructure</u>** to adopt new technologies that:[255] a. Improve access to, and efficient use of, networks and services; b. Allow for the re-use of redundant services and structures where they are safe and operating to required standards; c. Increase resilience, safety or reliability of networks and services; d. Result in environmental benefits and enhancements; e. Promote environmentally sustainable outcomes including green; or infrastructure and the increased utilisation of renewable resources.

5.6. INFRASTRUCTURE RULES

<u>Submissions and Further submissions</u>

All Standards and Notes to the Rules

[254] Buller District Council S538.041
[255] Buller District Council S538.041

959. Forest and Bird (supported by Poutini Ngāi Tahu)[256] sought to ensure that it was clear that the requirements of the Infrastructure Chapter, as well as other identified chapter plan provisions, needed to be complied with. Forest and Bird also sought that each of the restricted discretionary activities include an additional matter of discretion relating to the adverse effects on natural values.

960. BDC (S538.053) sought a different format for the performance standards without providing details.

961. Paul Finlay (S408.002) (supported by NZEL (FS127.046) sought that the performance standards provide for monitoring buildings and equipment to detect the movement of the plates and the Alpine Fault.

962. Forest & Bird (S560.134) sought that Advice Notes (2), (3) and (4) be amended to clarify the matters covered by the Infrastructure Chapter and those in other chapters.

963. Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd (S663.019) sought that Advice Note (2) be amended to reflect that the NESTF does not regulate all new poles and antennas.

Permitted Activities

INF-R1

964. There were eight submission points[257] on Rule INF-R1, mostly in support.

965. BDC (S538.053) sought that the heading of Rule INF-R1 be amended to '*Infrastructure ~~Permitted~~ Activity Performance Standards'*.

INF-R2

966. Eight submission points[258] supported INF-R2 as notified.

967. Forest & Bird (S560.142) sought that INF-R2 be amended to a controlled activity to allow the Council to assess capacity.

968. Poutini Ngāi Tahu (S620.094) sought the addition of an advice note directed at controlling the volume of waterborne contaminants, litter, and sediments.

969. GDC (S608.512) sought clarification of what buildings are required to connect to reticulated services and proposed the inclusion of '*or structure in which human wastewater is generated*'

INF-R3

[256] S560.143, S560.144, S560.145, S560.146, S560.147, S560.148, S560.149, S560.150, S560.151, S560.152, S560.153, S560.154, S560.155, S560.156,S560.157, S560.158, S560.159, S560.160, S560.161, S560.162, S560.162, S560.163, S560.164,7 FS41.42, FS41.043, FS41.044, FS41.045, FS41.046, FS41.047, FS41.048, FS41.049, FS41.109, FS41.110, FS41.111, FS41.112, FS41.114, FS41.115, FS41.116, FS41.117, FS41.118, FS41.119, FS41.120

[257] S109.001, S190.085, S476.021, S538.042, S558.483, S566.483, S567.053, S574.483

[258] S190.086, S450.033, S538.043, S558.494, S566.494, S567.054, S574.494, & S612.012

970. Five submission points[259] supported Rule INF-R3 as notified.

971. BDC (S538.044) sought deletion of Rule INF-R3 because it was not relevant to the region. The Panel notes that this submission does not appear to have been covered in the s42A Report because it was assessed as a submission in support.

INF-R4

972. There were eight submission points[260] in support of INF-R4 as notified.

973. BDC (S538.045) sought INF-R4 be amended by deleting references to *'Activities'* and *'activity'* to provide consistency with the rule framework.

974. Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd (S663.021) sought an additional clause to provide an increased period of 12 months for construction/re-construction activity.

INF-R5

975. Te Mana Ora (S190.089) supported Rule INF-R5 as notified.

976. WCRC (S488.008) (supported by NZEL (FS127.048)) sought that INF-R5 be amended to increase the height from 4m to 10m because 4m was unreasonable given the current provision of 30m in the Rural Zone and the minimal environmental effects of hydrology monitoring structures and aerials in remote locations.

977. BDC (S538.046) sought to incorporate the words '*environmental monitoring equipment*' into INF-R6 (meteorological facilities). BDC considered the reference to '*extreme weather event monitoring'* was unnecessary as it was captured within '*environmental monitoring'*.

INF-R6

978. There were five submission points[261] supporting Rule INF-R6 as notified.

979. BDC (S538.047) sought that INF-R6 be amended to give effect to the relief sought concerning INF-R5 as follows:

> Navigational aids/beacons, environmental monitoring equipment and Meteorological Facilities Activity Status Permitted ~~Where:~~
>
> ~~(1) These are located in a RURZ Zone or INZ – Industrial Zone~~.

INF-R7

980. There were seven submission points[262] supporting Rule INF-R7 as notified.

[259] S190.087, S558.505, S566.505, S567.055, S574.505
[260] S190.088, S442.029, S476.022, S558.516, S566.516, S567.056, S574.516, S608.513
[261] S190.090, S558.527, S566.527, S567.057, S574.527
[262] S190.091, S476.022, S558.538, S566.538, S567.058, S574.538, S663.022

981. KiwiRail (S442.030) sought to amend INF-R7 to ensure it applied to *'rail infrastructure'*, as it considered it was essential to capture rail activities within the permitted activity rule.

982. BDC (S538.048) sought to amend the heading of INF-R7 to '*Operation, maintenance, repairs and extension of existing network utilities'*.

983. GDC (S608.515) sought that INF-R7 be amended to exclude standard (5) from standard (7) to provide clarity.

INF-R8

984. There were six submission points[263] in support of Rule INF-R8 as notified.

985. BDC (S538.049) sought to remove the advice note relating to connections involving a heritage item and insert a new reference in the Energy Chapter that directs plan users to Rule INF-R8 when considering customer connections for electricity service.

INF-R9

986. There were six submission points[264] in support of Rule INF-R9 as notified.

987. BDC (S538.050) sought that INF-R9 be deleted and inserted into the Energy Chapter because it encompassed the electricity lines and telecommunication poles or towers. BDC suggested moving the electricity component to the Energy Chapter and removing the reference to telecommunications.

988. Frida Inta (S553.043) sought that INF-R9 be changed to a discretionary activity becasue it would allow a cell phone tower to be built without resource consent.

INF-R10

989. There were seven submission points[265] and one further submitter who supported Rule INF-R10 as notified.

INF-R11

990. There were nine submission points[266] received on Rule INF-R11. Several submitters supported INF-R11 as notified.

991. The Telecommunication Companies (S663.027) sought to include an additional standard to align with the NESTF as follows:

> the volume (including any ancillary equipment) but not including any cabling) is not more than 0.11m^3.

[263] S190.092, S558.549, S566.549, S567.059, S574.549, S663.024
[264] S190.093, S558.560, S566.560, S567.060, S574.560, S663.025
[265] S190.094, S558.571, S566.571, S567.061, S574.571, S663.026, S663.028, FS98.001
[266] S190.095, S558.582, S566.582, S567.062, S574.582

INF-R12

992. Te Mana Ora (S190.096) supported Rule INF-R12 as notified.

993. Several submitters (S558.593, S566.593, S567.063 & S574.593) sought that INF-R12 be amended to be more enabling and provide clarity.

994. The Telecommunication Companies (S663.029) sought that the heading of INF-R12 be amended to cover equipment that did not meet the permitted standards of the NESTF, as follows:

> New telecommunications poles, new antenna attached to poles and new antenna attached to a building not regulated by the NESTF, or regulated equipment not meeting the permitted standards of the NESTF.

995. The Telecommunication Companies also sought a 20m height limit for CMUZ – Commercial and Mixed-Use Zone (other than the NCZ – Neighbourhood Centre Zone) and a 25m height limit for the INZ – Industrial Zone to provide more consistency with the standards in other district plans and to better reflect the ability of these zones to absorb the effects of infrastructure.

Controlled Activities

INF-R13

996. There were seven submission points[267] in support of Rule INF-R13 as notified.

997. GDC (S608.518) sought to delete clause (4) from INF-R13 or include a separate clause because it referred to the requirements for dish antennae in zoned land and Rule INF-R13 was specifically for road reserve.

INF-R14

998. There were six submission points[268] supporting Rule INF-R14 as notified.

999. GDC (S608.519) sought that INF-R14 specify the requirements for the width of the panel antenna in the RESZ and SETZ if the limit was not 0.8m, so as to provide clarity on the width of the panel in these two zones. GDC noted the rule limited panel antennas to 0.8m in width, excluding those in the RESZ and SETZ.

Restricted Discretionary Activities

INF-R15

1000. There were seven submission points[269] supporting Rule INF-R15 as notified.

[267] S190.097, S538.054, S558.604, S566.604, S567.064, S574.604, S663.030
[268] S190.098, S538.055, S558.615, S566.615, S567.065, S663.031
[269] S190.099, S538.056, S558.626, S566.626, S567.066, S574.626, S663.032

INF-R16

1001. There were six submission points[270] supporting Rule INF-R16 as notified.

1002. BDC (S538.057) sought significant amendments to INF-R16 to include provisions relating to onsite stormwater management, wastewater, and water services.

INF-R17

1003. Te Mana Ora (S190.101) supported Rule INF-R17 as notified.

1004. BDC (S538.058) sought deletion of Rule INF-R17 because it was irrelevant to the region.

INF-R18

1005. Te Mana Ora (S190.102) supported INF-R18 as notified.

1006. BDC (S538.059) sought the deletion of INF-R18, seeking navigational aids and beacons to be permitted activities.

INF-R19 and INF-R20

1007. Te Mana Ora (S190.103 & S190.104) supported Rule INF R19 and Rule INF-R20 as notified, and Toka Tū Ake EQC (S612.014) supported INF-R19 as notified.

1008. BDC (S538.060 & S538.061) sought the deletion of INF-R19 and INF-R20 because environmental, extreme weather event monitoring and meteorological facilities should be provided for as permitted activities.

INF-R21

1009. There were three submission points[271] in support of Rule INF-R21 as notified.

INF-R22

1010. There were seven submission points[272] in support of Rule INF-R22 as notified.

INF-R23

1011. There were seven submission points[273] in support of Rule INF-R23 as notified.

Discretionary Activities

INF-R24

[270] S190.100, S558.637, S566.637, S567.067, S574.637, S612.013
[271] S190.105, S612.015, S620.095,
[272] S190.106, S538.062, S558.648, S566.648, S567.068, S574.648, S663.033
[273] S190.107, S538.063, S558.659, S566.659, S567.069, S574.659, S663.034

1012. There were six submission points[274] in support of Rule INF-R24 as notified.

INF-R25

1013. There were seven submission points[275] in support of Rule INF-R25 as notified.

INF-R26

1014. There were eight submission points[276] in support of Rule INF-R26 as notified.

1015. KiwiRail (S442.031) sought that INF-R26 be amended to provide for '*rail infrastructure'*.

1016. GDC (S608.523) sought that INF-R26 be amended to remove reference to *'minor'* as there is no other allowance for upgrading these structures.

INF-R27

1017. There were eight submission points[277] in support of Rule INF-R27 as notified.

Non-Complying Activities

INF-R28

1018. There were eight submission points[278] in support of Rule INF-R28 as notified.

New Rules/Standards

1019. GDC (S608.624) sought the insertion of a new permitted activity rule as follows:

> INF-R13 New lighthouses, navigational aids and beacons Activity Status Permitted
>
> Where:
>
> (1) This meets the performance standards in Rule INF-R1. Activity status where compliance not achieved: Restricted Discretionary.

1020. Branch 49 (Westland) of the New Zealand Association of Radio Transmitters Inc. (S109.001) noted that Rule INF-R1(2) states that Radio Frequency Fields shall not exceed the maximum exposure level of the general public in New Zealand Standard NZS 2772.1:1999 Radiofrequency fields - Maximum exposure levels - 3kHz to 300 GHz. They pointed out that that the Amateur General User Radio Licence lists permitted frequencies up to 1000 GHz; and therefore, questioned whether INF-R1(2) should be amended. They suggested a new section specifically for Amateur Radio Communications as a permitted activity as follows:

> Amateur Radio Communications.

[274] S190.108, S558.670, S560.165, S566.670, S567.070, S574.670
[275] S190.109, S538.064, S558.681, S560.166, S566.681, S567.071, S574.681
[276] S190.110, S476.024, S538.065, S558.692, S560.167, S566.692, S567.072, S574.692
[277] S190.111, S476.025, S538.066, S558.703, S560.168, S566.703, S567.073, S574.703
[278] S190.112, S476.026, S538.067, S558.714, S560.169, S566.714, S567.074, S574.714

(1) Amateur Radio Communication means that communication permitted by the General User Licence (Radio) (ZZ) for Amateur Radio Operators – issued Pursuant to Regulation 9 of the Radiocommunications Regulations 2001 ("Regulations") made under section 116(1)(b) of the Radiocommunications Act 1989 for the transmission of radio waves by amateur radio operators in New Zealand, for the purpose of communications in the amateur radio service in accordance with the applicable terms, conditions and restrictions of such licence. Operators must have: [1] a current General Amateur Operator's Certificate of Competency (GAOC), and [2] a callsign.

(2) The following equipment shall be permitted under Amateur Radio Communications:

a. A single tower with a maximum height of 25 metres.

b. Four supplementary poles each having a maximum height of 15 metres, or including an antenna or lightning spike, 20 metres

c. A transmission building (including ancillary buildings) with a maximum area of 250 square metres. This shall apply in cases where transmission equipment is not located in an existing building, such a house or shed/garage.

(3) The following equipment attached to or erected on the existing tower and buildings or at the site on a permanent basis (in addition to the masts referred to above:

a. Radio communication antennas including whip, grid, yagi, dipoles and panels or similar, and ancillary equipment, but no single dish or panel antenna shall have a solid frontal surface area greater than 7 square metres or 2.5 metres in diameter in the case of dish antenna unless otherwise coming within the abovementioned sections and/or Regulations.

(4) Any beacon or repeater established per the abovementioned Regulations shall be allowed.

a. Where such repeater or beacon is permanently established and colocated in the premises of another qualifying operator/service (such as Kiwirail, Chorus, Department of Conservation etc) it shall meet any necessary conditions as agreed with that operator/service - such as not creating any unwanted interference with the operation of the transmission equipment of the other operator/service.

(5) Temporary or emergency operation of radio transmission equipment and antenna systems shall be permitted for a period of 7 days without notification – so long as no undue interference is created. Periods of operation longer than 7 days should be notified to the Regional/District Council concerned, with the reason for the temporary/emergency operation provided an indication of timeframe the communication is needed.

a. With respect to any temporary or emergency operation of amateur radio equipment, the amateur radio operator(s) involved shall comply with any lawful direction from any officer if the Regional/District Council and/or Police or Civil Defence Officer.

1021. Poutini Ngāi Tahu (S620.096) sought a new rule for systems that discharge wastewater to water as a non-complying activity.

1022. Frank and Jo Dooley (S478.092) and Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd (S663.020) sought a new rule to allow underground lines and backup electricity generators as a permitted activity.

1023. Transpower (S299.051) and Forest & Bird (FS34.031) sought a new standard/rule to capture any energy activities not explicitly provided for within the Plan.

Section 42A Reports

1024. The Reporting Officers opened with a planning summary statement noting that they had recommended relatively minor changes to the Plan provisions to improve clarity, efficiency, and effectiveness. They noted the outstanding matters related to the amendment of Rule INF-05, including Poutini Ngai Tahu requirements for wastewater discharge to land and Rule INF-R2, which covered reticulated connections, particularly the certification that capacity was available.

New Standards for Permitted and Restricted Discretionary Activities

1025. The Reporting Officers rejected the Forest and Bird request (supported by Poutini Ngāi Tahu) that permitted and restricted discretionary activities include new standards, including an additional matter of discretion to allow for consideration of natural values, and requiring other provisions in other chapters, including the values of zone overlays and district-wide chapters to be met. They noted the pTTPP was intended to be read in its entirety, and other chapters and provisions would be assessed. They also considered the overview already provided guidance that other chapters must be read and considered, so, adding further provisions would be, in their view, unnecessary duplication. The Reporting Officers considered Advice Notes (2), (3), and (4) did not need to be amended as they were clear and address the relevant matters covered by the infrastructure chapter.

1026. The Reporting Officers were open to the submission to include monitoring equipment for movement of the Alpine fault. However, they noted that they had insufficient technical evidence and no section 32 evaluation to support the relief sought.

1027. The Reporting Officers recommended accepting the relief sought by Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd to amend Advice Note (2) because it was consistent with the NESTF. The Addendum Report addressed Mr Horne's pre-circulated evidence and recommended amendments to Advice Note (2) to accommodate the relief sought.

1028. The Reporting Officers considered that Advice Notes (2), (3) and (4) were clear and appropriately addressed matters relevant to the Infrastructure Chapter; and therefore, recommended rejecting Forest & Birds submission.

INF-R1

1029. The Reporting Officers recommended accepting BDC's requested amendment to the rule heading, agreeing that the inclusion of '*Permitted*' was unnecessary and would be consistent with the recommendation made for equivalent Rule ENG-R1.

INF-R2

1030. The Reporting Officers recommended rejection in part of the Forest & Bird submission because they considered providing for the activity as a controlled activity created an unnecessary burden and cost to applicants seeking a consent that could not be declined based on capacity. They recommended an amendment to INF-R2 to enable connections as a permitted activity where certification was provided from the relevant Council that capacity was available. They also recommended that additional matters of discretion be added to INF-R16 to address the appropriate scale of activities.

1031. The Reporting Officers did not support the relief sought by Poutini Ngāi Tahu because they considered this issue a regional council function related to water quality.

1032. Regarding GDC's submission, the Reporting Officers accepted that the current wording of INF-R2 was unclear and recommended amendments to include '*certification*'.

INF-R3

1033. The Reporting Officers recommend retaining Rule INF-R3 as notified.

INF-R4

1034. The Reporting Officers did not support the BDC submission because they considered the inclusion of '*activity*' was needed to ensure Rule INF-R4 read correctly, and its retention was consistent with the Temporary Activities Chapter.

1035. The Reporting Officers did not support the relief sought by Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd because it was part of construction or reconstruction and the Energy Chapter and INF-R7 would apply addressing the concern. They considered this amendment would result in unnecessary duplication.

INF-R5 and INF-R6

1036. The Reporting Officers did not agree with increasing height as sought by WCRC considering that within an area of 25m^2 it could result in structures of a significant scale, and there was no evidence to support such an amendment.

1037. The Reporting Officers accepted BDC's request to combine INF-R5 and INF-R6 because this was consistent with the Energy Chapter. They noted the resulted in a consequential amendment to Rule INF-R18 and Rule INF-R20.

1038. The Addendum Report responded to submitter evidence with the Reporting Officers agreeing to delete INF-R19 and make consequential amendments to Rule INF-R6. They noted that this was consistent with the recommendation made in relation to Rule ENG-R10.

INF-R7

1039. The Reporting Officers did not support KiwiRail's requested relief because rail infrastructure was appropriately provided for within the Transport Chapter.

1040. The Reporting Officers supported the relief sought by BDC to amendment the heading of INF-R7 on the basis that it simplified it for ease of reference. They noted that based on this, they had recommended consequential amendments throughout the Energy Chapter to ensure consistency in the pTTPP.

1041. The Reporting Officers rejected GDC's request to excluded standard (5) from standard (7) because they considered this would result in a gap in the standard.

INF-R8

1042. The Reporting Officers agreed with the BDC submission but recommended that the rule be removed and inserted into the Energy Chapter to remove the duplication with Rule INF-R2.

INF-R9

1043. The Reporting Officers rejected BDC's request to delete INF-R9 and insert it in the Energy Chapter. They considered the current wording was clearly limited to telecommunications and it was necessary to retain this to ensure the telecommunication component could be reinforced.

1044. The Reporting Officers did not support Frida Inta's request to alter the rule status to discretionary, as they considered Rule INF-R9 was consistent with the General Residential Zone and Industrial Zone outcomes defaulting to discretionary.

INF-R10

1045. The s42A Report recommended retaining Rule INF-R10 as notified.

INF-R11

1046. The Reporting Officers supported the Telecommunication Companies' request to amend and align Rule INF-R11 with the NESTF.

INF-R12

1047. The Reporting Officers did not support the submissions that sought amendments to INF-R12 to make it more enabling because no specific relief was provided.

1048. The Reporting Officers supported the Telecommunication Companies' request to increase the height limit of poles and antenna to 20m in the Commercial and Mixed-Use Zone (CMUZ) because this was consistent with the relevant zone chapters in the pTTPP. However, they did not support increasing the height limit to 25m in the Industrial Zone because this was inconsistent with Rule GIZ-R1.

INF-R13

1049. The Reporting Officers recommended rejecting the GDC's request to delete clause (4) or to include a separate clause because it referred to the requirements for dish antennae in zone. They noted Rule INF-R13 was specifically for road reserve and INF-R14 applies to zoned land, so they considered the Plan already addressed the issue.

INF-R14

1050. The Reporting Officers did not support the relief sought by GDC relating to clarifying the width of panel antenna in a RESZ or SETZ zone due to a lack of technical evidence on the need for such a change. They recommended retaining Rule INF-R14 as notified.

INF-R15

1051. The Reporting Officers recommended retaining Rule INF-R15 as notified.

INF-R16

1052. The Reporting Officers did not support the relief sought by BDC. They considered the amendment requested would completely change the intent of the rule, as notified, which addressed connections to reticulated services.

INF-R17

1053. The Reporting Officers did not support the deletion of Rule INF-R17, as sought by BDC, because was linked to INF-R3 and it could provide a gap in future if deleted.

INF-R18, INF-R19 and INF-R20

1054. Given the recommended amendments to INF-R5 and INF-R6, the Reporting Officers recommended the deletion of Rule INF-R18 and Rule INF-R20 and the amendment of Rule INF-R19. However, the Panel notes that Attachment 1 to the s42A Report retained INF-R18 as notified, with no amendments, but deleted INF-R20 and amended INF-R19. This is discussed further below.

1055. In relation to Rule INF-R19, the Addendum Report noted that both WCRC and BDC considered Rule INF-R19 should be deleted as a consequence of other recommended changes because if no permitted conditions were breached there was no basis for a restricted discretionary rule. The Reporting Officers agreed and supported deleting Rule INF-R19 but considered consequential amendments were required to Rule INF-R6 to be consistent with Rule ENG-R10. They therefore recommended adding new clauses to Rule INF-R6 to require compliance with height limits for structures or buildings in the relevant zone provisions. They noted this rule could change following the zone hearings.

INF-R21, INF-R22, INF-R23, INF-R24 and INF-R25

1056. The Reporting Officers recommend retaining rules INF-R21, INF-R22, INF-R23 INF-R24 and INF-R25 as notified.

INF-R26

1057. The Reporting Officers did not support the relief sought by KiwiRail because they considered rail infrastructure was appropriately provided for in the Transport Chapter. They did support the GDC amendment to remove '*minor*' in the heading because they considered it provided clarity and removed unnecessary wording.

INF-R27 and INF-R28

1058. The Reporting Officers recommended retaining rules INF-R27 and INF-R28 as notified.

New Rules

1059. Transpower (S299.051) and Forest and Bird (FS34.031) sought a new rule to capture any energy activities not specifically provided for within the Plan at a discretionary status. The Reporting Officers recognised that the notified Plan lacked such a catch-all rule and

recommended that the submissions were accepted. They recommended that the same rule be included in the Infrastructure and Transportation Chapters but at a non-complying status.

1060. The Reporting Officers did not support GDC's request for a new rule for new lighthouses, navigation aids and beacons because they considered these were already provided for within rules INF-R6 and INF-R19.

1061. The Reporting Officers accepted Branch 49 (Westland) of the New Zealand Association of Radio Transmitters Inc. request to include a new permitted activity rule for Amateur Radio Communications; however, this was not included in the amendments to the provisions.

1062. The Reporting Officers did not support Poutini Ngāi Tahu's request for a new rule for systems that discharge wastewater to water because they considered this was regional council function.

1063. The Reporting Officers did not support the submissions by Frank and Jo Dooley and Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd, which sought a new rule to allow underground lines and backup electricity generators as a permitted activity because they considered Temporary Activity and Energy Chapter rules provided for underground lines and backup electricity generators.

Hearing and Submitter Evidence/Statements, including EWC

1064. Mr Horne, for the Telecommunication Companies, noted the s42A Report had not correctly set out the change in the Plan provisions, within Appendix 1, after recommending acceptance of their submission. He provided further wording to give effect to the relief sought. He disagreed with the Reporting Officers' response to the requested amendment to INF-R4 that rules INF-R7 or TEMP-R2 would provide relief. He highlighted the evidence of Mr McCarrison, Mr Kantor and Mr Clune detailing how temporary telecommunications facilities work and providing examples at Norsewood and Queenstown. He noted that they explain why INF-R2, INF-R4, INF-R4 and TEMP-R2 did not cover all situations entirely; and that the requested change to INF-R4 to provide for up to 12 months for the deployment of a temporary facility while an existing site was being reconstructed or replaced was required to ensure existing service disruption was minimised.

1065. Mr Horne considered permanent standby backup generators should be specifically provided for by INF rules as a permitted activity, noting that the district-wide noise rules would continue to apply. He noted the intent of the submission was for fixed standby generators rather than temporary generators that may for example be moved to a site during a natural disaster. He considered it was not necessary to include a permanent stand-by generator in the temporary activity provisions, and he supported adding wording for a 12-month period in Rule INF-R4.

1066. Mr Horne noted that Rule INF-R9 appeared to provide for telecommunication lines generally, notwithstanding that the standards were only relevant to above ground lines. He said that if this was the correct interpretation then no further change to the Plan would be necessary.

1067. Mr Horne addressed the Reporting Officers' position on Rule INF-R12 in relation to retaining a 20m height limit for poles and antennas in the Industrial Zone. He noted that their reasoning would be inconsistent with heights in the GIZ as provided by GIZ-R1. He referred to both his

experience with telecommunication projects and the evidence provided by Mr McCarrison, Mr Kantor and Mr Clune that a margin was required above local obstructions, such as buildings, to enable line of sight for effective coverage. He noted a height limit of 20m may result in telecommunication facilities being unable to provide coverage. He considered a height limit of 25m in the Industrial Zone would incentivise the Companies to utilise those zones to secure better height and coverage compared to other urban zones with higher amenities. He therefore considered a height of 25m appropriate, reasonable and standard within district plans; and would be consistent with INF-P2 by recognising operational and functional needs and recognising the benefits of the service provided while appropriately managing adverse effects on the environment using zones enabling larger and utilitarian building forms commonly associated with industrial activities.

1068. Mr Horne considered Rule INF-R14 did not make sense and noted the reference to the NESTF clause was incorrect. He also noted the rule standards addressed equipment in residential and industrial settlements and industrial zones where the NESTF did not regulate new poles and antennas. He considered the scope of the rule needed amendment but not the proposed standards and their intent. He considered clause 16 of the First Schedule RMA would be available to ensure the rule made sense and was workable without seeking to change the actual controlled activity envelope provided within the rule.

1069. Ms Pull, for Poutini Ngāi Tahu, challenged the Reporting Officers' response to the submission on INF-R2 that the amendment be declined as providing water quality was a regional council function. She referenced clause 3.5 of the NPS-FM to support her view that district councils have a role in addressing and providing for water quality. To resolve matters, she recommended that INF-R2 be amended to include an advice note as follows:

> Capacity for the purpose of this rule includes volume and the ability for the network to control the amount of water-borne contaminants, litter and sediments as set out in the consents for the network.

1070. Ms Pull position statement (dated 2 February 2024) records that conditional agreement was reached with the Reporting Officers to use an advice note regarding the water quality issue.

1071. In legal submissions for Poutini Ngāi Tahu, Ms Viskovic highlighted their strong desire for treated wastewater to not be discharged into water and sought that the Plan recognised this position to assist in deterring discharges into water. She submitted this could be achieved by providing planning support for the elements of wastewater discharge projects regulated through the district plan where the proposed project was for a discharge to land.

1072. Ms Pull contended that Poutini Ngāi Tahu values should be included as an additional matter of control or discretion for Rules INF-R13 to INF-R23. She noted Poutini Ngāi Tahu supported Forest and Bird's submission, particularly where that enhanced consideration of those values.

1073. Ms Viskovic acknowledged that including an additional matter of control/discretion would require an additional level of analysis to be undertaken by an applicant but considered the potential effects on Poutini Ngāi Tahu values was justified. In responding to questions from the Panel as to whether s104(1)(c) meant that the relief was not in fact necessary, she noted that the matters that can be considered in relation to controlled and restricted discretionary activities were specifically constrained by sections 104A and 104C respectively. She noted the

Plan did not comprehensively map or identify all Poutini Ngāi Tahu values and that the key concern was potential effects on Poutini Ngāi Tahu values (for example an adverse effect on mahinga kai) not located within identified SASM. She considered Ms Pull's refinement of the matter of discretion to only reference "*significant adverse effects*" on Poutini Ngāi Tahu values would limit the circumstances in which this matter of discretion would be engaged, while ensuring that the strategic direction objectives and policies in the Poutini Ngāi Tahu Chapter were achieved

1074. In her Addendum evidence, Ms Pull provided Table 2 identifying the relevant controlled and restricted discretionary rules that relate to activities that could potentially impact Poutini Ngāi Tahu values. She concluded that the rule which reached the threshold of '*significant*' potential effects on Poutini Ngāi Tahu values was INF-R16. She said the benefits of including Poutini Ngāi Tahu values as a matter of discretion included better implementation of the RPS, effective consideration of the Strategic Direction POU-O4 and improved cultural and environmental outcomes. She noted the costs of undertaking a more detailed assessment of environmental effects and/or discussion with representatives of the relevant rūnanga only applied to the one rule identified and therefore the additional cost was minimised and reasonable, was efficient compared to restoration of the values if damaged. Ms Pull's proposed matter of discretion was as follows:

> <u>The management of impacts on Poutini Ngāi Tahu values as set out in the tangata whenua chapter.</u>

1075. Ms Pull noted the Reporting Officers acknowledged infrastructure could adversely affect cultural values if not inappropriately managed but that despite this, they opposed amending the controlled activity and discretionary activity rules as sought by Poutini Ngai Tahu.

1076. In relation to INF-R17, Ms Pull did not agree with the Reporting Officers approach of relying on the Overview to alert Plan users that other chapters may be engaged. She considered that the principles of the Te Tiriti o Waitangi and Poutini Ngāi Tahu values needed to be woven across the entirety of the Plan and not only considered within the context of the Māori Chapters.

1077. In relation to the overlays, Ms Pull noted that the Poutini Ngāi Tahu submission was limited to including the overlay chapters and/or sites listed in Appendix Ten. She identified several rules, including INF-R23, that contained inconsistent language in terms of matters of control or discretion in referencing overlays.

1078. Ms Inta noted concern about the lack of standards in Rule INF-R6, despite not making a submission on this rule. She also sought Rule INF-R9 be changed to a discretionary activity so that building a cell phone tower required a resource consent.

1079. WCRC's tabled statement noted it supported deletion of clause (1) because if it was retained meteorological facilities would only be permitted activities in the Rural Zone and the Industrial Zone and in the Natural Open Space Zone on conservation land and other zones it would be a restricted discretionary activity. WCRC considered this would be unnecessarily onerous.

1080. WCRC also provided context and examples to support their submission on Rule INF-R5 to increase the height limit to 10m for environmental monitoring and extreme weather event

monitoring facilities, noting that the lattice rainfall monitoring towers at alpine sites were between 3-4m in height but there were four alpine repeater towers which were between 9-10m tall and that at lowland sites, poles and posts with solar panels, antennae and a telemetry cabinet were up to 10-12m tall.

1081. KiwiRail accepted the Reporting Officers' position on INF-R7 that rail infrastructure was appropriately provided for within the Transport Chapter. KiwiRail also accepted this position for INF-R26.

Reporting Officers' Reply Evidence

General

1082. At the hearing the Panel questioned the language used within various rules in relation to compliance with Rule INF-R1. We highlighted inconsistent language in the standards, such as some rules requiring "*All performance standards in Rule INF - R1 are complied with*", while other rules require "*This meets the performance standards in Rule INF – R1*". The Reporting Officers agreed there was an inconsistency and recommended the former wording be used with amendments made using RMA Schedule 1 clause 16 (2).

INF-R2 and INF-R16

1083. The Reporting Officers recommended rewording and amending Rule INF-R2 and Rule INF-R16 as follows:

INF-R2 ~~Connections to w~~Water, wastewater, stormwater ~~and reticulated~~ systems

Activity Status Permitted

Where:

1. **Any proposed allotment or activity is located within 50m of a public reticulated water, wastewater or stormwater system:**

   a) The proposed allotment or activity shall be provided with a connection to the reticulated system; and

   b) ~~The building is serviced by, and~~ **Certification is provided from the relevant local authority that** capacity exists within the reticulated water supply, wastewater or stormwater **system** ~~networks~~ **to service the proposed allotment or activity**.

Note: Certification shall confirm that the system has the capacity to accommodate the additional connections, including confirmation that volume and treatment of the reticulated systems will continue to comply with resource consent requirements.

2. Any proposed allotment or activity is located further than 50m of a public reticulated water, wastewater or stormwater system.

Advice Note: Any discharge to land and/or water may require a discharge permit from the West Coastal Regional Council under the relevant regional plan.

Activity status where compliance not achieved: Restricted Discretionary

INF-R16 ~~Connections to w~~Water, wastewater and stormwater reticulated system not meeting Permitted Activity standards.

Activity Status Restricted Discretionary Matters of ~~control~~ **discretion**:

a) Level of flood hazard mitigation through stormwater control;

b) Any requirement for pre-treatment, retention or detention of stormwater or wastewater prior to discharge to the reticulated system;

c) Provision of drinking water connections in accordance with NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure and Council Engineering Standards;

d) Provision for wastewater connections in accordance with NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure and Council Engineering Standards.

e) Scope and scale of proposed activity and potential demand on reticulated services.

f) Cumulative effects on reticulated systems.

g) Any adverse effects on areas and values listed in Schedules 1-8.

Advice Note: Any discharge to land and/or water may require a discharge permit from the West Coastal Regional Council under the relevant regional plan.

1084. The Reporting Officers noted the purpose of INF-R2 was to ensure developers connected to reticulated services when they were available. They considered whether the permitted activity status for this rule was appropriate given the uncertainty as to capacity and the need for the Council to certify that capacity was available. They noted that, as notified, the rule did not include consideration of the proximity between the subdivision and the service; and that it applied to all zones. In assuming connection to a reticulated service was either not taken up or unavailable, they noted all onsite systems throughout the region would require a resource consent via the default rule INF-R16, which would lead to a duplication between the pTTPP and the West Coast Regional Land and Water Plan Rule 79, (On-site discharge of sewage effluent) and Rule 81 (Stormwater discharge). They acknowledged the scope to amend this was limited but considered the recommend rewording of both INF-R2 and INF-R16 overcame the issues identified by including three new matters of discretion in INF-R16.

1085. In terms of Ms Pull's suggested matter of control or discretion, the Reporting Officers expressed concerns that the relief sought would increase the complexity of resource consents for restricted discretionary and controlled activities, noting that Ngai Tahu's involvement would be needed as specialists in tikanga in all applications. They suggested that if the Panel were of a mind to include such matters, that an advice note also be included that a cultural impact assessment would need to accompany any resource consent application. They also noted Ms Pull had, during the reconvened hearing, offered a further solution of including a notification advice note to notify Plan users that consultation with iwi was required.

1086. The Panel note the recommended provision in Reply included '*Any adverse effects on areas and values listed in Schedules 1-8*' as a matter of discretion, which seemed to stem from the Reporting Officers agreeing with Ms Pull that specific reference to Schedules 1–8 would provide direction to plan users, be consistent with other provisions and afford appropriate consideration of SASM. However, the Panel notes Rule INF-R16 was not mentioned in the Reply as one of the rules to which this was recommended to apply.

INF-R4

1087. The Addendum Report records that the Reporting Officers now accepted the relief sought by the Telecommunication Companies to include a new clause in INF-R4 to add wording addressing the 12 months for reasons outlined in Mr Horne's evidence.

INF-R6

1088. The Reporting Officers recommended amendments to Rule INF-R6 within their Addendum Report to be consistent with amendment recommended for Rule ENG-R10. They recommended the rule require compliance with the structure or building height limits in relevant zone provisions.

INF-R8

1089. Subsequent to their s42A Report, which recommended that the INF-R8 be deleted and inserted into the Energy Chapter, the Reporting Officers further considered the differentiation between the Energy and Infrastructure Chapters. They identified that in the Infrastructure Chapter had permitted activity Rule INF-R8 "*new network utility customer connections*" and that with the separation of chapters this permitted activity would not be available to Energy Activities. They noted that Westpower had sought the inclusion of customer connections within their proposed definition of '*minor upgrading'* to clarify that distribution lines included customer connections. Further, they said that evidence at the hearing and further clarification during the EWC led them to reach the conclusion that separate provisions for customer connections were not necessary because a connection was simply part of the distribution network and sufficiently provided for by permitted activity Rule ENG-RX3 (now ENG-R10).

INF-R9

1090. In response to Mr Horne, the Reporting Officers indicated in the Addendum Report that they considered underground lines were provided for as a permitted activity under Rule INF-R9. However, subsequent to this, the Reporting Officers included the addition of a further requirement without explanation in Attachment 1 of the Reply, as follows:

> <u>The activity is located below ground.</u>

INF-R12

1091. Attachment 1 of the Reply included two further changes to Rule INF-R12 by recommending amending clauses (1) and (2) to delete "*This*" from the beginning of both clause and replace it with "*The telecommunication pole or antenna*", in response to the Panel's queries, to make it clearer by identifying the structures. Thye also recommended amending clause (2)(i)(c) to change the height limit in the General Industrial Zone (GIZ) to 25m, as sought by the Telecommunication Companies.

1092. The Addendum Report responded to Mr Horne's evidence for the Telecommunication Companies relating to including activities not regulated by NES-TF in the heading to the rule. The Reporting Officers did not support amending INF-R12 but instead recommended a new rule to achieve the same outcome and be easier for plan users to understand the rule cascade as follows:

INF – RX2 New telecommunications poles and antennas meeting the permitted standards of the NES-TF

Activity Status Permitted

Where:

1. This meets the performance standards in Rule INF–R1.

Activity status where compliance not achieved: Various

INF-R17, INF-R19, and INF-R20 Landscape Measures: Matters of Control or Discretion

1093. The Reporting Officers agreed with Ms Pull that the wording "*landscape measures*" as a matter of discretion was unclear. They noted that their recommendations included the replacement of "*landscape measures*" with "*The effects of the proposal on the amenity, character and landscape values of the underlying Zone*". They therefore supported the amendment of Rule INF-R17 to include this wording to afford consistency across the provisions.

1094. The Reporting Officers recommended rules INF-R19 and INF-R20 be deleted.

INF-R13, INF-R14, INF-R15, INF-R22 and INF-R23 'Visual Effect' Matters of Control or Discretion.

1095. The Reporting Officers noted that Ms Pull considered the reference in the matters of discretion to '*visual effects in particular on amenity values*' was unclear. She had recommended adding '*including attributes*' to ensure that the effects on Poutini Ngāi Tahu values would be included as a matter of control and/or discretion. While the Reporting Officers did not support Ms Pull's recommendations, considering that "*attributes*" was attached only to cultural and recreational in terms of the definition of amenity values in the RMA, they concluded that separate criterion for '*visual effects*' and '*effects on amenity values*' would avoid the potential to muddle visual and amenity effects, whilst enabling amenity values to be considered including cultural attributes. They recommended the following wording:

a) Visual effects;

b) Effects on amenity values in particular of the locality and streetscape;

1096. In Reply, the Reporting Officers considered removing the extra words qualifying amenity values to resolve potential interpretation issues. They recorded their agreement to do so, leaving the additional wording for inclusion to be '*Effects on Amenity values'.*

Impacts on Overlay Matters, Matters of Control and Discretion

1097. In response to Ms Pull's concern regarding inconsistent language in the Plan within matters of discretion, the Reporting Officers supported consistency of wording across these rules and proposed the following words:

The degree to which the proposed activity will cause adverse effects on areas and values listed in Schedules 1-8.

New Rules

1098. In terms of the new rule requested for backup generators, the Reporting Officers changed their position within the Addendum and agreed with Mr Horne that no rules within the Temporary activities chapter provided for permanent backup generators. They therefore supported the inclusion of a new rule to provide for backup generators.

Hearing Panel's Evaluation

Notes to the Rules and Additional Standards

1099. The Panel agree with Mr Horne that the notified pTTPP does not correctly explain the relationship between the NESTF and the Plan. We accept his suggested amendments to Advice Note (2) appropriately explain that relationship and therefore recommend it is amended as shown below.

1100. The Panel agrees with Forest and Bird that consideration of effects on natural values should be a matter of discretion/control for the restricted discretionary and controlled activity rules where appropriate. We consider this should be '*Effects on indigenous biodiversity*' rather than natural values. This acknowledges that not all significant natural values are yet identified within the Plan (where adverse effects must be avoided) and significant adverse effects on indigenous biodiversity must be addressed by applying the effects management hierarchy. We consider this in relation to each of the relevant rules below.

1101. In all other respects, we accept the Reporting Officer's recommendation to reject submissions that sought amendment to the Notes and inclusion of additional standards for the reasons set out in s42A.

1102. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnotes below is accepted and recommends the following changes to the **Infrastructure Rules Note**:

Infrastructure Rules

Note:

1. There may be a number of Plan provisions that apply to an activity, building, structure and site. In some cases, consent may be required under rules in this Chapter as well as rules in other Chapters in the Plan. In those cases**,**[279] unless otherwise specifically stated in a rule, consent is required under each of those identified rules. Details of the steps Plan users should take to determine the status of an activity is provided in General Approach.
2. The installation and operation of telecommunications facilities (such as cabinets, antennas, poles, small cell-units and telecommunications lines) undertaken by a telecommunications facility operator are controlled **in some instances**[280] by the Resource Management (National Environmental Standards for Telecommunications Facilities) Regulations 2016, separate to Te Tai o Poutini Plan. Te Tai o Poutini Plan

[279] RMA Schedule 1 Clause 16(2)
[280] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.019

applies where these telecommunications facilities **are either not covered by the Regulations, are covered but do not meet permitted standards of the Regulations, or**[281] are located within the following overlays:

a. Outstanding Natural Features
b. Outstanding Natural Landscapes
c. Outstanding Coastal Natural Character
d. High Coastal Natural Character
e. Significant Natural Areas
f. Sites and Areas of Significance to Māori
g. Sites and Areas of Historic Heritage
h. Notable Trees

3. Infrastructure includes the Ports and Airports, the specific provisions for these utilities are within the Port Zone and Airport Zone provisions.
4. Provisions relating to energy activities and associated infrastructure are contained in the Energy Chapter and provisions for transport infrastructure are contained in the Transport Chapter.

Permitted Activities

General Matters

1103. The Panel agrees with the Reporting Officers that separating the criterion for '*visual effects'* and '*effects on amenity values'* would avoid confusion and enable amenity values to be considered including cultural attributes. We acknowledge that the Reporting Officers also agreed with the removal of the extra words which qualifying amenity values and that the matter of control/discretion be simply '*effects on amenity values'*. We consider this will ensure potential interpretation issues do not arise.

1104. The Panel notes that the Reporting Officers' and Ms Pull's recommended amendment responds to submissions by Forest and Bird and Poutini Ngāi Tahu in relation to notified rules INF-R13, INF-R14, INF-R15, INF-R22 and INF-23. However, we do not consider those submissions provide sufficient scope to make the amendments recommended by the Reporting Officers. We agree that the wording, as notified, is unclear and is inconsistent the language used in the RMA in relation to the definition of '*amenity values*'. We therefore rely on RMA Schedule 1, clause 16(2) to recommend that the relevant matters of control/discretion in each rule be amended as follows:

a) Visual effects ~~in particular on the amenity values of the locality and streetscape~~;

b) **Effects on amenity values;**

INF-R1

1105. The Panel agree with BDC that the word '*Permitted'* in the rule heading is superfluous given the words '*Permitted Activities*' begin this section of Rules. We recommend it is deleted.

[281] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.019

1106. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted, and recommend the following changes to **Rule INF-R1**:

Permitted Activities	
INF - R1	**Infrastructure ~~Permitted~~[282] Activity Performance Standards**
Activity Status Permitted Where: 1. Electric and Magnetic fields - An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the **World Health Organisation**'s monograph Environmental Health Criteria 238, June 2007; and 2. Radio Frequency Fields - An activity generating radio frequency fields does not result in radio frequency field levels that exceed the maximum exposure level of the general public in New Zealand Standard **NZS 2772.1:1999 Radiofrequency fields - Maximum exposure levels** - 3kHz to 300 GHz.	
Activity status where compliance not achieved: Non-complying	

INF-R2

1107. The Panel understands that the purpose of Rule INF-R2 is to have subdivisions and developments connect to services where they are available. We use the word 'available' in this context to mean the services are both available and have sufficient capacity to service the demand. We agree that, as worded, Rule INF-R2 is problematic by effectively making any building not connected to services a restricted discretionary activity, regardless of location or zone. We consider it is unlikely this was the intent of the rule (although we cannot be certain) and agree with the Reporting Officers and Ms Pull that its purpose was more likely to require connection to reticulated services where there was the ability for such connection.

1108. The Reporting Officers have identified that they consider scope to amend INF-R2 is limited. Nevertheless, they have proposed a rewrite of the rule including introduction '*water*' and providing a distance of 50m from services within which the activity status is permitted provided certification from the local authority is obtained; and that beyond a distance of 50m a connection would not be required.

1109. The Panel agree that scope is limited with Forest and Bird's submission seeking a controlled activity status providing the greatest level of scope available. In this context, our view is that a rewrite of the rule or its deletion is beyond the scope available to us; and we do not consider, based on the limited information before us, that a controlled activity status is appropriate. We have considered whether use of RMA, Schedule 1, clause 16(2) is appropriate but conclude that describing the amendments proposed as an alteration of minor effect, or a minor error would be stretching use of the clause. Even if we are wrong on this view, we have concerns

[282] Buller District Council S538.053

that the 50m distance proposed is not supported by evidence providing the rationale for that distance and could potentially lead to the ability for urban style development to not need to connect to services. In our view, such an outcome has not been appropriately assessed, and parties have not had sufficient opportunity to comment.

1110. In conclusion, the Panel agree that the INF-R2 needs to be reconsidered, however, we consider this must be achieved via a plan change, which looks into the various options and appropriately assesses these. Given lack of scope enabling change to INF-R2, we have no option but to recommend INF-R2 is retained as notified. However, we consider our recommended amendments to the heading of Rule INF-R16 (now INF-R14) below should be made under RMA Schedule 1, clause 16(2).

INF – R2	**Connections to <u>water,</u> wastewater, stormwater ~~and~~ reticulated systems** [283]
Activity Status Permitted Where: 1. The building is serviced by, and capacity exists within the reticulated water supply, wastewater or stormwater networks.	
Activity status where compliance not achieved: Restricted Discretionary	

INF-R3

1111. The Panel notes that BDC sought to delete INF-R3 on the basis that it was not relevant to the region. As we understand, it there is at least one gas pipeline in the Te Kinga/Iveagh Bay area which operates through the road reserve. On this basis, we recommend that **Rule INF-R3** is retained as notified.

INF – R3	**Maintenance and operation of existing gas pipeline under 2,000 kilopascals**
Activity Status Permitted Where: 1. The pipeline is located underground and is not on or within a natural waterbody, except where it is: a. Attached to and/or incorporated within an existing bridge structure; or b. Within an existing attached conduit or duct; and 2. Any realignment, relocation or replacement of a pipeline is within: a. An existing easement in favour of the pipeline; and b. Is within 12 metres of the existing alignment or location.	
Activity status where compliance not achieved: Discretionary	

INF-R4

[283] RMA Schedule 1, clause 16(2)

1112. For the reasons outlined in Mr Horne's evidence and supported by the Reporting Officers, we accept the inclusion new clause (2)(iii) to provide temporary activities for 12 months as part of construction or re-construction activity is an appropriate outcome.

1113. The Panel notes that for consistency reasons an amendment has been made to the activity status where compliance is not achieved with the standards. Non-compliance with Rule INF-R1 is non-complying, however, is indicated in INF-R4 as discretionary. We consider this is an error and can be corrected using RMA Schedule 1, clause 16 (2).

1114. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted, and recommend the following changes to **Rule INF-R4**:

INF – R4	**Temporary Network Activities**
Activity Status Permitted Where: 1. The temporary network is operated by a network utility operator; 2. The temporary network activity is: i. For up to a period of 24 months following a national, regional or local state of emergency declaration; or ii. For up to a period of four weeks to provide for additional capacity; ~~and~~ **or** iii. **For a period of up to 12 months as part of construction or re-construction activity; and**[284] 3. All performance standards in Rule INF-R1 are complied with; and 4. The utility must be removed from the site when operation ceases and the site reinstated.	
Activity status where compliance not achieved: **Non-complying where standard 3 is not complied with.** Discretionary **where standards 1, 2 and 4 are not complied with**[285]	

INF-R5 and INF-R6

1115. The Panel notes that our recommendation in the Energy Chapter that Rule ENG-R10 (dealing with environmental monitoring and meteorological facilities) is not necessary and that any such provision is better placed within the Infrastructure Chapter to avoid duplication. We note that our recommendation on Rule ENG-R10 also recognises that there is sufficient scope to address the concerns of Manawa in relation height limits and their concern about the activity status within a revised Rule INF-R6.

1116. The Panel agree with the BDC that Rule INF-R5 and Rule INF-R6 should be combined, resulting in the deletion of Rule INF-R5 and consequential amendments to other rules. In that context, we agree that Rule INF-19 and Rule INF-20 should be deleted and that this also necessitates consequential amendments to Rule INF-R6, in relation to compliance with the relevant zone provisions. For the reasons contained within the BDC submission and s42A Report, we recommend Rule INF-R5 is deleted.

[284] Chorus NZ Ltd, Spark NZ Trading Ltd and Vodafone NZ Ltd S663.021
[285] RMA Schedule 1, clause 16(2)

1117. In terms of INF-R6, the Panel notes that the deletion of INF-R5 means the heading of INF-R6 requires amendment to include '*environmental monitoring'*. We also accept the Reporting Officers' recommendation that the rule should require compliance with the relevant underlying zone structure or building height limits. However, consistent with other recommendations we have made, we consider this should reference other zones provision to ensure the effects of the activity are addressed within the context of the relevant zone.

1118. For the reasons advanced by BDC and WCRC, we recommend that clause (1) in the notified version of INF-R6 is deleted.

1119. The Panel notes that the consequential amendments to INF-R6 would go some way to addressing the concerns of WCRC and Manawa in relation to the height limit and scale for monitoring equipment given that they become zone based.

1120. For consistency with Rule INF-R1, the Panel recommends amending the activity status to non-complying, where compliance with standard (1) is not achieved. We consider this is an error that can be corrected as an RMA Schedule 1, clause 16 (2) amendment.

1121. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part, and recommend that **Rule INF-R5** is deleted and that **Rule INF-R6** is amended as follows:

~~**INF – R5**~~	~~**Environmental monitoring and extreme weather event monitoring facility**~~
~~**Activity Status Permitted**~~ ~~Where:~~ ~~1. Monitoring equipment is not more than 4m in height 25m^2 in area.~~	
~~**Activity status where compliance not achieved**: Restricted Discretionary~~ [286]	
INF – R~~6~~5	**Navigational aids/beacons, environmental monitoring equipment and**[287] **Meteorological facilities**
Activity Status Permitted Where: ~~1. These are located in a RURZ - Rural Zone or INZ - Industrial Zone.~~ **1. All performance standards in Rule INF-R1 are complied with;** **2. Monitoring equipment is not more than 25m^2 in area; and** **3. Monitoring equipment complies with the relevant zone performance standards in Rule R1 of the applicable zone or in the case of the:** • **Settlement Zone - SETZ – R2**	

[286] Buller District Council S538.046
[287] Buller District Council S538.047

• **Buller Coalfield Zone - BCZ – R3** • **Mineral Extraction Zone - MINZ – R3**[288]
Activity status where compliance not achieved: **Non-complying where standard 1 is not complied with.** Restricted Discretionary **where standards 2 and 3 are not complied**[289]

INF-R7

1123. The Panel agree with the BDC submission and the Reporting Officers recommendation to amend the heading to this rule to clarify what the rule addresses.

1124. During the hearing, the Panel raised questions about the readability of clause (2), particularly the use of the word '*These*.' The Reporting Officers agreed that the word could be replaced with '*The network utilities*' rather than utilising a word that does not identify what the standard applies to. We support the amendment to clause (2) and consider it resolves the uncertainty arising from the use of the word '*these'* as notified; and consider this is consequence of the amended heading.

1125. For consistency with Rule INF-R1, the Panel recommends amending the activity status to non-complying, where compliance with standard (1) is not achieved. We consider this is an error that can be corrected as an RMA Schedule 1, clause 16 (2) amendment.

1126. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted, and recommend that **Rule INF-R7** is amended as follows:

INF – R~~7~~6	**~~Installation, extension, maintenance, operation, upgrade and repair of lines, underground pipelines and ancillary vehicle access tracks erected by a Network Utility Operator~~ Operation, maintenance, repair and extension of existing network utilities**[290]

[288] Buller District Council S538.047, Grey District Council S608.514, Manawa Energy Limited S438.051
[289] RMA Schedule 1, clause 16(2)
[290] Buller District Council S538.048

Activity Status Permitted Where: 1. All performance standards in Rule INF-R1 are complied with; 2. ~~These~~ **The network utilities**[291] are not gas pipelines regulated under Rule INF - R3; 3. Where any realignment, relocation or replacement of a network utility pole, tower, structure, building or minor utility structure is within 5m of the alignment or location of the original existing pole, tower, structure, building, or minor utility structure; 4. A replacement pole, tower or structure does not exceed the height of the original pole, tower, or structure by more than 30 percent, measured from the top of the foundation; 5. The diameter or width of the replacement pole does not exceed twice that of the replaced pole at its widest point, and; where a single pole is replaced with a pi pole, the width of the pi pole structure must not exceed three times that of the replaced pole at its widest point; 6. Additional conductors or lines do not increase the number of conductors or lines by more than 100 percent; 7. The building footprint or the footprint of the structure does not increase by more than 30 percent of the existing building or structure, excluding any pole or pi pole structure provided for in 4 above; 8. The largest face area of a replacement panel antenna or the diameter of a replacement dish antenna does not increase by more than 20 percent; 9. There are no additional towers; and 10. A pole is not replaced with a tower. **Advice Note:** 1. Where the activities undertaken under this rule are located within an Outstanding Natural Feature or Landscape, earthworks associated with the activity are Permitted under Rules NFL - R6 and NFL - R8.
Activity status where compliance not achieved: **Non-complying where standard 1 is not complied with.** Discretionary **where standards 2-10 are not complied with.**[292]

INF-R8

1127. The Panel agrees that Rule INF-R8 addresses connections to electricity networks and therefore its placement in the Infrastructure Chapter is incorrect. We recommend it is deleted, as sought by BDC.

1128. The Panel notes the Reporting Officers revised position with regards the need for the rule to be inserted into the Energy Chapter, where they now consider this unnecessary because a connection is simply part of the distribution network and sufficiently provided for by new permitted activity rule ENG-R10. We have looked at this closely and agree that a connection to electricity network would fall under Rule ENG-R10.

[291] Consequential amendment from Buller District Council S538.048
[292] RMA Schedule 1, clause 16(2)

1129. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted, and recommend that **Rule INF-R8** is deleted as follows:

~~**INF – R8**~~	~~**New Network Utility Customer Connections**~~
~~**Activity Status Permitted**~~ ~~Where:~~ ~~1. The connection does not include a new tower;~~ ~~2. The connection does not exceed three additional poles; and~~ ~~3. The diameter of conductors, lines or cables does not exceed 30mm.~~ ~~**Advice Note:** Where the connection is to a heritage item identified in Schedule One resource consent is also required under Rule HH - R5.~~	
~~**Activity status where compliance not achieved**: Discretionary~~[293]	

INF-R9

1130. The Panel do not agree with BDC that Rule INF-R9 belongs in the Energy Chapter. The rule refers to infrastructure associated primarily with telecommunications and therefore we consider the Infrastructure Chapter is the appropriate location for it.

1131. The Panel accept with the Reporting Officers response to Frida Inta's submission. We agree that cell phone towers located within the GRUZ- General Rural Zone or the INZ- Industrial Zone should be permitted activities because that is consistent with the outcomes for those zones.

1132. The Panel acknowledge Mr Horne's comments that Rule INF-R9 appears to provide for telecommunication lines generally, notwithstanding that the standards are only relevant to above ground lines. He said that if this was the correct interpretation then no further change to the Plan would be necessary. We note that the Reporting Officers in their Addendum appear to agree with Mr Horne's interpretation, nevertheless, in the Reply they recommended adding a new clause "*The activity is located below ground*".

1133. The Panel accept this new clause clarifies the rule provides for underground lines as a permitted activity and recommend it is added.

1134. The Panel recommend amending clause (1) to be consistent with other similar provisions.

1135. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted or accepted in part, and recommend that **Rule INF-R9** is amended as follows:

INF – R~~9~~7	**New Lines, Telecommunication Poles or Towers**
Activity Status Permitted Where: 1. ~~This meets the~~ **All** performance standards in Rule INF - R1 **are complied with**;[294]	

[293] Buller District Council S538.049
[294] RMA Schedule 1, clause 16(2)

2. This is located in a GRUZ - General Rural Zone or INZ - Industrial Zone; 3. Poles do not exceed a height of 25m; **and** 4. Towers do not exceed a height of 15m; **or** 5. **The activity is located below ground.**[295]
Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Discretionary where standards 2-4 are not complied with.

INF-R10

1136. The Panel recommend retaining **Rule INF-R10** as notified, except for making consistency changes to the wording of clause (1) using RMA Schedule 1, clause 16 (2) as follows:

INF – R~~10~~8	**New Telecommunications Kiosk**
Activity Status Permitted Where: 1. ~~This meets the~~ **All** performance standards in Rule INF - R1 **are complied with**; and [296] 2. The maximum height is 3.5m and gross floor area is 1.5m^2.	
Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Restricted Discretionary where standard 2 is not complied with	

INF- R11

1137. For the reasons set out in Mr Horne's evidence and in the Reporting Officers' reports, the Panel agree with the addition of a new clause (2). We recommend a consequential amendment to the default status to address the new clause to make non-compliance with the new standard discretionary.

1138. For consistency with Rule INF-R1, the Panel recommends amending the activity status to non-complying, where compliance with standard (1) is not achieved. We consider this is an error that can be corrected as an RMA Schedule 1, clause 16 (2) amendment.

1139. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below be accepted, and recommend that **Rule INF-R11** is amended as follows:

INF – R~~11~~9	**New Small Cell Utility**
Activity Status Permitted Where: 1. ~~This meets the~~ **All** performance standards in Rule INF – R1 **are complied with; and**[297]	

[295] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.020
[296] RMA Schedule 1, clause 16(2)
[297] RMA Schedule 1, clause 16(2)

2. **The volume (including any ancillary equipment but not including any cabling) is not more than 0.11m³.**[298]
Activity status where compliance not achieved: Non-complying **where standard 1 is not complied with. Discretionary where standard 2 is not complied with**[299]

INF- R12

1140. For the reasons set out in Mr Horne's evidence, the Panel agree with the Telecommunication Companies' amendment to the heading of INF-R12 to reflect the permitted standards of the NES-TF. We also agree that the height for the Commercial and Mixed Use Zone should be increased to 20m and the General Industrial Zone increased to 25m. We agree that both zones are the type of zone within which to locate larger telecommunications facilities where practical and that this is consistent with Policy INF-P2 in terms of recognising operational need and functional need, and positive effects for the community, whilst appropriately managing adverse effects.

1141. The Panel recommend amending clauses (1) and (2) and consider it resolves the uncertainty arising from the use of the word '*This*' as notified and can be seen as partly addressing the concerns of BDC.

1142. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below be accepted and accepted in part, and recommend that **Rule INF-R12** is amended as follows:

INF – R1~~2~~0	**New telecommunications poles, new antenna attached to poles and new antenna attached to a building not regulated by the NES-TF or regulated equipment not meeting the permitted standards of the NES-TF**[300]
Activity Status Permitted Where: 1. ~~This~~ **The telecommunication pole, or antenna**[301] is located within a ~~land~~[302] transport corridor; and i. The combined height of the pole and antenna does not exceed: a. 15m in a RESZ - Residential Zone, SETZ - Settlement Zone or CMUZ - Commercial and Mixed Use Zone; b. 20m in an INZ - Industrial Zone; or c. 35m in all other zones. ii. A panel antenna: a. Does not exceed a width of 0.7m; and	

[298] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.027
[299] Consequential amendment from Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.027
[300] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.029
[301] Buller District Council S538.053
[302] Grey District Council S608.517

b. When in a ~~land~~ [303]transport corridor a formed legal road, fits within an envelope of 3.5m in length and 0.7m in diameter;

iii. A dish antenna does not exceed a diameter:
  a. Within a railway corridor of:
    I. 1.2 m~~etres~~ in a GRUZ - General Rural Zone or INZ - Industrial Zone;
    II. 0.9m in a CMUZ - Commercial and Mixed Use Zone
  b. Outside of a railway corridor:
    I. 1.2m outside of RESZ - Residential Zones and the SETZ - Settlement Zone

iv. Omni directional "whip" or dipole antennas do not exceed:
  I. 1.6m in vertical length;
  II. 60mm in diameter; and
  III. 1.5m in horizontal length.

v. A headframe does not exceed the following:
  I. 2.5m in diameter in RESZ - Residential Zones and the SETZ - Settlement Zone;
  II. 6m in diameter in all other zones (including unformed legal road).

2. ~~This~~ **The telecommunication pole, or antenna**[304] is located outside a ~~land~~[305] transport corridor:
  i. The combined height (network utility) of a telecommunications pole and antenna does not exceed:
    a. 15m in a RESZ - Residential Zone, ~~CMUZ - Commercial and Mixed Use Zone~~ or SETZ - Settlement Zone;
    b. **20m in a CMUZ - Commercial and Mixed Use Zone**;[306]
    c. 20m in a ~~IN~~**LIZ – Light** Industrial Zone **or 25m in a GIZ – General Industrial Zone**;[307]
    d. 25m in all other locations, or 30m where there are two or more users of the same pole.
  ii. A panel antenna does not exceed a width of 0.7m;
  iii. A dish antenna does not exceed a diameter of 1.2m;
  iv. Omni directional "whip" or dipole antennas do not exceed:
    a. 1.6m in vertical length;
    b. 60mm in diameter; and
    c. 1.5m in horizontal length
  v. A headframe does not exceed:
    a. 2.5m in diameter in RESZ - Residential Zones and SETZ - Settlement Zones;
    b. 6m in diameter in all other zones.
  vi. A new panel antenna face does not exceed 1.5m^2, and a new dish antenna does not exceed 1.2m; and
    a. The antenna does not exceed a height of 5m above the point of attachment to the building, and is not attached to a building in the RESZ - Residential Zones or SETZ - Settlement Zone, except where the antenna is attached at least 15m above ground level.

[303] Grey District Council S608.517
[304] Buller District Council S538.053
[305] Grey District Council S608.517
[306] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.029
[307] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.029

Activity status where compliance not achieved: Restricted Discretionary

New Rule

1143. The Panel agree with Mr Horne that permanent stand-by generators would not necessary be covered by the temporary activity provisions in Rule INF-R4 or the Temporary Activity provisions. We agree that permanent standby backup generators should be specifically provided for in the rules as a permitted activity and note that the Reporting Officers now consider that appropriate and have proposed a new rule.

1144. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below be accepted and accepted in part, and recommend that **new rule INF-R11** be added as follows:

INF–R11	**Back-up Generators**
Activity Status Permitted **Where:** **1. All performance standards in Rule INF–R1 are complied with; and** **2. The equipment is:** **a. being tested and maintained for a period not exceeding 48 hours in duration; or** **b. to provide backup electricity during routine or scheduled maintenance for a period not exceeding 48 hours; or for longer than 48 hours where that use complies with the noise limits specified between 0700 hours and 2200 hours relevant to the zone; or** **c. for emergency purposes only and operates for a maximum of 12 months.**	
Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Discretionary where standard 2 is not complied with. [308]	

New Rule

1145. The Panel considers the Reporting Officers proposed new rule for new telecommunication poles and antennas meeting the permitted standards of the NES-TF is not necessary because it is already addressed in the NES-TF and additionally, Rule INF-R1 requires all infrastructure activities to meet the standards.

1146. For the reasons outlined the Panel recommends no new rule is added.

Controlled Activities

INF-R13

[308] Chorus NZ Ltd, Spark NZ Trading Ltd, Vodafone NZ Ltd S663.020

1147. The Panel agree with GDC in relation to clause (4), which seems to have been misunderstood by the Reporting Officers. The rule relates to new telecommunications poles and antennas within road reserve and therefore the reference to zones is of limited value. We consider deleting clause (4) would create an inconsistency between panel antenna, which are controlled by clause (3), and dish antenna, which then would not be controlled. We consider a more appropriate approach is to utilise the least restrictive requirement of a diameter of 0.9m in clause (4) and delete the references to zones, as recommended below.

1148. The Panel recommends the same amendment to Rule INF-R13 relating to visual effects and amenity values, as previously discussed.

1149. The Panel considers adding a new matter of control relating to '*Effects on indigenous biodiversity*' in response to Forest and Birds submission is unnecessary in the context of this rule.

1150. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends the following changes to **Rule INF-R13**, (including consequential renumbering), as follows:

Controlled Activities	
INF – R1~~3~~2	**New telecommunications poles and antennas in road reserve (regulated by Regulations 26 or 28 of the NES-TF that do not meet the permitted activity standards in Regulations 27 or 29 of the NES - TF)**
Activity Status Controlled Where: 1. The permitted activity combined height (network utility) of a telecommunications pole and antenna is exceeded by a maximum of 1m; 2. The telecommunications pole permitted activity notional envelope i**s**[309] exceeded by a maximum of 1m in height up to 4.5m; 3. A panel antenna does not exceed a width of 0.8m; 4. A dish antenna does not exceed a diameter of **0.9m**. ~~i. 0.6m in a RESZ - Residential Zone or SETZ - Settlement Zone;~~ ~~ii. 0.9m in all other zones.~~[310] Matters of control are: a. Visual effects;~~ in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**;[311] c. Potential impacts on the operation, maintenance and upgrade of other network utilities.	
Activity status where compliance not achieved: Restricted Discretionary	

INF-R14

[309] Grey District Council S608.518
[310] Grey District Council S608.518
[311] RMA Schedule 1 Clause 16(2)

1151. The Panel agree with Mr Horne that the heading of the rule as it stands is problematic and that RMA Schedule 1, clause 16(2) is available because the alterations are of minor effect and correct minor errors in the rule as drafted relating to the NES-TF. We also recommend including his suggested new advice note to clarify the relationship with Rule INF-R12.

1152. The Panel agree with GDC that it is unclear what the requirements are for panel antenna width within the RESZ or SETZ given their exclusion from the 0.8m requirement. We accept that clarity is required in this instance. We recommend removing the exclusion to address GDC's concerns.

1153. The Panel considers adding a new matter of control relating to '*Effects on indigenous biodiversity'* in response to Forest and Birds submission is unnecessary in the context of this rule.

1154. The Panel recommends the same amendment to Rule INF-R14 relating to visual effects and amenity values, as previously discussed.

1155. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted or accepted in part, and recommend the following changes to **Rule INF-R14** (including consequential renumbering):

INF-R14~~3~~	**New telecommunications poles and antennas not in road reserve (regulated by Regulations ~~30, 32 or~~ 34 of the NES - TF that do not meet the permitted activity standards in Regulations ~~31, 33~~ or 35 or subject to Rule INF-R10(2) and not meeting the permitted activity standards)**[312]
Activity Status Controlled Where: a. In the GRUZ - General Rural Zone or an INZ - Industrial Zone, the height does not exceed 30m, or 35m where two or more operator's utilities are on the same pole; b. A panel antenna does not exceed a width of 0.8m ~~(excluding those in a RESZ - Residential Zone or SETZ - Settlement Zone)~~;[313] c. A dish antenna does not exceed a diameter of: i. 0.6m in a RESZ - Residential Zone or SETZ - Settlement Zone; ii. 2m in all other zones. Matters of control: a. Visual effects; ~~in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**. [314] **Advice Note:** **For activities subject to Rule INF-R10, this rule only applies in regard to the specific alternative standards set out above.**[315]	

[312] RMA Schedule 1 Clause 16(2)
[313] Grey District Council S608.519
[314] Consequential amendment from the change to the heading of the rule
[315] RMA Schedule 1 Clause 16(2)

Activity status where compliance not achieved: Restricted Discretionary

Restricted Discretionary Activities

INF-R15

1156. The Panel notes that this rule was mistakenly been included in the Restricted Discretionary Activities section in the Reporting Officers Reply, rather than in the Controlled Activities, as per the notified Plan. We have therefore corrected this.

1157. The Panel considers adding a new matter of control relating to '*Effects on indigenous biodiversity'* in response to Forest and Birds submission is unnecessary in the context of this rule.

1158. The only amendment to Rule INF-R15 is that relating to visual effects and amenity values as previously discussed.

1159. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommend the following changes to **Rule INF-R15** (including consequential renumbering):

INF-R1~~5~~4	**New telecommunications cabinets (regulated by Regulation 19 of the NES – TF that do not meet the permitted standards in Regulations 20, 31 or 22)**
Activity Status Restricted Discretionary Where: a. A single telecommunications cabinet does not have a footprint exceeding 2.5m^2 or a height (network utility) of 2m; and b. A group of telecommunications cabinets does not have a footprint exceeding 3m^2. Matters of control: a. Visual effects~~; in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**. [316]	
Activity status where compliance not achieved: Restricted Discretionary	

INF-R16

1160. The Panel note that Rule INF-R16 was amended initially in the s42A Report by adding two new matters of discretion as clause (e) and (f) relating to scale of the activity and the cumulative effects. While there is no specific cross-reference to a submission that sought to include these new matters of discretion, it appears the Reporting Officers used Forest and Bird's submissions on Rule INF-R2 seeking for it become a controlled activity to provide for these matters of discretion in INF-R16. [317] We also note there is a generic Forest and Bird submission on the restricted discretionary rules to amend the matters of discretion in each rule to include adverse effects on natural values, including those not yet identified on overlays, and the

[316] Consequential amendment
[317] Section 42A Report, paragraph 425

requirement to manage those effects in accordance with the Natural Environment and District-Wide chapters of the Plan.

1161. The Panel considers that given the significant problems we have identified with Rule INF-R2 and this rule, it would be inappropriate to add any new matters of discretion. We consider the issues raised by Forest and Bird submission (supported by Poutini Ngāi Tahu's further submission) in relation to the assessment of effects on natural values and cultural values should be considered when this rule is reviewed.

1162. However, given this rule will remain until it is reviewed, the Panel recommends the heading to the rule include '*water*' as it forms part of the matters of discretion; and '*and*' is deleted to improve clarity. We see these amendments are RMA Schedule 1, clause 16(2) matters.

1163. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnote below are accepted in part, and recommend the following changes to **Rule INF-R16** (including consequential renumbering):

Restricted Discretionary Activities	
INF-R1~~6~~5	**Connections to water, wastewater and stormwater ~~and~~ reticulated systems not meeting Permitted Activity standards**[318]
Activity Status Restricted Discretionary **Discretion is restricted to:** a. Level of flood hazard mitigation through stormwater control; b. Any requirement for pre-treatment, retention or detention of stormwater or wastewater prior to discharge to the reticulated system; c. Provision of drinking water connections in accordance with NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure and Council Engineering Standards; **and**[319] d. Provision for wastewater connections in accordance with NZS 4404: Code of Practice or Land Development and Subdivision Infrastructure and Council Engineering Standards. **Advice Note:** Any discharge to land and/or water may require~~d~~[320] a discharge permit from the West Coastal Regional Council under the relevant regional plan.	
Activity status where compliance not achieved: N/A	

INF-R17

1164. The Panel note that Ms Pull considered '*Landscape measures*' to be unclear and uncertain as to whether those words include cultural landscape. The Reporting Officers agreed and recommended those words be deleted and replaced with:

[318] RMA Schedule 1, clause 16(2)
[319] RMA Schedule 1, clause 16(2)
[320] RMA Schedule 1, clause 16(2)

The effects of the proposal on the amenity, character and landscape values of the underlying Zone.

1165. The Panel acknowledge that the issue of the wording '*landscape measures*' arose in other hearings and that it had been opposed by Manawa (S438.100). We note that landscape architects Mr Bentley and Ms Gilbert, in the Natural Landscapes and Features hearing stream, agreed that the wording was ambiguous and unclear. In the Natural Landscape and Features Chapter Recommendation Report the Panel recommends replacing '*Landscape measures*' with *'Measures to mitigate landscape effects*' throughout the Plan to provide clarity and ensure consistency. We recommend the same wording is used to replace '*Landscape measures'* in Rule INF-R17 (now Rule INF-R15).

1166. The Panel recommends clause (1) is deleted, noting that compliance with Rule INF-R1 in the reciprocal Rule INF-R3 was not required. We consider this an RMA Schedule 1, clause 16(2) matter.

1167. As discussed above, the Panel recommends including a new matter of discretion relating to '*Effects on indigenous biodiversity*' as requested by Forest and Bird. We consider it is not necessary to add a matter of discretion in relation to the overlays as other chapters have provisions addressing these significant values.

1168. In response to BDC, the Panel consider rule remains relevant in that it addresses the existing gas pipeline and any new gas pipelines.

1169. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnote below are accepted in part, and recommend the following changes to **Rule INF-R17** (including consequential renumbering):

INF-R1~~7~~6	**New underground gas pipeline up to 2,000 kilopascals and ancillary above ground stations and equipment**
Activity Status Restricted Discretionary Where: ~~1. Performance standards in Rule INF - R1 are complied with;~~[321] **1.** The gas pipeline will be underground. Discretion is restricted to: a. ~~Landscape measures~~**Measures to mitigate landscape effects**;[322] b. Locational, technical and operational constraints; ~~and~~ c. Benefits to the community**; and** d. **Effects on indigenous biodiversity.**[323]	
Activity status where compliance not achieved: Discretionary	

INF-R18, INF-R19 and INF-R20

[321] RMA Schedule 1 Clause 16(2)
[322] Consequential Plan wide amendment to Manawa Energy Limited S438.100
[323] Forest and Bird S560.158

1170. The Panel recommend deleting INF-R19 and INF-R20 and agree coverage for those rules is adequately provided for in amended INF-R18. As a consequence of deleting INF-R19 and INF-R20, we recommend including '*environmental monitoring equipment and Meteorological facilities*' in the heading for INF-R18.

1171. As with INF-R17, the Panel recommends replacing '*landscape measures*' with *'Measures to mitigate landscape effects*' as a consequential Plan-wide amendment.

1172. As discussed above, the Panel recommends including a new matter of discretion relating to '*Effects on indigenous biodiversity'* as requested by Forest and Bird. We consider it is not necessary to add a matter of discretion in relation to the overlays as other chapters have provisions addressing these significant values.

1173. For consistency with Rule INF-R1, the Panel recommends amending clause (1) and the activity status to non-complying, where compliance with standard (1) is not achieved. We consider this is an error that can be corrected as an RMA Schedule 1, clause 16 (2) amendment.

1174. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted and accepted in part, and recommend the following changes to **Rule INF-R18** (including consequential renumbering) and the deletion of **Rule INF-R19** and **Rule INF-R20**:

INF-R1~~8~~7	**Lighthouses, navigational aids and beacons, environmental monitoring equipment and Meteorological facilities[324] not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Where: **1. All ~~P~~p**erformance standards in Rule INF-R1 are complied with.[325] Discretion is restricted to: a. ~~Landscape measures~~ **Measures to mitigate landscape effects**;[326] b. Locational, technical and operational constraints; ~~and~~ c. Benefits to the community**; and** d. **Effects on indigenous biodiversity.** [327]	
Activity status where compliance not achieved: Non-complying	

~~**INF-R19**~~	~~**Environmental monitoring and extreme weather event monitoring and meterological facilities not meeting Permitted Activity standards**~~

[324] Consequential amendment resulting from the deletion of INF-R19 and INF-R20, Buller District Council S538.060 & S538.061
[325] RMA Schedule 1 Clause 16(2)
[326] Consequential Plan wide amendment to Manawa Energy Limited S438.100
[327] Forest and Bird S560.158

~~**Activity Status Restricted Discretionary**~~ ~~Discretion is restricted to:~~ ~~2. Impact on the resilience of the community to natural hazards and climate change;~~ ~~3. Benefits to the community;~~ ~~4. Locational, technical and operational constraints; and~~ ~~5. Landscape measures.~~	
~~**Activity status where compliance not achieved**~~: N/A[328]	
~~**INF-R20**~~	~~**Meteorological facilities in rural and industrial zones not meeting Permitted Activity standards**~~
~~**Activity Status Restricted Discretionary**~~ ~~Discretion is restricted to:~~ ~~a. Locational, technical and operational constraints; and~~ ~~b. Landscape measures.~~	
~~**Activity status where compliance not achieved**~~: N/A[329]	

INF-R21

1175. The Panel recommends **Rule INF-R21** is retained as notified, except for consequential renumbering, as follows:

INF-R~~21~~8	**Community Wastewater Treatment Facility in the Community Living Precinct**
Activity Status Restricted Discretionary Where: 1. This is located in accordance with a Concept Plan in Appendix Eight; 2. Disposal of treated effluent is through a land based effluent system. Discretion is restricted to: a. The design of the wastewater treatment plant and land based disposal method; b. Effects on Poutini Ngāi Tahu values within or adjacent to the site; c. Natural hazards or geotechnical ~~constraints~~ **considerations**;[330] d. Effects on natural character, landscape, water quality and ecosystems; e. Any requirements arising from meeting the **NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure** or the Council Engineering Standards. **Advice Note:** 1. A Discharge Consent under the West Coast Regional Land and Water Plan may also be required. 2. Applicants are encouraged to jointly lodge applications for consent under the Regional Plan and TTPP provisions at the same time to enable efficient processing.	
Activity status where compliance not achieved: Discretionary	

INF-R22

[328] Buller District Council S538.060
[329] Buller District Council S538.061
[330] Consequential amendment stemming Natural Hazards recommendation

1176. The Panel recommends amending Rule INF-R22 relating to visual effects and amenity values as previously discussed.

1177. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends the following changes to **Rule INF-R22** (now renumbered INF-R20):

INF-R19	**New Telecommunications Kiosk not meeting Permitted Activity Standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Visual effects; ~~in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**.[331]	
Activity status where compliance not achieved: N/A	

INF-R23

1178. The Panel recommend amending Rule INF-R23 relating to visual effects and amenity values as previously discussed.

1179. As discussed above, the Panel recommends amending clause (d) to include adverse effects on indigenous biodiversity in addition to the reference to the overlay chapters.

1180. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnote below are accepted in part, and recommend the following changes to **Rule INF-R23** (now renumbered INF-R21):

INF-R2~~3~~0	**New Telecommunications Poles and Antennas attached to Poles and cabinets not meeting Permitted or Controlled Activity Standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. The functional and operation needs of, and benefits derived from the network utility; b. Visual effects; ~~in particular on the amenity values of the locality and streetscape~~ c. **Effects on amenity values**;[332] d. ~~significant~~**A**~~a~~dverse effects on ~~the values and attributes~~ **indigenous biodiversity and Overlay Chapter matters**. ~~adverse effects on of scheduled overlay chapter areas~~;[333] e. The potential impacts on the operation, maintenance and upgrade of other network utilities.	
Activity status where compliance not achieved: N/A	

[331] RMA Schedule 1 Clause 16(2)
[332] RMA Schedule 1, clause 16(2)
[333] Forest and Bird S560.164

INF-R24

1181. The Panel recommend **Rule INF-R24** is retained as notified with the consequential re-numbering.

Discretionary Activities	
INF–R21	**New Community Wastewater treatment facility or New Community Reticulated Water Treatment Plant not provided for as a Controlled or Restricted Discretionary Activity**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

INF-R25

1182. The Panel recommend **Rule INF-R25** is retained as notified with the consequential re-numbering..

INF–R22	**Maintenance and operation of existing gas pipeline or new pipelines and ancillary facilities up to 2,000 kilopascals not meeting Permitted or Restricted Discretionary Standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

INF-R26

1183. The Panel recommend amending the heading to INF-R26 by deleting the word '*minor*' from the title to provide clarity and remove unnecessary wording. We also agree with the Reporting Officers in relation to KiwiRail's submission and consider rail infrastructure is appropriately provided for in the Transport Chapter.

1184. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted, and recommend the following changes to **Rule INF-R26**:

INF–R23	**Installation, extension, maintenance, operation, ~~minor~~ upgrade and repair of lines, poles and towers erected by a Network Utility Operator not meeting Permitted Activity standards**[334]
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

INF-R27

[334] Grey District Council S608.523

1185. The Panel recommend **Rule INF-R27** is retained as notified with the consequential re-numbering.

INF–R24	**Temporary Network Activities and New Network Utility Customer Connections not meeting Permitted Activity standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

INF–RX1

1186. The Reporting Officer's recommended a 'catch-all' non-complying activity status for Energy Activities not otherwise identified as Permitted, Controlled, Restricted Discretionary or Discretionary Activities. The amendment responds to a submission by Transpower, however, the Panel notes, as pointed out by Ms Whitney in her evidence, that the submission sought a default discretionary rule for energy activities not otherwise provided for. While Ms Whitney said that there was no commentary provided on Transpower's submission, the Panel notes that the s42A Report (paragraph 321) addresses the submission and recommended it be accepted; and to ensure consistency across the Energy, Infrastructure and Transportation chapters recommended that the same rule be included in the Infrastructure and Transportation chapters.

1187. What is unclear to the Panel is why the default position for this 'catch-all' rule became non-complying in the s42A Report. In our view, there is no submission seeking a non-complying status and it is therefore beyond scope to include one. Further, there seems to be no justification provided for such an approach and we agree with Ms Whitney that a non-complying activity status does not give effect to the NPSET or the RPS.

1188. The Panel recommends that a catch-all rule for the Infrastructure Chapter is added as new discretionary activity Rule INF-R28. We consider the rule title can be simplified to "*Any Energy Activity not provided for in another rule*".

1189. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission point identified in the footnote below is accepted, and recommend the following **new Rule INF-R25**:

INF–R25	**Any Infrastructure Activity not provided for in another rule**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A [335]	

INF-R28

1190. The Panel recommend **Rule INF-R28** is retained as notified.

[335] Consequential amendment from Transpower S299.051

Non-complying Activities	
INF–R26~~8~~	**Any infrastructure activity which does not meet with Performance Standards in Rule INF - R1, or any rule which refers to those standards, in relation to Electric Fields, Magnetic Fields or Radio Frequency Fields**
Activity Status Non-complying	
Activity status where compliance not achieved: N/A	

Other New Standards and Rules

Amateur Radio communications

1191. The Panel accept that a rule addressing Amateur Radio communications is appropriate and we have reviewed the provisions in other recent district plans, including Porirua, Napier and Waimakariri. All have differing rules at a permitted status, however we note that the scale of structures being sought by Branch 49 in their submission are in excess of the provisions we have seen in those other plans.

1192. The Panel's concern is that the scale of structures proposed by Branch 49 may not be appropriate in certain zones or in certain locations and that no detailed analysis on this has been undertaken or is before us. We consider that 25m towers and 250m^2 transmission buildings are not insubstantial structures.

1193. For these reasons, the Panel recommends rejecting the submission by Branch 49, however, we consider this is a matter that requires further investigation and should be addressed through a subsequent plan change.

New lighthouses, navigational aids and beacons.

1194. GDC sought the insertion of a new permitted activity to provide for new lighthouses, navigational aids and beacons.

1195. The Panel agree with the Reporting Officers that Rules INF-R6 and INF-R19 already provide for the relief sought and further note Rule INF-R18 addresses the default activity. We therefore do not recommend a new permitted activity rule and reject the GDC submission.

Waste Water Discharge Rule

1196. Poutini Ngāi Tahu sought a new rule for systems that that address the discharge wastewater into water as a non-complying activity.

1197. The Panel agrees with the Reporting Officers discharges of wastewater to land or water are regulated by the WCRC and does not require management in the pTTPP. We therefore do not recommend a new permitted activity rule and reject the Poutini Ngāi Tahu submission.

Section 32AA Evaluation for Infrastructure Chapter Recommended Amendment

1198. Given the level of recommended changes, the Panel has undertaken an evaluation of the recommended amendments to provisions since the initial s32 evaluation was undertaken, in accordance with s32AA of the RMA.

1199. The Panel considers the amendments proposed will create consistency across the chapters and improve the effectiveness of the Plan by aiding in plan interpretation and administration. We consider the Plan will be easier for plan users to understand, resulting in it being more efficient and effective than the notified provisions in achieving the objectives of the pTTPP.

1200. The Panel considers the benefits of the changes are improved consistency and ease of interpretation. The Panel acknowledge that some activity types may now require consent, which will be an additional cost for those activities in certain circumstances, as part of consenting processes. Conversely, some activities will now be permitted, and costs are avoided.

1201. The Panel considers there is a risk of not acting in that there would be a range of inconsistencies within the provisions which will be difficult and potentially impossible in meet. We have not identified any risks from acting.

6. TRANSPORT

6.1. TRN General/Whole Chapter

Submissions and Further Submissions

1202. Suzanne Hills (S443.016) sought that the Transport (**TRN**) Chapter be reviewed to enable a significant reduction in regional transport emissions.

1203. Rocky Mining Ltd (S474.030) and Papahaua Resources Ltd (S500.019) sought recognition of the importance of efficiently and effectively using and operating the transport network.

1204. Foodstuffs (S464.005), supported by Martin & Co Westport Ltd, and Lumberland Building Market Westport (FS140), sought that the Transport chapter remove the emphasis on amenity.

1205. Jane Neale (S262.006) sought disability access to be provided in all areas.

1206. In multiple submission points KiwiRail (S442) sought that the TRN Chapter include a series of new rules, standards and figures to protect the sightlines of railway level crossings.

Section 42A Reports

1207. Responding to Suzanne Hills, the s42A Report considered that the proposed provisions support alternative modes of transport and the consolidation of development, which will contribute to reducing transport emissions.

1208. Responding to Rocky Mining Ltd and Papahaua Resources Ltd, the s42A Report considered objective TRN-O1 afforded appropriate recognition of the transport network.

1209. Responding to Foodstuffs, the s42A Report considered that, given that the pTTPP did not provide for amenity standards, the TRN Chapter should include the consideration of amenity given it is important for transport and the experience of transport users.

1210. Responding to Jane Neale, the s42A Report did not support the relief sought because disability access and parking are required in accordance with the Building Code.

1211. Responding to KiwiRail, the s42A Report agreed that railway level crossing sightlines and design should be considered. However, it noted insufficient technical evidence and lack of a S32 evaluation to support the relief sought.

Hearing Panel's Evaluation

1212. The Panel accepts the Reporting Officers' evaluation and reasoning not to change the provisions concerning issues raised in submissions and further submissions made on general matters.

1213. The Panel note the evidence of Ms Michelle Grinlinton-Hancock for KiwiRail responded to the lack of information to support the submission point relating to railway level crossings. We consider this matter in relation to the specific provision below.

Hearing Panel's Recommendation

1214. No changes to the TRN Chapter are recommended in response to submissions and further submissions on general matters.

6.2. TRN Definitions

Submissions and Further Submissions

1215. Buller District Council (BDC) (S538.005 and S538.009) sought a definition to be provided for '*transport corridor*'. NZTA Waka Kotahi (S450.004 and S450.010) supported the definitions of '*heavy vehicle'* and '*vehicle crossing'* as notified. KiwiRail (S442.014) sought a definition to be provided for '*transport network'* as follows:

> *Means all rail, public roads, public pedestrian, cycle and micro-mobility facilities, public transport and associated infrastructure.*

Section 42A Reports

1216. The s42A Report agreed with BDC that a definition for '*transport corridor'* should be provided because the term is used in several standards and needed to be clearly defined in its extent. It recommended it be referred to as '*land transport corridor'* to be consistent with the pTTPP and ensure that it is not confused with coastal transport.

1217. The s42A Report disagreed with the KiwiRail submission, considering it unnecessary to provide a definition of '*transport network'* because this is appropriately summarised in the overview of the Transport Chapter.

Hearing Panel's Evaluation

1218. The Panel notes that GDC (S608) sought a definition of 'Land Transport Corridor' be included which we have addressed in the Infrastructure Chapter. BDC's request is for a definition for '*transport corridor*' while KiwiRail sought a definition be provided for '*land transport infrastructure*' which is also discussed in the Infrastructure Chapter.

1219. We note the Reporting Officers' recommendation to include a new definition for '*land transport corridor*' appears to be as a consequential amendment to their recommendation to include a new objective that uses the term and appears at odds with the recommendation in their recommendation in the Infrastructure Chapter not to provide a definition. The Panel recommends not including a new objective (see below) and therefore consider there is no scope to make a consequential amendment in relation to adding the two new definitions recommended by the Reporting Officers.

1220. The Panel has therefore limited its consideration to BDC's request for a definition for '*transport corridor*'. We agree with the submitter that including a definition is helpful given the term is used in the rules. We note that this would pick up any situations in the Plan where '*land transport corridor*' is used and as such consider there is no need for a definition of '*land transport corridor'* as a result. We have made minor amendments to the wording requested.

1221. The Panel consider the request by KiwiRail (S442.014) for a new definition for '*transport network*' is a useful addition to the Plan. We have also made minor amendments to the wording requested.

Hearing Panel's Recommendation

1222. Subject to our consideration of Part 2 of the RMA, the Panel recommends including a new definition for '*land transport corridor'* to assist with Plan clarity:

TRANSPORT CORRIDOR[336]	**Means the legal road or rail corridor from the adjacent property boundary on one side of the legal road or rail corridor to the adjacent property boundary on the other side.**
TRANSPORT NETWORK[337]	**Means all rail; public roads; public pedestrian, cycle and micro-mobility facilities; public transport; and associated infrastructure.**

6.3. TRN Overview

Submissions and Further Submissions

[336] Buller District Council S538.005
[337] KiwiRail S442.014

1223. There were nine submission points and three further submission points[338] identified in the s42A Report in relation to the TRN Overview and it notes two submissions supported the strategic overview as notified.

1224. HNZPT (S140.012) sought to amend the '*Other relevant Te Tai o Poutini Plan provisions'* section of the Overview to provide for historic heritage under the Overlay Chapters heading.

1225. Karen Lippiatt (S439.013) sought to amend paragraph 1 of the Overview to emphasise active transport.

1226. Forest & Bird (S560.170) sought the deletion of the first sentence of paragraph 2 and clarification of the relationship between the Transport chapter and other chapters. They considered that the scope and relationship of the Transport chapter to other chapters was unclear.

1227. Grey District Council (GDC) (S608.009), opposed by Poutini Ngāi Tahu (FS41.3), sought removal of performance standards referencing Sites and Areas of Significance to Māori (**SASM**) and deletion of '*Sites and Areas of Significance to Māori*' from the Overlay section of the Overview; and requested identified sites be reassessed.

1228. GDC also (S608.010) sought clarification on how the wording in the Overview corresponds to standard best practices in the planning sector.

Section 42A Reports

1229. The s42A Report supported the relief sought by HNZPT because providing for historic heritage under the overlay chapters would ensure consistency across the pTTPP.

1230. The s42A Report did not support the amendments sought by Karen Lippiatt because it considered this would alter the scope and intent of the Overview. It also did not support the changes sought by Forest & Bird because it considered the Overview, particularly the "*Other relevant Te Tai o Poutini Plan Provisions*" section, provided sufficient clarity of the relationship between chapters.

1231. The s42A Report supported GDC's request to remove the reference to SASM in the TRN Chapter performance standards because it considered the Sites and Areas of Significance to Māori Chapter manages the effects of activities in proximity to SASM. Appendix 1 of the s42A Report showed this as recommended for deletion from the overview section. However, contrary to this Appendix 2 of the s42A Report recommends rejecting S608.009 and accepting FS41.003.

1232. The s42A Report invited GDC to provide further information on how the wording of the Overview corresponds with best planning practices. Nothing further was provided.

Hearing and Submitter Evidence/Statements

[338] S140.012, S190.113, S439.013, S560.466, S560.467, S560.468, S560.469, S608.009, S608.537, FS41.3, FS230.0374, FS230.0435

1233. Ms Pull highlighted Poutini Ngāi Tahu's general support of how the notified pTTPP used cross-referencing to relevant provisions within the Overviews to clarify the relationship between chapters. However, she noted inconsistencies in the recommendations of the s42As reports for different chapters of the Plan and in what should or shouldn't be cross-referenced.

1234. Ms Pull noted the SASM Chapter included provisions that relate to Energy, Infrastructure and Transport and therefore she supported cross-referencing to SASM included in the Overview under the heading Overlay Chapters. She considered the s42A Report consideration of the further submission was incorrect (paragraph 520) and did not accurately reflect the request to retain references to the SASM on the performance standards.

1235. In support of her position, Ms Pull noted that the National Planning Standards include a mandatory direction[339] that states:

> *The chapters under the energy, infrastructure and transport heading must include cross-references to any energy, infrastructure and transport provisions in a Special purpose zones chapter or sections*

1236. Ms Pull also referred to mandatory direction five which states:

> *Tangata whenua/mana whenua content must be integrated throughout the policy statement or plan where the local authority determines it appropriate.*

1237. Ms Pull noted the s42A Report recommended adding '*Historic Heritage*' to the overlay chapters and highlighted the RMA definition of '*Historic Heritage'* includes SASM, which is why the SASM Chapter is in the Historical and Cultural Values section of the Plan.

1238. Ms Grinlinton-Hancock's tabled evidence for KiwiRail, accepted the s42A Report recommendation to not alter the Overview as sought in submission.

Reporting Officer Reply Evidence

1239. The issue of SASM being referenced within the Overview under the heading of overlay chapters was not discussed in Reply and the tracked changes to the provisions showed the Reporting Officers continued to recommend *'Sites and Areas of Significance to Māori'* be deleted from the Overview.

Hearing Panel's Evaluation

1240. The Panel disagrees with the Reporting Officers and recommends retention of the reference in the Overlay Chapters section of the Overview to '*Sites and Areas of Significance to Māori'* for the reasons advanced by Ms Pull in her evidence. We consider this is consistent with cross referencing throughout the Plan. The Panel recommends rejecting GDC's submission point S608.009 and accepts Poutini Ngāi Tahu's further submission point FS41.3.

[339] National Planning Standards (2002) Mandatory Direction 6, page 32

1241. The Panel agrees with the Reporting Officers that it is appropriate to add '*Historic Heritage*' and consider this will achieve Plan consistency.

1242. The Panel considers the overview wording appropriately acknowledges a range of transport modes.

Hearing Panel's Recommendations

1243. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in footnotes below are accepted or accepted in part, and recommends the following changes to the **TRN Overview**:

Transport - Te Tūnuku

Overview

The West Coast/Te Tai o Poutini has an extensive road and rail network with a growing number of shared pathways. It is essential that people and goods are safely and efficiently transported to destinations through a multimodal transport network that enables all users to meet their economic, social and cultural needs.

The Transport Chapter contains all the objectives, policies and rules for managing the land transport corridors and the works and activities that occur within them. The Plan encourages safe, efficient and cost-effective transport corridors to support the movement of people, goods and services through integrated, accessible, and well-connected transport corridors.

Transport Performance Standards are contained in Appendix One: Transport Performance Standards. The Plan uses the One Network Roading Classification System (ONRCS). This national system divides roads into categories based on how busy they are, whether they connect to important destinations, or if they are the only route available. The ONRCS is used to specify the key standards for the design and construction of infrastructure. To support safety and connectivity, Te Tai o Poutini Plan also requires minimum design standards in respect of driveways, vehicle access points, visibility, road widths and other transport related infrastructure while also requiring on-site parking in appropriate places.

Land use and subdivision are managed to protect the land transport corridors from incompatible activities that could undermine the provision of an integrated, responsive, and sustainable transport system. The Transport Chapter is linked to the Part 2 – District-[340]Wide Matters to ensure transport corridor works maintain the anticipated amenity, heritage, environmental, and cultural values. The risk from natural hazards is also considered.

The transport provisions apply to each zone identified in the Planning Maps and Part 3 - Area Specific Matters section of the Plan. The land use zoning is to be extended to the centreline of land transport corridors.

[340] RMA First Schedule Clause 16

Provisions for Ports and public Airports/Heliports are included within the Port Zone and Airport Zone respectively.

Other relevant Te Tai o Poutini Plan provisions
It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-**W**~~w~~ide[341] Matters chapters also contain provisions that may be relevant for energy activities, including:
Noise - The Noise Chapter contains the provisions for managing reverse sensitivity effects relating to noise sensitive activities establishing next to the state highways.
Signs - The Signs Chapter contains the provisions for signs, including those within the transport corridors.
Light - The Light Chapter contains the provisions for artificial outdoor light, including that within transport corridors.
Subdivision - The Subdivisions **C**~~c~~hapter[342] sets out the requirements for the development of new transport connections.
Financial Contributions - The Financial Contributions **C**~~c~~hapter[343] sets out the requirements for contributions of costs for activities which impact on the local roading network.
Overlay Chapters - The Overlay Chapters have provisions in relation to Sites and Areas of Significance to Māori; **Historic Heritage**;[344] Ecosystems and Indigenous Biodiversity; Natural Features and Landscape**s**;[345] Natural Character and Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where a transport activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.

6.4. Transport Objectives

Submissions and Further submissions

1244. The s42A Report identified 12 submission points[346] on the TRN objectives collectively and noted eight submission points supported the objectives as notified.

TRN-01

1245. The s42A Report identified 10 submission points and five further submission points[347] relating to TRN-O1 and noted six submission points supported TRN-O1 as notified.

1246. TiGa Minerals and Metals Ltd (S493.026), WMS Group (HQ) Ltd and WMS Land Co. Ltd (S599.002 and S599.030) and Birchfield Coal Mines Ltd (S601.024) sought TRN-O1 be retained but moved to 'Connections and Resilience' under the Strategic Directions Chapter to recognise

341 RMA First Schedule Clause 16
342 RMA First Schedule Clause 16
343 RMA First Schedule Clause 16
344 Heritage New Zealand S140.012
345 RMA First Schedule Clause 16
346 S538.082 S181.003, S493.025, S538.068, S558.718, S563.005, S564.008, S566.718, S567.075, S574.718, S577.008, S599.029, S601.023
347 S190.114, S442.032, S450.034, S464.039, S493.026, S599.002, S599.030, S608.524, S614.020, S615.020, FS68.011, FS72.011, FS144.011, FS147.011, FS218.013

the critical role of transport infrastructure. Katherine Crick (FS68.011) and Mike Spruce (FS218.013) opposed the relief sought by TiGa Minerals and Metals Ltd.

TRN-02

1247. The s42A Report identified 11 submission points and five further submission points[348] and noted four submissions points supported TRN-O2 as notified.

1248. NZTA Waka Kotahi (S450.035) sought to replace '*minimise*' with '*mitigate*' because minimise can be interpreted in a way that would be a disproportionately onerous to the requirement to manage adverse effects.

1249. Foodstuffs (S464.040), supported by Martin & Co Westport Ltd and Lumberland Building Market Westport (FS140.019), sought deletion of TRN-O2 or amendment as follows:

> *To provide for the safe and efficient operation of the land transport infrastructure, while managing adverse effects on the surrounding environment*

1250. TiGa Minerals and Metals Ltd (S493.027), WMS Group (HQ) Ltd and WMS Land Co. Ltd (S599.031) and Birchfield Coal Mines Ltd (S601.025) sought the deletion of TRN-O2 or amendment as follows:

> *To ~~manage the effects~~ provide for the safe and efficient operation of land transport infrastructure ~~on the character, landscape and amenity of the towns, settlements and rural areas and minimise~~ while managing adverse effects on the surrounding environment.*

1251. Four further submissions opposed this amendment (FS147.005, FS72.005, FS77.14 and FS144.005) opposed this amendment.

1252. Two submitters sought the replacement of '*minimise*' with alternative wording. Forest & Bird (S560.172) sought its replacement with '*avoid, remedy or mitigate following the Natural Environment and District Wide chapters of this Plan*'. GDC (S608.525) sought its replacement with '*mitigate*'.

TRN-03

1253. The s42A Report identified 16 submission points and six further submission points[349] and noted eight submissions points supported TRN-O3 as notified.

1254. Herenga ā Nuku Aotearoa Outdoor Access Commission (S274.002) sought that TRN-O3 be amended to ensure accessibility, safety, connectivity and amenity are provided for all

[348] S65.002, S190.115, S450.035, S464.040, S493.027, S560.172, S599.031, S601.025, S608.025, S614.021, S615.021, FS140.019, FS147.005, FS72.005, FS77.14, FS144.005

[349] S65.003, S190.116, S274.002, S439.014, S442.033, S450.036, S456.006, S464.005, S464.041, S493.028, S500.020, S599.032, S601.026, S608.526, S614.022, S615.022, FS53.10, FS68.012, FS72.012, FS147.012, FS140.020, FS218.014

transport users, rather than giving less importance to cyclists and pedestrians and only providing for amenity.

1255. Karen Lippiatt (S439.014), supported by Herenga ā Nuku Aotearoa, Outdoor Access Commission (FS53.10) sought to amend TRN-O3 to replace '*consider*' with '*provide for'* so as to provide more emphasis on active transport.

1256. Six submission points (S464.005, S464.041, S493.028, S500.020, S599.032 and S601.026, supported by FS140.020) sought that TRN-O3 be amended to remove reference to '*amenity*' because it is inappropriate to introduce a requirement to consider amenity in relation to land transport infrastructure. Several further submitters (FS68.012, FS72.002, FS72.006, FS147.006, FS53.12, FS53.13 FS77.15 FS218.014 and FS144.006) opposed this amendment because the overlays are an important and essential sustainable management tool and ensure compliance with higher order statutory instruments.

TRN-04

1257. The s42A Report identified seven submission points[350] supporting TRN-O4 as notified. The reasons provided include:

- Improved resilience to hazards and climate change has good public health outcomes for people and communities;
- Encourages a resilient transport network to natural hazards and climate change; and
- Recognises the provision of emergency and core infrastructure services.

TRN-05

1258. The s42A Report noted six submissions supported TRN-O5 as notified.

New Objectives

1259. TiGa Minerals and Metals Ltd (S493.025), WMS Group (HQ) Ltd and WMS Land Co. Ltd (S599.029) and Birchfield Coal Mines Ltd (S601.023) sought two new objectives to give effect to the RPS, as follows:

> *To provide for the safe, effective and efficient operation and use of land transport infrastructure to enable the movement of goods and people across the region.*
>
> *Land transport corridors and land transport infrastructure are protected from incompatible land use activities and subdivision development, where these are defined as critical infrastructure.*

[350] S190.117, S442.034, S450.037, S608.527, S612.016, S614.023, S615.023

1260. Four further submissions opposed these new objectives (FS147.003, FS72.020, FS144.021 and FS144.018).

Section 42A Report

TRN-01

1261. The s42A Report did not support moving TRN-01 to the Strategic Direction Chapter because it considered CR-O1 – CR-O4 (as notified) already afford appropriate strategic direction and TRN-O1 refines this for the purpose of the TRN Chapter.

TRN-02

1262. The s42A Report did not support replacing '*minimise*' with '*manage*' as sought by NZTA Waka Kotahi because this was inconsistent with the recommendations for the ENG Chapter and INF Chapter. It considered '*minimise*' provided greater certainty and was consistent with the approach taken plan wide. However, the Panel notes that the submitter sought '*mitigate*'.

1263. The s42A Report did not support deletion of TRN-02 or its amendment because it considered this would be inconsistent with the recommendations for the equivalent objectives in the ENG and INF Chapters. It also considered the proposed wording aligned with the methods outlined in the RPS, which seek to provide for safe and efficient operation of regionally significant infrastructure, including land transport infrastructure. However, contrary to these recommendations (s42A Report paragraphs 530 and 531), Appendix 1 of the s42A Report showed amendments to TRN-02, including deleting '*manage the effects*' and adding '*provide for the safe and efficient operation'.* It also showed the words *'on the character, landscape and amenity of the towns, settlements and rural areas'* as deleted.

1264. The Reporting Officers' Position Statement (paragraph 31) records they had considered Ms Pulls' evidence disagreeing with their recommendation to delete references to character, landscape and amenity but retained the s42A Report recommendation.

1265. The s42A Report also did not support the amendment sought by Forest & Bird and GDC to replace '*minimise*' with '*avoid, remedy or mitigate'* as they considered that '*avoid, remedy or mitigate'* is too general for an objective. Further, it considered this would be inconsistent with the recommendations for the equivalent objectives in the ENG and INF Chapters.

TRN-03

1266. The s42A Report considered the current wording of TRN-O3 did not give less importance to cyclists and pedestrians and noted it specifically highlights their importance. It did not support the relief sought by Herenga ā Nuku Aotearoa Outdoor Access Commission.

1267. The s42A Report supported replacing '*consider*' with '*provide for'* because it considered this would strengthen the amenity requirement within the TRN Chapter and gives effect to s7 of Part 2 of the RMA which provides for amenity.

1268. The s42A Report did not support removing reference to *'amenity'* because this is an important consideration for transport and the experience of transport users. It noted that without amenity effects the objective would be redundant and would not give effect to RMA s7.

TRN-04

1269. The s42A Report recommended retaining TRN-O4 as notified.

TRN-05

1270. The s42A Report recommend retaining TRN-O5 as notified.

New Objectives

1271. The s42A Report did not support the first proposed new objective because it considered the issue was already appropriately addressed within the notified objectives. It supported the second new objective because it considered this would ensure consistency with ENG and INF Chapters (ENG-O3 and INF-O3) and it was appropriate to provide an objective related to reverse sensitivity effects.

Hearing and Submitter Evidence/Statements

1272. Ms Alex Hansby and Ms Alex Booker provided a short legal memorandum on behalf of Birchfield Coal Mines Ltd, Papahaua Resources Ltd, Rocky Mining Ltd, TiGa Minerals and Metals Ltd, WMS Group and WMS Land Co, confirming no evidence or legal submissions would be provided, but noted that questions were welcome. The memorandum repeated the submission points relevant to this part of our recommendations (TRN-01, TRN-02, TRN-03 and proposed New Objectives). These points are recorded above.

1273. Ms Snoyink, for Forest & Bird, challenged the Reporting Officers' reasons for relying on the Overview to guide what other chapters may apply and for rejecting its relief for TRN-02. She noted that the Overview, while helpful, did not influence the interpretation of provision wording. She was concerned that if there was no direction to avoid, remedy, mitigate, or alternative measures, such as minimise as directed in the TRN chapter, could be read to override the direction of other chapter provisions regarding how adverse effects are to be addressed. She also reiterated Forest & Birds request to replace '*minimise*' with '*avoid, remedy or mitigate*.'

1274. Mr Stuart Pearson, for NZTA Waka Kotahi, advised that the agency accepted the recommendations in the s42A Report on all the objectives.

1275. Ms Pull's evidence challenged the s42A Report recommendation to amend TRN-02 by deleting references to effects on character, landscape, and amenity of towns, settlements, and rural areas. She considered that in determining if the TTPP is giving effect to the RPS, the Plan must be read as a whole, and that cultural, historic, and amenity values need to be considered. She considered that if the s42A Report's recommended deletions were supported, none of the TRN objectives would allow for consideration of the potential effects of transport on cultural and amenity values in the surrounding environment.

1276. Ms Pull's position statement (1 February 2024) records the Reporting Officers agreed with her criticisms of TRN-02 and, in theory, agreed to retain references to '*character, landscape, and amenity*' within the objective to provide clarity on what is meant by the word '*environment*'.

Reporting Officer Reply Evidence

1277. No further changes to the TRN objectives were shown in Attachment 1 of the Reporting Officers' Reply.

Hearing Panel's Evaluation

1278. TRN-02, TRN-O3 and new TRN-06 are the only amendments recommended by the Reporting Officers to the objectives. The Panel accept the Reporting Officers' recommendation to retain **TRN-O1, TRN-O4 and TRN-O5** as notified.

1279. In relation to **TRN-02**, the Panel notes that the Reporting Officers mistakenly considered replacing that '*minimise*' with '*manage*'.

1280. The objective, as notified, sought to manage effects of land transport infrastructure on character, landscape and amenity of towns, settlements and rural areas, and to minimise adverse effects on the environment. The Panel considers this is unnecessarily complicated and should be simplified. We prefer the amended objective proposed by Foodstuffs (South Island) Properties Limited and Foodstuffs South Island Limited, which uses clear and concise wording.

1281. The Panel notes that Poutini Ngāi Tahu did not submit on TRN-O2, or any TRN objectives.

1282. In relation to **TRN-03**, the Panel accepts the Reporting Officers' recommendation to replace '*consider*' with '*to provide for'* in relation to amenity, for the reasons provided in s42A Report.

1283. The Panel agree with the Reporting Officers' reasoning to reject the first of the two proposed **new objectives** because it would lead to duplication. However, we consider including proposed new Objective TRN-O6 could result in a perverse outcome where lighting, footpaths, signage and cycleways would be required to be protected from reverse sensitivity effects from land use activities, which would be inconsistent with the RPS. We also note there is no policy which would implement this proposed objective. We therefore disagree with the Reporting Officers and recommend not including this proposed objective; and reject the submission points requesting this. We consider the Reporting Officers concerns regarding reverse sensitivity are provided for under TRN-O2.

Hearing Panel's Recommendations

1284. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in footnotes below are accepted or accepted in part, and recommends the following changes to the **TRN Objectives**:

Transport Objectives	
TRN– O1	To recognise and provide for the critical role land transport infrastructure plays in supporting communities including emergency services, and economic activity on the West Coast/Te Tai o Poutini.
TRN – O2	To ~~manage the effects~~ **provide for the safe and efficient operation** of land transport infrastructure ~~on the character, landscape and amenity of the towns, settlements and rural areas and minimise~~, **while managing** adverse effects on the

	environment.[351]
TRN – O3	To enable accessibility, safety and connectivity of land transport infrastructure and ~~consider~~**to provide for**[352] the amenity of all transport users, including pedestrians and cyclists.
TRN– O4	To encourage resilience within the transport network to natural hazards and climate change reflecting its vital role in community wellbeing and economic activity.
TRN – O5	To ensure that the provision of safe and efficient parking, loading and access is consistent with the character, scale and intensity of the zone, the roading hierarchy and the activity being undertaken.

6.5. Transport Policies

1285. The s42A Report identified 11 submission points[353] relating to the Transport policies collectively and noted four submissions supported the policies as notified.

TRN-P1

1286. The s42A Report identified 10 submission points and one further submission point[354] in relation to TRN-P1 and noted four submissions supported it as notified. BDC (S538.069), supported by NZTA Waka Kotahi (FS62.003), sought to amend TRN-P1 to recognise road classification under the most current National Transport Network classification system.

1287. Two submission points (S450.039 and S608.529) sought to replace '*minimise*' with '*mitigate*' to align with TRN-O2 and because mitigate is considered more appropriate in managing adverse effects.

1288. Four submission points (S464.042, S493.030, S599.033 and S601.028) sought the deletion of clause (c) from TRN-P2 because it provides for amenity, which is not considered relevant to land transport infrastructure.

TRN-P2

1289. The s42A Report identified four submission points[355] relating to TRN-P2 and noted two supported it as notified.

[351] Foodstuffs South Island) Properties Limited and Foodstuffs South Island Limited S464.040
[352] Karen Lippiatt S439.014
[353] S181.003, S493.029, S538.068, S538.069, S558.719, S566.719, S567.076, S574.719, S599.033, S601.027, S613.012
[354] S65.004, S190.119, S442.036, S450.039, S456.007, S464.042, S493.030, S599.034, S601.028, S608.529, FS62.003
[355] S190.120, S442.037, S450.040, S608.530

1290. KiwiRail (S442.037) sought to amend TRN-P2 to include '*rail level crossings*' to ensure that rail level crossings are considered in addition to intersections and State Highways.

1291. NZTA Waka Kotahi (S450.040) sought to amend TRN-P2 to delete clause (c) because it considered it achieved similar outcomes to clause (a) and resulted in repetition.

TRN-P3

1292. The s42A Report identified four submission points[356] relating to TRN-P3 and noted three submission points supported TRN-P3 as notified.

1293. KiwiRail (S442.038) sought to amend TRN-P3 to restrict buildings, structures, planting, or other visual obstructions within the sightlines of rail level crossings.

TRN-P4

1294. The s42A Report identified four submissions[357] relating to TRN-P4 and noted three submission points supported it as notified.

1295. KiwiRail (S442.039) sought to amend TRN-P4 to strengthen the wording and requirement to achieve safety at all rail crossings, not just at grade-level crossings.

TRN-P5

1296. The s42A Report identified five submission points[358] supporting TRN-P5 as notified.

TRN-P6

1297. The s42A Report identified four submission points[359] supporting TRN-P6 as notified.

TRN-P7

1298. The s42A Report identified six submission points[360] relating to TRN-P7 and noted four submissions supported TRN-P7 as notified. Herenga ā Nuku Aotearoa Outdoor Access Commission (S274.007) sought to amend TRN-P7 to include an additional clause supporting increased cycling and walking.

1299. NZTA Waka Kotahi (S450.004) recommended reviewing the rules and standards relating to cycle parking facilities to better align with TRN-P7.

TRN-P8

[356] S190.121, S442.038, S450.041, S608.531
[357] S190.122, S442.039, S450.042, S608.532
[358] S65.005, S190.123, S442.040, S450.043, S608.533
[359] S65.006, S190.124, S450.044, S613.012
[360] S65.007, S190.125, S274.007, S439.015, S608.534

1300. The s42A Report identified 10 submission points[361] supporting TRN-P8 as notified. NZTA Waka Kotahi (S450.046) sought TRN-P8 be amended to delete clause (c) as it repeats (b).

TRN-P9

1301. The s42A Report identified four submission points[362] supporting TRN-P9 as notified.

New Policies

1302. TiGa Minerals and Metals Ltd (S493.029), WMS Group (HQ) Ltd and WMS Land Co. Ltd (S599.033) and Birchfield Coal Mines Ltd (S601.027) sought the insertion of a new policy to protect and enable vital land transport links. This request for a new policy was opposed by three further submissions (FS147.004, FS72.004 and FS144.004).

1303. NZTA Waka Kotahi (S450.048) sought the insertion of a new policy reflecting the high trip-generating standards. Foodstuffs (FS107.001) opposed this submission in part, unless it appropriately recognised activities (such as supermarkets) with operational and functional needs, and where customers require using a vehicle for shopping. BDC (FS149.003) agreed with NZTA Waka Kotahi that the policy framework did not specifically address high trip-generating activities but considered that adopting TRN-S14 was inappropriate, and that instead, a specific policy should be developed.

Section 42A Reports

TRN-P1

1304. The s42A Report agreed with the relief sought by BDC and NZTA Waka Kotahi because it would provide consistent wording throughout the pTTPP. It agreed that including the reference to the classification system was appropriate given there was no policy direction supporting this within the performance standards.

1305. The s42A Report did not support replacing '*minimise'* with '*mitigate'* because they considered minimising effects was appropriate to give effect to TRN-O2.

1306. The s42A Report did not support submissions seeking the deletion of clause (c) because it considered amenity is an important consideration for transport and the experience of transport users. It also noted that the inclusion of amenity in this policy also affects TRN-03.

TRN-P2

1307. The s42A Report agreed TRN-P2 should include a provision for rail, particularly given the wording of TRN-P3, which explicitly provides for rail level crossings. The Addendum Report, Attachment 1 (meeting notes at item 3 Vehicle Crossing) records TRN-P2 refers to the design, and that this matter should flow to the rules and standards. The Reporting Officers considered

[361] S65.008, S190.126, S450.046, S456.008, S558.727, S566.727, S567.084, S574.727, S608.535, S613.012
[362] S190.127, S450.047, S456.009, S608.536

there was a gap in the rules due to the absence of design standards. This matter is discussed further in relation to Appendix One: Transport Performance Standards below.

1308. The s42A Report agreed that clauses (a) and (c) overlapped, but they recommended refining clause (c) so that both could be retained.

TRN-P3

1309. The s42A Report did not support KiwiRail's request to include '*restricting*' because this was too onerous, and KiwiRail had not provided a s32 evaluation to support this amendment. It considered that structures and planting were essentially caught by '*other visual obstructions*'; and therefore, this amendment would be unnecessary.

TRN-P4

1310. The s42A Report agreed with KiwiRail that the words '*carefully consider'* do not provide strong enough policy direction and that the inclusion of '*ensure*' improves the policy's readability.

TRN-P5 and TRN-P6

1311. The s42A Report acknowledged the submissions in support and recommended retention of both policies as notified.

TRN-P7

1312. The s42A Report supported the relief sought by Herenga ā Nuku Aotearoa Outdoor Access Commission because this aligned with the NPSUD, which aims to provide for connectivity, specifically active mode networks, within new development.

1313. In relation to cycle parking facilities, the s42A Report agreed that the standards were unclear and could be amended to better align with TRN-P7, particularly TRN Table 5. In response to submission S538.088, it recommended that the heading of TRN Table 5 is amended to improve clarity.

TRN-P8

1314. The s42A Report agreed that clauses (b) and (c) had duplicate content and recommended that clause (c) was deleted.

TRN-P9

1315. The s42A Report recommend retaining TRN-P9 as notified.

New Policies

1316. In relation to the first new policy sought by TiGa Minerals and Metals Ltd, WMS Group (HQ) Ltd and WMS Land Co. Ltd, and Birchfield Coal Mines Ltd, the s42A Report did not support its inclusion because it considered the matters were appropriately addressed within the notified objectives and policies. However, contrary to this recommendation (paragraph 566), the new policy was included in Appendix 1 of the s42A Report as TRN-P10. Appendix 2 recommends

rejecting the requests for a new policy and accepting the further submissions opposing this new policy.

1317. The wording of new policy TRN-P10 in Appendix 1 of the s42A Report reflected the new policy requested except it replaced '*protect and enable*' with '*provide*', as follows:

> *Recognise and provide for the function of land transport infrastructure to ensure the safe and efficient movement of people and goods.*

1318. The s42A Report supported NZTA Waka Kotahi's request to include a new policy to reflect high trip-generating standards because the policy framework did not specifically address this identified gap. However, it considered adopting TRN-S14 was inappropriate, and recommended development of a specific policy. It noted agreement that the TRN Chapter did not appropriately provide a policy for high trip generation activities and that the Plan should provide guidance. However, it did not support the submitter's proposed wording because it would more appropriately be included as an assessment criterion and repeated TRN-R14. The Reporting Officers therefore recommended alternative wording for new TRN-P11 as follows:

> *Only allow high traffic generating activities where these activities support the safe, efficient and effective use of transport infrastructure, as demonstrated through an integrated transport assessment (ITA). All ITAs should be completed by a suitably qualified and experienced transport professional.*

1319. In addition to this new policy, the Reporting Officers also recommended including the above assessment criteria (TRN S14) in TRN-R12.

Hearing and Submitter Evidence/Statements

1320. Ms Booker's legal submissions highlighted her client's submission points.

1321. Mr Pearson (for NZTA Waka Kotahi) confirmed that the s42A Report recommendations were acceptable and either addressed the submission points or provided sufficient explanation as to why the changes sought are not required.

1322. Ms Grinlinton-Hancock (for KiwiRail) provided detailed evidence and diagrams on level crossings for both approach and restart sightlines in relation to TRN-P3. She outlined the purpose of sightlines for managing risks at rail crossings. She noted KiwiRail had statutory powers to remove vegetation and other obstructions under the Railways Act 2005 but stressed the need to exercise the power meant that a compromise of sightlines had already occurred. She sought to avoid that outcome, noting the relief sought meant sightlines would apply at the development point, minimising the risk of obstructions. She noted that sight lines rules and standards are regularly included in district plans, automatically.

1323. Ms Grinlinton-Hancock responded to the reasons stated in the s42A Report for rejecting the KiwiRail relief, noting that the sight line controls affect only a small portion of land near a rail crossing. She stressed that obstructing sightlines could significantly affect road and rail users and obstructions should be by '*restricting*' rather than just '*considering*' by their location, as suggested in the s42A Report. She added that '*restricting*' does not mean prohibited, but conveys clearly that buildings, structures, planting, and other visual obstructions should not

generally be located within sightlines. She added that including the words '*structures and plantings'* clarified what an obstruction might be for plan users.

1324. Ms Grinlinton-Hancock provided a detailed s32 analysis of the KiwiRail relief, noting that relief would affect TRN-P3 and gives effect to Policy 6.4 of the RPS, which protects RSI from reverse sensitivity effects. She also noted that the relief included two new rules dealing with sightlines at railway level crossings and sight triangles.

Reporting Officer Reply Evidence

1325. In Reply, the Reporting Officers recommended replacing '*minimise*' with '*mitigate*' in TRN-P2(b). However, they considered there was no submission to replace '*minimise'* in TRN-P1(c) and concluded there was no scope for change.

1326. Attachment 1 of the Right of Reply showed new policy TRN-10.

Hearing Panel's Evaluation

1327. In relation to **TRN-P1**, the Panel disagrees with the Reporting Officers that there is no scope to address use of '*minimise*' in clause (c). We note submission points from NZTA Waka Kotahi (S450.039) seeking replacement with '*mitigate*'; and Foodstuffs (S464.042), TiGa (S493.030), WMS (S599.034) and Birchfield (S601.028) seeking deletion of clause (c). We consider these submissions provide scope for amendments.

1328. The Panel assumes the Reporting Officers have confused the submission points relating to TRN-P1 with TRN-P2. We acknowledge there is no submission seeking to replace '*minimise*' with '*mitigate*' in relation to TRN-P2(b). We therefore reject the Reporting Officers recommendation to amend TRN-P2(b) shown in Attachment 1 of the Reply because this is not within the scope of submissions.

1329. We agree with the BDC and NZTA Waka Kotahi request and the Reporting Officers' recommendations to add clause (d) to TRN-P1 because this issue was omitted from the notified version of the Plan and needs coverage. However, we have deleted the words '*most current*' because it must refer to the National Transport Classification in effect at the time of notification.

1330. In relation to **TRN-P2**, the Panel recommends retaining clause (c) to implement TRN- 02 and agree that including '*separation of*' and '*rail level crossings*' is appropriate to improve clarity and to provide complete coverage.

1331. In relation to **TRN-P3**, the Panel accept the evidence of Ms Grinlinton-Hancock's and agree that the language used must be very clear. We consider her recommended wording achieves this clarity. We acknowledge safety at rail crossings is a significant issue and accept protecting critical sightlines will assist in achieving safety. We agree that adding '*structures, planting*' is appropriate to maximise user safety at road and rail crossings.

1332. In relation to **TRN-P4**, the Panel accept KiwiRail's request to amend TRN-P4 to provide more directive language by rewording the provision and deleting the words '*carefully consider*' and replacing them with '*ensure*', which is a much higher and appropriate threshold given the policy context.

1333. In relation to **TRN-P7**, the Panel agree with adding a new clause (c) to TRN-P7 because the amendment addresses providing for connectivity, which was omitted from the notified Plan. We accept connectivity between subdivisions and communities is an important consideration in relation to transport and consider its inclusion assists in giving effect to TRN-03.

1334. In relation to **TRN-P8**, the Panel accepts the recommendation to delete clause (c) to remove duplication with clause (b), which provides for the functional and operational requirements of activities covering all clause (c) matters.

1335. Despite the Reporting Officers conflicting recommendations, the Panel considers a **new policy**, such as TRN-P10, is necessary, primarily because all the other policies have a discrete focus. We note that this new proposed policy is much wider in its ambit, addressing safety and efficiency for the entire transport infrastructure, which was not covered by the notified Plan. We agree with the Reporting Officers that the requested '*recognise, protect and enable*' (as requested by submitters) is not appropriate. We consider '*recognise and provide for*' is consistent with the language used in the RPS in relation to regionally significant infrastructure. However, we recommend rewording the new policy to recognise the function of land transport infrastructure and to provide for the efficient and safe transport of people and goods.

1336. The Panel agrees that a **new policy TRN-P11** is required to address the identified gap in relation to high trip generation activities. We also agree with the Reporting Officers that the wording proposed by NZTA Waka Kotahi is more appropriately included as assessment criteria. We note the Reporting Officers also recommend an amendment to TRN rules to utilise some of this recommended wording, which is addressed below. However, we recommend the last sentence as proposed be included in the relevant rule and standards.

Hearing Panel's Recommendation

1337. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in footnotes below are accepted or accepted in part, and recommends the following changes to the **TRN Policies:**

Transport Policies

TRN – P1	The road and rail **transport** networks shall**:** ~~:~~ [363] a. Be maintained or enhanced to provide safe and efficient transportation; b. Consider the needs of all transport users and modes of transport; ~~and~~[364] c. Minimise effects on adjoining properties including the impacts of vibration, noise and glare**; and**[365] d. **Recognise the different functions and design requirements for**

[363] RMA First Schedule Clause 16
[364] RMA First Schedule Clause 16
[365] RMA First Schedule Clause 16

	each road classification under the National Transport Network classification system.[366]
TRN – P2	Vehicle crossings and associated access will**:** ~~:~~ [367] a. Be designed and located to provide for safe, effective and efficient movement to and from sites; b. Minimise potential conflicts between vehicles, pedestrians and cyclists on the adjacent road network; and c. Manage **separation of** vehicle access to and from sites adjacent to intersections, **rail level crossings,** and where State Highways meet.[368]
TRN – P3	Maximise user safety at road and rail level crossings by ~~considering the location of~~ **restricting** buildings**, structures, planting** and other visual obstructions within sightlines.[369]
TRN – P4	~~Ensure any new r~~Road and pedestrian rail level crossings ~~carefully consider~~ ensure the safety of road users, pedestrians, and the effective and efficient operation of the regions rail network.[370]
TRN – P5	Control vehicle access to sites adjacent to all road **and** ~~/~~[371]rail level crossings to improve safety for road users on the approach to level crossings.
TRN – P6	Enable provision of electric vehicle and bicycle charging stations.
TRN – P7	Support increased cycling and walking by: a. Requiring larger developments to provide bicycle parking; ~~and~~ b. Providing for off-road pedestrian and bicycle facilitates to complement facilities located within the road network; **and** c. **Providing for connectivity within, between and across subdivisions and communities.**[372]
TRN – P8	Manage the number, location and type of parking and loading spaces, including bicycle parking and electric car charging spaces to support the

[371] RMA First Schedule Clause 16
[372] Herenga a Nuku Aotearoa Outdoor Access Commission S274.007

	following: a. The safe, efficient and effective operation of the transport network; b. The functional and operational requirements of activities; ~~c. The recognition of different activities having different trip characteristics;~~[373] c. The use of sustainable transport options including cycling and walking; d. Provision of safe access and egress for vehicles, pedestrians and cyclists; e. Avoid or mitigate potential conflicts between vehicles, pedestrians and cyclists; f. Mitigation of stormwater contamination from vehicles through treatment of stormwater from large areas of car parking; **and**[374] g. Provision for flexible approaches to parking, including more efficient use of parking spaces, and reduce incremental and individual parking provision.
TRN – P9	Require parking and loading areas to be designed so that reverse manoeuvring of vehicles onto or off the road does not occur in situations which will compromise: a. The safe, effective and efficient operation of roads including State Highways; or b. Pedestrian access and amenity; or c. Safe and functional access.
TRN – P10	**Recognise the function of land transport infrastructure and provide for the safe and efficient movement of people and goods.** [375]
TRN – P11	**Only allow high traffic generating activities where these activities support the safe, efficient and effective use of transport infrastructure, as demonstrated through an integrated transport assessment (ITA).**[376]

6.6. Transport Rules

Submissions and Further Submissions

1338. KiwiRail (S442.041) supported the **Advice Note** advising plan users that they need approval from KiwiRail where any crossing will intersect with the rail corridor.

1339. BDC (S538.070) sought **Advice Note 2** be amended to replace '*road opening'* with '*relevant road controlling*' to alert plan users that additional approvals may be necessary for activities within the road reserve/transport corridor.

373 NZTA Waka Kotahi S450.046
374 RMA First Schedule Clause 16
375 TiGa Minerals and Metals Ltd S493.029, WMS Group HQ Ltd and WMS Land Co Ltd S599.033 and Birchfield Coal Mines Ltd S601.027
376 NZTA Waka Kotahi S450.048

1340. GDC (S608.538) sought the **Advice Notes** be amended to ensure no ambiguity. Based on GDC's submission, the specific relief sought was limited to amending Advice Note 2 as follows:

> *A road works permit is required prior to w~~W~~orks undertaken in a road reserve / transport corridor or areas subject to a District Council designation ~~also require road opening approval from the relevant District Council.~~*

1341. The s42A Report identified sixteen submission points and five further submission points[377] in relation to the **Transport Standards** and noted all submission points sought changes to the rules, standards, and/or advice note wording.

1342. The s42A Report identified eleven submission points and one further submission point[378] relating to **TRN-R1** and noted one supported the provisions, and ten sought changes to the wording of the rules and standards.

1343. The s42A Report identified nine submission points and one further submission point[379] relating to **TRN–R2** and noted five supported the provisions, and four sought changes to the wording of the rules and standards.

1344. The s42A Report identified fourteen submission points and three further submission points[380] relating to **TRN–R3** and noted one supported the provisions, and sixteen sought changes to the wording of the rules and standards.

1345. The s42A Report identified four submission points[381] relating to **TRN–R4** and noted one supported the provisions, one sought deletion and three sought changes to the wording of the rules and standards.

1346. The s42A Report identified six submission points and one further submission point[382] relating to **TRN–R5** and noted one supported the provisions, and six sought changes to the wording of the rules and standards.

1347. The s42A Report identified twelve submission points[383] relating to **TRN–R6** and noted six supported the provisions, and six sought changes to the wording of the rules and standards.

1348. The s42A Report identified ten submission points and one further submission point[384] relating to **TRN–R7** and noted seven supported the provisions and two sought changes to the wording of the rules and standards.

1349. The s42A Report identified six submission points and one further submission point[385] relating to **TRN–R8** and noted three supported the provisions, and four sought changes to the wording of the rules and standards.

1350. The s42A Report identified ten submission points and one further submission point[386] relating to **TRN–R9** and noted eight supported the provisions, and two sought changes to the wording of the rules and standards.

1351. The s42A Report identified ten submission points and two further submission points[387] relating to **TRN–R10** and noted seven supported the provisions, and four sought changes to the wording of the rules and standards.

1352. The s42A Report identified nine submission points and one further submission point[388] relating to **TRN–R11** and noted six supported the provisions, and two sought changes to the wording of the rules and standards.

1353. The s42A Report identified nine submission points and six further submission points[389] relating to **TRN–R12** and noted two supported the provisions, and ten sought changes to the wording of the rules and standards.

1354. The s42A Report identified eight submission points[390] relating to **TRN–R13** and noted one supported the provisions, and seven sought changes to the wording of the rules and standards.

1355. The s42A Report identified six submission points[391] and three further submission points relating to **TRN–R14** and noted one supported the provisions, and the remainder sought changes to the rules and standards' wording and/or deletion.

1356. The s42A detailed **New Standards** sought by submitters, identifying BDC (S538.078), sought the insertion of a new standard to provide for trip generation as a Permitted Activity where appropriate, as follows:

> *Trip Generation Activities*
>
> *Activity Status: Permitted*
>
> *Where: (1) The activity complies with the thresholds listed in Table TRN-6a those submitters who sought those new standards.*

1357. NZTA Waka Kotahi (S450.336) sought to insert a **new standard** in the Transport chapter that requires resource consent for any new activity or change in land use where the activity will

[385] S190.135, S450.056, S538.080, S560.179, S608.546, S612.018, FS230.0365
[386] S190.136, S450.057, S538.081, S558.728, S560.180, S566.728, S567.085, S574.728, S608.547, S612.019, FS230.0366
[387] S190.137, S439.017, S456.010, S538.082, S558.729, S560.181, S566.729, S567.086, S574.729, S608.548, FS127.002, FS230.0309
[388] S190.138, S538.083, S558.730, S560.182, S566.730, S567.087, S574.730, S608.549, S613.014, FS230.0367
[389] S190.139, S443.017, S450.058, S456.011, S491.010, S538.084, S560.183, S573.011, S608.550, FS1.165, FS64.008, FS104.012, FS230.0368, FS231.015, FS232.013
[390] S190.140, S450.059, S538.085, S558.731, S566.731, S567.088, S574.731, S608.551
[391] S190.141, S538.086, S566.732, S567.089, S574.732, FS104.013, FS231.016, FS232.014

have direct access to the State Highway network. Waka Kotahi sought that this activity be provided as a restricted discretionary activity, with the safe and efficient operation of the State Highway network and traffic effects included as matters of discretion.

1358. WMS Group (HQ) Ltd and WMS Land Co. Ltd (FS231.014) and Birchfield Coal Mines Ltd (FS232.012) opposed the NZTA Waka Kotahi submission as unnecessary, and unconnected from adverse effects and is appropriately covered under the access and trip generator standards. BDC (FS149.007) partially supported the relief NZTA Waka Kotahi sought because a new standard should differentiate between activities using an existing vehicle crossing and a new vehicle crossing. GDC (FS1) opposed the relief sought by Waka Kotahi as they considered a 'catch-all' approach unreasonable. Further, they considered that many use-related changes do not exacerbate effects. Likewise, there are many new activities with less than minor effects.

1359. The s42A Report identified one submission[392] that supported **Appendix One: Transport Performance Standards** as notified. GDC (S608.845) sought to include the standards with **Appendix One: Transport Performance Standards** within the TRN Chapter, rather than as a separate Appendix. Sixteen submission points[393] sought that **Appendix One: Transport Performance Standards** be amended to be less onerous, more consistent and correct errors. One submission (S360.058) sought **Appendix One: Transport Performance Standards** to be amended to enable development.

1360. The s42A Report identified KiwiRail (S442.042) as supporting **TRN S1** as notified; and GDC (S608.850 and S608.851) supporting TRN S2 and TRN S3 as notified; and Rocky Mining Ltd (S474.024) as supporting **TRN S14** as notified. The s42A identified a submission from BDC (S538.088) that sought to reformat **TRN S7**, amend the **TRN S12** table, and delete **TRN S14.** NZTA Waka Kotahi (S450.339) sought to retain **TRN S10**.

1361. The s42A Report identified several submitters (S65.055, S82.001, S101.017, S129.004, S355.007, S356.003, S377.013, S443.018, FS.028 and FS77.8) relating to **TRN S14** within Appendix One, who sought that **TRN S14** be amended to consider the cumulative effects of truck movements associated with heavy mineral concentrate or any other extraction associated with large bulk carrier vehicle movements.

1362. Fire and Emergency (S573.013) sought the insertion of a new standard as follows:

> ***TRAN-S15*** *– Firefighting Access*
>
> *As follows:*
>
> *1. Any access to a site located in an area where no fully reticulated water supply system is available, or having a length greater than 50 metres when connected to a road that has a fully reticulated water supply system including hydrants, must be designed to accommodate a fire appliance design vehicle of*

[392] S599.158

[393] S516.160, S558.709, S558.721, S563.167, S564.176, S566.709, S566.721, S574.709, S574.721, S577.140, S614.233, S614.234, S614.235, S615.233, S615.234, S615.235

at least 2.5 metres wide and 13 metres long and with a minimum gross mass of 25 tonne.

1363. As to amendments to the **Tables and Figures within Appendix One**, the s42A Report identified submissions from BDC (S538.088) that sought the following amendments:

- **TRN Figure 1**: show distance 'y' on Figure 1;
- **TRN Tables 4 and 5** – amend the first heading of the tables to read: 'Total number of vehicle spaces provided';
- **TRN S7** – reformat the last three bullet points; and
- **TRN S12**: amend Table 6 that follows the standard.

1364. The s42A Report identified further submissions from BP Oil NZ Ltd, Mobil Oil NZ Ltd and Z Energy Ltd (FS64.007) that supported BDC's proposed amendment to the trip generation thresholds to relate to gross floor area as opposed to filling pumps at service stations, as service stations do not generate a significant number of new trips as they are predominantly vehicles using the road network on their way to another destination. It noted that this would result in a consequential amendment to TRN-R12.

1365. The Ministry of Education (S456.012) requested that the '*Education—Schools*' qualifier in **TRN Table 6** be increased from 30 as notified to 100 students. Kāinga Ora (FS58.016) supported the Ministry of Education's submission for matters unrelated to transport (financial contributions), and for these reasons, the Reporting Officers disregarded that submission.

1366. NZTA Waka Kotahi (S450.334, S450.0335, S450.338 and S450.339) sought that Appendix One: Transport Performance Standards retain **TRN Tables 1 and 3, TRN Figure 1 and TRN S10.** They sought amendments as follows:

- Include the Transport Standards within the chapter rather than in an appendix;
- Amend the table or add a new table to recognise the local road accessway separations from a state highway;
- Include new transport standard for state highway vehicle crossings requiring the approval of Waka Kotahi;
- Amend TRN Table 6 to include drive-throughs;
- Elevate the assessment criteria to form a new policy for the assessment of high trip-generating activities; and
- Clarify the meaning of hvm/d.

Section 42A Reports

1367. In relation to **Transport Standards**, the s42A Report did not support deleting the amenity assessment because they considered it an important consideration for transport and the experience of transport users. It noted it was appropriate to include effects on amenity given the recommended wording of TRN-O3.

1368. The s42A Report did not support an new additional standard added to all permitted activities requiring adherence to standards in other chapters of the pTTPP, including ECO, NC, NFL and CE because it considered specifying particular chapters of the pTTPP limits and restricts the assessment, when the pTTPP should be read in full and the TRN Chapter overview guides other chapters to be read. It concluded a new standard would result in duplication with specific standards.

1369. The s42A Report rejected Forest & Bird's request to include an additional matter of discretion to allow for consideration of natural values and Poutini Ngāi Tahu's further submission to incorporate the values of any zone, overlays and district wide chapters, such as SASM, as matters of discretion in each rule. It considered this would be inconsistent with the TRN objectives and policies, and the overall format of the pTTPP. It noted the TRN Overview provided guidance as to other relevant chapters and that given this it would be duplication to include it under specific standards.

1370. The s42A Report agreed with BDC and GDC that the **Advice Notes** needed to be amended to ensure no ambiguity.

TRN-R1

1371. The s42A Report agreed with some of the amendments sought by BDC, such as the inclusion of 'TRN-S12' because compliance with this standard is necessary (as clause (2) sets down the applicable parking, loading, and queuing standards) but it did not support the balance of the relief sought.

1372. In response to GDC's concerns regarding referencing 'The Auckland Design Guide for Stormwater Management' in the advice note, the s42A Report requested further information to justify any amendment.

1373. The s42A Report agreed with Fire and Emergency and BDC to increase the minimum driveway width from 3 to 3.5 metres to allow for fire appliance access. The amendment is found not in TRN-R1 but in TRN S3. Despite this acceptance, Appendix 1 of the s42A Report did not reflect this recommended amendment. The Panel recommends this.

TRN-R2

1374. The s42A Report agreed with NZTA Waka Kotahi that reference to designations within the heading and clause (2)(c) of TRN-R2 was unnecessary duplication of functions and methods, and recommended deletion. It noted the deletion resulted in the GDC relief concerning TRN-R2 and TRN-R3 no longer being relevant. It agreed with BDC's request to simplify the heading wording to clarify that it covers the maintenance and repair of the existing land transport corridor.

TRN-R3

1375. The s42A Report supported the deletion of clause (c), as sought by NZTA Waka Kotahi and BDC, because the reference to designations duplicated functions and methods.

1376. The s42A Report did not support an amendment to TRN-R3 to allow for works to be undertaken if written consent has been provided by the road controlling or requiring authority, because third-party approval is *ultra vires* and beyond the scope of the pTTPP.

TRN-R4

1377. The s42A Report accepted NZTA Waka Kotahi's request to delete the rule because a designation's effect is to provide for activities otherwise managed through the pTTPP. It agreed with the submitter that it was appropriate to include a new discretionary activity standard for any new transport corridor for subdivision and development before the vesting of assets. It noted that given the recommended deletion of TRN-R4**,** the relief sought by BDC and GDC to remove reference to designations was no longer relevant.

TRN-R5

1378. The s42A Report did not support amending TRN-R5 to include all legal roads because that amendment would be limiting compared to the notified wording. It did not support amendments to encourage active transport routes because this is not clearly defined in the pTTPP, and the amendment would result in ambiguity. Amendments seeking to limit the scope of tracks to unformed legal road reserves and strips were not supported because the relief sought results in further wording to provide examples of the types of activities, which is unnecessary and results in lengthy standard headings.

TRN-R6

1379. The s42A Report supported replacing '*land transport authority'* with *'road controlling authority'* to provide clarity. It noted Straterra (S536.067) had not provided evidence to support the relief that 30 vehicle movements per day was unworkable, and no alternative number of heavy vehicle movements was provided.

1380. The s42A Report supported amending the heading of TRN-R6 by deleting the reference to the transport corridor because it made more sense and improved readability. It did not support the amendment seeking to restrict the location of charging stations, considering this to be too limited and to provide unnecessary restrictions to the activity.

1381. The s42A Report did not support deleting clause (2) of **TRN-R6** because it ensures that charging stations remain of a size and scale that is consistent with other network utilities and seeks to maintain amenity, which consequently reduces the opportunity for adverse effects.

TRN-R7

1382. The s42A Report supported adding two new matters of discretion because new clause (f) is more directive than clause (c), and new clause (g) is more specific than clauses (a) and (b). In addition to these amendments, the Panel notes that BDC also sought to amend clause (d) by deleting the word '*flood'* and replacing it with '*future natural'*, which were not addressed in the s42A Report. However, Appendix 1 of the s42A Report included the change sought to clause (d) without deleting '*flood*' and did not identify it as an amendment to the notified provisions.

1383. The s42A Report made no further recommendations for change. It recommended rejecting the submission by GDC that the impact on the road controlling authority and existing infrastructure is unclear.

TRN-R8

1384. The s42A Report noted a consequential amendment to the heading to removing references to the designation. It supported the inclusion of an additional new clause to consider the effects of the safe and efficient operation of the road. However, that recommendation is not included in Appendix 1, nor is the recommendation to amend clause (b) to delete '*flood'* and replace it with *'future natural'* included. A new clause (c) '*Outcome of consultation with the relevant roading authority'* is proposed but the s42A Report does not discuss this new clause.

TRN-R9

1385. The s42A Report supported deleting the word '*system'* as it creates confusion in clause (a). It supported adding design and suitability to the matters of discretion. However, the Panel notes this recommendation is not included in Appendix 1, nor is the recommendation to amend clause (d) to provide for all future natural hazard mitigation.

TRN-R10

1386. The s42A Report supported deleting the reference to '*over 1000m above sea level'* in clause (a) because this was unnecessary wording. It did not support including a reference to '*active transport routes*' because these are not defined in the pTTPP. It did not support the Poutini Ngāi Tahu's request to broaden assessment considerations beyond visual impacts to include effects on cultural heritage and natural environment values because this would be limiting and the District-Wide chapters should manage the impact on cultural and natural environment values.

TRN-R11

1387. The s42A Report supported amendments to the rule heading to correspond with the permitted activity rule TRN-R6 and recommended deleting '*in the transport corridor'.* It supported adding '*safety and efficiency*' to clause (a) but did not support deleting clause (b) because it is an action to contact the relevant transport agency. It recommended replacing the '*transport agency*' with '*road authority'* for consistency across the pTTPP. It did not support the inclusion of amenity effects in this rule because TRN-R11 gives effect to TRN-P6, not TRN-P9, which provides scope for consideration of amenity effects; and such an amendment would be inconsistent with the policy framework.

TRN-R12

1388. The s42A Report did not support amending it to explicitly reference heavy vehicle movements because it considered those movements were already covered within clause (a) of the rule, which refers to high trip-generating activities transport assessment requirements.

1389. The s42A Report disagreed that there was an issue with the clarity of the activity status caused by the lack of clear delineation between TRN-R12 and TRN-R14. It considered that if the activity complied with TRN-R12, it would be a restricted discretionary activity; and if not, it

would become fully discretionary under TRN-R14. It concluded this lack of clarity claim was not made out, so there was no basis to amend TRN-R12.

1390. The s42A Report concluded amending TRN-R12 to provide for vehicle movements to and from the site was no longer required due to other amendments to TRN-R12.

1391. The s42A Report agreed, in part, with the BDC submission to amend TRN-R12 but rejected the part that sought to delete TRN-R14 because TRN-R14 provided for activities that do not comply with TRN-S12. The balance part of the BDC submission in relation to TRN-R12 was supported.

1392. While Fire and Emergency (S573) opposed TRN-R12 in part, the s42A Report did not support that submission but noted it was agreed that emergency service facilities should have no limit on traffic movements. It noted that the need was addressed by excluding emergency traffic movements from Table TRN6.

1393. The s42A Report accepted that a new policy was needed because this rule refers to *'high trip activities'*. It recommended the new policy TRN-P11, which is addressed above.

TRN-R13

1394. The s42A Report agreed to delete the advice note requiring notification because retention created an onerous outcome, potentially requiring every subdivision creating a new road to be vested to be notified. It preferred to rely on s95 of the RMA rather than retain the notification advice note. It agreed that the wording *'not meeting Permitted Activity standards*' was unnecessary in the rule heading because the linked rule, TRN-R4 (permitted activity rule), was recommended for deletion.

1395. The s42A Report noted the GDC submission (S608.551) sought clarification on the requirements for Council when considering the creation of a new road, formed or unformed but considered there was no evidence to assist in evaluating the submission.

TRN-R14

1396. The s42A Report did not support deleting this rule because it provided for activities that do not comply with TRN-R12.

TRN-RXX

1397. In common with other chapters, a new catch-all rule was proposed to ensure that if an activity is neither permitted nor discretionary, it is non-complying. The rule stemmed from a submission from Transpower on the Energy Chapter and the Reporting Officer's acknowledged that it would afford clarity and direction for plan users who are not familiar with the provisions of the RMA. They recommend accepting the submission, and to ensure consistency across the Energy, Infrastructure and Transportation chapters the same rule be included in the Infrastructure and Transportation chapters. The Panel notes that reporting officers for other chapters recommended the same catch all rule because, as notified, such a rule was not included.

New Standards

1398. BDC (S538.078) seek the insertion of a new standard to provide for trip generation as a Permitted Activity where appropriate, as follows:

> ***Trip Generation Activities***
>
> *Activity Status: Permitted*
>
> *Where:*
>
> *(1) The activity complies with the thresholds listed in Table TRN-6.*

1399. The s42A Report recommend a permitted activity standard for activities not identified as High Trip Generating in Table TRN-6, noting this amendment would cause consequential amendments. However, Appendix 1 of the s42A Report did not include clause (1) as requested by BDC.

1400. The s42A Report did not support NZTA Waka Kotahi's (S450.060) request to insert a new standard in the Transport Chapter to require resource consent for any new activity or change in land use where the activity will have direct access onto the State Highway network. It considered many changes of use would not exacerbate effects and that many new activities have less than minor effects. It also considered that the high trip-generating activity standards would address this matter. It concluded that it was too onerous to require resource consent as a restricted discretionary activity for every activity gaining access.

Appendix One: Transport Performance Standards

1401. In terms of Appendix One: Transport Performance Standards, the Reporting Officers supported limited amendments. GDC had sought that the Appendix be included within the Transport chapter itself, but the Reporting Officers rejected this because they considered the chapter appropriately referenced the Appendix and no change was needed.

1402. A number of submitters sought changes, corrections and deletions to the standards and tables. The Reporting Officers rejected most of these due to a lack of evidence in support. They did support minor amendments, some of which were not included within Appendix 1 to the s42A Report.

1403. The s42A Addendum Report (Attachment 1: Meeting Notes) in relation to vehicle crossings records that the design standards within the tables needs to be clarified, and that illustrative figures would benefit plan users. The meeting notes record that there are gaps within these tables that require clarification, and a range of updates are proposed to address these.

1404. The s42A Report supported amending TRN S3 to increase the driveway width to 3.5m from 3m, as sought by Fire and Emergency (S573.013), but that amendment was not included in Appendix 1 to the s42A Report. They also supported amending **Tables 4** and **5** to include "*vehicle*" after the word "of" within both tables' titles, as sought by BDC.

1405. The s42A Addendum Report in Attachment 1 in response to the Waka Kotahi evidence included notes of an online meeting held on 23 November 2023 between the Reporting Officers and Robert Swears and Stuart Pearson, both from Waka Kotahi. The notes record Waka Kotahi's recommended approach of utilising equivalent car movements (ECM) within **TRN Table 6,** along with traffic effect assessment information (TIA or ITA) and noted that the

Reporting Officers were open to further work to establish a set of provisions relating to ECMs before completing their Reply.

1406. The Reporting Officers supported a BDC submission in amending **TRN S12** by deleting the words '*formed'* and *'sealed'* and including the word *metaled* within the first right-hand box and replacing metaled with '*formed*' and '*sealed*' in the second right-hand box**.** BDC also sought the replacement of the word '*less*' with the word '*more*' within the third right-hand box. While the Reporting Officers accepted this amendment, it was not included within Appendix 1 to the s42A Report.

1407. The Reporting Officers supported amending **TRN S14** clause (4) to clarify the meaning of '*hvm/d'* replacing it with '*heavy vehicle movements per day'*.

Hearing and Submitter Evidence/Statements

1408. The evidence summaries below refer only to areas of outstanding matters of disagreement between the submitter and the recommendation of the Reporting Officers.

1409. Ms Grinlinton-Hancock for KiwiRail (S442.043) sought two new rules for sight lines at railway level crossings and level crossing sight triangles, along with accompanying illustrative diagrams of those sight lines. She provided proposed text for the new rules and included a s32AA analysis of the new rules. She highlighted KiwiRail sought to amend TRN Table 1 (vehicle access design standards and minimum site distances for vehicle access points to the state highway) to include rail crossing sight lines, including diagrams.

1410. Ms Booker, in legal submissions responding to the s42A Report, remained concerned that the recommended reference to TRN Table 6 rather than TRN S14 could result in all new activities requiring resource consent being caught in the catch-all '*other activities not listed in this table'*, through compliance with TRN Table 6. She sought a permitted activity rule for activities not exceeding the thresholds in TRN Table 6, the amendment of TRN-R12 to apply to activities exceeding TRN Table 6 thresholds, delete reference to TRN S14, and delete TRN-R14. She noted support for the recommended rejection of NZTA Waka Kotahi's proposal to insert a new transport standard requiring resource consent for any new activity or change in land use where access to the State Highway network occurs.

1411. Mr Leckie's legal submissions highlighted concerns with TRN-Table 6, High Trip-Generating Activities. He initially detailed the relationship between Appendix One and the rules, noting that as notified, mining and quarrying are identified as high-trip-generating activities if there are more than 30 heavy vehicle movements daily. He recorded that if more than 30 heavy vehicle movements occur, Standard TRN S14 sets out the requirements for a high trip generating activity transport assessment. He noted that Rule TRN-R12 provided for establishing a new high trip generating activity, or the expansion of an existing activity listed in TRN-Table 6 that complies with the requirements of Standard TRN S14, as a restricted discretionary activity.

1412. Mr Leckie's submissions sought to ensure that the TRN provisions were consistent with the intended objectives and provisions of both BCZ and MINZ and did not unintentionally restrict anticipated activities in these zones. To achieve that result, he submitted TRN Table 6 required amendment by including additional words as follows:

Mining and Quarrying

*>30 heavy vehicle movements **to or from** the site per day*

1413. Mr Leckie disagreed with the s42A Report recommendation to reject the relief due to amendments made to TRN-R12 due to other submissions. He noted TRN Table 6 had not been amended, and the rule still referred to the table, so the interpretation issue remained unresolved. He noted that both the BCZ and MINZ plan provisions clarified that heavy vehicle movements exclude heavy vehicle movements within a site and highlighted the Reporting Officers agreed with him. He contended that the amendment sought to TRN Table 6 would resolve inconsistency and interpretation conflicts.

1414. Additionally, Mr Leckie noted that Rule BCZ-R3 provided for a maximum of 50 heavy vehicle movements per day, Rule MINZ-R3 provided for 30, and Rule TRN-R12 provided for 30. He considered it was unclear which rule would take precedence. Bathurst, he said, preferred 50. He also considered it was unclear if the Plan intended that one vehicle movement equated to a trip to and from a site and requested clarification. He referred to Ms Hunter's evidence provided in hearing Topics 1 and 2, which made it clear that if there was a specific rule within a Special Purpose Zone, then it should apply above the more general transport provisions.

1415. Post Mr Leckie's submissions, the Panel notes that substantial changes arising from expert witness conferencing were recommended to TRN Table 6 and the traffic assessment of heavy vehicle movements.

1416. Ms Snoyink's statement focused on the s42A Addendum Report and Appendix One. She noted Forest & Bird remained concerned that the rules only address significant effects on identified values and did not give effect to the RMA and NZCPS.

1417. Mr Pearson, for NZTA Waka Kotahi, noted that for a new vehicle crossing to a state highway a restricted discretionary activity status was not required, provided the crossing met the performance standards recognised in Rule TRN-R1. However, he considered an additional performance standard should be included to provide further clarity.

1418. Mr Pearson also addressed high trip-generating activities, noting that amendments sought to TRN Table 6 included providing for drive-through facilities and reducing the number of heavy vehicles used for mining and quarrying. He said traffic volumes should be based on equivalent car movements (**ECM**) per day rather than heavy vehicle movements per day.

1419. Referencing Mr Swears' expert advice, Mr Pearson noted that using ECM as a standardised approach for identifying assessment thresholds in TRN Table 6 would simplify when traffic assessments are required and would capture all activities. He also considered using ECM would improve clarity and consistency when assessing transport effects, ensuring the correct mitigations are appropriately managed, and the effects associated with different activities and vehicle types are provided.

1420. Mr Swears noted that the pTTPP did not include a definition of ECM and provided proposed wording to address the relief sought by BDC to include one. He noted the s42A Report commented on the BDC submission but did not make a recommendation. The Panel notes this omission was subsequently addressed in the s42A Addendum Report.

1421. The BDC submission stated as follows:

> *Council also seeks the inclusion of a statement that sets down the equivalent car movements so that the number of vehicle movements can be determined when heavy vehicle movements are involved.*
>
> *As a general comment, the Council notes that trip generation limits are incorporated into the performance standards across the Plan. For example, Home Businesses, Community Facilities, and Mining Activities in the Rural Zone all have vehicle movement limits.*
>
> *Any trip-generating standards in other chapters need to be reviewed to ensure consistency with the Transport Performance Standards.*

1422. The Panel notes the NZTA Waka Kotahi submission (page 59) also raised the issue of utilising ECM to more accurately allow assessment of heavy vehicles when applying TRN Table 6 and its related standards and rules.

1423. Mr Pearson pointed out that amendments to rules in specific zones that refer to light and heavy vehicles would be needed. He identified GRZ-R5, LLRZ-R5, MRZ-R5, GRUZ-R9, RLZ-R8, SETZ-R9 and MINZ-R3. He directed the Panel to Mr Swears' evidence (paragraph 33), where he provided an example of using ECM. Mr Pearson noted that the approach simplified identifying trip generation thresholds for when transport assessments may be required. He noted the approach did not use specific activities with different qualifier thresholds but instead relied on ECM that apply to all activities and how different vehicle trip generation impacts different road hierarchies. He highlighted applying this approach determined whether a traffic impact assessment or an integrated transport assessment was required.

1424. Mr Pearson considered that using ECM provided clarity and would capture any activity adversely affecting the transport system. He also referenced the two proposed transport assessment requirements - Basic Assessment and a Full Integrated Assessment, as set out in the amended TRN S14. He considered these proposed assessments removed potentially onerous requirements by ensuring that the assessment was fit for purpose, for the varying level of effects an activity may have.

1425. Mr Pearson went on to note the linkage between TRN Table 6 and TRN S14 and proposed new Policy TRN-PX, and the evidence of Mr Swears that the new Policy needed to reference the use of both '*Traffic impact assessments*' and *'Integrated transport assessments'*, so that whichever is appropriate can be used.

1426. Subsequent to the hearing, Mr Pearson (supplementary statement dated 5 December 2023) considered that, while there was scope to make some changes to TRN Table 6, there was no specific submission point broadly seeking modifications to all the thresholds related to the activities listed in the table. However, despite this, he considered there was benefit in revisiting the thresholds in Table 6 for when a transport assessment (whether basic or full) is required.

1427. Mr Pearson also provided alternate options to be used in the Transport Performance Standard provisions for the assessment criteria for high trip generating activities. He referenced the

partially operative Selwyn District Plan (within the amended transport provisions) and the Thames Coromandel District Plan.

1428. Mr Pearson disagreed with the Foodstuffs further submissions (FS107) because he considered the operational and functional need for supermarkets should be recognised and that these types of activities needed to be assessed, and where required, their effects on the transport network evaluated via traffic assessments.

1429. Mr Pearson addressed vehicle crossings, detailing amendments to TRN-R1, including new vehicle crossing designs (Diagrams C and E) for the state highway network. He provided a new table (new Table TRN-4) to be referenced within TRN-R1, which links to the diagrams providing details on the accessway type. If included, Mr Pearson considered that effects associated with access to and from the state highway would be addressed by ensuring adequate standards, including sight distances, vehicle access separation, and vehicle crossing design standards. He noted the new table could also apply to local roads as well. The diagrams, by identifying the extent of the areas to be sealed, assist in ensuring loose material and or mud from the access road will not migrate onto the carriageway of the adjoining road, avoiding, for example, the risks loose gravels pose for motorcyclists.

1430. Mr Pearson noted the s42A Report had not responded to NZTA Waka Kotahi's submissions to amend TRN Table 3, which deals with the separation of accessways. Assuming amendments were made to TRN Table 3, he provided Figure 1 in his evidence to accompany that amended table to provide clarity. Mr Swears' evidence in section 5, Separation of Accessways, also addressed this issue.

1431. Mr Swears supported amendments to TRN Table 3 but provided Figure 5 as an alternative to Mr Pearson's Figure 1. He discussed the difference between the two options and had reservations regarding the lengths described in the inset table of Figure 5.

1432. Following the hearing, Mr Swears provided a memorandum (dated 5 December 2023) updating the Panel on the accessway separation matter. He provided two tables accompanying his Figure 5, which provided separation distances. One option was based on the nature of the traffic using the accessway, such as heavy vehicles; the other option was based on land use/zoning. He did not record a preference for either option. He also revisited the transport assessment to assess the effects of a land use activity on the transportation network and provided three additional tables.

1433. Mr Swears also revisited the content of the transport assessment. After considering sources for that assessment, he noted it was desirable for NZTA Waka Kotahi to provide simple but clear guidance to the Region. Based on terminology that is commonly used, he considered it would be best to refer to the 'Basic' assessment as a '*Basic Integrated Transport Assessment*' or as a '*Traffic Impact Assessment*'; and to refer to the 'Full' assessment as either a '*Full Integrated Transport Assessment*' or as an '*Integrated Transport Assessment*'

1434. Within his supplementary statement, Mr Pearson included a new table for vehicle crossing standards for rural environments where the speed limit is 70 km/h or greater with associated changes to TRN-R1, new figures including the vehicle crossing designs, amendments to both TRN Table 1 and TRN Table 3, and a new figure to help clarify how this Table is to be interpreted.

1435. Mr Pearson noted NZTA Waka Kotahi's submission recommended that local vehicle crossing standards be included because in urban environments (speed limit of 60 km/h or lower) where there is a kerb and channel, it is often required for sites to construct their vehicle crossings to Council standards. He suggested that the pTTPP could adopt an approach like the Selwyn District Plan, which has provided vehicle crossing design standards for local roads (TRAN-DIAGRAM 5) and arterial and collector roads (TRAN-DIAGRAM 6). Alternatively, urban vehicle crossing designs (Standard Drop Crossing) in Schedule 3 of the Grey District Plan (Standard Residential Drop Crossing) for the residential vehicle crossing design in the Westland Code of Practice for Engineering Works could be adopted and incorporated into the District Plan.

1436. In Mr Pearson's view, including an urban/local vehicle crossing standard would ensure that any new residential development in an urban context has an appropriate vehicle crossing that mitigates potential safety issues on the transport system. He noted activities related to commercial and industrial activity would probably require a bespoke design and would likely trigger a restricted discretionary status in the Transport Chapter.

1437. Mr Pearson addressed the road classification issue, noting that the notified Plan uses the One Network Road Classification (**ONRC**), which has since been superseded by the One Network Framework (**ONF**). He noted NZTA Waka Kotahi utilises ONF to enable better design, planning, and delivery of transport systems by recognising how the roads function to move goods and people and how people experience those roads. He said this matches funding from NZTA Waka Kotahi, which funds state highways and is a co-founder of the local road network. Mr Pearson accepted that there may not be scope in the relevant submissions to make this change; however, to ensure that the changes sought concerning high trip generating activities were appropriately addressed, he considered changes should be made to the roading hierarchy to be consistent with ONF to improve clarity and usability of the pTTPP.

1438. Following the hearing, the Panel requested that Mr Pearson confirm scope within submissions to incorporate ONF into the pTTPP. In his supplementary statement, he confirmed there was scope but noted that there was insufficient data available for roads within the West Coast Region, which prevented the immediate implementation of ONF into the pTTPP. He noted that once ONF was available, it could be incorporated into the pTTPP through a future plan change. He also noted there was currently no schedule to recognise the current hierarchy within the pTTPP. The Panel consider there is no scope within submissions to incorporate the ONF and agree this would require future plan change.

1439. Ms Pull's addendum evidence confirmed a focus on TRN-R9 and TRN-R10. However, the Panel note Poutini Ngāi Tahu's did not submit on the TRN Rules.

Reporting Officer Reply Evidence

1440. Both the Position Statement and Reply responded to Ms Pull's evidence relating to TRN-R9 and TRN-R10 to include Poutini Ngāi Values as a matter of discretion, detailing the Reporting Officers' concerns that inclusion would reduce plan certainty and increase complexity and require input from Poutini Ngāi Tahu on all applications. They considered that if these matters were included as matters of discretion, a cultural impact report would be needed, and Ngai Tahu was the only body capable of providing one.

1441. Regarding TRN-R10, as to the visual effects issue, the Reporting Officers considered reference to amenity values included and provided for consideration of impacts on cultural values. They provided alternative wording to that advanced by Ms Pull as follow:

Effects on amenity values, in particular of the locality and streetscape.

1442. The Reply, while repeating the content of the Position Statement, on the above issues, also noted Ms Pull had promoted the approach of including a notification advice note to the relevant rules as a means of notifying plan users of the need to consult with Ngāi Tahu when Ngāi Tahu values might be affected. The Reporting Officers did not support that approach as an effective means of overcoming uncertainty because the Ngāi Tahu values are not explicitly mapped. Also, they noted that any proposals that did give rise to that type of effect would need to comply with the requirements of the SASM Chapter.

1443. Both the Position Statement and the reply responded to the issue of Special Purpose Roads, providing information on their background. The Reporting Officers advised that Special Purpose Roads had been in place for many years and have remained unchanged on the West Coast. They recorded they had spoken with the Council's roading departments, who wished to see both retention of those roads and inclusion within the RSI definition. Those roads are listed in a Waka Kotahi document entitled Funding Assistance Rates (FAR) which was provided to the Panel.

1444. In response to the Panel's query about whether those roads could be identified as another term on the planning maps, the Reporting Officers confirmed they saw no issue with doing so.

1445. When addressing the road hierarchy ONF, the Reply noted Mr Pearson's evidence above but recorded during the EWC that Mr Pearson withdrew the specific relief relating to the One Network Road Classification.

1446. As to high trip generating activities, the Reply notes that NZTA Waka Kotahi's relief sought to comprehensively change those notified plan provisions to form both a new policy and convert the triggers for traffic assessments into ECM. The Reporting Officers noted that Mr Swears was the only expert who presented transport engineering evidence, and as such, they considered they must rely on his recommendations relating to ECM. The Panel notes NZTA Waka Kotahi's submission was narrow and that it was the BDC's submission that provided broad scope for amendments.

1447. The Reply briefly addressed the issue of consistency between BCZ and MINZ rules and TRN rules regarding the high trip-generating threshold of 30 or 50 heavy vehicle movements, noting that the mining topic had yet to be heard. The Reporting Officers again stated they were not transportation experts and did not have access to experts.

Hearing Panel's Evaluation

1448. The matters raised in submissions and evidence by Waka Kotahi and BDC are the most significant regarding the Transport Rules and performance standards, so the Panel have addressed them first in some detail. We accept that Mr Swears' evidence was the only expert evidence from a Chartered Professional Engineer with an assessed practice field of

Transportation. Mr Pearson is a seven-year senior planner with Waka Kotahi, and we acknowledge his experience and transport-based planning expertise.

1449. The Panel notes that we received legal submissions on the issue of heavy vehicle movements and high trip-generating activities, as well as some broad-based evidence from Ms Hunter regarding the purpose of special zones such as the mineral extraction zone. However, we view those submissions and evidence as generalised, particularly compared to the detailed and expert evidence from Mr Swears and Mr Pearson. Accordingly, in formulating our recommendations, we have given greater weight to the evidence presented by these experts.

Roading Classification

1450. The Panel has noted that to apply the tables in Appendix 1, a clear understanding of roading classification is required. We have not identified any provisions in the Plan that specify roads other than state highways, which are shown on the notified planning maps. Other classifications in the notified Tables 1 – 3 of Local Road, Collector Road and Arterial Road are not identified either on the Planning Maps, or in any schedule. This creates a fundamental problem in applying the Plan as notified.

1451. The Panel notes that changes have been recommended to Policy TRN-P1 to recognise the different functions and design requirements for each road classification under the most current National Transport Network classification system. This stemmed from a submission from BDC, which also stated that:

> *While Council has not sought inclusion of a Road Hierarchy information into the Transport Performance Standards, consideration should be given to whether this would be a helpful addition.* [emphasis added]

1452. The Panel agrees that introducing a road classification schedule would be invaluable and indeed necessary to remedy the problem identified above. We have recommended using the Council's existing roading schedules from the three operative Plans as a means of providing for this. This schedule is recommended for inclusion as part of Appendix 1.

High Traffic Generation

1453. The issue of High Traffic Generating Activities (HTGA) did attract submissions. However, the approach in submissions is piecemeal, seeking to utilise, in part, equivalent car movements (ECM) as a means of assessing effects, as distinct from relying primarily on an activities-based criterion in Table TRN 6, as notified.

1454. Buller District Council in their submission point (S538.088) have sought to significantly amend notified Table 6 but retain limited parts. The BDC submission notes in terms of Table 6 that:

> *"Council considers that the threshold table for high trip generating activities is excessive for some activities and there are concerns that this could result in traffic generation that may comprise [sic] the safe and efficient operation of the transport network if not managed accordingly. Council's preference is that the specified activities are scaled back and that the threshold limit of 60 vehicle movements per day is used as this is what is in the current BDP and has proven a reliable trigger limit."*

Council also seeks the inclusion of statement which sets down the equivalent car movements in order for the number of vehicle movements to be determined when heavy vehicle movements are involved.

1455. BDC also note in its submission:

"*that there are trip generation limits incorporated into the performance standards across the Plan e.g. Home Business, Community Facilities and Mining Activities in the Rural Zone all have vehicle movement limits. There is a need to review any trip generating standards in other chapters to ensure consistency with the Transport Performance Standards."*

1456. BDC propose that the activities in Table 6 be amended to delete all bar Industrial (which they proposed is amended to 500m^2), Mining and Quarrying and Residential, and they propose to add Commercial. Their submission then proposes that the threshold limit of 60 vehicle movements per day be utilised for all other activities and they introduce an ECM method enabling calculation as below:

1 car trip (to or from the property) = 2 equivalent car movements

1 truck trip (to or from the property) = 6 equivalent car movements

1 truck and trailer trip (to or form the property) = 10 equivalent car movements

1457. BDC also sought to delete TRN S14 stating:

Council requests that the High Trip Generating Activities Transport Assessment requirements are deleted as these are not expressed in the form of standards but as discretionary considerations. Council has suggested that these matters form the basis of the restricted discretionary matters for Rule 12.

1458. Waka Kotahi sought to retain Table 6 as notified but amend the '*Mixed use or other activities not otherwise listed*' category to **30 equivalent** car movements per day. Their ECM levels differed from BDC being a truck and trailer unit is 5 equivalent car movements, and a non-articulated truck is 3 equivalent car movements.

1459. In the Panels' record of the evidence, we have noted scope issues relating to the use of ECM, including Mr Pearson's reservations. We accept that the Waka Kotahi submission did not take a line-by-line approach to the notified Table 6. But we consider that the submission did raise in part the issue of the appropriate measures for high trip-generating activities and ECM. The BDC submission goes further, as noted above.

1460. Through evidence and post-hearing conferencing, Waka Kotahi's witnesses altered their position on Table 6, supporting its complete deletion and its replacement with a new Table 6 that utilises ECM as the method for assessing HTGA. Waka Kotahi, however, acknowledged in

their later evidence[394] a scope issue in their submission relating to the recommended replacement of notified Table 6.

1461. The Panel considers that it needs to address the following issues to determine the most appropriate outcome for these Plan provisions:

i. Retention of the notified Appendix 1

ii. A hybrid Table 6 solution

iii. Full adoption of ECM including the numbers within the ECM method and the use of Basic and/or Full Integrated Traffic Assessments

iv. Scope of submissions

i. Retention of the notified Appendix 1

1462. Mr Swears stated that:

> *"the impacts on the road network are dependent on the volume and composition of the traffic rather than on the specific land use activity. Therefore, I consider there is merit in defining high trip generating activities based on the actual trip generation for the activity rather than on land use specific development criteria"*

1463. The Panel agrees with this assessment. We accept that defining high trip-generating activities based on actual trip generation rather than using land-use-specific development criteria results in a more certain and accurate outcome for Plan users. We note that BDC currently utilise an ECM methodology and considers it "*has proven a reliable trigger limit*".

1464. The fact that BDC submitted to substantially amend Table 6 and introduce an ECM methodology demonstrates to the Panel that they held concerns about the appropriateness of the Table to assess HTGA. We also noted that Table 6, as notified, creates a level of inconsistency in the way different activities are assessed with land use-specific criteria for some named activities and trip generation criteria for those that are unnamed.

1465. In addition to the above, the Panel considers that even with the new Rule TRN RX1, which creates a permitted activity status for activities that meet the qualifiers in the notified Table 6, the problems associated with TRN S14 are not resolved.

1466. Where there is an exceedance of the Qualifiers in notified Table 6, it results (TRN-R12) in the need to comply with the standards in TRN S14 [emphasis added]. The Panel agrees with BDC and others that these standards are actually discretionary considerations (or assessment matters) rather than standards. We consider compliance with TRN S14 as required by TRN-R12 to be assessed as a restricted discretionary activity is not possible, and therefore, all

394 Supplementary statement of Stuart Pearson on behalf of Waka Kotahi NZ Transport Agency, 5 December 2023

activities not meeting the qualifiers would, in our view, become fully discretionary under TRN-R14. This demonstrates a further significant problem with the notified provisions.

ii. Hybrid Table 6 solution

1467. The Panel has considered whether a hybrid option would be appropriate. However, we are of the view that such an option would result in a mix of methodologies for assessing HTGA, resulting in uncertainty and complexity within the Plan and potentially inconsistent outcomes in relation to different roading categories. This is because notified Table 6, apart from the catch-all requirement, utilises activities combined with floor area as qualifiers with no consideration of the roading categories. In contrast, the ECM would utilise car movements and the roading categories in determining the level of effects and the correct level (either none, basic or full) of assessment for HTGA. Furthermore, the hybrid option retains the inconsistencies identified and does not entirely resolve the issues with TRN S14, as referred to above.

iii. Full adoption of ECM

1468. Having considered the submissions and evidence, and the two options above, the Panel finds that adopting the ECM methodology to assess HTGA is the most appropriate option. Mr Spears advised us that:

> *From a transport engineering perspective there is a significant difference between the effects created by light vehicles (cars, utes, vans, etc) and those created by heavy vehicles (trucks, and multi-unit heavy commercial vehicles (HCVs), including HPMV).*

1469. The Panel accept this reasoning and is of the view that this is more efficient as it focuses on the relevant effects of HTGA, utilising vehicle numbers to assess the impacts on various road classifications. We also consider that, from a Plan user point of view, there will be consistent methodology to apply regardless of activity type.

1470. In terms of the ECM levels, i.e. thresholds on equivalent car movements, the Panel prefers the evidence of Mr Swears as an expert in this area as opposed to the submission of BDC. In Mr Swear's evidence, there is a detailed background to those thresholds, as well as information on how they were adopted in other district plans and by the Environment Court. He proposed the following definition, which the Panel accepts (apart from clarification) for inclusion as part of Appendix 1:

- 1 equivalent car movement (ecm) = 1 car / light vehicle movement,
- 3 ecm = 1 heavy commercial vehicle movement (1 truck),
- 5 ecm = 1 combination heavy commercial vehicle movement (1 articulated truck or truck and trailer).

1471. Both Mr Swears and Mr Pearson refer to a Basic and Full Integrated Traffic Assessment (ITA) in their evidence. The Panel understands these differentiate between the level of assessment required for differing numbers of vehicle movements and corresponding roading classifications. In other words, the greater the number of vehicle movements and the higher

the classification of the road, the more detailed the ITA is required. We agree with this approach.

1472. The Panel notes that the replacement Table 6 recommended by Mr Swears and Mr Pearson readily identifies which assessment is required (or whether it is required at all) and in which circumstances. We consider the notified Plan is unclear on this aspect.

1473. We note that Waka Kotahi provided a marked-up version of Appendix One, which included the assessment criteria for a Basic and Full ITA from the partially operative Selwyn District Plan. Unfortunately, probably due to a cutting and pasting error, the Full ITA criteria replicated the Basic ITA criteria. We recognised this when we reviewed the Selwyn District Plan. We have corrected this in our Appendix One recommendations.

iv. Scope

1474. Having reached this point, the Panel have turned their mind to the issue of scope. We have identified the salient submission points we rely on to amend the provisions detailed above, and we consider they provide sufficient scope for the changes proposed. In addition, we have identified several broad submissions seeking that Appendix One be amended "*to be less onerous, more consistent and correct errors"*.[395] As we have highlighted above, there are several errors (problems) and inconsistencies within Appendix One, including Table 6. Accordingly, we consider we have scope to make our recommended amendments.

1475. The amendments the Panel are recommending to Appendix One concerning HTGA necessitate amendments to TRN-R12 in line with that primarily sought by BDC[396], but with reference to the HTGA Transport Assessment Requirements outlined in amended TRN S14.

Trip Generation Standards on other Chapters

1476. As referred to above, BDC raised the issue of trip generation limits incorporated into the performance standards across other chapters of the Plan and considered that there was a need to review any trip generating standards in other chapters to ensure consistency with the Transport Performance Standards. The Panel agrees this is problematic particularly within the standard zones and more so with a revised HTGA approach. We also consider there is the potential for uncertainty between provisions.

1477. The Panel notes for example that Educational Facilities are listed in Table 6 with specified per student ratios to trigger assessment but are then also listed in the three residential zones with '*a maximum of 4 heavy vehicle movements and whichever is the greater of 20 light vehicle movements per day or 140 vehicle movements per week'* requirement. We consider this to create a problem of certainty for plan users regarding which rule applies. We also note a similar situation arises with Retail Activities in the Settlement Zone.

[395] Chris & Jan Coll S558.709 & S558.721, Geoff Volckman S563.167, Catherine Smart-Simpson S564.176, Chris J Coll Surveying Limited S566.709 & S566.721, William McLaughlin S567.078 & S567.735, Laura Coll McLaughlin S574.709 & S574.709, Koiterangi Lime Co LTD S577.140, Karamea Lime Company S614.235, Steve Croasdale S516.160

[396] Buller District Council S538.084

1478. The Panel recommends that these performance standards relating to specific activities in the following zones be removed:

- GRZ-R5, LLRZ-R5, MRZ-R5, GRUZ-R9, RLZ-R8, SETZ-R9 and FUZ-R7.

1479. Bespoke provisions have been made in relation to Community Facilities, Educational Facilities, Emergency Service Facilities and Retirement Homes in SETZ-R12, Community Facilities and Educational Facilities in GRZ-R7, LLRZ-R7, MRZ-R7, Retail Activities in SETZ-R13 and Commercial Activities other than Retail, Home Business or Visitor Accommodation in SETZ-R14 in ensure activity scale it addressed.

1480. In terms of the Special Purpose Zones, we consider a different approach can be taken to HTGA assessment particularly in situations such as mining where it is a single activity within the zone, as in part the reason for Special Purpose Zones of that nature is to identify the various provisions that will relate to it.

Section 32AA

1481. Given the level of recommended changes, the Panel has undertaken an evaluation of the recommended amendments to provisions since the initial s32 evaluation was undertaken, in accordance with s32AA.

1482. The Panel considers the changes to Appendix One and TRN-R12 will create consistency across the chapters and improve the effectiveness of the Plan by aiding in plan interpretation and administration. We consider the Plan will be easier for plan users to understand, resulting in it being more efficient and effective than the notified provisions in achieving the objectives of the proposed TTPP.

1483. The Panel considers the benefits of the changes are improved consistency and ease of interpretation. The Panel acknowledge that some activity types in notified Table TRN 6 may now require a traffic impact assessment, which will be an additional cost for those activities in certain circumstances, as part of consenting processes.

1484. The Panel considers there is a risk of not acting in that there would be a range of inconsistencies within the provisions, and particularly rule TRN-R12, which will be impossible in meet. We have not identified any risks from acting.

TRN-R1

1485. The Panel accepts the Reporting Officers' recommended changes as shown in Attachment 1 of the Right of Reply. No further evidence was provided by BDC to support its request to delete the advice note.

TRN-R2

1486. The Panel accepts the Reporting Officers' recommended changes as shown in Attachment 1 of the Right of Reply. However, we have amended the clause associated with requiring authorities to make it clear they are not required to meet the performance standard.

TRN-R3

1487. The Panel accepts the Reporting Officers' recommended changes as shown in Attachment 1 of the Right of Reply. However, we have amended the clause associated with requiring authorities to make it clear they are not required to meet the performance standard.

TRN-R4

1488. The Panel accepts the Reporting Officers' recommendation to delete TRN-R4. In response to NZTA Waka Kotahi's concern, we note that as notified TRN-R13 is a discretionary activity rule for the formation of new transport corridors not undertaken by requiring authority in accordance with a designation. However, by deleting TRN-R4, as recommended, TRN-R13 would then also apply to designations. We therefore recommend a consequential amendment to TRN-13 to clarify it does not apply to designations.

TRN-R5

1489. The Panel accepts the Reporting Officers' recommendation to retain as notified, except for renumbering the provision.

TRN-R6

1490. The Panel accepts the Reporting Officers' recommended changes as shown in Attachment 1 of the Right of Reply.

TRN-R7

1491. The Panel accepts the Reporting Officers' recommended changes as shown in Attachments 1 of the Right of Reply. However, we accept in part BDC's (S538.079) request to replace '*flood*' with '*natural*' in clause (d) but not to include '*future*'.

TRN-R8

1492. The Panel rejects the Reporting Officers' recommended changes as shown in Attachments 1 of the Right of Reply. There is no scope to include new clause (c). We accept BDC's (S538.080) request to replace '*flood*' with '*natural*' in clause (b). We also recommend a consequential amendment to delete '*road reserve'* from the rule heading to reflect the new definition of '*transport corridor'*.

TRN-R9

1493. The Panel accepts the Reporting Officers' recommended changes as shown in Attachments 1 of the Right of Reply. However, we accept in part BDC's (S538.081) request to replace '*flood*' with '*natural*' in clause (d) but not to include '*future*'.

TRN-R10

1494. The Panel accepts the Reporting Officers' recommended changes as shown in Attachments 1 of the Right of Reply. However, we do not recommend adding new clause (b) '*Effects on amenity values*' given there is no submission requesting this. We accept BDC's (S538.082) request to add a new clause '*Effects on cultural, heritage and natural environment values'* because this is appropriate.

TRN-R11

1495. The Panel accepts the Reporting Officers' recommended changes as shown in Attachment 1 of the Right of Reply. However, we accept BDC's request to delete clause (b) because it not an appropriate matter of discretion.

TRN-R12

1496. The Panel accepts that TRN-R12 requires amendment alongside TRN S14 as we have explained above. We do not however consider there is a need for separate matters of discretion within the rule itself, but that the rule should instead reference the revised TRN S14 as the requirements for assessment.

TRN-R13

1497. The Panel accepts the Reporting Officers' recommended changes as shown in Attachments 1 of the Right of Reply.

TRN-R14

1498. The Panel rejects the Reporting Officers' recommendation and accepts BDC's (S538.086) request to delete Rule TRN-R14 on the basis of amendments to TRN-R12.

New Rules

1499. The Panel agrees with the Reporting Officers recommendation to include new Rule **TRN-RX1**, which a permitted activity rule. We consider this is required to cover an omission in the notified plan.

1500. The Panel has considered the Reporting Officers recommendation to include new Rule **TRN-RX2**, as a catch all rule at a non-complying activity rule. While we acknowledge we have supported such a rule in the Energy and Infrastructure Chapters, which stem from a submission by Transpower, we have had to consider whether the recommended rule framework for Transport requires a default activity rule. In the end we agree with the Reporting Officer's that it would afford clarity and direction for plan users who are not familiar with the provisions of the RMA and that including it would ensure consistency across the Energy, Infrastructure and Transportation chapters. As with our recommendations other we consider the activity status for such a rule should discretionary rather than non-complying as there is no submission seeking a non-complying status and it is therefore beyond scope to include one.

KiwiRail Sight Lines

1501. In addition to changes to the policies, KiwiRail through submissions and subsequent evidence had sought for the inclusion of a rule to protect railway level crossing sight lines. Ms Grinlinton-Hancock provided details of a rule and associated diagrams and accompanied that with a s32AA assessment to address concerns raised in the s42A Report.

1502. The Reporting Officers noted in their Addendum to their Section 42A Report dated 23 November 2023 that "*Due to the late access to Waka Kotahi New Zealand Transport Agency*

and KiwiRail evidence we have not had sufficient time to review and make recommendations in response to matters raised". From that point onwards it appears that no further consideration has been given to the KiwiRail position or Ms Grinlinton-Hancock evidence by the Reporting Officers.

1503. The Panel notes its recommendation with regards TRN–P3 above to accept the evidence of Ms Grinlinton-Hancock's and amend the policy as sought by KiwiRail. However, we noted that regardless of this the maximising of user safety at road and rail level crossings was part of TRN–P3 in the notified Plan and that there is no rule which addresses sightlines in the context of rail crossings as it currently stands [emphasis added].

1504. The Panel notes that amendments are now proposed to TRN Tables 1 and 2 to make it clear that they relate to sightlines in relation to roads. We consider the issue with rail level crossings therefore also requires attention within the rules and standards. The Panel therefore proposes amendments to TRN-R1, and the introduction of the sightline diagrams provided by Ms Grinlinton-Hancock into the Appendix One. In this context we accept and adopt the s32AA assessment provided by Ms Grinlinton-Hancock.

Appendix One – Transport Performance Standards

1505. The most significant amendment to Appendix One Transport Performance Standard arises from the NZTA Waka Kotahi submissions, which we consider are well supported by Mr Swears and Mr Pearson's evidence. We accept the evidence supporting those amendments for the reasons detailed in their evidence and the s42A Report.

1506. The Panel agree with the submission of Fire and Emergency regarding TRN-S3, which requests increasing the width from 3m to 3.5m to ensure and enable emergency access.

1507. The Panel agree with the BDC submissions that sought clarifications regarding TRN Table 5, now 6, and TRN S7. The Panel also agrees with the amendments sought by BDC to TRN S12. These appear to us to be simple errors.

Special Purpose Roads

1508. We note that the Reporting Officers support the inclusion of special purpose roads being identified on the Planning Maps. The Panel accepts that there is a need to clearly identify the Special Purpose Roads within the Plan, particularly given they are to be considered Regionally Significant Infrastructure. We therefore agree that the appropriate place is to identify them on the Planning Maps.

Hearing Panels' Recommendation

1509. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in footnotes below are accepted or accepted in part, and recommends the following changes to the **TRN Rules** and **Standards**, **Appendix One and the Planning Maps**:

Transport Rules

Note: There may be a number of Plan provisions that apply to an activity, building, structure and site. In some cases, consent may be required under rules in this Chapter as well as rules in other Chapters in the Plan. In those cases unless otherwise specifically stated in a rule, consent is required under each of those identified rules. Details of the steps Plan users should take to determine the status of an activity is provided in General Approach.

Advice Notes:
Works undertaken in a road reserve / transport corridor or an area subject to a transport designation, that are undertaken by a Utility Provider who is not the roading authority are Permitted where these are compliant with the Utilities Access Act 2010 and Code of Practice.
Works undertaken in a road reserve / transport corridor or areas subject to a District Council designation also require road opening approval from the relevant District Council.
Minimum vehicle parking spaces, except for accessibility parking and bicycling parking, are not set. A minimum number of vehicle parking spaces do not have to be provided, however, if vehicle parking is provided it must comply with the vehicle parking standards.
Any work required for a new or upgraded vehicle crossing intersecting with a State Highway, requires a Corridor Access Request prior to any works occurring with the State Highway road reserve and approval from Waka Kotahi NZ Transport Agency.
Any crossing that intersects with the Rail Network requires approval from KiwiRail.
The Auckland Design Manual Guideline Document GD 2017/01 Stormwater Management Devices in the Auckland Region provides information on best practice stormwater design options for stormwater treatment.

Permitted Activities	
TRN - R1	**Establishment of accessways, vehicle crossings, parking spaces, loading spaces, queuing and standing spaces**
Activity Status Permitted Where: 1. Vehicle crossings and access way standards - TRN Tables 1 – ~~3~~ **4**,[397] Standards TRN S1 - S3, and TRN Figure 1-**5**[398] are complied with; 2. Parking, loading, queuing and standing standards - TRN Tables 4**5** – ~~5~~**6**, [399]

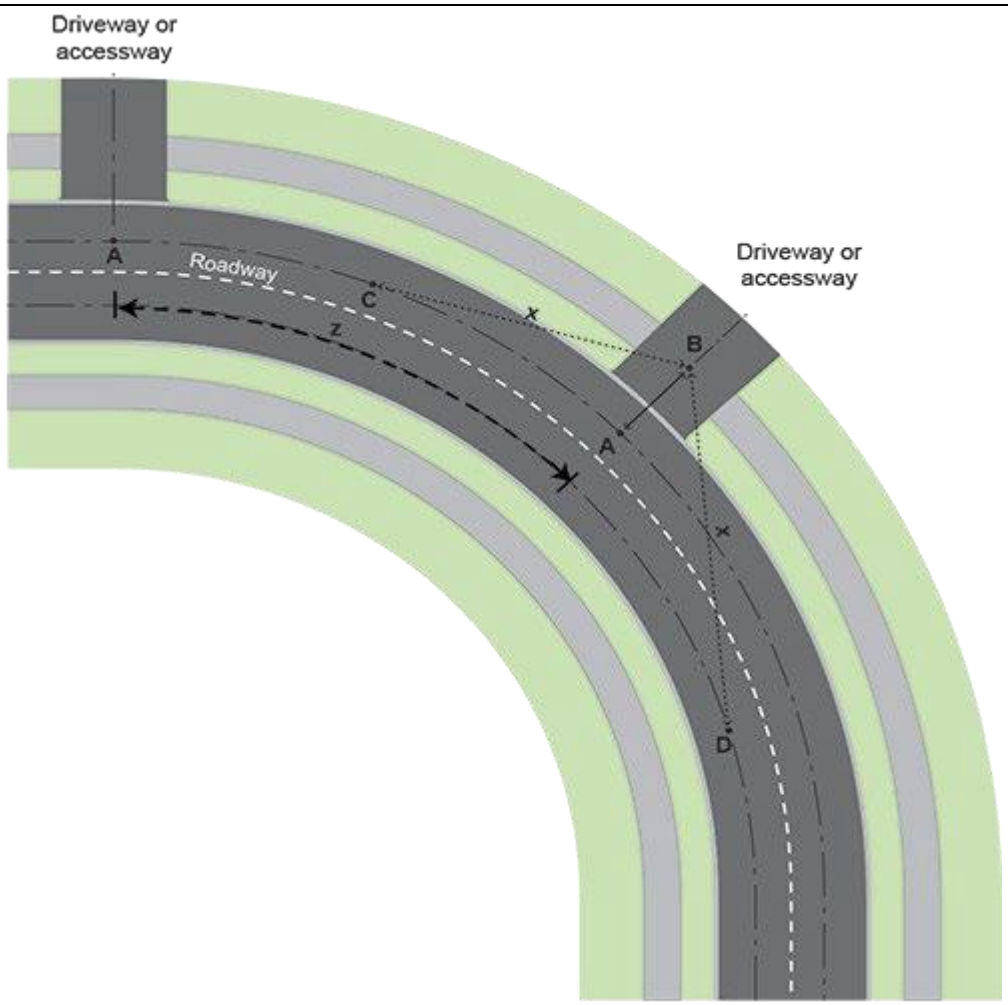
[434] NZTA Waka Kotahi S450.060
[435] NZTA Waka Kotahi S450.060

TRN S1 – All new vehicle access points shall be located a minimum of 30m from a railway level crossing. The 30m is measured from the closest rail track to the edge of the seal on the proposed vehicle access point. All new vehicle access points that intersect a railway require the approval of Kiwi~~i~~Rail.

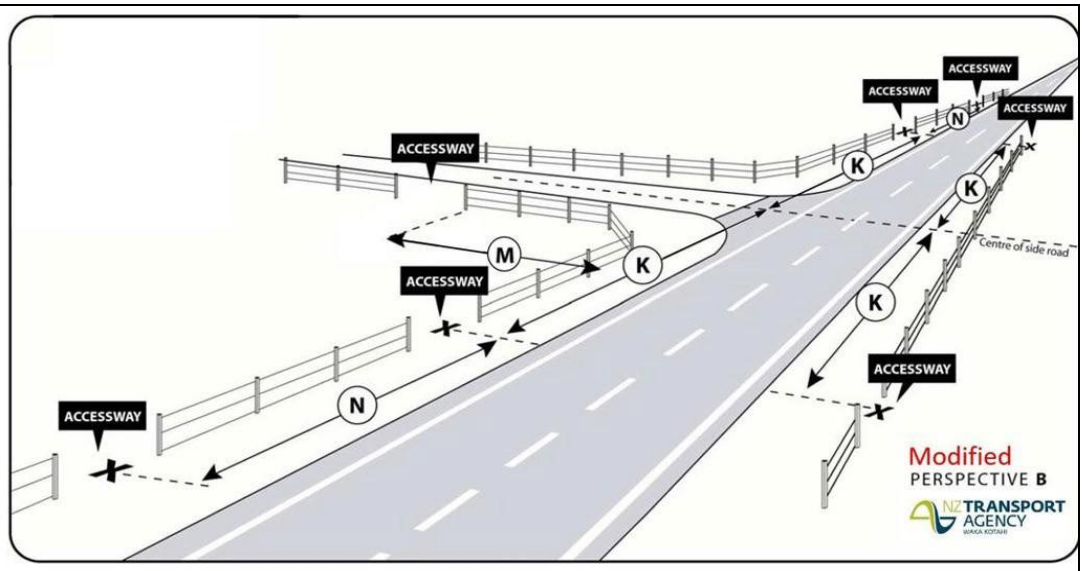


TRN S2 Access areas must accommodate the 85th percentile car tracking curves in **TRN** Figure ~~4~~ ~~8~~. The required driveway must not include any space used for on-site queue, tracking curve, manoeuvring, loading space, standing space, bicycle parking space, or vehicle access point.

TRN S3 – Requirements for driveways:

For all zones the minimum driveway width is 3**.5**m[436], and maximum gradient is 1:5.
For all zones, where the driveway is longer than 50m, passing bays must be provided at no more than 50m intervals. Turning areas must be provided when the driveway length is 50m or longer.

TRN Figure ~~1~~ **4** – Sight line calculations for **TRN** Table 1 and **TRN** Table 2



[436] Fire and Emergency New Zealand S573.012

Sight lines shall be from driver's eye height to drivers eye height (1.15m) above ground level.
Point A: Intersection of lane centreline and driveway centreline.
Point B: Position of centreline of driveway where sight distance is measured (note - this is measured from the edge lane line and where there is no edge lane line, from the edge of seal).
Point C and D: Position on centreline of lane where sight distance is measured.

TRN Figure 5 – Minimum Distance Calculation from vehicle access point and transport corridor intersection for TRN Table 3[437]

[437] NZTA Waka Kotahi S450.060

TRN S4 – Where accessibility parking spaces are provided, they must be located on a level surface; clearly marked, designed and constructed in accordance with NZS 4121: 2001 Design for Access and Mobility – Buildings and Associated Facilities

TRN Table ~~4~~ **5** – Minimum number of on-site accessibility parking spaces[438]

Total number of **vehicle**[439] spaces provided	Number of accessibility parking spaces (inclusive of total)
Less than 20	1
Between 21 and 50	2
In excess of 50	2 plus 1 additional accessibility space per 50 vehicles spaces thereafter

TRN S5 – Where bicycle parking spaces are provided the space must enable bicycles to be securely attached to an immovable object and located so as not to impede pedestrian movement.

TRN Table ~~5~~ **6** – Minimum number of on-site bicycle parking spaces[440]

Total number of **vehicle**[441] spaces provided	Number of bicycle parking spaces
Less than 10	1
Between 10 and 20	2
In excess of 20	2 plus 1 additional accessibility space per 10 vehicles spaces thereafter

[438] Buller District Council S538.086
[439] Buller District Council S538.088
[440] Buller District Council S538.086
[441] Buller District Council S538.086

TRN S6 – Residential developments in Moana and Iveagh Bay must provide the equivalent of three car- parking spaces on-site for trailer / boat storage.

TRN S7 – Dimensions for on-site vehicle parking spaces including manoeuvring dimensions.

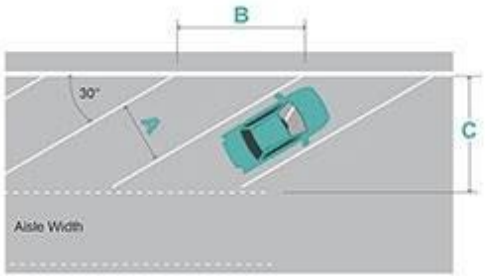
- Parking space and area for vehicles must not include any space for on-site queue, tracking curve, manoeuvring, loading space, standing space, bicycle parking space, or vehicle access point.
- Must meet the requirements specified for on-site dimensions for car parking areas and circulating routes for vehicles of dimensions less than service vehicles shown in **TRN** Figure ~~2~~ **6**, and
- For vehicles of dimensions equal or greater than a service vehicle.
- The two-way aisle width for parallel parking bays must be at least 3m wider than for one- way aisle. The two-way aisle width for parking bays at 90 degrees must be at least 5.5m.
- Where a parking space is located at the end of a blind aisle, an additional 1m clearance must be provided.
- Where any parking space has a side directly next to a wall, support column or other obstacles, an additional 300mm width must be provided.[442]

TRN S8 – Where loading spaces and or standing spaces are provided, they must be designed to accommodate a 90th percentile two-axle truck in accordance with **TRN** Figure ~~3~~ **7**, and where articulated trucks and trailer, or buses are to be used, the loading space(s) must be designed to accommodate these vehicles. Every vehicle space must be of a useable shape and comply with the following dimensions:

- Minimum width of 3.5m if adjacent to a kerb or 4.5m when adjacent to a wall; minimum depth 8m, minimum height of 4.5m above ground / floor level.
- The loading space must not include any space for on-site queue, tracking curve, manoeuvring, standing space, bicycle parking space, or vehicle access point.
- The standing space must not include any space for on-site queue, tracking curve, manoeuvring, loading space, bicycle parking space, or vehicle access point.

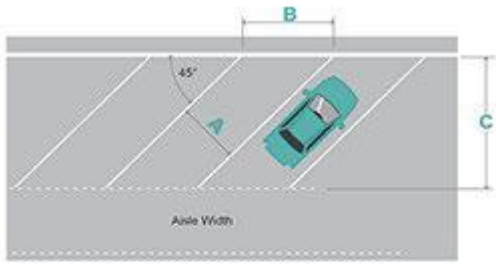
TRN S9 - On-site queuing spaces must be provided when six or more parking, loading, and / or standing spaces combined are provided on-site. On-site queuing lengths, measured from the commencement of the driveway to the site boundary, must comply with the following: 6m into the site if the largest vehicle to visit the site is a car, or 8m into the site if the largest vehicle to visit the site is a service vehicle; or when the largest vehicle to visit the site is greater than a service vehicle, then this vehicle must be able to be accommodated within the site.

TRN S10 – Minimum onsite manoeuvring space provision - On-site manoeuvring space must be provided where a single vehicle access point services four or more parking spaces; or access to a site is obtained from a state highway, arterial road or collector road.



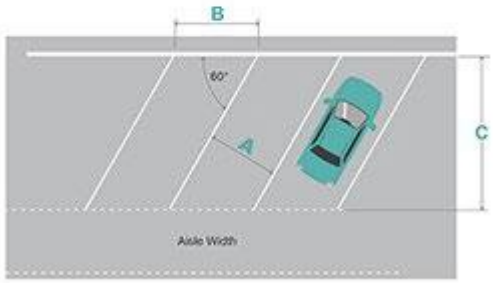
TRN S11 – Minimum onsite manoeuvring space design -The manoeuvring space must not include any space for on-site parking, queuing, loading, or standing space, or vehicle access

[442] Buller District Council S538.068

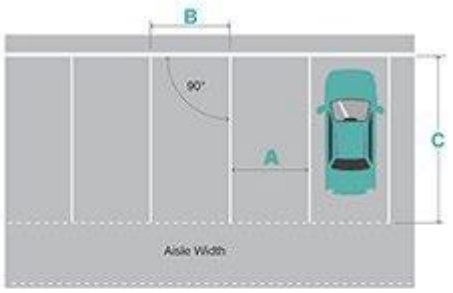


point and must meet the requirements for the relevant tracking curve in **TRN** Figure ~~2~~ **6**.

This standard does not apply where the site has direct vehicle access to a service lane, right of way or driveway which be utilised instead of the required manoeuvring space.



TRN – Figure ~~2~~ **6** – On-site car parking space dimensions



Parking Bays at 30°						
User Class	A	B	C1	C2	C3	Aisle Width

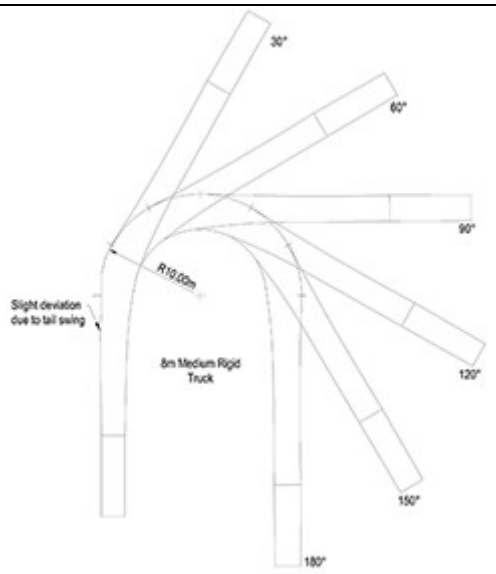
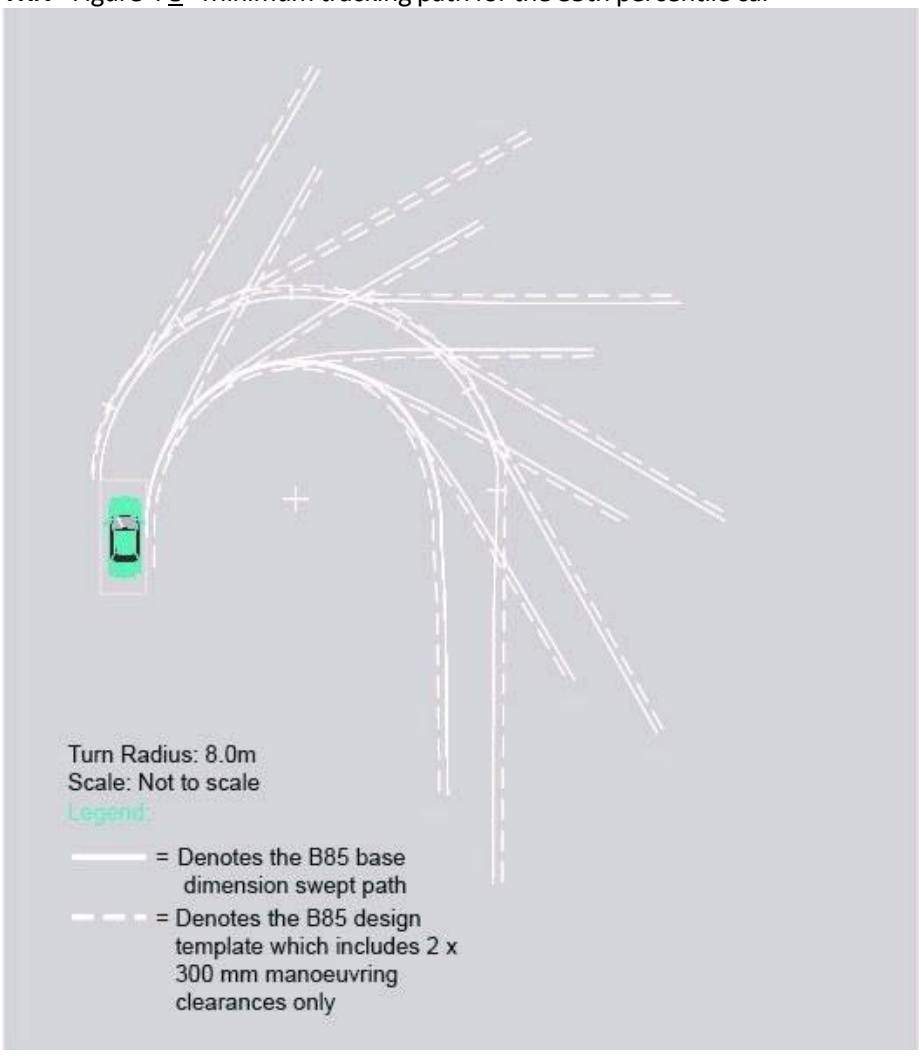
4	3.6	4.2	5.7	5.1	6.3	4.0



Parking Bays at 90°						
User Class	A	B	C1	C2	C3	Aisle Width
1	2.4	2.4	5.4	4.8	5.4	6.2
2	2.5	2.5	5.4	4.8	5.4	5.8
3	2.6	2.6	5.4	5.1	5.4	5.4
4	3.6	3.6	5.4	4.8	5.4	5.0



Parallel Parking Bays						
User Class	A	B	L1	L2	L3	Aisle Width
1, 2, 3	2.1	2.1				
4	3.6	3.6				
All			6.3	6.6	5.4	3.0
All			6.1	6.4	5.4	3.3
All			5.9	6.2	5.4	3.6

TRN - Figure ~~3~~ **7** - Tracking path for a 90th percentile two axle truck

TRN - Figure 4 **8** - Minimum tracking path for the 85th percentile car

Note:

With the exception of 90 degree car parks, aisle width dimensions are for manoeuvring into and out of car parks with one-way aisles.

User Class is identified as:

- for all day parking, such as tenant, employee and commuter parking;
- for medium-term parking, such as town centre parking, sports and entertainment centres, motels, airport visitors;
- for short-term parking, such as short-term town centre parking, shopping parking, hospitals, and the drop-off of children;
- accessible parking for people with disabilities.

Dimension C is selected as follows:

- C1: where parking is to a wall or high kerb not allowing any overhang;
- C2: where parking is to a low kerb which allows 600mm overhang;
- C3: where parking is controlled by wheelstops installed at right angles to the direction of parking, or where the ends of parking spaces form a sawtooth pattern.

Dimension L is selected as follows:

- L1: space length for consecutive parallel parking spaces;
- L2: space length for obstructed end spaces;
- L3: space length for unobstructed end spaces.

TRN S12 – Requirements for on-site vehicle parking, loading and standing spaces – construction and formation

All RURZ - Rural Zones and FUZ - Future Urban Zone	For sites with four or more vehicle parking / loading / standing spaces, the surface must be **metaled** ~~formed, sealed~~,[443] marked and drained to an all- weather standard, with a maximum gradient of 1:20.
All RESZ - Residential Zones and MPZ - Māori Purpose Zone	For sites with four or more vehicle parking / loading / standing spaces, the surface must be **formed, sealed,** ~~metaled,~~[444] marked and drained to an all- weather standard, with a maximum gradient of 1:20.
All CMUZ - Commercial and Mixed Use, INZ - Industrial, OSRZ - Open Space and Recreation, AIRPZ - Airport, HOSZ - Hospital, STADZ - Stadium and PORTZ - Port Zones	For sites with ~~less~~ **more**[445] than four on-site vehicle parking / loading / standing spaces the surface must be formed, with a maximum gradient of 1:20; and the area over which vehicles obtain access to the parking area is sealed from the vehicle access point to 5m into the site; or if adjacent to a residential zone, the area must be formed, sealed, marked and

[443] Buller District Council S538.088
[444] Buller District Council S538.088
[445] Buller District Council S538.088

	drained.
All zones	If the spaces are sealed, stormwater from the sealed surface must not be discharged causing erosion to other sites or accesses.

Note. Marking does not require all lines to be shown. However, it should be clear to the user of the parking area where the edge of each space is.

TRN S13 – Requirement for rights of way – construction and formation

All RESZ - Residential Zones, MPZ - Māori Purpose Zone, All RURZ - Rural Zones and FUZ - Future Urban Zone	The minimum road width is 3.5m one to nine dwellings, 5.5m for ten or more dwellings.
All CMUZ - Commercial and Mixed Use Zones	The minimum road width is 3**.5**m[446] for 2 allotments, 4.5m for 3 or more allotments.
All INZ - Industrial, OSRZ - Open Space and Recreation Zones, HOSZ - Hospital, AIRPZ - Airport, STADZ - Stadium and PORTZ – Port zone	The minimum road width is 7m for 2 allotments, 10m for 3 or more allotments.
All zones	Stormwater from the right of way must not be discharged causing erosion to other sites or accesses. When a right of way services 3 or more allotments, one passing bay for every 50m of length shall be provided. Maximum gradient for right of way 1:5

TRN Table ~~6~~ **7** – High Trip Generating Activities **Thresholds**[447]

*** Equivalent Car Movements (a movement is one car out or into a site)**

- **1 equivalent car movement (ecm) = 1 car / light vehicle movement,**
- **3 ecm = 1 heavy commercial vehicle movement (1 truck),**
- **5 ecm = 1 combination heavy commercial vehicle movement (1 articulated truck or truck and trailer).**

**** Refer TRN S15 Road Classifications**

TRN S14 – High Trip Generating Activities - Transport Assessment requirements

1. ~~Whether the provision of access and on-site manoeuvring areas associated with the activity, including vehicle loading and servicing deliveries, affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network.~~
2. ~~Whether the design and layout of the proposed activity maximises opportunities for travel other than private cars, including by providing safe and convenient access for travel using more active modes.~~
3. ~~Having particular regard to the level of additional traffic generated by the activity and whether measures are proposed to adequately mitigate the actual or potential effects from the anticipated trip generation (for all transport modes) from the proposed activity, including consideration of cumulative effects with other activities in the vicinity, proposed infrastructure and construction work associated with the activity.~~
4. ~~Whether there are any effects from the anticipated trip generation and how they are to be mitigated where activities will generate more than 250 hvm/d heavy vehicle movements per day.~~
5. ~~Whether the transport assessment has been prepared by a suitably qualified and experienced transport specialist and has been approved by the relevant District Council.~~

1. **Basic Traffic Impact Assessment:**

   a. **Whether the provision of access and on-site manoeuvring areas**

associated with the activity, including vehicle loading and servicing deliveries. affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network (including considering the network classification of the frontage road).

b. **Whether the design and layout of the proposed activity promotes opportunities for travel other than by private cars, including by providing safe and convenient access for travel using more active modes.**

c. **Whether the traffic impact assessment has been prepared by a suitably qualified and experienced transport specialist.**

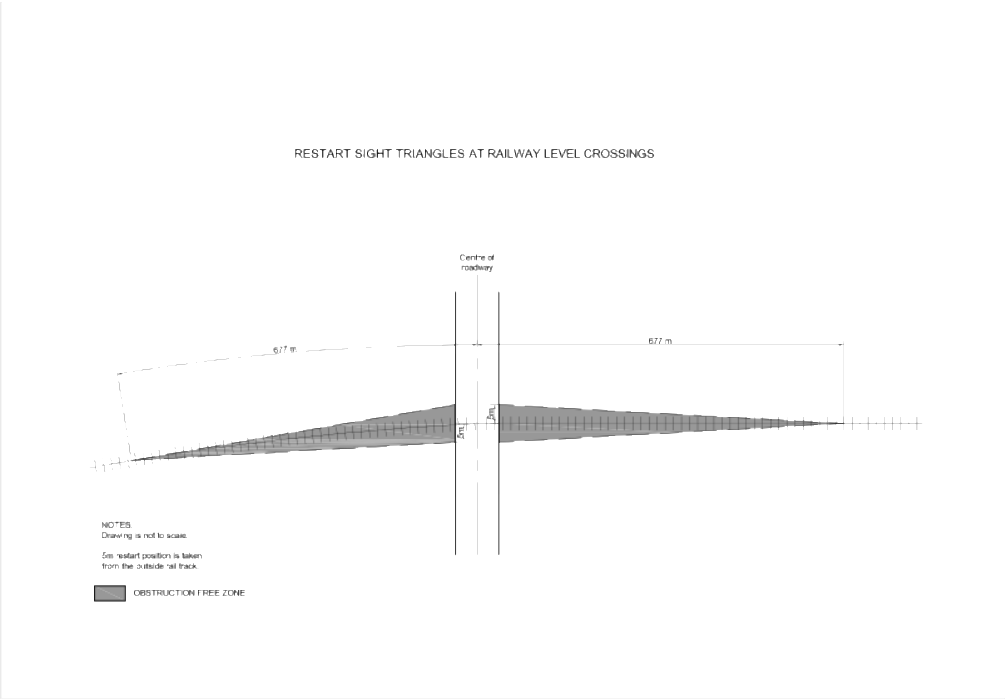
d. **Need for a traffic impact assessment - Any characteristics of a proposed activity or site that are out of scope of an existing ITA but where expected traffic generation and access to existing multi modal connections mean requiring a traffic impact assessment, in a manner set out in this rule, is unnecessary.**

2. **Full Integrated Traffic Assessment:**

a. **Whether the provision of access and on-site manoeuvring areas associated with the activity, including vehicle loading and servicing deliveries, affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network (including considering the network classification of the frontage road).**

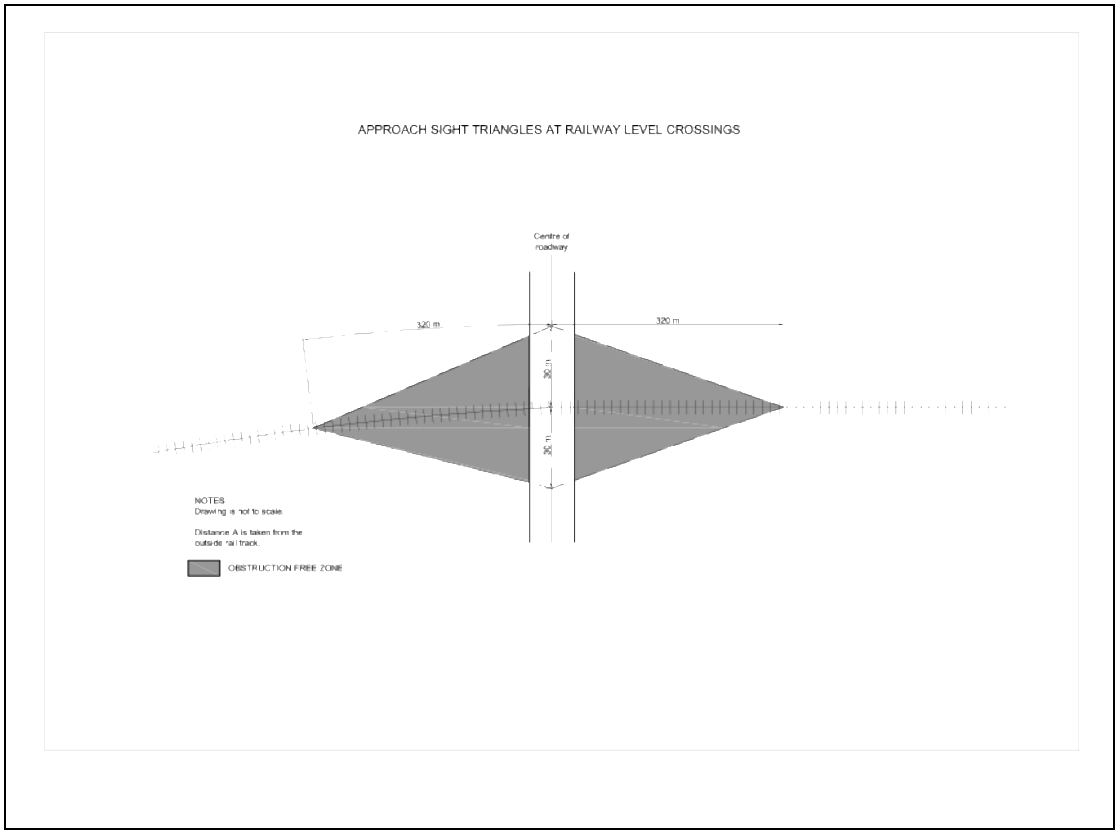
b. **Whether the design and layout of the proposed activity promotes opportunities for travel other than by private cars, including by providing safe and convenient access for travel using more active modes.**

c. **Having particular regard to the level of additional traffic generated by the activity while taking into account any particular effects from heavy vehicles and whether measures are proposed to adequately mitigate the actual or potential effects from the anticipated trip generation (for all transport modes) from the proposed activity, including consideration of cumulative effects with other activities in the vicinity, proposed infrastructure and construction work associated with the activity.**



d. **Whether there are any effects from the anticipated trip generation and how they are to be mitigated where activities will generate more than 250hvm/d.**

e. **Whether the ITA has been prepared by a suitably qualified and experienced transport specialist.**



f. **Need for an ITA - Any characteristics of a proposed activity or site that are out of scope of an existing ITA but where expected traffic generation and access to existing multi modal connections mean requiring an ITA, in a**

manner set out in this standard, is unnecessary.[448]

Local Roads	

Buller, Grey and Westland Districts	The remainder of the roads not listed in this table are local roads.

Planning Maps

Amend the Planning Maps to include the Special Purposes Roads on the West Coast being:

- Haast – Jackson Bay Road
- Karamea Highway – Mokihinui River to Karamea

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS

Definitions

Term	Definition
~~CRITICAL INFRASTRUCTURE~~	~~means:~~ ~~the rail network, state highways, special purpose roads, airports, wastewater treatment plants, reticulated water systems, stormwater treatment plants, and electricity transmission and distribution assets.~~
REGIONALLY SIGNIFICANT INFRASTRUCTURE	**means:** a. The National Grid (as defined by the Electricity Industry Act 2010); b. Other electricity distribution and transmission networks defined as the system of transmission lines, sub-transmission and distribution feeders and all associated substations and other works to convey electricity; c. Facilities for the generation of more than 1 MW of electricity, including the Turnbull Hydro Power Station and Fox Hydro Power Station, and their supporting infrastructure where the electricity generated is supplied to the electricity distribution and transmission networks; d. Pipelines and gas facilities used for the transmission and distribution of natural and manufactured gas; e. The State Highway network, and road networks classified in the One Network Road Classification Sub-category as strategic; f. The regional rail networks; g. The Westport, Greymouth, and Hokitika airports; h. The Regional Council seawalls, stop banks and erosion protection works; i. Telecommunications networks and facilities and radio communications facilities; j. Public or council owned sewage treatment plants and associated reticulation and disposal systems;

	k. Public or council owned water supply intakes, treatment plants and distribution systems; l. Public or council owned drainage systems, including stormwater systems; m. The ports of Westport, Greymouth and Jackson Bay; n. Public or council owned solid waste storage and disposal facilities; o. Special Purpose Roads as identified on the planning maps; and p. Defence Facilities
INFRASTRUCTURE	has the same meaning as in section 2 of the RMA (as set out below), means a. pipelines that distribute or transmit natural or manufactured gas, petroleum, biofuel or geothermal energy; b. a network for the purpose of telecommunication as defined in section 5 of the Telecommunications Act 2001; c. a network for the purpose of radiocommunication as defined in Section 2(1) of the Radiocommunications Act 1989; d. facilities for the generation of electricity, lines used or intended to be used to convey electricity, and support structures for lines used or intended to be used to convey electricity, excluding lines and support structures if a person- i. uses them in connection with the generation of electricity for the person's use; and ii. does not use them to generate any electricity for supply to any other person; e. a water supply distribution system, including a system for irrigation; f. a drainage or sewerage system; g. structures for transport on land by cycleways, rail, roads, walkways, or any other means; h. facilities for the loading or unloading of cargo or

	passengers transported on land by any means; i. an airport as defined in section 2 of the Airport Authorities Act 1966; j. a navigation installation as defined in section 2 (1) of the Port Companies Act 1988; **and** k. **facilities for the loading or unloading of cargo or passengers carried by sea, including a port related commercial undertaking as defined in section 2(1) of the Port Companies Act 1988**; l. anything described as a network utility operation in regulations made for the purposes of the definition of network utility operator in section 166. **Note:** **Electricity activities are addressed in the Energy Chapter of the Plan.**
ENERGY ACTIVITY	means the use of land, buildings and structures for the purpose of energy investigation, generation, transmission and distribution. This includes all types of renewable electricity generation.
LARGE SCALE **DISTRIBUTED ELECTRICITY GENERATION**	means~~, when applied to provisions in the Energy Chapter,~~ electricity generation activities utilising renewable energy sources ~~with a capacity of greater than 100kW~~ **which are not Small and Community Scale Electricity Generation Activities** for the purposes of exporting electricity directly into the distribution network or National Grid. It includes all ancillary components and activities such as lines, poles, structures, substations, climate / environmental monitoring equipment, earthworks, roading, maintenance buildings, temporary concrete batching plants, internal transmission and fibre networks, and site rehabilitation works
NATIONAL GRID	**has the same meaning as provided in the National Policy Statement on Electricity Transmission 2008 (as set out below)** means the assets used or owned by Transpower NZ Limited
NATIONAL GRID SUBDIVISION CORRIDOR	means the area measured either side of the centreline of above ground National Grid transmission ~~and distribution~~ lines as follows (and illustrated in green below): a. 14m for 66kV or 110kV transmission lines on single poles; b. 16m for 110kV transmission lines on pi poles; and c. 32m for 110kV transmission lines on towers (including

	tubular steel towers where these replace steel lattice towers). **The measurement of setback distances from the National Grid transmission lines must be undertaken from the centre line of the National Grid transmission line. The centre line at any point is a straight line between the centre points of the two support structures at each end of the span.**
NATIONAL GRID YARD	means as illustrated in red below: a. the area located 10m either side of the centreline of an overhead 66kV or 110kV National Grid transmission line on single poles; b. the area located 12m in any direction from the outer **visible** edge of a support structure for an overhead 66kV or 110kV National Grid transmission line; and c. the area located 12m either side of the centreline of any 66kV or 110kV overhead National Grid transmission line on pi poles or towers (including tubular steel towers where these replace steel lattice towers). The measurement of setback distances from the National Grid transmission lines must be undertaken from the centre line of the National Grid transmission line and the outer visible edge of any support structure. The centre line at any point is a straight line between the centre points of the two support structures at each end of the span.
NETWORK UTILITY	**means a project, work, system or structure that is a network utility operation undertaken by a network utility operator.**
NON-RENEWABLE ELECTRICITY GENERATION ACTIVITY	**means the construction, operation and maintenance of structures associated with electricity generation from non-renewable energy sources.**
RENEWABLE ELECTRICITY GENERATION ACTIVITIES	means the construction, operation, maintenance and upgrading of structures associated with renewable energy generation. This includes**, along with large scale activities,** small and community-scale distributed renewable electricity generation activities and the system of electricity conveyance required to convey electricity to the distribution network and/or the national grid and electricity storage technologies associated with renewable electricity. It includes all ancillary components and activities such as substations, climate/environmental monitoring equipment, **earthworks, vegetation clearance,** roading, maintenance buildings, temporary concrete batching plants, internal

	transmission and fibre networks, and site rehabilitation works.
SMALL **AND COMMUNITY** SCALE **ELECTRICITY GENERATION**	~~means, in relation to energy, renewable electricity generation activities at a capacity of no greater than 20kW for the purpose of using or generating electricity on a particular site, or exporting from a site.~~ **means renewable electricity generation for the purpose of using electricity on a particular site, or supplying an immediate community, or connecting into the distribution network.**
SUBSTATION (ZONE)	means the ground-mounted equipment used to convert ~~sub~~ transmission voltage (33kV and higher) to distribution voltages (22 or 11kV), and this equipment is generally enclosed in a fenced yard.
TRANSMISSION LINE~~S~~	**has the same meaning as provided in the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009 (as set out below).** means: a. the facilities and structures used for, or associated with, the overhead or underground transmission of electricity in the national grid and: b. includes transmission line support structures, telecommunication cables, and telecommunication devices to which paragraph a) applies; but c. does not include an electricity substation.
TELECOMMUNICATIONS KIOSK	**means any structure intended for public use to facilitate telecommunications and includes boxes or booths for telephone, video or internet services.**
UPGRADING /**UPGRADE**	means in relation infrastructure and renewable electricity generation activities, the improvement or increase in carrying capacity, operational efficiency, security or safety of existing infrastructure and renewable electricity generation activities, but excludes maintenance and repair. (**Upgrade has the same meaning)**

INFRASTRUCTURE	has the same meaning as in section 2 of the RMA (as set out below) means … a. **facilities for the loading or unloading of cargo or passengers carried by sea, including a port related**

	commercial undertaking as defined in section 2(1) of the Port Companies Act 1988; b. anything described as a network utility operation in regulations made for the purposes of the definition of network utility operator in section 166.
TELECOMMUNICATION KIOSK	**means any structure intended for public use to facilitate telecommunications and includes boxes or booths for telephone, video or internet services.**
LAND TRANSPORT INFRASTRUTURE	**Means any infrastructure, building, equipment or devices that support the movement of people and goods by land or water, including:** **(a) Cycle facilities including cycleways, cycle parking, cycle hire stations and cycle maintenance stands;** **(b) Pedestrian facilities and accessways, including footpaths, footways and foot bridges;** **(c) Railway tracks, bridges, tunnels, signalling, access tracks, retaining walls and facilities;** **(d) Roads including carriageways, pavements, bridges, tunnels, retaining walls, underpasses, overpasses, verge and berms;** **(e) Lighting, signals, signs and control structures and devices associated with intelligent transport systems including vehicle detection systems (electronic vehicle identification and infra-red vehicle occupancy counters), incident detection, emergency telephones, cables and ducting;** **(f) Safety devices including hand rails, bollards, cameras, road markings, rumble strips, barriers, fences, speed tables and speed cushions and traffic separators;** **(g) Other traffic control devices including traffic islands, level crossings, pedestrian crossings, roundabouts and intersection controls, traffic and cycle monitoring devices;** **(h) Parking control devices;** **(i) Site access including vehicle crossings;** **(j) Street and rail furniture, artworks, passenger shelters and ticketing and tolling facilities;** **(k) Ancillary equipment and structures associated with public transport systems including seats, shelters,**

	real time information systems and ticketing facilities, bicycle storage and cabinets; **(l) Stormwater management facilities, ventilation structures, drainage devices and erosion control devices; and** **(m) Land based Port facilities.**

Energy Chapter

Energy - Te Pūngao
Overview

~~Energy activities, including r~~ Renewable electricity generation, **electricity** transmission, **and** distribution ~~and operation~~ are recognised as regionally significant infrastructure in the West Coast Regional Policy Statement. As such they **need to be recognised and provided for,** ~~require specific recognition and protection,~~ as they are critical to the social, cultural, and economic well-being of people and communities. **Operation, maintenance, and repair of existing energy activities contribute to the resilience of the West Coast.**

The National Policy Statement for Electricity Transmission **2008**~~Activities~~ requires **that the National Grid is recognised and provided for**. ~~specific recognition and protection of the National grid, with renewable electricity recognised in the~~ **The** National Policy Statement on Renewable ~~Energy~~ **Electricity** Generation **recognises the national significance of renewable electricity generation activities, including the need for and benefits from, renewable electricity generation.**

Certain activities must also comply with the rules managing activities which may compromise the operation, maintenance and upgrading of the National Grid transmission lines, including **its protection from** reverse sensitivity effects**.** ~~**The New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34:2001)** contains mandatory restrictions on activities in relation to the National Grid and electricity distribution lines. Compliance with the rule requirements of Te Tai o Poutini Plan does not ensure compliance with NZECP 34:2001 or vice versa~~.

~~Vegetation planted in the vicinity of the National Grid or electricity distribution lines must comply with the **Electricity (Hazards from Trees) Regulations 2003.**~~

~~Where an activity relates to the operation, maintenance and upgrading of existing National Grid transmission lines, the Resource Management Regulations 2009 (National Environmental Standards for **Electricity Transmission Activities) apply**.~~

The Energy Chapter contains the objectives, policies, rules for managing energy activities - the Infrastructure Chapter rules and the Area Specific Provisions (Zone chapters) do not apply to energy activities, however the Overlay chapters and other District Wide rules also apply where relevant.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-wide Matters chapters also contain provisions that may be relevant for energy activities, including:

- **Overlay Chapters** - the Overlay Chapters have relevant provisions in relation to Sites of Significance to Māori, Ecosystems and Indigenous Biodiversity; Landscape and Natural Features; Natural Character and Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an energy activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.

- **Subdivision** - The Subdivision chapter sets out the requirements for the development of new electricity connections as part of subdivision activities.

- **Financial Contributions** - The Financial Contributions Chapter sets out the requirements for contributions of costs for activities ~~which impact on infrastructure~~.

- **General District Wide Matters** - provisions in relation to Activities on the Surface of Water, Noise and Earthworks in particular may be relevant to energy activities.

Energy Objectives	
ENG – O1	To recognise the local, ~~and~~ regional **and national** benefits of electricity transmission, distribution and renewable electricity generation activities, **by providing** for their development, operation, maintenance and upgrading to meet the needs of Te Tai o Poutini/the West Coast.
ENG – O2	To recognise the functional **need or** operational needs associated with the location and design of **renewable electricity generation, investigation, and distribution and transmission** ~~energy~~ activities, and to ~~minimise~~ **manage** adverse effects of these activities on communities and the environment.
ENG – O3	To provide for **development and enable** the ~~development~~, operation, maintenance and upgrade of **renewable electricity generation and investigation, and electricity distribution and transmission** ~~energy~~ activities and to protect them from the adverse effects of incompatible subdivision**, use** and development.
ENG – O4	To recognise and provide for the national, regional and local significance and benefits of the National Grid, by ensuring the safety, efficiency, operation, maintenance, repair, upgrade and development is not adversely affected by **incompatible** subdivision, use and development.
ENG-O5	**To ensure the efficient provision and use of electricity distribution and transmission activities by co-ordinating with subdivision, use and development.**

Energy Policies	
ENG – P1	Provide for **and enable** the development, operation, maintenance and upgrading of existing and new electricity transmission, distribution and renewable generation infrastructure ~~and assets~~.
ENG – P2	When considering proposals to develop and operate new and existing **renewable electricity generation, investigation, and distribution and transmission** activities have particular regard to the benefits to be obtained from the proposal, including; a. Maintaining or increasing security of renewable electricity supply ~~by diversifying the type and/or location of electricity generation~~; b. **Providing for diversity of the type and location of renewable electricity generation;** c. Maintaining or increasing renewable electricity generation capacity while avoiding, reducing or displacing greenhouse gas emissions; d. Economic, social, environmental or cultural wellbeing; e. The contribution the proposal will have towards New Zealand meeting its renewable electricity generation targets; f. Effective transmission and distribution of electricity supply; g. Facilitation and use of renewable energy; h. Security of electricity supply; and i. Meeting New Zealand/Aotearoa me Te Waipounamu's climate change obligations.
ENG – P3	~~Minimise reverse sensitivity effects from~~ **Manage activities to avoid adverse reverse sensitivity effects from incompatible** subdivision, use and development on **renewable electricity generation and electricity distribution and transmission** ~~energy~~ activities. ~~and protect energy activities from adverse effects to ensure their ongoing operation, maintenance, upgrade or development~~
ENG – P4	~~Minimise~~ **Avoid, remedy or mitigate** adverse effects on ~~communities and~~ the environment from **renewable electricity generation, investigation, distribution and transmission** ~~energy~~ activities by: a. **Having regard to effects on urban amenity**; b. Having regard to the **effect on areas of significant environmental values and** values ~~associated with~~ **identified in Schedules One – Eight and Appendix Ten**; ~~areas identified as having significant environmental values, urban amenity, areas of high recreational value, outstanding and high natural character areas, outstanding landscapes and features, Poutini Ngāi Tahu and heritage sites, and significant natural areas~~; c. Implementing industry best management practices around electrical safe distances; d. Maintaining ongoing access to grid and distribution ~~elements~~ **infrastructure** and structures for **operation,** maintenance and

	upgrading works; and e. Avoiding exposure to health and safety risks.
ENG – P5	~~When considering proposals to develop, operate, maintain and upgrade new and~~ **Avoid, remedy or mitigate adverse effects from the development of new or the development, operation, maintenance or upgrading of** existing **renewable electricity generation, investigation, distribution and transmission** ~~energy~~ activities **by**: a. Recognise**ing** their functional ~~constraints~~ **need o**r~~and~~ operational ~~requirements~~ **need**; and b. ~~Where new transmission infrastructure and major upgrades to transmission infrastructure are proposed have regard to the extent to which any adverse effects~~ **Having regard to the extent to which any adverse effects of new significant electricity distribution lines** have been minimised in the route, site and method selection.
ENG – P6	Provide for the development, upgrading, maintenance and operation of: a. A range of ~~small, community and large scale~~ renewable electricity generation activities; and b. Activities that seek to investigate, identify and/or assess potential sites and energy sources for renewable electricity generation.
ENG – P7	Recognise and provide for the national, regional and local benefits of the National Grid, including by: a. Enabling the operation, maintenance and ~~minor~~ upgrading requirements of existing National Grid assets; b. Providing for ~~other upgrades and~~ the effective development of new National Grid assets; and c. When considering measures to avoid, remedy and mitigate adverse effects of National Grid activities, have regard to: i. The technical and operational constraints of the National Grid; and ii. The extent to which proposals **for new National Grid infrastructure or major upgrades to existing National Grid infrastructure** have avoided, remedied and mitigated effects through the route, site and method selection.
ENG – P8	Manage the adverse effects of the **development and major upgrade of the** National Grid by: a. Where appropriate, using substantial upgrades as an opportunity to reduce existing adverse effects; b. Seeking to avoid adverse effects on areas **of significant environmental values and the values** identified in Schedules **One – Eight and Appendix Ten;** c. Where the National Grid has a functional **need** or operational need to locate within the Coastal Environment, manage adverse effects by: i. Seeking to avoid adverse effects on ~~Overlay Chapter~~ areas **and values identified in Schedules One – Eight and Appendix Ten** and where it is not practicable to avoid **because of functional needs or operational needs of the National Grid**, to remedy or mitigate; **and**

	ii. Seeking to avoid significant adverse effects on other areas of natural character, natural attributes and character of natural features and landscapes and indigenous biodiversity values that meet the criteria in Policy 11(b) of the NZCPS 2010; and d. Recognise that there may be some areas within the sites and areas identified in Schedules **One – Eight and Appendix Ten** where avoidance of adverse effects is required to protect the identified values and characteristics; **and** e. **Remedying or mitigating any adverse effects from the operation, maintenance, upgrade or development of the National Grid which cannot be avoided, to the extent practicable.**
ENG – P9	Manage activities within the National Grid Yard and the National Grid Subdivision Corridor to: a. Ensure the safe and efficient operation, maintenance, repair, upgrading and development of the National Grid is not compromised; b. Avoid incompatible land use**, buildings and structures that may directly affect or otherwise compromise the National Grid;** c. Manage subdivision **within the National Grid Subdivision Corridor** to avoid subsequent land use activities from compromising the operation, maintenance, upgrading and development of the National Grid; d. Achieve compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZECP 34: 2001) and avoid exposure to health and safety risks from the National Grid; ~~and~~ e. **Maintain ongoing access for maintenance and upgrading works on the National Grid; and** f. Avoid**, to the extent reasonably possible, the** potential for reverse sensitivity effects on the National Grid.
ENG– P10	**Manage activities in and around Significant Electricity Distribution Lines to:** a. **Ensure the safe and efficient operation, maintenance, repair, upgrading and development of the lines are not compromised by subdivision, use and/or development;** b. **Achieve compliance with the New Zealand Electrical Code of Practice for Electrical Safe Distances (NZCEP 34:2001) and avoid health and safety risks from Significant Electricity Distribution Lines; and** c. **Protect the lines from potential reverse sensitivity effects.**
ENG-P11	**Discourage the development of non-renewable electricity generation activities.**
ENG-P12	**Ensure that subdivision and development is adequately serviced including:** **a. Infrastructure networks have sufficient capacity to accommodate the additional development, and requiring any necessary upgrades to be completed at the time of subdivision; and** b. **Infrastructure is installed at the time of subdivision, except for on- site infrastructure that cannot be determined until the**

	allotment is developed.

Permitted Activities	
ENG - R1	**Energy Permitted Activity Performance Standards**
Activity Status Permitted Where: 1. Electric and Magnetic fields – An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the World Health Organisation's monograph Environmental Health Criteria 238, June 2007.	
Activity status where compliance not achieved: Non-complying	
ENG - R2	**Substations (Zone)**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; and 2. ~~This is t~~ **T**he operation, maintenance, repair and upgrade **is** of an existing substation (zone) where ~~any~~ upgrades are undertaken within existing switchyards or buildings, in any zone; or 3. ~~This is a~~**A** new substation (zone) **is** ~~or upgrade to an existing substation (zone)~~: i. Located in an Industrial Zone; and ii. The substation will be visually screened from the road and any **existing** residential building **located adjacent to the Industrial Zone** by fencing and / or landscaping.	
Activity status where compliance not achieved: Restricted Discretionary	
ENG – R3	**Substations (Distribution)**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; and 2. ~~This is~~ t **T**he maintenance, repair, upgrade and operation **is** of an existing distribution a. substation; or 3. ~~This is a~~ **A**ny new distribution substation.	
Activity status where compliance not achieved: Restricted Discretionary	
ENG – R4	**~~Operating existing transmission and distribution lines, new distribution and transmission lines, maintaining, minor upgrading, strengthening, upgrading and replacing support structures and foundations~~ The operation, maintenance, repair and upgrading of distribution lines and 110kv Dobson Tee A line above and below ground not managed by the National Environmental Standard for Electricity Transmission Activities**
Activity Status Permitted Where: 1. All performance standards in Rule ENG - R1 are complied with; **and** 2. Any realignment, relocation or replacement of a network utility pole, pipe, tower, and	

structure, ~~building or minor utility structure~~ is within 5m of the alignment or location of the original existing pole, tower, **and** structure, ~~building or minor utility structure~~; 3. A replacement pole, tower, or structure does not exceed the height of the original pole, tower, or structure by more than 30 percent, measured from the top of the foundation; 4. **Specific to distribution lines,** ~~T~~ **t**he diameter or width of the replacement pole **structures, at its widest point:** a. does not exceed twice that of the replaced pole at its widest point; and b. where a single pole is replaced with a pi pole, the width of the pi pole structure must not exceed three times that of the replaced pole at its widest point; 5. Additional conductors or lines do not increase the number of conductors or lines by more than 100 percent of the original; 6. The footprint of the structure or building does not increase by more than 30 percent of the existing building or structure, excluding any pole or pi pole structure provided above; 7. The face area of a replacement panel antenna or the diameter of a replacement dish antenna does not increase by more than 20 percent; 8. There are no~~t~~ additional towers; and 9. A pole is not replaced with a tower.	
Activity status where compliance not achieved: Restricted Discretionary	
ENG – R5	~~**The construction, operation, maintenance, repair and upgrade of renewable energy structure for small scale use**~~ **Renewable Electricity Generation Activity**
Activity Status Permitted Where: 1. Performance standards in Rule ENG – R1 are complied with; and 2. ~~Solar panels do not exceed the permitted building height in the relevant zone by more than 0.25m vertically~~ **The construction, operation, maintenance, repair and upgrading of small and community scale renewable electricity generation shall comply with the following standards:** ~~3. Small scale w~~ i. a. **Wind turbines do not exceed 8m in tower height**;~~Small scale wind turbines comply with NZS 6808:2010 Acoustics - Wind Farm Noise;~~ b. **Solar panels and any land-based structure, building or impermeable surface for hydroelectricity generation must comply with the relevant performance standards in Rule R1 of the applicable zone or in the case of the:** **Settlement Zone - SETZ – R2** **Buller Coalfield Zone BCZ – R3** **Mineral Extraction Zone MINZ – R3.** 3. ~~Land based structure, building or impermeable surface for hydroelectricity generation must not exceed~~: ~~a footprint of 25m^2 and~~ **The operation, maintenance, repair and upgrading of large-scale renewable electricity generation shall comply with the relevant performance standards in Rule R1 of the applicable zone or in the case of the:** **Settlement Zone - SETZ – R2** **Buller Coalfield Zone BCZ – R3** **Mineral Extraction Zone MINZ – R3.** 4. ~~Any building or structure must not be located within an existing esplanade reserve or strip~~	

Activity status where compliance not achieved: **Restricted Discretionary where this is new small and community scale renewable electricity generation subject to Rule ENG – R14** **Discretionary where this is new large scale renewable electricity generation subject to Rule ENG – R15** ~~Restricted Discretionary where performance standards 1 - 3 or 5 - 6 are not complied with.~~ Non-complying where with performance standard ~~4~~ **1** is not complied with.	
ENG – R6	**Activities in and around the Significant Electricity Distribution Lines**
Activity Status Permitted Where: Performance standards in Rule ENG - R1 are complied with; and 1. These are Energy Activities; 2. The following other activities are able to occur under the conductors where these are Permitted within the relevant zone and overlay: Fences less than 2.5m high; **or** a. Alterations and additions to existing buildings and structures used for sensitive activities that do not involve an increase in the building envelope; **or** b. Network Utilities within a transport corridor or any part of electricity infrastructure; **or** c. Structures used for agricultural and horticultural activities excluding buildings for sensitive activities; **and** 3. The only buildings or structures erected within 12m of any support structure are: a. Network Utilities within a transport corridor; or b. Any part of electricity infrastructure; **or** c. Fences more than 5m from the support structure and less than 2.5m in height; and 4. Structures and activities located near ~~transmission~~ **distribution** lines must comply with the safe distance requirements in the NZECP 34:2001.	
Activity status where compliance not achieved: Non-complying	
ENG – R7	**Buildings, Structures and Activities within the National Grid Yard**
Activity Status Permitted Where: 1. These are the following activities where they are also ~~P~~**p**ermitted within the relevant zone and overlay: a. Fences less than 2.5m high; b. Alterations and additions to existing buildings and structures used for sensitive activities that do not involve an increase in the building or structure height or footprint; c. Infrastructure undertaken by a Network Utility **operation** ~~Operator within a transport corridor~~ or any part of electricity **generation** ~~infrastructure~~ that connects the National Grid; d. ~~Non - habitable farm or horticultural buildings or structures excluding commercial greenhouses, protective canopies, wintering barns, produce packing facilities, dairy and milking sheds~~ **Agriculture and horticulture activities, and associated non-**	

habitable buildings and structures (meaning they are not usually occupied but may be accessed from time to time), excluding:

i. **Buildings and structures used for intensive indoor primary production;**
ii. **Dairy and milking sheds;**
iii. **Commercial greenhouses;**
iv. **Produce packing facilities;**
v. **Protective canopies; and**
vi. **Wintering barns.**

e. **The activity is not a sensitive activity**;
f. An accessory building or structure associated with an existing residential activity that is less than 10m^2 and 2.5m in height;

2. All buildings, structures and activities permitted by 1. above must ~~have~~:
   a. **Have a** ~~A~~ minimum vertical clearance of at least 10m below the lowest point of a conductor
      - or meet the electrical distances required by NZECP 34: 2001 under all transmission line and building operation conditions;
         i. Not result in the loss of vehicle access to a National Grid support structure;
         ii. Be located at least 12 metres from the outer visible edge of a foundation of a National Grid transmission support structure~~ National Grid Yard transmission support~~ except where it is:
   b. Infrastructure undertaken by a network utility **operation** ~~operator~~ or any part of electricity **generation** ~~infrastructure~~ that connects the National Grid;
   c. A fence not exceeding 2.5m in heigh**t** that is located at least:
      i. 6m from the outer visible edge of a foundation of a National Grid transmission line tower; ~~or~~**and**
      ii. 5m from the outer visible edge of a foundation of a National Grid transmission line pole; **or**
   d. An artificial crop protection structure or crop support structure not exceeding 2.5m in height and located at least 8m from a National Grid transmission line pole that:
      i. Is removable or temporary to allow a clear working space of 12m from the pole for maintenance; and
      ii. Allows all weather access to the pole and sufficient area for maintenance equipment including a crane; or
   e. A building or structure where Transpower has given written approval in accordance with clause 2.4.1 of NZECP34: 2001.

Activity status where compliance not achieved: Non-complying

ENG – R8	**Installation of electricity cabinets**

Activity Status Permitted
Where:

1. All performance standards in Rule ENG - R1 are complied with; and
2. The cabinet has a maximum height above ground level of 2m **and a maximum area of 1.4m^2**.

Activity status where compliance not achieved: Restricted Discretionary

ENG – R9	**Temporary Energy Activities**

Activity Status Permitted Where: 1. The temporary energy activity is for up to a period of 24 months following a national, regional or local state of emergency declaration; 2. All performance standards in Rule ENG - R1 are complied with; and 3. Any temporary structures are removed from the site ~~when operation ceases and the sites is rehabilitated~~ **and the site is rehabilitated within one month of the operation ceasing;** 4. **The temporary energy activity is a back-up generator, provided this equipment is:** i. **Being tested and maintained for a period not exceeding 48 hours in duration; or** ii. **To provide back-up electricity during routine or scheduled maintenance for a period not exceeding 48 hours; or for longer than 48 hours where that use complies with the noise limits specified between 0700 hours and 2200 hours relevant to the underlying zone; or** iii. **For emergency purposes only and operates for a maximum of 12 months.**
Activity status where compliance not achieved: Restricted Discretionary

~~**ENG – R10**~~	~~**Environmental monitoring and meteorological facilities associated with Energy Activities**~~
~~**Activity Status Permitted**~~ ~~Where:~~ ~~1. All performance standards in Rule INF-R1 are complied with; and~~ ~~2. Monitoring equipment is not more than 4m in height and 25m² in area.~~	
~~**Activity status where compliance not achieved**: Non-complying~~	

ENG – R10	**The construction of new distribution lines above or below ground**
Activity Status Permitted **Where:** **1. All performance standards in Rule ENG - R1 are complied with; and** **2. The line will comply with the requirements of NZECP 34:2001;** **3. The construction or establishment of any tower, pole, mast, aerial, panel, element or dish operationally associated with electricity lines has a maximum height above ground level of 7m;** **4. The installation or modification of a sign is at a height no greater than 2m above ground level and is no larger than 1m² and is associated with an electricity network utility.**	
Activity status where compliance not achieved: Discretionary	

Restricted Discretionary Activities	
ENG - R11	**Substation~~s~~ (Zone and Distribution) not meeting ~~Permitted Activity~~ standards, or otherwise not provided for in another rule**
Activity Status Restricted Discretionary Discretion is restricted to: a. ~~Landscape measures~~ **Measures to mitigate landscape effects**; b. Locational, technical**, functional** and operational constraints; c. Impacts on resilience of the community to natural hazards and climate change; d. The benefits of the proposal to Aotearoa New Zealand meeting its Greenhouse Gas	

targets; h. ~~Impacts of contamination from the substation on any overlay;~~ e. Benefits to the community from the substation; and f. The degree to which the proposed activity will cause ~~significant~~ adverse effects on **areas and values listed in Schedules One to Eight and Appendix 10** ~~Overlay Chapter matters~~.	
Activity status where compliance not achieved: N/A	
ENG – R12	~~**Operating existing transmission and distribution lines, new distribution and transmission lines, maintaining, minor upgrading, strengthening, upgrading and replacing support structures and foundations**~~ **Operation, maintenance, repair and upgrading of distribution lines and transmission lines above or below ground not managed by the National Environmental Standard for Electricity Transmission Activities not meeting Permitted Activity standards**
Activity Status Restricted Discretionary ~~Where:~~ 1. ~~Performance standards in Rule ENG - R1 are complied with~~; Discretion is restricted to: a. Degree of non-compliance with Rule ENG - R4; b. Locational, technical**, functional** and operational constraints; c. Benefits to the community; and d. The degree to which the proposed activity will cause ~~significant~~ adverse effects on **areas and values listed in Schedules One to Eight and Appendix 10** ~~Overlay Chapter matters~~.	
Activity status where compliance not achieved: ~~Non-complying~~ **N/A**	
ENG – R13	**Installation of electricity cabinets not meeting Permitted Activity standards**
Activity Status Restricted Discretionary ~~Where:~~ 1. ~~Performance standards in Rule ENG - R1 are complied with;~~ Discretion is restricted to: a. Locational, technical**, functional** and operational constraints; b. The degree to which the proposed activity will cause ~~significant~~ adverse effects on **areas and values listed in Schedules One to Eight and Appendix 10** ~~Overlay Chapter matters~~; and c. Benefits to the community.	
Activity status where compliance not achieved: ~~Non-complying~~ **N/A**	
ENG – R14	**The construction, operation, maintenance, repair and upgrading of small and community scale renewable electricity generation ~~structures, renewable energy investigation activity~~ and temporary energy activities not meeting Permitted Activity standards**
Activity Status Restricted Discretionary ~~Where:~~ 1. ~~Performance standards in Rule ENG - R1 are complied with;~~ Discretion is restricted to: a. Impacts on resilience of the community to natural hazards and climate change;	

b. The benefits of the proposal to Aotearoa New Zealand meeting its Climate Change and Greenhouse Gas targets; c. **The ~~B~~ benefits of the proposal** to the **local and regional** community **and to resilience for Te Tai o Poutini/ the West Coast**; d. Functional, **locational, technical** and operational constraints; e. ~~Landscape measures~~ **Measures to mitigate landscape effects**; ~~and~~ f. The degree to which the proposed activity will cause ~~significant~~ adverse effects on **areas and values listed in Schedules One to Eight and Appendix 10 ~~Overlay Chapter matters~~ and** g. **The level, hours of operation, duration and nature of the noise and any effects on the health and wellbeing of people**.
Activity status where compliance not achieved: ~~Non-complying~~ **N/A**

Discretionary Activities	
ENG – R15	**New and existing ~~L~~large scale renewable electricity generation activity ~~excluding wind~~ not meeting Permitted Activity standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
~~ENG – R16~~	**~~Wind farm construction and operation~~**
~~Activity Status Discretionary~~ ~~Where:~~ ~~1. This complies with New Zealand Standard NZS6808:2010 Acoustics - Wind Farm Noise.~~	
~~Activity status where compliance not achieved~~: ~~Non-complying~~	
ENG – R16	**Construction of distribution lines above and below ground not meeting Permitted Activity Standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
ENG – R17	**Construction of National Grid assets, including transmission lines, not otherwise provided for in another rule**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
ENG – R18	**Any Energy Activity not provided for in another rule**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

Non-complying Activities	
~~**ENG – R17**~~	~~**Any energy activity which does not comply with New Zealand Standards NZS6808:2010 Acoustics – Wind Farm Noise**~~
~~**Activity Status Non-complying**~~	
~~**Activity status where compliance not achieved**: N/A~~	
ENG - R1~~8~~9	**Any energy activity generating electric or magnetic fields, that does not comply with Rule ENG - R1**
Activity Status Non-complying	
Activity status where compliance not achieved: N/A	
ENG - R~~19~~20	**Activities within ~~and around~~ the National Grid Yard ~~and between the Significant Electricity Transmission Lines,~~ that do not comply with Permitted Activity standards or are not otherwise provided for in a rule**
Activity Status Non-complying	
Activity status where compliance not achieved: N/A	
~~**ENG – R20**~~	~~**Energy Activities that do not meet Rules ENG - R12, ENG - R13, or ENG - R14**~~
~~**Activity Status Non-complying**~~	
~~**Activity status where compliance not achieved**: N/A~~	
ENG – R21	**Non-renewable Electricity Generation Activities**
Activity Status Non-complying **Activity status where compliance not achieved: N/A** **Advice Note: This rule does not apply to backup generators that do not comply with permitted activity standards of ENG-R9 and ENG-14 applies.**	
ENG – R22	**Activities in and around significant electricity distribution lines, that do not comply with permitted activity standards**
Activity Status Non-complying **Activity status where compliance not achieved: N/A**	

Infrastructure

Infrastructure - Te Tūahanga
Overview Infrastructure is critical to the social, cultural and economic wellbeing of people and communities, including providing for their health and safety, and has national, regional and local

benefits. The West Coast Regional Policy Statement requires specific recognition and protection of regionally significant infrastructure.

While infrastructure is often seen as a necessary and normal part of urban and rural environments, it can also have adverse effects on surrounding land uses and the environment. The sustainable management of natural and physical resources requires a balance between the effects of different land uses.

However, infrastructure also needs to be protected, where possible, from encroachment by incompatible activities that may result in reverse sensitivity effects. Some infrastructure has specific operational and functional needs that need to be accommodated for its operation.

Infrastructure includes a range of structures, services and activities as defined in Definitions – Ngā Tautuhinga. The Infrastructure Chapter contains the objectives, policies, rules for managing a range of specified Infrastructure activities**, such as three waters, telecommunications networks and radio communication networks**. Port Activities are however managed in the Port Zone and Airport Activities are managed in the Airport Zone. The Infrastructure Chapter also does not apply to energy activities **nor National Grid activities** as these are addressed in the Energy Chapter nor does it apply to Transport Activities that are addressed in the Transport Chapter.

The Area Specific Provisions (Zone chapters) do not apply to the Infrastructure activities managed in the Infrastructure chapter. The Overlay chapters and other District-Wide rules do apply where relevant.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-wide Matters chapters also contain provisions that may be relevant for infrastructure activities, including:

- **Transport** - the Transport chapter sets out the requirements for activities in and around transport corridors that may be relevant to infrastructure.
- **Overlay Chapters** - the Overlay Chapters have provisions in relation to Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscape; Natural Character and Margins of Waterbodies; Natural Hazards; Historic Heritage, Notable Trees and the Coastal Environment. Where an infrastructure activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.
- **General District Wide Matters -** provisions in relation to Activities on the Surface of Water and Earthworks in particular may be relevant to infrastructure activities.
- **Subdivision** - The Subdivision chapter sets out the requirements for the development of new infrastructure and connections as part of subdivision activities.
- **Financial Contributions** - The Financial Contributions chapter sets out the requirements for contributions of costs for activities which impact on infrastructure.

INF – O1	To enable the safe, efficient and sustainable development, operation, maintenance and upgrading of ~~utilities and~~ infrastructure, to meet the **current and future** needs of the West Coast/Te Tai o Poutini.

INF – O2	To protect ~~utilities and~~ infrastructure from the adverse effects of incompatible subdivision, land use and development.

INF – O3	To ensure the efficient provision and use of infrastructure for communities by co-ordinating the provision of utilities with subdivision, use and development of land.

INF – O4	To consider natural hazard resilience and impacts of climate change in infrastructure **location,** design and provision.

INF – O5	The adverse effects of infrastructure on the environment are minimised, **including (but not limited to) the adverse effects of land use activities and management practices on the Poutini Ngāi Tahu cultural values associated with fresh and coastal water,** while recognising: a. The functional **need** and operational ~~need~~s of infrastructure; and b. That positive effects of the infrastructure may be realised locally, regionally, or nationally.

INF – P1	Recognise ~~and provide for~~ the positive social, economic, cultural and environmental benefits from the development, continued operation, **maintenance,** and upgrading of ~~utilities and~~ infrastructure.
INF – P2	Manage the design and location of ~~utilities and~~ infrastructure, including when sited in **all** overlays in a way which considers: a. ~~Locational, technical and operational constraints~~ **Operational need and functional need**; b. Resilience to natural hazards and climate change; c. Poutini Ngāi Tahu requirements for discharge of wastewater to land; d. Benefits of co-location of infrastructure; e. That positive effects of infrastructure may be realised locally, regionally, or nationally; and f. The need to ~~minimise~~ **avoid, remedy and mitigate** adverse effects on the environment.
INF – P3	Manage reverse sensitivity effects from subdivision, use and development, on ~~utilities and~~ infrastructure to ensure their safe, secure and efficient operation.
INF – P4	Ensure that subdivision and development, is adequately serviced **to meet the current and future needs** including: a. Safe and efficient vehicle access; b. Drinking water compliant with Safe Drinking Water Standards; c. Adequate water supply for firefighting; d. Treatment and safe disposal of stormwater that does not result in increased flooding and erosion risk; e. Treatment and safe disposal of wastewater with a preference for land-based treatment; f. Supply of electricity and telecommunications using a method that is appropriate to the type of development, location and character of the area including consideration of off-grid supply / wireless /satellite; g. Connections are made to wastewater, water supply and stormwater

	systems where they are available and there is capacity; h. Where new infrastructure is developed, that there is adequate provision for ongoing maintenance either by the vesting of the infrastructure in the relevant Council, or in the case of papakāinga developments, that an ongoing hapū entity may be responsible for maintenance; and i. Financial contributions are provided where additional or upgraded ~~network utility~~ infrastructure is required to service development.
INF – P5	Minimise the effect of stormwater run-off associated with development activity, including requirements for onsite detention, upgrades to pump networks and roadside drainage networks where necessary, to reduce flooding risk to roads and property.
INF – P6	Provide flexibility for ~~network utilities~~ **infrastructure** to adopt new technologies that: a. Improve access to, and efficient use of, networks and services; b. Allow for the re-use of redundant services and structures where they are safe and operating to required standards; c. Increase resilience, safety or reliability of networks and services; d. Result in environmental benefits and enhancements; e. Promote environmentally sustainable outcomes including green; or infrastructure and the increased utilisation of renewable resources.

Permitted Activities	
INF - R1	**Infrastructure ~~Permitted~~ Activity Performance Standards**
Activity Status Permitted Where: 1. Electric and Magnetic fields - An activity generating electric or magnetic fields does not exceed the maximum exposure level listed in the International Commission on Non-ionizing Radiation Protection Guidelines for limiting exposure to time-varying electric and magnetic fields (1Hz - 100 kHz) (Health Physics (6):818-836; 2010), and the recommendations from the **World Health Organisation**'s monograph Environmental Health Criteria 238, June 2007; and 2. Radio Frequency Fields - An activity generating radio frequency fields does not result in radio frequency field levels that exceed the maximum exposure level of the general public in New Zealand Standard **NZS 2772.1:1999 Radiofrequency fields - Maximum exposure levels** - 3kHz to 300 GHz.	
Activity status where compliance not achieved: Non-complying	
INF – R2	**Connections to <u>water,</u> wastewater, stormwater ~~and~~ reticulated systems**
Activity Status Permitted Where: 1. The building is serviced by, and capacity exists within the reticulated water supply, wastewater or stormwater networks.	
Activity status where compliance not achieved: Restricted Discretionary	
INF – R3	**Maintenance and operation of existing gas pipeline under 2,000 kilopascals**
Activity Status Permitted Where: 1. The pipeline is located underground and is not on or within a natural waterbody, except where it is: a. Attached to and/or incorporated within an existing bridge structure; or b. Within an existing attached conduit or duct; and 2. Any realignment, relocation or replacement of a pipeline is within: a. An existing easement in favour of the pipeline; and b. Is within 12 metres of the existing alignment or location.	
Activity status where compliance not achieved: Discretionary	
INF – R4	**Temporary Network Activities**
Activity Status Permitted Where: 1. The temporary network is operated by a network utility operator; 2. The temporary network activity is: i. For up to a period of 24 months following a national, regional or local state of emergency declaration; or ii. For up to a period of four weeks to provide for additional capacity; ~~and~~ **<u>or</u>** iii. **<u>For a period of up to 12 months as part of construction or re-construction activity; and</u>**	

3. All performance standards in Rule INF-R1 are complied with; and 4. The utility must be removed from the site when operation ceases and the site reinstated.	
Activity status where compliance not achieved: **Non-complying where standard 3 is not complied with.** Discretionary **where standards 1, 2 and 4 are not complied with**	
~~**INF – R5**~~	~~**Environmental monitoring and extreme weather event monitoring facility**~~
~~**Activity Status Permitted**~~ ~~Where:~~ ~~1. Monitoring equipment is not more than 4m in height 25m² in area.~~	
~~**Activity status where compliance not achieved**: Restricted Discretionary~~	
INF – R~~6~~5	**Navigational aids/beacons, environmental monitoring equipment and Meteorological facilities**
Activity Status Permitted Where: ~~1. These are located in a RURZ - Rural Zone or INZ - Industrial Zone.~~ **1. All performance standards in Rule INF-R1 are complied with;** **2. Monitoring equipment is not more than 25m² in area; and** **3. Monitoring equipment complies with the relevant zone performance standards in Rule R1 of the applicable zone or in the case of the:** • **Settlement Zone - SETZ – R2** • **Buller Coalfield Zone - BCZ – R3** • **Mineral Extraction Zone - MINZ – R3**	
Activity status where compliance not achieved: **Non-complying where standard 1 is not complied with.** Restricted Discretionary **where standards 2 and 3 are not complied**	
INF – R~~7~~6	~~**Installation, extension, maintenance, operation, upgrade and repair of lines, underground pipelines and ancillary vehicle access tracks erected by a Network Utility Operator**~~ **Operation, maintenance, repair and extension of existing network utilities**

Activity Status Permitted
Where:

1. All performance standards in Rule INF-R1 are complied with;
2. ~~These~~ **The network utilities** are not gas pipelines regulated under Rule INF - R3;
3. Where any realignment, relocation or replacement of a network utility pole, tower, structure, building or minor utility structure is within 5m of the alignment or location of the original existing pole, tower, structure, building, or minor utility structure;
4. A replacement pole, tower or structure does not exceed the height of the original pole, tower, or structure by more than 30 percent, measured from the top of the foundation;
5. The diameter or width of the replacement pole does not exceed twice that of the replaced pole at its widest point, and; where a single pole is replaced with a pi pole, the width of the pi pole structure must not exceed three times that of the replaced pole at its widest point;
6. Additional conductors or lines do not increase the number of conductors or lines by more than 100 percent;
7. The building footprint or the footprint of the structure does not increase by more than 30 percent of the existing building or structure, excluding any pole or pi pole structure provided for in 4 above;
8. The largest face area of a replacement panel antenna or the diameter of a replacement dish
   antenna does not increase by more than 20 percent;
9. There are no additional towers; and
10. A pole is not replaced with a tower.

Advice Note:

1. Where the activities undertaken under this rule are located within an Outstanding Natural Feature or Landscape, earthworks associated with the activity are Permitted under Rules NFL - R6 and NFL - R8.

Activity status where compliance not achieved: **Non-complying where standard 1 is not complied with.** Discretionary **where standards 2-10 are not complied with.**

~~**INF – R8**~~	~~**New Network Utility Customer Connections**~~

~~**Activity Status Permitted**~~
~~Where:~~

~~1. The connection does not include a new tower;~~
~~2. The connection does not exceed three additional poles; and~~
~~3. The diameter of conductors, lines or cables does not exceed 30mm.~~

~~**Advice Note:** Where the connection is to a heritage item identified in Schedule One resource consent is also required under Rule HH - R5.~~

~~**Activity status where compliance not achieved**: Discretionary~~

INF – R~~9~~7	**New Lines, Telecommunication Poles or Towers**

Activity Status Permitted
Where:

1. ~~This meets the~~ **All** performance standards in Rule INF - R1 **are complied with**;
2. This is located in a GRUZ - General Rural Zone or INZ - Industrial Zone;
3. Poles do not exceed a height of 25m; **and**
4. Towers do not exceed a height of 15m; **or**
5. **The activity is located below ground.**

Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Discretionary where standards 2-4 are not complied with.	
INF – R~~108~~	**New Telecommunications Kiosk**
Activity Status Permitted Where: 1. ~~This meets the~~ **All** performance standards in Rule INF - R1 **are complied with**; and 2. The maximum height is 3.5m and gross floor area is 1.5m^2.	
Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Restricted Discretionary where standard 2 is not complied with	
INF – R~~119~~	**New Small Cell Utility**
Activity Status Permitted Where: 1. ~~This meets the~~ **All** performance standards in Rule INF – R1 **are complied with; and** 2. **The volume (including any ancillary equipment but not including any cabling) is not more than 0.11m^3.**	
Activity status where compliance not achieved: Non-complying **where standard 1 is not complied with. Discretionary where standard 2 is not complied with**	
INF – R1~~2~~0	**New telecommunications poles, new antenna attached to poles and new antenna attached to a building not regulated by the NES-TF or regulated equipment not meeting the permitted standards of the NES-TF**
Activity Status Permitted Where: 1. ~~This~~ **The telecommunication pole, or antenna** is located within a ~~land~~ transport corridor; and a. The combined height of the pole and antenna does not exceed: i. 15m in a RESZ - Residential Zone, SETZ - Settlement Zone or CMUZ - Commercial and Mixed Use Zone; ii. 20m in an INZ - Industrial Zone; or iii. 35m in all other zones. b. A panel antenna: i. Does not exceed a width of 0.7m; and ii. When in a ~~land~~ transport corridor a formed legal road, fits within an envelope of 3.5m in length and 0.7m in diameter; c. A dish antenna does not exceed a diameter: i. Within a railway corridor of: 1. 1.2-m~~etres~~ in a GRUZ - General Rural Zone or INZ - Industrial Zone; 2. 0.9m in a CMUZ - Commercial and Mixed Use Zone ii. Outside of a railway corridor: 1. 1.2m outside of RESZ - Residential Zones and the SETZ - Settlement Zone d. Omni directional "whip" or dipole antennas do not exceed: I. 1.6m in vertical length; II. 60mm in diameter; and	

III. 1.5m in horizontal length.

e. A headframe does not exceed the following:

I. 2.5m in diameter in RESZ - Residential Zones and the SETZ - Settlement Zone;

II. 6m in diameter in all other zones (including unformed legal road).

2. ~~This~~ **The telecommunication pole, or antenna** is located outside a ~~land~~ transport corridor:

a. The combined height (network utility) of a telecommunications pole and antenna does not exceed:

i. 15m in a RESZ - Residential Zone, ~~CMUZ - Commercial and Mixed Use Zone~~ or SETZ - Settlement Zone;

ii. **20m in a CMUZ - Commercial and Mixed Use Zone**;

iii. 20m in a ~~IN~~**LIZ – Light** Industrial Zone **or 25m in a GIZ – General Industrial Zone**;

iv. 25m in all other locations, or 30m where there are two or more users of the same pole.

b. A panel antenna does not exceed a width of 0.7m;

c. A dish antenna does not exceed a diameter of 1.2m;

d. Omni directional "whip" or dipole antennas do not exceed:

i. 1.6m in vertical length;

ii. 60mm in diameter; and

iii. 1.5m in horizontal length

e. A headframe does not exceed:

i. 2.5m in diameter in RESZ - Residential Zones and SETZ - Settlement Zones;

ii. 6m in diameter in all other zones.

f. A new panel antenna face does not exceed 1.5m^2, and a new dish antenna does not exceed 1.2m; and

i. The antenna does not exceed a height of 5m above the point of attachment to the building, and is not attached to a building in the RESZ - Residential Zones or SETZ - Settlement Zone, except where the antenna is attached at least 15m above ground level.

Activity status where compliance not achieved: Restricted Discretionary

INF–R11	**Back-up Generators**

Activity Status Permitted
Where:

1. **All performance standards in Rule INF–R1 are complied with; and**
2. **The equipment is:**
   a. **being tested and maintained for a period not exceeding 48 hours in duration; or**
   b. **to provide backup electricity during routine or scheduled maintenance for a period not exceeding 48 hours; or for longer than 48 hours where that use complies with the noise limits specified between 0700 hours and 2200 hours relevant to the zone; or**
   c. **for emergency purposes only and operates for a maximum of 12 months.**

Activity status where compliance not achieved: Non-complying where standard 1 is not complied with. Discretionary where standard 2 is not complied with.

. **Controlled Activities**	
INF – R1~~3~~2	**New telecommunications poles and antennas in road reserve (regulated by Regulations 26 or 28 of the NES-TF that do not meet the permitted activity standards in Regulations 27 or 29 of the NES - TF)**
Activity Status Controlled Where: 1. The permitted activity combined height (network utility) of a telecommunications pole and antenna is exceeded by a maximum of 1m; 2. The telecommunications pole permitted activity notional envelope i**s** exceeded by a maximum of 1m in height up to 4.5m; 3. A panel antenna does not exceed a width of 0.8m; 4. A dish antenna does not exceed a diameter of **0.9m**. ~~iii. 0.6m in a RESZ - Residential Zone or SETZ - Settlement Zone;~~ ~~iv. 0.9m in all other zones.~~ Matters of control are: a. Visual effects;~~ in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**; c. Potential impacts on the operation, maintenance and upgrade of other network utilities.	
Activity status where compliance not achieved: Restricted Discretionary	
INF-R14~~3~~	**New telecommunications poles and antennas not in road reserve (regulated by Regulations ~~30, 32 or~~ 34 of the NES - TF that do not meet the permitted activity standards in Regulations ~~31, 33~~ or 35 or subject to Rule INF-R10(2) and not meeting the permitted activity standards)**
Activity Status Controlled Where: a. In the GRUZ - General Rural Zone or an INZ - Industrial Zone, the height does not exceed 30m, or 35m where two or more operator's utilities are on the same pole; b. A panel antenna does not exceed a width of 0.8m~~ (excluding those in a RESZ - Residential Zone or SETZ - Settlement Zone)~~; c. A dish antenna does not exceed a diameter of: iii. 0.6m in a RESZ - Residential Zone or SETZ - Settlement Zone; iv. 2m in all other zones. Matters of control: a. Visual effects;~~ in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**. **Advice Note:** **For activities subject to Rule INF-R10, this rule only applies in regard to the specific alternative standards set out above.**	
Activity status where compliance not achieved: Restricted Discretionary	
INF-R15~~4~~	**New telecommunications cabinets (regulated by Regulation 19 of the NES – TF that do not meet the permitted standards in Regulations 20, 31 or 22)**

Activity Status Restricted Discretionary Where: a. A single telecommunications cabinet does not have a footprint exceeding 2.5m^2 or a height (network utility) of 2m; and b. A group of telecommunications cabinets does not have a footprint exceeding 3m^2. Matters of control: c. Visual effects; ~~in particular on the amenity values~~ ~~of the locality and streetscape~~ d. **Effects on amenity values**.	
Activity status where compliance not achieved: Restricted Discretionary	
Restricted Discretionary Activities	
INF-R1~~6~~5	**Connections to water, wastewater and stormwater ~~and~~ reticulated systems not meeting Permitted Activity standards**
Activity Status Restricted Discretionary **Discretion is restricted to:** a. Level of flood hazard mitigation through stormwater control; b. Any requirement for pre-treatment, retention or detention of stormwater or wastewater prior to discharge to the reticulated system; c. Provision of drinking water connections in accordance with NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure and Council Engineering Standards; **and** d. Provision for wastewater connections in accordance with NZS 4404: Code of Practice or Land Development and Subdivision Infrastructure and Council Engineering Standards. **Advice Note:** Any discharge to land and/or water may require~~d~~ a discharge permit from the West Coastal Regional Council under the relevant regional plan.	
Activity status where compliance not achieved: N/A	
INF-R1~~7~~6	**New underground gas pipeline up to 2,000 kilopascals and ancillary above ground stations and equipment**
Activity Status Restricted Discretionary Where: ~~1. Performance standards in Rule INF - R1 are complied with;~~ **1.** The gas pipeline will be underground. Discretion is restricted to: a. ~~Landscape measures~~**Measures to mitigate landscape effects**; b. Locational, technical and operational constraints; ~~and~~ c. Benefits to the community**; and** d. **Effects on indigenous biodiversity.**	
Activity status where compliance not achieved: Discretionary	
INF-R1~~8~~7	**Lighthouses, navigational aids and beacons, environmental monitoring equipment and Meteorological facilities not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Where: **1. All ~~P~~p**erformance standards in Rule INF-R1 are complied with. Discretion is restricted to:	

~~Landscape measures~~ a. **Measures to mitigate landscape effects**; a. Locational, technical and operational constraints; ~~and~~ b. Benefits to the community**; and** c. **Effects on indigenous biodiversity.**
Activity status where compliance not achieved: Non-complying

~~**INF-R19**~~	~~**Environmental monitoring and extreme weather event monitoring and meterological facilities not meeting Permitted Activity standards**~~
~~**Activity Status Restricted Discretionary**~~ ~~Discretion is restricted to:~~ ~~1. Impact on the resilience of the community to natural hazards and climate change;~~ ~~2. Benefits to the community;~~ ~~3. Locational, technical and operational constraints; and~~ ~~4. Landscape measures.~~	
~~**Activity status where compliance not achieved**: N/A~~	
~~**INF-R20**~~	~~**Meteorological facilities in rural and industrial zones not meeting Permitted Activity standards**~~
~~**Activity Status Restricted Discretionary**~~ ~~Discretion is restricted to:~~ ~~a. Locational, technical and operational constraints; and~~ ~~b. Landscape measures.~~	
~~**Activity status where compliance not achieved**: N/A~~	
INF-R~~2~~18	**Community Wastewater Treatment Facility in the Community Living Precinct**
Activity Status Restricted Discretionary Where: 1. This is located in accordance with a Concept Plan in Appendix Eight; 2. Disposal of treated effluent is through a land based effluent system. Discretion is restricted to: a. The design of the wastewater treatment plant and land based disposal method; b. Effects on Poutini Ngāi Tahu values within or adjacent to the site; c. Natural hazards or geotechnical ~~constraints~~ **considerations**; d. Effects on natural character, landscape, water quality and ecosystems; e. Any requirements arising from meeting the **NZS 4404: Code of Practice for Land Development and Subdivision Infrastructure** or the Council Engineering Standards. **Advice Note:** 1. A Discharge Consent under the West Coast Regional Land and Water Plan may also be required. 2. Applicants are encouraged to jointly lodge applications for consent under the Regional Plan and TTPP provisions at the same time to enable efficient processing.	
Activity status where compliance not achieved: Discretionary	

INF-R19	**New Telecommunications Kiosk not meeting Permitted Activity Standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Visual effects; ~~in particular on the amenity values of the locality and streetscape~~ b. **Effects on amenity values**.	
Activity status where compliance not achieved: N/A	
INF-R2~~3~~0	**New Telecommunications Poles and Antennas attached to Poles and cabinets not meeting Permitted or Controlled Activity Standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. The functional and operation needs of, and benefits derived from the network utility; b. Visual effects; ~~in particular on the amenity values of the locality and streetscape~~ c. **Effects on amenity values**; d. ~~significant~~**A**~~a~~dverse effects on ~~the values and attributes~~ **indigenous biodiversity and Overlay Chapter matters**. ~~adverse effects on of scheduled overlay chapter areas~~; e. The potential impacts on the operation, maintenance and upgrade of other network utilities.	
Activity status where compliance not achieved: N/A	
Discretionary Activities	
INF–R21	**New Community Wastewater treatment facility or New Community Reticulated Water Treatment Plant not provided for as a Controlled or Restricted Discretionary Activity**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
INF–R22	**Maintenance and operation of existing gas pipeline or new pipelines and ancillary facilities up to 2,000 kilopascals not meeting Permitted or Restricted Discretionary Standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
INF–R23	**Installation, extension, maintenance, operation, ~~minor~~ upgrade and repair of lines, poles and towers erected by a Network Utility Operator not meeting Permitted Activity standards**
Activity Status Discretionary	
INF–R24	**Temporary Network Activities and New Network Utility Customer Connections not meeting Permitted Activity standards**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	
INF–R25	**Any Infrastructure Activity not provided for in another rule**
Activity Status Discretionary	

Activity status where compliance not achieved: N/A	
Non-complying Activities	
INF–R2~~6~~8	**Any infrastructure activity which does not meet with Performance Standards in Rule INF - R1, or any rule which refers to those standards, in relation to Electric Fields, Magnetic Fields or Radio Frequency Fields**
Activity Status Non-complying	
Activity status where compliance not achieved: N/A	

Transport

Transport - Te Tūnuku

Overview

The West Coast/Te Tai o Poutini has an extensive road and rail network with a growing number of shared pathways. It is essential that people and goods are safely and efficiently transported to destinations through a multimodal transport network that enables all users to meet their economic, social and cultural needs.

The Transport Chapter contains all the objectives, policies and rules for managing the land transport corridors and the works and activities that occur within them. The Plan encourages safe, efficient and cost-effective transport corridors to support the movement of people, goods and services through integrated, accessible, and well-connected transport corridors.

Transport Performance Standards are contained in Appendix One: Transport Performance Standards. The Plan uses the One Network Roading Classification System (ONRCS). This national system divides roads into categories based on how busy they are, whether they connect to important destinations, or if they are the only route available. The ONRCS is used to specify the key standards for the design and construction of infrastructure. To support safety and connectivity, Te Tai o Poutini Plan also requires minimum design standards in respect of driveways, vehicle access points, visibility, road widths and other transport related infrastructure while also requiring on-site parking in appropriate places.

Land use and subdivision are managed to protect the land transport corridors from incompatible activities that could undermine the provision of an integrated, responsive, and sustainable transport system. The Transport Chapter is linked to the Part 2 – District-Wide Matters to ensure transport corridor works maintain the anticipated amenity, heritage, environmental, and cultural values. The risk from natural hazards is also considered.

The transport provisions apply to each zone identified in the Planning Maps and Part 3 - Area Specific Matters section of the Plan. The land use zoning is to be extended to the centreline of land transport corridors.

Provisions for Ports and public Airports/Heliports are included within the Port Zone and Airport Zone respectively.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of other Part 2: District-**W**~~w~~ide Matters chapters also contain provisions that may be relevant for energy activities, including:

Noise - The Noise Chapter contains the provisions for managing reverse sensitivity effects relating to noise sensitive activities establishing next to the state highways.

Signs - The Signs Chapter contains the provisions for signs, including those within the transport corridors.

Light - The Light Chapter contains the provisions for artificial outdoor light, including that within transport corridors.

Subdivision - The Subdivisions **C**~~c~~hapter sets out the requirements for the development of new transport connections.

Financial Contributions - The Financial Contributions **C**~~c~~hapter sets out the requirements for contributions of costs for activities which impact on the local roading network.

Overlay Chapters - The Overlay Chapters have provisions in relation to Sites and Areas of Significance to Māori; **Historic Heritage**; Ecosystems and Indigenous Biodiversity; Natural Features and Landscape**s**; Natural Character and Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where a transport activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.

Transport Objectives	
TRN– O1	To recognise and provide for the critical role land transport infrastructure plays in supporting communities including emergency services, and economic activity on the West Coast/Te Tai o Poutini.
TRN – O2	To ~~manage the effects~~ **provide for the safe and efficient operation** of land transport infrastructure ~~on the character, landscape and amenity of the towns, settlements and rural areas and minimise~~, **while**

	managing adverse effects on the environment.
TRN – O3	To enable accessibility, safety and connectivity of land transport infrastructure and ~~consider~~**to provide for** the amenity of all transport users, including pedestrians and cyclists.
TRN– O4	To encourage resilience within the transport network to natural hazards and climate change reflecting its vital role in community wellbeing and economic activity.
TRN – O5	To ensure that the provision of safe and efficient parking, loading and access is consistent with the character, scale and intensity of the zone, the roading hierarchy and the activity being undertaken.

Transport Policies

TRN – P1	The road and rail **transport** networks shall**:** ~~;~~ a. Be maintained or enhanced to provide safe and efficient transportation; b. Consider the needs of all transport users and modes of transport; ~~and~~ c. Minimise effects on adjoining properties including the impacts of vibration, noise and glare**; and** d. **Recognise the different functions and design requirements for each road classification under the National Transport Network classification system**.
TRN – P2	Vehicle crossings and associated access will**:** ~~;~~ a. Be designed and located to provide for safe, effective and efficient movement to and from sites; b. Minimise potential conflicts between vehicles, pedestrians and cyclists on the adjacent road network; and c. Manage **separation of** vehicle access to and from sites adjacent to intersections, **rail level crossings,** and where State Highways meet.
TRN – P3	Maximise user safety at road and rail level crossings by ~~considering the location of~~ **restricting** buildings**, structures, planting** and other visual obstructions within sightlines.
TRN – P4	~~Ensure any new r~~Road and pedestrian rail level crossings ~~carefully consider~~ ensure the safety of road users, pedestrians, and the effective and efficient operation of the regions rail network.

TRN – P5	Control vehicle access to sites adjacent to all road **and** ~~/~~rail level crossings to improve safety for road users on the approach to level crossings.
TRN – P6	Enable provision of electric vehicle and bicycle charging stations.
TRN – P7	Support increased cycling and walking by: a. Requiring larger developments to provide bicycle parking; ~~and~~ b. Providing for off-road pedestrian and bicycle facilitates to complement facilities located within the road network; **and** c. **Providing for connectivity within, between and across subdivisions and communities.**
TRN – P8	Manage the number, location and type of parking and loading spaces, including bicycle parking and electric car charging spaces to support the following: a. The safe, efficient and effective operation of the transport network; b. The functional and operational requirements of activities; ~~c. The recognition of different activities having different trip characteristics;~~ c. The use of sustainable transport options including cycling and walking; d. Provision of safe access and egress for vehicles, pedestrians and cyclists; e. Avoid or mitigate potential conflicts between vehicles, pedestrians and cyclists; f. Mitigation of stormwater contamination from vehicles through treatment of stormwater from large areas of car parking; **and** g. Provision for flexible approaches to parking, including more efficient use of parking spaces, and reduce incremental and individual parking provision.
TRN – P9	Require parking and loading areas to be designed so that reverse manoeuvring of vehicles onto or off the road does not occur in situations which will compromise: a. The safe, effective and efficient operation of roads including State Highways; or b. Pedestrian access and amenity; or c. Safe and functional access.
TRN – P10	**Recognise the function of land transport infrastructure and provide for the safe and efficient movement of people and goods.**
TRN – P11	**Only allow high traffic generating activities where these activities support the safe, efficient and effective use of transport infrastructure, as demonstrated through an integrated transport assessment (ITA).**

Transport Rules

Note: There may be a number of Plan provisions that apply to an activity, building, structure and site. In some cases, consent may be required under rules in this Chapter as well as rules in other Chapters in the Plan. In those cases unless otherwise specifically stated in a rule, consent is required under each of those identified rules. Details of the steps Plan users should take to determine the status of an activity is provided in General Approach.

Advice Notes:
Works undertaken in a road reserve / transport corridor or an area subject to a transport designation, that are undertaken by a Utility Provider who is not the roading authority are Permitted where these are compliant with the Utilities Access Act 2010 and Code of Practice.
Works undertaken in a road reserve / transport corridor or areas subject to a District Council designation also require road opening approval from the relevant District Council.
Minimum vehicle parking spaces, except for accessibility parking and bicycling parking, are not set. A minimum number of vehicle parking spaces do not have to be provided, however, if vehicle parking is provided it must comply with the vehicle parking standards.
Any work required for a new or upgraded vehicle crossing intersecting with a State Highway, requires a Corridor Access Request prior to any works occurring with the State Highway road reserve and approval from Waka Kotahi NZ Transport Agency.
Any crossing that intersects with the Rail Network requires approval from KiwiRail.
The Auckland Design Manual Guideline Document GD 2017/01 Stormwater Management Devices in the Auckland Region provides information on best practice stormwater design options for stormwater treatment.

Permitted Activities	
TRN - R1	**Establishment of accessways, vehicle crossings, parking spaces, loading spaces, queuing and standing spaces**
Activity Status Permitted Where: 1. Vehicle crossings and access way standards - TRN Tables 1 – ~~3~~ **4**, Standards TRN S1 - S3, and TRN Figure 1**-5** are complied with; 2. Parking, loading, queuing and standing standards - TRN Tables ~~4~~**5** – ~~5~~**6**, Standards TRN S4 - S6 **and TRN S12** and TRN Figures ~~2~~ **6** and ~~3~~**7** are complied with; 3. Manoeuvring standards TRN S7 - S11 are complied with; 4. Where an impermeable carparking area greater than 1000m^2 in area is provided, stormwater treatment is provided; and 5. Formation standards TRN S12 and TRN S13 are complied with. **Advice Note:** The Auckland Design Manual Guideline Document GD 2017/01 Stormwater Management Devices in the Auckland Region provides information on best practice stormwater design options for stormwater treatment.	
Activity status where compliance not achieved: Restricted Discretionary	

TRN - R2	~~**Land transport operation, removal, repairs and maintenance within a road reserve / transport corridor or an area subject to designation**~~ **Maintenance or upgrading of existing transport infrastructure within the existing transport corridor**
Activity Status Permitted Where: 1. **The works are undertaken by a requiring authority in accordance with a designation listing in this Plan; or** 2. All performance standards in Rule TRN - R1 are complied with; and 3. The works are undertaken: a. By, or on behalf of, a road controlling authority; or b. In accordance with a subdivision consent.~~; or~~ ~~c. By a requiring authority in accordance with a designation listing in this Plan~~.	
Activity status where compliance not achieved: Restricted Discretionary	

TRN – R3	**Formation of an unformed legal road**
Activity Status Permitted Where: 1. **This is by a requiring authority in accordance with a designation listing in this Plan; or** 2. All performance standards in Rule TRN - R1 are complied with; and 3. The works are undertaken: i. By, or on behalf of, a road controlling authority; or ii. In accordance with a subdivision consent.~~; or~~ iv. ~~By a requiring authority in accordance with a designation listing in this Plan.~~	
Activity status where compliance not achieved: Restricted Discretionary	

~~**TRN – R4**~~	~~**Formation of a new transport corridor**~~
~~**Activity Status Permitted**~~ ~~Where:~~ ~~1. This is undertaken by a requiring authority in accordance with a designation listed in this Plan.~~	
~~**Activity status where compliance not achieved**: Restricted Discretionary~~	

TRN – R~~54~~	**Establishment of shared pathways including cycleways and bridleways on public land**
Activity Status Permitted Where: 1. The activity is below 1000m above sea level.	
Activity status where compliance not achieved: Restricted Discretionary	

TRN – R~~65~~	**Establishment of e-bike and e-vehicle charging stations ~~in the transport corridor~~**
Activity Status Permitted Where: 1. All performance standards in Rule TRN - R1 are complied with; and 2. These are not more than 2m in height and 10m^2 in area. **Advice Note:** If within the legal road reserve, contact the appropriate ~~land transport~~ **road controlling** authority to obtain a license to occupy.	
Activity status where compliance not achieved: Restricted Discretionary	

TRN – R6	**Trip Generation Activities**
Activity Status Permitted **Where:** **1. The High Trip Generating Activities Thresholds in TRN Table 7 are complied with**	
Activity status where compliance not achieved: Restricted Discretionary	

TRN – R7	**Sight Lines at Railway Crossings**
Activity Status Permitted **Where:** **1. The sightlines standards in TRN Figure 9 are complied with.**	
Activity status where compliance not achieved: Restricted Discretionary	

Restricted Discretionary Activities	
TRN – R~~7~~8	**Establishment of accessways, vehicle crossings, parking spaces, loading spaces, queuing and standing spaces not meeting Permitted Activity standards**

Activity Status Restricted Discretionary Discretion is restricted to: a. The impact on other road users including pedestrians; b. Effects on the safety and efficiency of the transport system; c. The ability to safely and effectively park, load, queue; d. Any requirements for **natural** ~~flood~~ hazard mitigation; ~~and~~ e. Stormwater treatment and control; f. **The location, size and design of accessways, vehicle crossings, parking and loading areas; and** g. **The types of vehicle crossings serving the site, their intensity, the time of day the site is frequented and likely trip generation**.	
Activity status where compliance not achieved: N/A	

TRN – R~~8~~9	**Land transport operation, removal, repairs and maintenance within a ~~road reserve /~~ transport corridor ~~or an area subject to a designation~~ not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Impacts during construction; b. Any requirements for **natural**~~flood~~ hazard mitigation; **and** c. Stormwater treatment and control.	
Activity status where compliance not achieved: N/A	

TRN – R~~9~~10	**Formation of unformed legal road not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Effects on the safety and efficiency of the transport ~~system~~ **network**; b. The ability for accessibility park users to safely and effectively park, enter and exit a vehicle; c. The impact on other road users including pedestrians; d. Any requirements for **natural**~~flood~~ hazard mitigation; and e. Stormwater treatment and control.	
Activity status where compliance not achieved: N/A	

TRN – R~~10~~11	**Establishing shared paths including cycleways and bridleways on public land not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Visual **effects** ~~impacts on landscapes over 1000m above sea level~~; b. **Effects on cultural, heritage and natural environment values**; c. Effects on public access; and d. Effects on the transport network.	
Activity status where compliance not achieved: N/A	

TRN – R~~11~~12	**Establishing e-bike and e-vehicle charging stations ~~in the transport corridor~~ not meeting Permitted Activity standards**
Activity Status Restricted Discretionary Discretion is restricted to: a. Effects on **safety and efficiency of** the transport network.~~; and~~ b. ~~Outcome of consultation with the relevant transport agency.~~	
Activity status where compliance not achieved: N/A	

TRN – R~~12~~13	**High trip generating transport activities**
Activity Status Restricted Discretionary Where: 1. This is the establishment of a new activity or the expansion of an existing activity **that exceeds the thresholds** listed in Table TRN ~~6~~ **7** ~~that complies with Standard TRN S14.~~ Discretion is restricted to: a. **The matters outlined in TRN S14 – High Trip Generating Activities Transport Assessment requirements** ~~b. Effects on the transport network; and~~ ~~c. Effects and recommendations to minimise effects from the transport assessment.~~	
Activity status where compliance not achieved: ~~Discretionary~~ N/A	

TRN – R14	**Sight Lines at Railway Crossings not meeting the Permitted Activity standards**
Activity Status Restricted Discretionary **Discretion is restricted to:** a. **The potential for adverse effects on the safety and efficiency of the rail network.**	
Activity status where compliance not achieved: N/A	

Discretionary Activities	
TRN – R~~14~~15	**Formation of a new Transport Corridor not undertaken by a requiring authority in accordance with a designation ~~meeting Permitted Activity standards~~**
Activity Status Discretionary **~~Notification:~~** ~~Applications will always be publicly notified.~~	
Activity status where compliance not achieved: N/A	

~~**TRN – R14**~~	~~**High Trip generating activities not meeting Restricted Discretionary Activity standards**~~

~~**Activity Status Discretionary**~~	
~~**Activity status where compliance not achieved**: N/A~~	
TRN – R16	**Any Transportation Activity not provided for in another rule**
Activity Status Discretionary	
Activity status where compliance not achieved: N/A	

Appendix One: Transport Performance Standards Te Āpitihanga Tuatahi: Ngā Ture Tūnuku

TRN Table 1 – Vehicle Access Design Standard – State Highway: Minimum **sight** distance ~~of~~ **from** vehicle access point ~~relative to intersections and minimum spacing~~

Posted Legal speed limit	Minimum sight distance	~~Minimum distance of vehicle access point relative to intersections~~	~~Minimum spacing between vehicle access points on same or opposite frontages~~
~~K~~ km/h~~r~~	Distance x in metr~~e~~s	~~Distance y in meters~~	~~Distance z in meters~~
50	115	~~30~~	~~9m for residential, 15m all other~~
60	140	~~30~~	~~20~~
70	170	~~100~~	~~40~~
80	205	~~100~~	~~100~~
100	280	~~200~~	~~200~~

TRN Table 2 – Vehicle Access Design Standard for vehicle access onto a local road, arterial or collector road, up to 60 vehicle movements a day: Minimum distance of vehicle access point relative to intersections and minimum spacing.

Posted Legal speed limit	Minimum sight distance Local Road	Minimum sight distance Collector Road	Minimum sight distance Arterial Road	Minimum spacing between vehicle access points on same or opposite frontages
~~K~~ km/h~~r~~	Distance x in metr~~e~~s	Distance x in metr~~e~~s	Distance x in metrers	Distance z in metr~~e~~s

50 or below	40	90	90	NA
60	55	115	115	NA
70	85	140	140	10
80	105	175	175	10
100	160	250	250	10~~m~~
Total maximum combined width of vehicle access points				4m or 50% of the road boundary, on any site

TRN Table 3 – **Vehicle Access** Design ~~s~~**S**tandards for minimum distances between any vehicle access point and **other vehicle access point or** transport corridor intersection

	~~Posted speed limit of 60km/hr or less~~			~~Posted speed limit of greater than 60km/hr~~		
	~~Arterial Road~~	~~Collector Road~~	~~Local Road~~	~~Arterial Road~~	~~Collector Road~~	~~Local Road~~

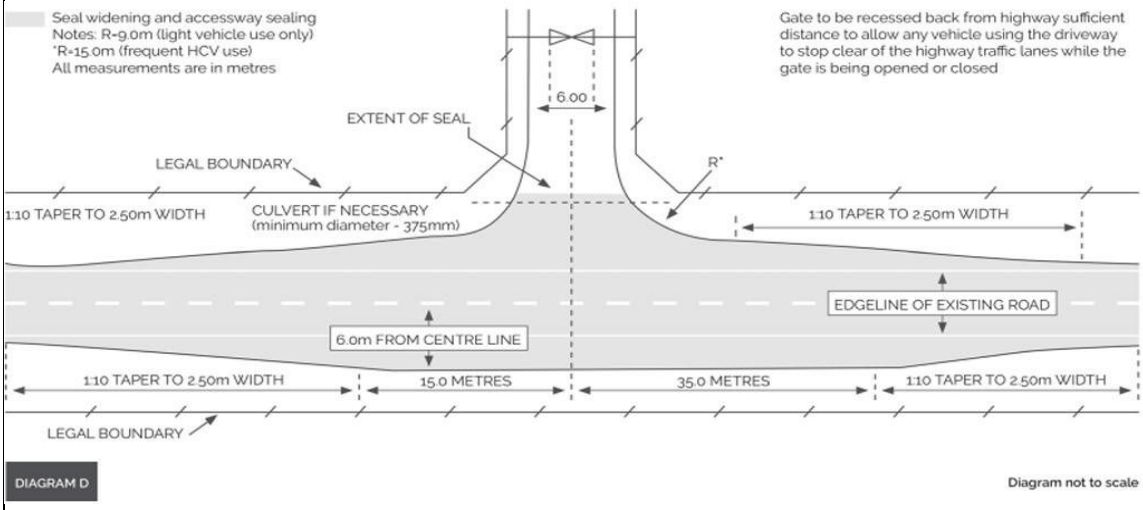
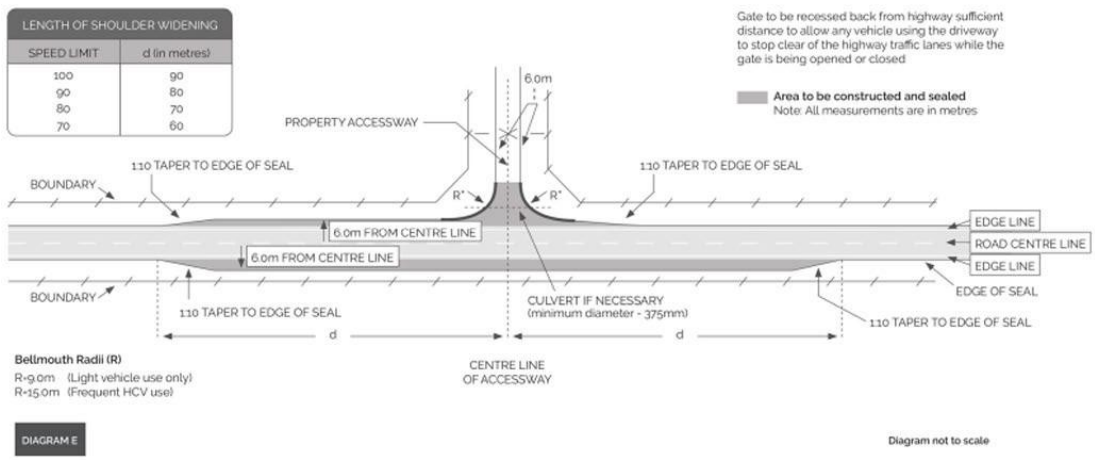
Type of traffic using accessway (more than one slow, heavy or long vehicle movements per week)	**Separation (m) for Posted Speed Limit (km/h) (refer Figure 5)**								
	30 – 50 km/h			**60 – 70 km/h**			**80 – 100 km/h**		
	K	**M**	**N**	**K**	**M**	**N**	**K**	**M**	**N**
Yes	**30**	**30**	**5**	**60**	**40**	**40**	**200**	**60**	**200**
No	**20**	**20**	**5**	**60**	**30**	**20**	**150**	**60**	**200**



TRN Table 4: Accessway standards and guidelines for a new vehicle crossing on a sealed road where the posted speed limit is 70 km/h or above.

Daily traffic volume using the vehicle crossing (ECMs*)	**Is the vehicle crossing on a state highway?**	**Accessway type**
1 – 30; and no more than 2 heavy vehicle movements per week	**N/A**	**TRN Figure 1 Diagram C, Perspective C**
1 – 30; and more than 2 heavy vehicle movements per week, or, 31-100	**No**	**TRN Figure 2, Diagram D, Perspective D**
1 – 30; and more than 2 heavy	**Yes**	**TRN Figure 3, Diagram E,**
vehicle movements per week, or 31-100		**Perspective E**

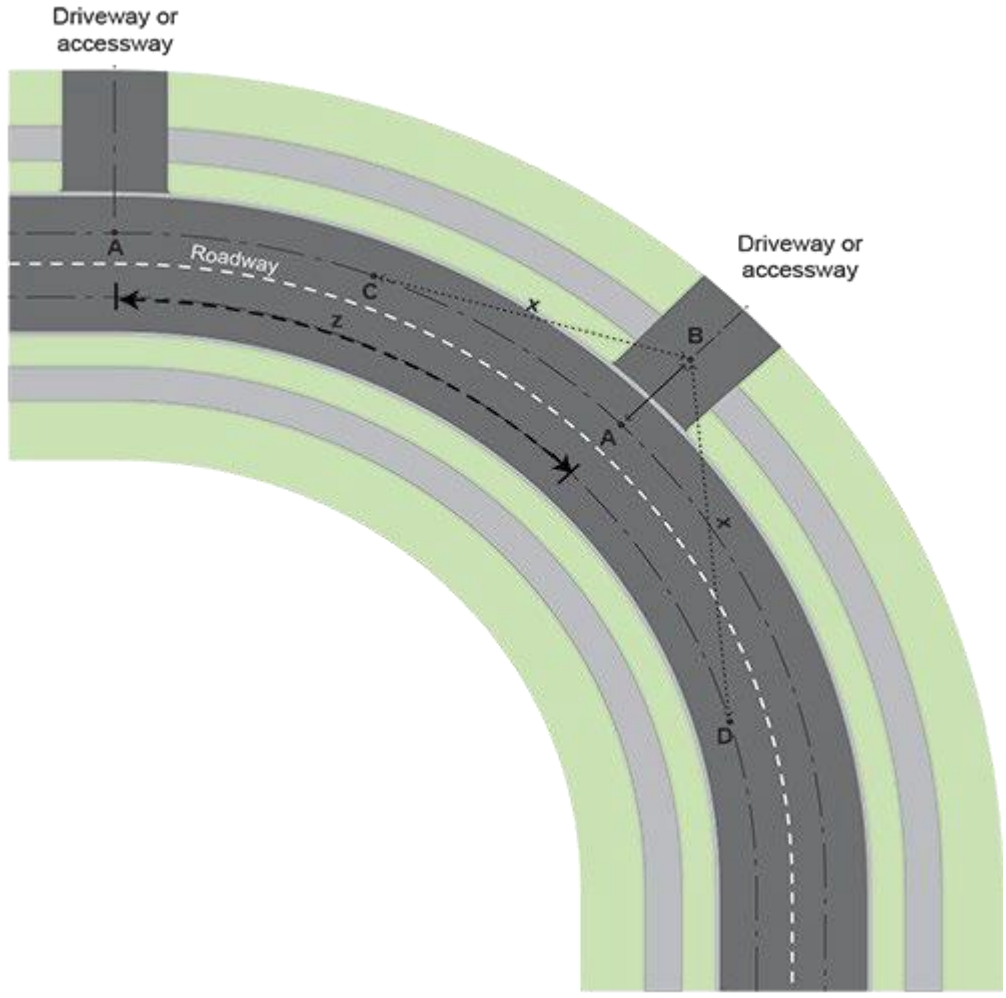


TRN Figure 1 – Diagram C, Perspective C

TRN Figure 2 – Diagram D – Perspective D

TRN Figure 3 – Diagram E – Perspective E

TRN S1 – All new vehicle access points shall be located a minimum of 30m from a railway level

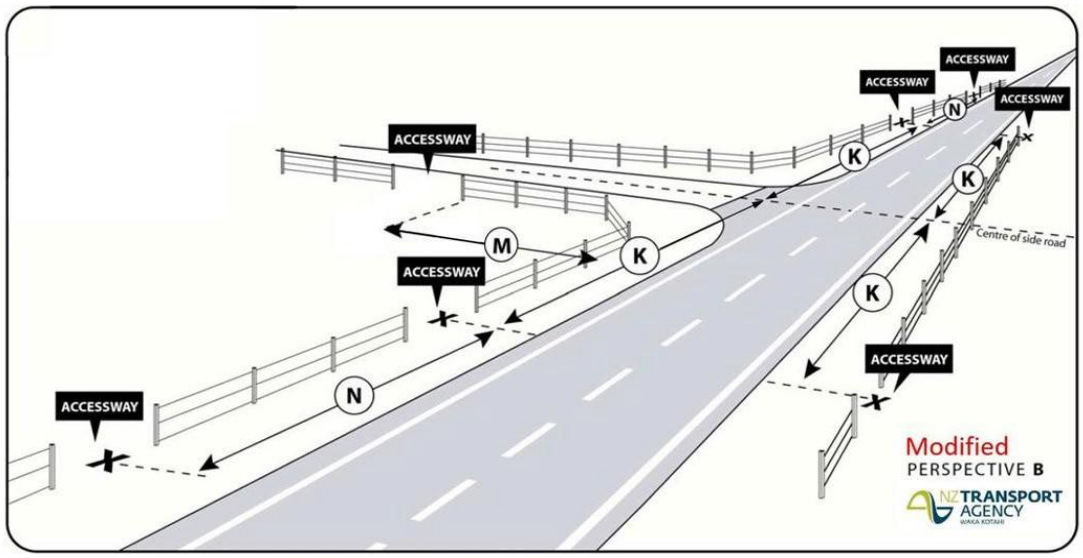


crossing. The 30m is measured from the closest rail track to the edge of the seal on the proposed vehicle access point. All new vehicle access points that intersect a railway require the approval of Kiwi~~r~~Rail.

TRN S2 Access areas must accommodate the 85th percentile car tracking curves in **TRN** Figure ~~4~~ **~~8~~**. The required driveway must not include any space used for on-site queue, tracking curve, manoeuvring, loading space, standing space, bicycle parking space, or vehicle access point.

TRN S3 – Requirements for driveways:

For all zones the minimum driveway width is 3**.5**m, and maximum gradient is 1:5.
For all zones, where the driveway is longer than 50m, passing bays must be provided at no more than 50m intervals. Turning areas must be provided when the driveway length is 50m or longer.



TRN Figure ~~1~~ **4** – Sight line calculations for **TRN** Table 1 and **TRN** Table 2

Sight lines shall be from driver's eye height to drivers eye height (1.15m) above ground level.
Point A: Intersection of lane centreline and driveway centreline.
Point B: Position of centreline of driveway where sight distance is measured (note - this is measured

from the edge lane line and where there is no edge lane line, from the edge of seal).
Point C and D: Position on centreline of lane where sight distance is measured.

TRN Figure 5 – Minimum Distance Calculation from vehicle access point and transport corridor intersection for TRN Table 3

TRN S4 – Where accessibility parking spaces are provided, they must be located on a level surface; clearly marked, designed and constructed in accordance with NZS 4121: 2001 Design for Access and Mobility – Buildings and Associated Facilities

TRN Table ~~4~~ **5** – Minimum number of on-site accessibility parking spaces

Total number of **vehicle** spaces provided	Number of accessibility parking spaces (inclusive of total)
Less than 20	1
Between 21 and 50	2
In excess of 50	2 plus 1 additional accessibility space per 50 vehicles spaces thereafter

TRN S5 – Where bicycle parking spaces are provided the space must enable bicycles to be securely attached to an immovable object and located so as not to impede pedestrian movement.

TRN Table ~~5~~ **6** – Minimum number of on-site bicycle parking spaces

Total number of **vehicle** spaces provided	Number of bicycle parking spaces
Less than 10	1
Between 10 and 20	2

In excess of 20	2 plus 1 additional accessibility space per 10 vehicles spaces thereafter

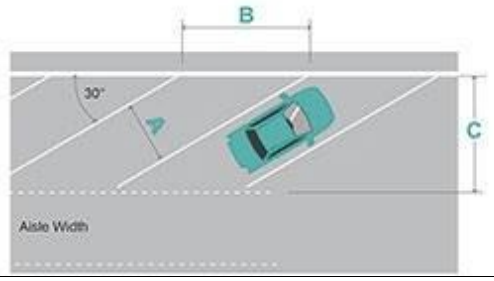
TRN S6 – Residential developments in Moana and Iveagh Bay must provide the equivalent of three car-parking spaces on-site for trailer / boat storage.

TRN S7 – Dimensions for on-site vehicle parking spaces including manoeuvring dimensions.

- Parking space and area for vehicles must not include any space for on-site queue, tracking curve, manoeuvring, loading space, standing space, bicycle parking space, or vehicle access point.
- Must meet the requirements specified for on-site dimensions for car parking areas and circulating routes for vehicles of dimensions less than service vehicles shown in **TRN** Figure ~~2~~ **6**, and
- For vehicles of dimensions equal or greater than a service vehicle.
- The two-way aisle width for parallel parking bays must be at least 3m wider than for one- way aisle. The two-way aisle width for parking bays at 90 degrees must be at least 5.5m.
- Where a parking space is located at the end of a blind aisle, an additional 1m clearance must be provided.
- Where any parking space has a side directly next to a wall, support column or other obstacles, an additional 300mm width must be provided.

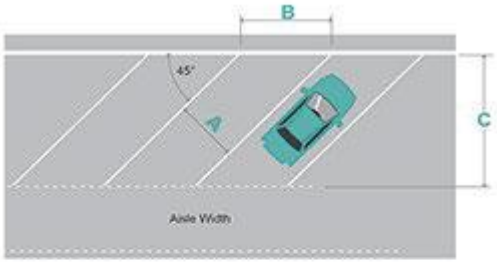
TRN S8 – Where loading spaces and or standing spaces are provided, they must be designed to accommodate a 90th percentile two-axle truck in accordance with **TRN** Figure ~~3~~ **7**, and where articulated trucks and trailer, or buses are to be used, the loading space(s) must be designed to accommodate these vehicles. Every vehicle space must be of a useable shape and comply with the following dimensions:

- Minimum width of 3.5m if adjacent to a kerb or 4.5m when adjacent to a wall; minimum depth 8m, minimum height of 4.5m above ground / floor level.
- The loading space must not include any space for on-site queue, tracking curve, manoeuvring, standing space, bicycle parking space, or vehicle access point.
- The standing space must not include any space for on-site queue, tracking curve, manoeuvring, loading space, bicycle parking space, or vehicle access point.



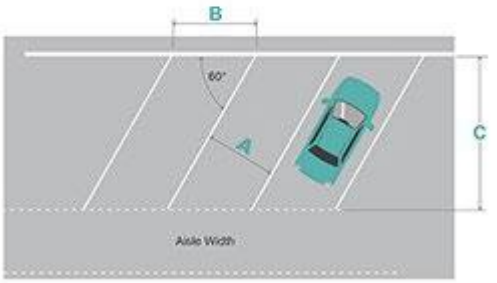
TRN S9 - On-site queuing spaces must be provided when six or more parking, loading, and / or standing spaces combined are provided on-site. On-site queuing lengths, measured from the commencement of the driveway to the site boundary, must comply with the following: 6m into the site if the largest vehicle to visit the site is a car, or 8m into the site if the largest vehicle to visit the site is a service vehicle; or when the largest vehicle to visit the site is greater than a service vehicle, then this vehicle must be able to be accommodated within the site.

TRN S10 – Minimum onsite manoeuvring space provision - On-site manoeuvring space must be provided where a single vehicle access point services four or more parking spaces; or access to a site is obtained from a state highway, arterial road or collector road.

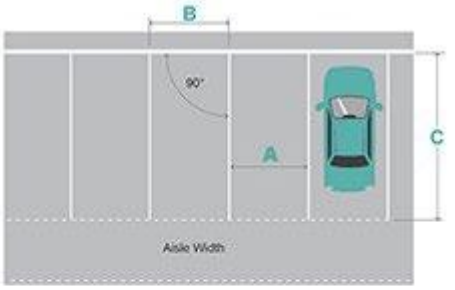


TRN S11 – Minimum onsite manoeuvring space design -The manoeuvring space must not include any space for on-site parking, queuing, loading, or standing space, or vehicle access point and must meet the requirements for the relevant tracking curve in **TRN** Figure ~~2~~ **6**.

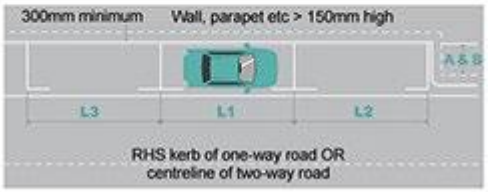
This standard does not apply where the site has direct vehicle access to a service lane, right of way or driveway which be utilised instead of the required manoeuvring space.



TRN – Figure ~~2~~ **6** – On-site car parking space dimensions

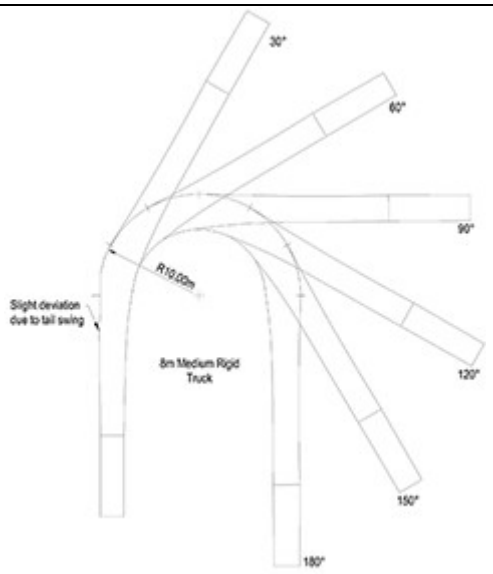


Parking Bays at 30°						
User Class	A	B	C1	C2	C3	Aisle Width
1	2.1	4.2	4.4	4.1	4.5	3.1
2	2.3	4.6	4.4	4.1	4.7	3.0
3	2.5	5.0	4.4	4.1	4.9	2.9
4	3.5	6.4	4.4	4.1	5.5	2.9

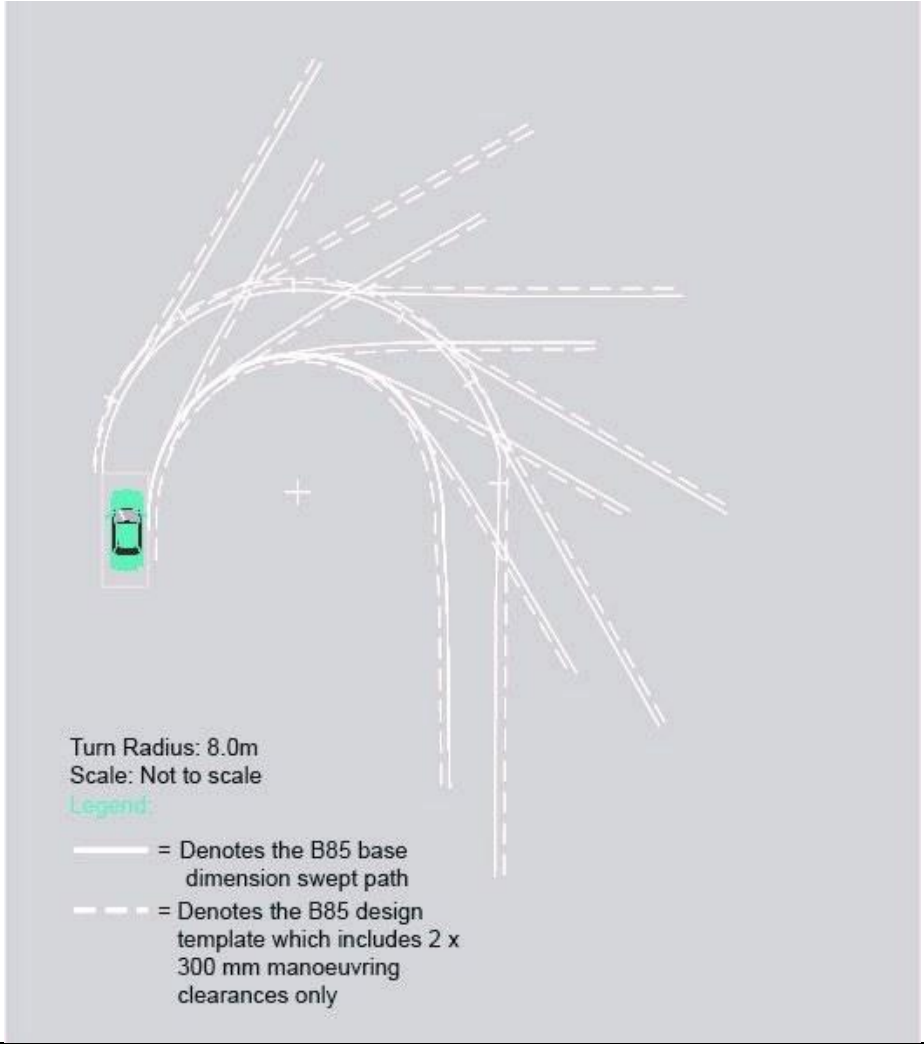


Parking Bays at 45°						
User Class	A	B	C1	C2	C3	Aisle Width
1	2.4	3.4	5.2	4.8	5.5	3.9
2	2.5	3.5	5.2	4.8	5.6	3.7
3	2.6	3.7	5.2	4.8	5.7	3.5
4	3.6	5.1	5.2	4.8	6.1	3.3

Parking Bays at 60°						
User Class	A	B	C1	C2	C3	Aisle Width
1	2.4	2.8	5.7	5.1	5.9	4.9
2	2.5	2.9	5.7	5.1	6.0	4.6
3	2.6	3.0	5.7	5.1	6.0	4.3
4	3.6	4.2	5.7	5.1	6.3	4.0



Parking Bays at 90°						
User Class	A	B	C1	C2	C3	Aisle Width
1	2.4	2.4	5.4	4.8	5.4	6.2
2	2.5	2.5	5.4	4.8	5.4	5.8
3	2.6	2.6	5.4	5.1	5.4	5.4
4	3.6	3.6	5.4	4.8	5.4	5.0



Parallel Parking Bays						
User Class	A	B	L1	L2	L3	Aisle Width
1, 2, 3	2.1	2.1				
4	3.6	3.6				
All			6.3	6.6	5.4	3.0
All			6.1	6.4	5.4	3.3
All			5.9	6.2	5.4	3.6

TRN - Figure ~~3~~ **7** - Tracking path for a 90th percentile two axle truck

TRN - Figure ~~4~~ **8** - Minimum tracking path for the 85th percentile car

Note:

With the exception of 90 degree car parks, aisle width dimensions are for manoeuvring into and out of car parks with one-way aisles.

User Class is identified as:

- for all day parking, such as tenant, employee and commuter parking;
- for medium-term parking, such as town centre parking, sports and entertainment centres, motels, airport visitors;
- for short-term parking, such as short-term town centre parking, shopping parking, hospitals, and the drop-off of children;
- accessible parking for people with disabilities.

Dimension C is selected as follows:

- C1: where parking is to a wall or high kerb not allowing any overhang;
- C2: where parking is to a low kerb which allows 600mm overhang;
- C3: where parking is controlled by wheelstops installed at right angles to the direction of parking, or where the ends of parking spaces form a sawtooth pattern.

Dimension L is selected as follows:

- L1: space length for consecutive parallel parking spaces;
- L2: space length for obstructed end spaces;
- L3: space length for unobstructed end spaces.

TRN S12 – Requirements for on-site vehicle parking, loading and standing spaces – construction and formation

All RURZ - Rural Zones and FUZ - Future Urban Zone	For sites with four or more vehicle parking / loading / standing spaces, the surface must be **metaled** ~~formed, sealed~~, marked and drained to an all- weather standard, with a maximum gradient of 1:20.
All RESZ - Residential Zones and MPZ - Māori Purpose Zone	For sites with four or more vehicle parking / loading / standing spaces, the surface must be **formed, sealed,** ~~metaled,~~ marked and drained to an all- weather standard, with a maximum gradient of 1:20.
All CMUZ - Commercial and Mixed Use, INZ - Industrial, OSRZ - Open Space and Recreation, AIRPZ - Airport, HOSZ - Hospital, STADZ - Stadium and PORTZ - Port Zones	For sites with ~~less~~ **more** than four on-site vehicle parking / loading / standing spaces the surface must be formed, with a maximum gradient of 1:20; and the area over which vehicles obtain access to the parking area is sealed from the vehicle access point to 5m into the site; or if adjacent to a residential zone, the area must be formed, sealed, marked and drained.
All zones	If the spaces are sealed, stormwater from the sealed surface must not be discharged causing erosion to other sites or accesses.

Note. Marking does not require all lines to be shown. However, it should be clear to the user of the parking area where the edge of each space is.

TRN S13 – Requirement for rights of way – construction and formation

All RESZ - Residential Zones, MPZ - Māori Purpose Zone, All RURZ - Rural Zones and FUZ - Future Urban Zone	The minimum road width is 3.5m one to nine dwellings, 5.5m for ten or more dwellings.
All CMUZ - Commercial and Mixed Use Zones	The minimum road width is 3**.5**m for 2 allotments, 4.5m for 3 or more allotments.
All INZ - Industrial, OSRZ - Open Space and Recreation Zones, HOSZ - Hospital, AIRPZ - Airport, STADZ - Stadium and PORTZ – Port zone	The minimum road width is 7m for 2 allotments, 10m for 3 or more allotments.
All zones	Stormwater from the right of way must not be discharged causing erosion to other sites or accesses. When a right of way services 3 or more allotments, one passing bay for every 50m of length shall be provided. Maximum gradient for right of way 1:5

TRN Table ~~6~~ **7** – High Trip Generating Activities **Thresholds**

~~Activity~~	~~Qualifier~~
~~Childcare including preschool, kindergarten and play centre~~	~~25 children~~
~~Education – Schools~~	~~30 students~~
~~Education – Tertiary~~	~~150 FTE students~~
~~Industrial~~	~~5,000m² Gross Floor Area~~
~~Mining and Quarrying~~	~~>30 heavy vehicle movements per day~~
~~Warehousing and distribution~~	~~6,500m² Gross Floor Area~~
~~Healthcare~~	~~300m² Gross Floor Area~~
~~Office~~	~~2,000m² Gross Floor Area~~
~~Residential~~	~~20 residential sites / units~~
~~Retail – Shops and supermarkets~~	~~250m² Gross Floor Area~~
~~Retail – Large Format and Bulk Goods~~	~~500m² Gross Floor Area~~
~~Service Stations~~	~~2 filling pumps~~
~~Mixed use or other activities not otherwise listed in this Table~~	~~60 vehicle movements per day~~

Equivalent Car Movements*	**Access is to a road classified** as:**			
	Local	**Collector**	**Arterial**	**State Highway**

per day				
0-100	**N/A**	**N/A**	**N/A**	**N/A**
101-200	**N/A**	**Basic**	**Basic**	**Full**

>400	**Full**	**Full**	**Full**	**Full**

*** Equivalent Car Movements (a movement is one car out or into a site)**

- **1 equivalent car movement (ecm) = 1 car / light vehicle movement,**
- **3 ecm = 1 heavy commercial vehicle movement (1 truck),**
- **5 ecm = 1 combination heavy commercial vehicle movement (1 articulated truck or truck and trailer).**

**** Refer TRN – S15 for Road Classifications**

TRN S14 – High Trip Generating Activities - Transport Assessment requirements

1. ~~Whether the provision of access and on-site manoeuvring areas associated with the activity, including vehicle loading and servicing deliveries, affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network.~~
2. ~~Whether the design and layout of the proposed activity maximises opportunities for travel other than private cars, including by providing safe and convenient access for travel using more active modes.~~
3. ~~Having particular regard to the level of additional traffic generated by the activity and whether measures are proposed to adequately mitigate the actual or potential effects from the anticipated trip generation (for all transport modes) from the proposed activity, including consideration of cumulative effects with other activities in the vicinity, proposed infrastructure and construction work associated with the activity.~~
4. ~~Whether there are any effects from the anticipated trip generation and how they are to be mitigated where activities will generate more than 250 hvm/d heavy vehicle movements per day.~~
5. ~~Whether the transport assessment has been prepared by a suitably qualified and experienced transport specialist and has been approved by the relevant District Council.~~

1. **Basic Traffic Impact Assessment:**

   a. **Whether the provision of access and on-site manoeuvring areas associated with the activity, including vehicle loading and servicing deliveries. affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network (including considering the network classification of the frontage road).**

   b. **Whether the design and layout of the proposed activity promotes opportunities for travel other than by private cars, including by providing safe and convenient access for travel using more active modes.**

   c. **Whether the traffic impact assessment has been prepared by a suitably qualified and experienced transport specialist.**

   d. **Need for a traffic impact assessment - Any characteristics of a proposed activity or**

site that are out of scope of an existing ITA but where expected traffic generation and access to existing multi modal connections mean requiring a traffic impact assessment, in a manner set out in this rule, is unnecessary.

2. **Full Integrated Traffic Assessment:**

   a. **Whether the provision of access and on-site manoeuvring areas associated with the activity, including vehicle loading and servicing deliveries, affects the safety, efficiency, accessibility (including for people whose mobility is restricted) of the site, and the land transport network (including considering the network classification of the frontage road).**

   b. **Whether the design and layout of the proposed activity promotes opportunities for travel other than by private cars, including by providing safe and convenient access for travel using more active modes.**

   c. **Having particular regard to the level of additional traffic generated by the activity while taking into account any particular effects from heavy vehicles and whether measures are proposed to adequately mitigate the actual or potential effects from the anticipated trip generation (for all transport modes) from the proposed activity, including consideration of cumulative effects with other activities in the vicinity, proposed infrastructure and construction work associated with the activity.**

   d. **Whether there are any effects from the anticipated trip generation and how they are to be mitigated where activities will generate more than 250hvm/d.**

   e. **Whether the ITA has been prepared by a suitably qualified and experienced transport specialist.**

   f. **Need for an ITA - Any characteristics of a proposed activity or site that are out of scope of an existing ITA but where expected traffic generation and access to existing multi modal connections mean requiring an ITA, in a manner set out in this standard, is unnecessary**.

PART A – INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Introduction

1. Matters to do with our appointment and other preliminary matters applicable to all Hearing Panel's recommendations on the Proposed Te Tai o Poutini Plan (pTTPP or 'the Plan') are recorded and addressed in Recommendation Report 1.

2. This Recommendation Report relates to the Rural Zones - Ngā Takiwa Tuawhenua of the pTTPP. It contains the Hearing Panel's evaluations and recommendations to the TTPP Committee on the submissions and further submissions received on Part 1 (Definitions), Part 2 (Subdivision), Part 3 (Rural Zones), and the planning maps.

3. The Report contains the Hearing Panel's evaluations and recommendations to the TTPP Committee on the submissions and further submissions received on these sections of Part 3 of the Plan.

4. The Section 32 Report[1] provided an evaluation of the Rural Zones (General Rural and Rural Lifestyle), and how they were managed through the combined Plan, including the regulatory framework, resource management issues, the evidence base, consultation, information and analysis undertaken and evaluation of the options.

5. The Section 42A Officer's Report[2] ('s42A Report') for the Rural Zones was authored by Ms Lois Easton, a planner with Kererū Consultants as the Reporting Officer, was circulated before the hearing. The s42A Report provided an analysis of submissions and further submissions received, and made recommendations on changes to the notified plan provisions.

6. Ms Easton subsequently provided an Addendum s42A Report[3] covering the rural and settlement zone topics and prepared to address submission points which were omitted, and updated commentary and recommendations on the specific submission of Russell Robinson concerning rezoning at Moana as a result of further technical information received from the Grey District Council. The latter matter is covered in the Settlement Zone Recommendations Report.

1.2. Rural Zones

7. The Rural Zones s42A Report assessed a total of 1499 submission points and 298 further submission points on the RURZ objectives and policies, GRUZ and RLZ Chapters, relevant definitions, minimum allotment sizes for subdivision and the planning maps. It provided summaries of all submissions and further submissions received, as well as the relief sought; an analysis of the proposed changes to the provisions; and recommendations on changes to the plan provisions.

8. The matters raised by submitters were generally grouped in the s42A Report in relation to each of the following key issues:

[1] Te Tai o Poutini Plan – Section 32 Evaluation Report Twelve
[2] Te Tai o Poutini Plan Section 42A Officer's Report Rural Zones (excluding Settlement Zone) – Ngā Takiwa Tuawhenua
[3] Addendum to Rural Zones and Settlement Zones s42A Reports and Appendices

- Definitions
- General Submissions;
- Overview;
- Objectives;
- Policies;
- Rules;
- Rezonings
- Associated Planning Maps

9. A s32AA Evaluation for the changes was provided at the end of the s42A Report.

1.3. Recommendation Report

10. This Recommendation Report follows the same structure as the s42A Report. It provides a brief summary of the issues raised in submissions and further submissions, the s42A Report analysis and recommendations, submitter evidence and the Reporting Officer's reply evidence, before providing our evaluation and recommendation.

11. As with Ms Easton's s42A reports, the provisions concerning Mineral Extraction within this zone are not included within this Recommendation Report. The provisions affected are Objective RURZ – O5, Policies RURZ – P18 – P25, and Rules GRUZ-R11, GRUZ – R12, GRUZ – R18, GRUZ – R25, GRUZ – 32, RLZ – R11 and RLZ – R15.

12. These Plan provisions are dealt with in our Recommendation Report on the Mineral Extraction chapter.

13. This Recommendation Report should be read in conjunction with the s42A Report and the tracked change version of the notified Plan provisions (attached as Appendix 1 to this Report). The tracked change version of the TTPP provisions forms an integral part of the decision, recording all recommended amendments (additions and deletions) to the notified TTPP provisions made by the Panel. The tracked change version of the TTPP shows the Panel's recommended changes to the notified provisions in **bold and underlining**, indicating additions and strikethrough, indicating deletions. If there is any discrepancy between this Recommendation Report and the tracked change version of the Plan, the tracked change version of the Plan shown in Appendix 1 of this Report must prevail.

14. This Recommendation Report contains the reasons for the Panel's recommendations. These comprise either the adoption of the reasoning and recommendations of the original section 42A Reports or the Reporting Officer's reply evidence (Councils' right of reply post hearing adjournment), or a specific reasoning by the Panel.

15. Where the Panel recommends the TTPP provisions should remain as notified, it is because:

    a. The Panel has adopted the reasoning and recommendation of the s42A Report or addendum to retain the provision as notified; or

    b. The Panel has adopted the reasoning and recommendation to retain the provision as notified, as recommended in the Reporting Officer's reply evidence; or

c. The Panel has recommended retaining the provision as notified for reasons set out in this Recommendation Report.

16. Where there is a recommended change to a notified provision of the TTPP, it is because:

(a) The Panel has recommended an amendment to a provision for reasons set out in this Recommendation Report in response to a submission point, which the s42A Report did not recommend; or

(b) The Panel adopted the reasoning and recommendation of the s42A Report to change the provision to that recommended in the original s42A Report; or

(c) The Panel has adopted the reasoning and recommendation in the Reporting Officer's reply evidence; or

(d) A consequential change has been necessary following on from a decision in either (a), (b) or (c).

17. Where there may be a different recommendation between the s42A Report and the Reporting Officer's addendum or reply evidence (i.e., the recommendation by the Reporting Officer has changed as a result of hearing the evidence of submitters), unless the Panel decision specifically adopts the original s42A Report's reasoning and recommendations, the reasoning and recommendations in the (later) reply to evidence has been adopted and it must be taken to prevail.

18. If there are circumstances where the Panel consider that alternative relief is more appropriate than that requested in submissions and further submissions to give effect to the RMA, NZCPS, national policy statements and/or RPS, but are still within the scope of the relief sought, the relevant recommendation sets out the nature of the change and the reason for the change. This is recorded in this Recommendation Report.

19. If any changes are recommended to the provisions (since the Section 32A Report was completed), a further evaluation, if required pursuant to section 32AA of the RMA, has been undertaken. Any such circumstances are referred to in this Recommendation Report in sufficient detail to demonstrate that a further evaluation was undertaken.

20. Clause 16(2) of the First Schedule of the RMA enables the Panel to recommend amendments to alter information, where such an alteration is of minor effect, or may correct any minor errors. In the Panel's recommendations below, each section considered in Part C of this Report and in the tracked change version of the notified Plan provisions (Appendix 1 of this Report) records any such minor amendments.

1.4. Terminology in this Report

21. Throughout this Report, the following abbreviations will be used:

Department of Corrections	Ara Poutama Aotearoa, Department of Corrections
BCG	Buller Conservation Group
BDC	Buller District Council

Councils	Buller District Council, Grey District Council, and Westland District Council
Director General	Director General of Conservation
Federated Farmers	Federated Farmers of New Zealand
FENZ	Fire and Emergency New Zealand
Forest & Bird	Royal Forest & Bird Protection Society of NZ Inc
GDC	Grey District Council
GIZ	General Industrial Zone
HortNZ	Horticulture New Zealand
KiwiRail	KiwiRail Holdings Limited
Manawa	Manawa Energy Limited
MOE	Ministry of Education
NZAAA	New Zealand Agricultural Aviation Association
NPSHPL	National Policy Statement for Highly Productive Land
NPSFM	National Policy Statement for Freshwater Management 2020
NPSUD	National Policy Statement on Urban Development 2020
Poutini Ngāi Tahu	Te Rūnanga o Ngāi Tahu, Te Runanga o Ngāti Waewae, Te Rūnanga o Makaawhio
pTTPP	Proposed Te Tai Poutini Plan
RNZ	Radio New Zealand
RMA or the Act	Resource Management Act 1991
RPS	West Coast Regional Policy Statement
SASM	Sites and Areas of Significance to Māori
SFF	Silver Fern Farms Limited
Waka Kotahi	NZ Transport Agency Waka Kotahi
WCRC	West Coast Regional Council
WDC	Westland District Council

1.5. Hearing Arrangements

22. The hearing was held at two venues, the first being the NBS Theatre in Westport on the 29 & 30 July 2024, and the second being the West Coast Regional Council Building on the 1 & 2 August 2024. Some submitters appeared via internet connection.

23. At the hearing, Ms Easton tabled a Planning Summary Statement to her s42A Report and Addendum Report.

1.6. Appearances

24. The following submitters appeared at the combined Rural and Settlement zones hearing:

Mr John Menlove for himself

Ms Emily Levenson for Horticulture New Zealand

Mr Tony Michelle for NZAAA

Mark & Emily Wiechern for themselves

Mr Vance Boyd for himself

Mr Hadleigh Pedler, Mr Steve White and Mr Mark Bullen for Radio New Zealand

Ms Sarah Eveleigh, Ms Amy Callaghan & Ms Kathrine Jones for CMP Kokiri Limited

Mr Steve Tuck, Planner for Silver Fern Farms Limited (SFF)

Mr Frank O'Toole for himself and **Ms Anna Bensemann** for Mr Frank O'Toole

Mr Philippe Dumout, Mr Andrei Cotiga, Mr Jade McFarlane, Ms Claire McKeever, Mr Garry Howard, Ms Holly Luzak, Mr Anthony Fisher, Mr Tom McGaveston & Mr Bryan McGillan for Tauranga Bay Holdings Ltd

Mr Larry Eade and **Ms Jane Bayley** for Cape Foulwind Stape 1 (CFS1) and Cape Foulwind Stape 2 (CFS2)

Mr Murray Stewart for himself

Mr Jeremy Dillon for Forest Habitats Ltd

Ms Marie Elder for herself

Ms Christina Bushby for herself

Ms Pauline Hadfield for T Croft Ltd, International Panel & Lumber Ltd, Te Kinga Investments Ltd and Davis Oglivie Ltd

Ms Shari McLaughlin for herself and representing Mr John Boyles; Mr David McInRoe; Ms Kay Leighton, Mr Ken and Mrs Robyn Ferguson

Ms Kelsey Barry, Mr Russel Robinson, Mr Tony Penny, Mr Richard Nichol, Ms Helen Kellet, Ms Louise Bailey & Mr Craig Barr for Russell Robinson and Brunner Builders Limited

Mr Jonathan Bhana-Thomson for New Zealand Heavy Haulage Association Inc

Mr Karl Luxon for Scenic Hotel Group

Mr Andrew Beaumont for himself

Mr Rob Kinney for Te Kinga Estate Ltd

Mr Martin Kennedy for himself

Mr Martin Kennedy for Westpower

Mr Tom McGaveston for himself

Ms Frida Inta for herself and Buller Conservation Group

1.7. Overview of submitter evidence received

25. Legal submissions were received from Ms Sarah Eveleigh for CMP Kokiri Limited, Hadleigh Pedler for RNZ.

26. For those appearing at the hearing, the following evidence and/or statements were received:

    a. Mr Steve Tuck, planner for SFF (dated 1 July 2024).

    b. Ms Jane Bayley, planner for CFS1 and CFS2 (dated 22 March 2024 and 2 July 2024).

    c. Mr Jonathan Bhana-Thomson, Chief Executive of the New Zealand Heavy Haulage Association Inc (dated 14 June 2024);

    d. Mr Martin Kennedy, planner for Westpower Limited (dated 1 July 2024);

    e. Barry MacDonell, planner for Forest Habitats Ltd (dated 25 June 2024)

    f. Emily Levenson, policy advisor to HortNZ, (dated 1 July).

    g. Anna Jane Bensemann, planner for Frank O'Toole (dated 1 July 2024)

    h. Amy Callaghan, planner, Katharine Jones, transport engineer, and Darryl Tones, General Manager Operations of ANZCO Foods Limited, for CMP Koriri limited (dated 18 March 2024). Supplementary evidence from Amy Callaghan and Katharine Jones (dated 1 July 2024), and summary statements from Amy Callaghan, Katharine Jones and Darryl Tones, (dated 29 July 2024)

    i. Steve White, Transmission Engineer Specialist for RNZ (dated 2 July 2024).

    j. Andrea Cotiga, Jade McFarlane, Claire McKeever, Philippe Dumont for Tauranga Bay Holdings, (dated 4 July 2024).

    k. Lionel Hume, policy advisor, and Simon Cameron (West Coast Provincial President of Federated Farmers of NZ), for Federated Farmers (dated 1 July 2024).

    l. Pauline Hadfield, planner for International Panel and Lumber and T Croft Ltd, (dated 1 July 2024).

    m. Statement of Tony Michelle, NZAAA (dated 12 July 2024)

27. Following the receipt of the s42A Report and the Addendum to the s42A Report, the following were received:

    a. FENZ provided a letter[4] with additional discussion on those submission points that the reporting officer rejected.

    b. KiwiRail provided a letter[5] confirming that they did not wish to be heard. The letter indicated that KiwiRail sought minimum building setback requirements from the rail corridor in the rural zones.

    c. Stephanie Styles, planner for Manawa Energy Ltd, provided a statement of evidence (dated 19 June 2024). The statement discusses submission points that were not addressed in the s42A Report and confirms support for various recommendations made by the reporting officer.

    d. A site location map was provided by Shirley Godfrey, confirming the location of the properties requested to be rezoned.

28. Following the hearing, the subsequent information was received as follows:

    a. Jane Bayley (for Cape Foulwind Staple 1 and 2) responded to the WCRC discharge report by BTW dated 20 December 2024.

    b. Forest Habitats Ltd provided a letter[6] addressing flood mapping.

    c. Emily Levenson responded to Panel questions on greenhouses and artificial crop protection structures (dated 31 July 2024).

    d. Memoranda of Counsel were submitted on behalf of CMP Kokiri Ltd (dated 14 August 2024 and 12 December 2024) confirming that CMP Kokiri Ltd continue to seek rezoning of 7 Blair Road, Arnold Valley, and provide further clarification on the officer's zoning recommendation.

    e. Closing legal submissions and statement of planning evidence were submitted on behalf of Russell Robinson and Brunner Builders Ltd (dated 9 September 2024).

    f. Further legal submissions were submitted on behalf of RNZ, providing legal advice on the scope of RNZ's submission and confirming support for the draft provisions prepared by the s42A Officer (dated 25 September 2024).

    g. Scenic Hotels Ltd provided a letter and memo[7] responding to the Panel's request for proposed text amendments to the Proposed Plan.

    h. SFF provided a letter[8] in response to Panel requests confirming the extent of SFF landholdings and confirming that a car park is under development at Lot 3 DP 577157.

    i. Suzanne Hills provided an email requesting rezoning of 3342 Coast Road, to Natural Open Space Zone (dated 30 September 2024).

[4] Letter from Alec Duncan dated 19 July 2024
[5] Letter from Michelle Grinlinton-Hancock dated 1 July 2024
[6] Letter from Barry MacDonnell dated 1 October 2024
[7] Letter from Karl Luxon dated 22 August 2024 and attached memo from Planz Consultants dated 23 August 2024
[8] Letter from Steve Tuck dated 16 August 2024

j. Tauranga Bay Holdings provided a letter responding to the Panel's request for a proposed Outline Development Plan framework[9], and a letter reviewing the WCRC onsite wastewater disposal report by BWT dated 20 December 2024. Copies of a presentation made to the TTPP Planning Committee in May 2021, a contaminated land map dated January 2018, and further information relating to the potential yield of areas proposed to be rezoned were also provided.

k. Te Tumu Paeroa and Poutini Ngāi Tahu provided an agreed statement dated 14 August 2024 addressing RURZ-P17 and GRUZ-R4.

1.8. Right of Reply

29. Ms Easton provided a written right of reply (dated 30 September 2024) that addressed the Panel's questions on various matters. She proposed amendments to several provisions, including both track changes and a clean copy of the amended provisions.

30. Ms Easton provided a written right of reply (dated 12 February 2025) addressing the matters raised by the Panel with rezoning at Moana and Cape Foulwind.

31. A joint right of reply was also received in response to the submission from SFF (dated 17 October 2024).

1.9. Procedural Steps and Issues

32. The Panel notes that Commissioner Chrystal took no part in recommendations relating to Cape Foulwind Stape 1, O'Connor Crossroads Limited or Scenic Hotel Group and Commissioner Becker took no part in in the recommendations on Highly Productive Land. No procedural issues arose from this hearing.

1.10. Site Visits

33. As part of this hearing, we undertook several site visits as follows:

a. The Cape Foulwind sites

b. 261 Utopia Road,

c. Sergeants Hill

d. Nine Mile Road

e. Buller Road

f. Alma Road Terrace

g. Grey Valley-Atarua

h. Waipuna

i. CMP Kokiri Site, Arnold Valley Road

j. 11 Lake Brunner Road -Kempl Block

k. SH67A between Bulls Road and Bradshaw Road,

l. 28 Tuis Way

[9] Letter from Claire McKeever dated 13 September 2024

PART B - STATUTORY REQUIREMENTS AND DOCUMENTS

34. Rural Zones are in Part 3 – Area-specific Matters – Te Wāhanga 3 – Ngā Take a Ia Rohe. The Rural Zones include the General Rural, Rural Lifestyle and Settlement Zone. The section contains one objective and policies chapter that applies across the zones, and three rules chapters, with the rules that are specific to each zone. The Settlement Zone provisions have been addressed in the Settlement Zone Recommendations Report.

35. The Section 32 Report outlined the relevant statutory considerations applicable to the Rural Zones, and the relationships between the sections of the RMA and higher order documents.

36. The section 42A Report highlighted the relevant sections of the RMA, and higher order statutory documents and relevant documents. The Panel notes in particular the following:

    a. National Policy Statement for Highly Productive Land (NPS HPL)

    b. National Planning Standards

37. It is also noted there are three iwi management plans on the West Coast – the Te Rūnanga o Makaawhio Pounamu Management Plan, the Ngāti Waewae Pounamu Management Plan and the Lake Māhinapua Management Plan.

38. There is also a Mana Whakahono a Rohe agreement between West Coast Regional Council and Poutini Ngāi Tahu which must be implemented

39. The purpose of Strategic Direction in Part 2, in combination with objectives within the relevant topic sections and chapters, is to ensure that they provide a coherent overarching strategic direction and state the outcomes intended for the West Coast districts. With these strategic directions and objectives and policies in place, the articulation of location-specific and activity-specific objectives and policies is enabled in other chapters of the pTTPP, which are consistent with the strategic provisions. Relevant to our recommendations in this Report are the Rural Production and Climate Change and Resilience strategic provisions.

40. Clause 4 of the First Schedule, RMA, sets out the requirements to be inserted prior to notification of proposed district plans.

41. Clause 10 of the First Schedule, RMA, states that it is not necessary to provide decisions on individual submissions.

42. The National Planning Standards mandatory direction requires that the zones must be included in the order in which they are set out in Table 4. The Zone Framework Standard specifies that the Council can only use zones provided for in the standard. The District Spatial Layers Standard sets out the spatial layers that can be used. The Definitions Standard sets out standard definitions that must be applied if used in the District Plan. Of relevance to the Rural sections are the definitions for '*intensive indoor primary production'* and '*rural industry'*. We are satisfied that the Plan structure is consistent with this national direction.

PART C – SUBMISSIONS, EVIDENCE, EVALUATION AND RECOMMENDATIONS

2. DEFINITIONS

Submissions and Further Submissions

43. Forty-five submission points and thirty-four further submission points relating to definitions are summarised in a Table on pages 14-24 of the s42A Report. Seven submissions sought the inclusion of the NPS definition of '*primary production'*, six submissions related to the definition of '*agricultural, pastoral and horticultural activities'*, and twenty-one submissions related to the definition of '*intensive indoor primary production'*. The remainder of the submissions related to various other definitions.

44. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report.

Section 42A Report

45. Ms Easton acknowledged Federated Farmers' support for the notified '*rural industry'* definition.

46. Ms Easton supported the submission point from NZAAA (S166.006) seeking a new definition of '*Agricultural aviation activity'* to be included in the Plan, albeit that she proposed a slight amendment to the proposed wording, which references '*Primary production'*. Ms Easton noted that the definition of '*primary production*' includes mineral extraction, and she considers that the focus of the agricultural aviation activity needs to relate to rural production activities.

47. Ms Easton did not support the NZAAA submission point (S166.011) seeking a new definition of *Rural Airstrip,* as she was not convinced there was a significant need for this definition.

48. Ms Easton did not support the NZAAA (S166.012) submission point seeking a new definition *of Helicopter Landing Area* as she considered it would widen the definition to include a heliport or potentially a rural industry, as it includes buildings and helicopter servicing. She noted this is not what is intended by the current Plan provisions.

49. Ms Easton supported the NZAAA submission point (S166.013) seeking a new definition of Rural Production, stating "*While the primary definition around farming type activities in relation to the rules is Agricultural, Pastoral and Horticultural activities, in terms of policies there is a need for a term that includes forestry activities which would apply where the NESPF does not permit these.*"

50. Seven submission points from BRM Developments Ltd (S603.004), Birchfield Ross Mining Ltd (S604.004), Birchfield Coal Mines Ltd (S601.0049, Phoenix Minerals Ltd (S606.004), Whyte Gold Ltd (S607.004), and Tiga Minerals and Metals Ltd (S493.004) sought that the National Planning Standards (NPS) definition of *Primary Production* be included in the Plan. Ms Easton supported these submissions, noting that the definition would be helpful for interpretation as the term is used in the Plan policies. However, she did not include a definition for *Primary Production* within her s42A Report, Appendix 1. We discuss this issue further in our Recommendations section.

51. In response to a submission point (S486.076) from HortNZ seeking a new definition for *Artificial Crop Protection Structures,* Ms Easton considered that definition unnecessary as she did not support the proposed rule, and *Artificial Crop Protection Structures* are permitted under the Minor Structures provisions.

52. Ms Easton did not support a submission point (S486.077) from HortNZ seeking a new definition for *Greenhouses*, noting that she did not see a compelling case for specific provisions for *Greenhouses*, and these structures would be permitted subject to compliance with standards for Agricultural, Pastoral and Horticultural Activities.

53. Ms Easton did not support a submission point (S489.001) from Rural Contractors New Zealand Incorporated seeking a new definition for a *Rural Contractor Depot*, as she considers this activity falls within the definition of rural industry.

54. Ms Easton did not support a submission point (S524.026) from Federated Farmers seeking that a new definition of *Quarrying* be included within the Plan, as she considered the wide range of provisions and definitions for mineral extraction addressed quarrying.

55. Ms Easton supported in part a submission point (S524.008) from Federated Farmers seeking to amend the definition of a *Farm Quarry* to remove the requirement that this occurs on the same site, acknowledging that a farm may consist of multiple allotments. Ms Easton, therefore, proposed an amendment to the definition to refer to the activity occurring on the same "*property*" rather than the same "*site*."

Agricultural, Pastoral and Horticultural Activities

56. Ms Easton acknowledged NZAAA's support of rural airstrips and helicopter landing areas being included in this definition. She supported their submission (S166.008) seeking a change to the wording of matter k. in the notified definition, to replace "*rural production*" with "*agricultural aviation activities*".

57. HortNZ (S486.001) and Federated Farmers (S524.003) sought to amend the title to this definition to "*Rural Production Activities*", and to delete from clause a. the exclusion of intensive indoor primary production from this definition (i.e. to include intensive indoor primary production). Ms Easton did not support this submission point to amend the title, noting that she had proposed a new definition for Rural Production to be used in policies, which encompasses a broader range of activities than the Agricultural, Pastoral, and Horticultural Activities definition, used in the chapter rules. Ms Easton also considered that intensive indoor primary production has effects that need to be specifically managed, beyond what can be managed within a Permitted Activity status. Therefore, these activities should not be included in the definition, and the exclusion in clause a. should remain.

58. Forest and Bird (S560.410) sought that clause *j. farm quarries* be deleted from the definition, or alternatively, the provisions in GRUZ be amended to exclude *farm quarries* to ensure SNAs are adequately protected. Ms Easton did not support this definition, on the basis that the provisions for SNAs and vegetation clearance are found in the Ecosystems and Biodiversity chapter, not the zone rules. Ms Easton noted she has supported an amendment to the Chapter Overview to emphasise this. Ms Easton pointed out that *farm quarries* are a normal part of farming operations, and there is no need to exclude them from this definition.

Intensive Indoor Primary Production

59. BDC (S538.012) sought that the definition be amended to include the words "*For the avoidance of doubt, Herd Homes and Wintering Barns are not considered Intensive Indoor Primary Production".* GDC (S608.007) sought an explanatory note to be added to the definition with similar wording, and several other submitters sought identical relief. Ms Easton supported these submissions but noted that, as the definition is a National Planning Standard definition,

it cannot be amended, so an advice note would be an appropriate way to manage this. She included wording for an Advice Note.

60. Frida Inta (S553.021) sought that the definition be amended to state that it includes intensive indoor and outdoor primary production. Ms Easton did not support this submission point, noting that, as a National Planning Standard definition, it cannot be amended.

Recommended changes

61. Ms Easton recommended the following amendments to the definitions:

> ***Agricultural aviation activities:*** *means the intermittent operation of an aircraft from a rural airstrip or helicopter landing area for farming activities, plantation forestry production, and conservation activities for biosecurity, or biodiversity purposes, including stock management, and the application of fertiliser, agrichemicals, or vertebrate toxic agents (VTA's). For clarity, aircraft includes fixed-wing aeroplanes, helicopters, and unmanned aerial vehicles (UAVs).*
>
> ***Agricultural, Pastoral and Horticultural Activities*** *means the use of land or buildings where the primary purpose is to produce livestock, crops and other agricultural produce that relies on the productive capacity of land, and includes:*
>
> *a. agriculture, pastoral/livestock farming, dairying and horticulture except for intensive*
> *b. indoor primary production;*
> *c. beekeeping;*
> *d. sphagnum moss collection;*
> *e. storage of products and initial processing of horticultural and agricultural products produced on that site;*
> *f. the storage, treatment and disposal of solid and liquid animal waste;*
> *g. wood lots;*
> *h. stock sale yards;*
> *i. rural research;*
> *j. rural produce retail (where the rural produce is grown or produced on site, and*
> *k. products manufactured from it are offered for sale);*
> *l. farm quarries;*
> *m. intermittent use of rural airstrips and landing areas by aircraft undertaking activities for*
> *n. ~~rural production purposes~~ agricultural aviation activities; and*
> *o. ancillary structures/accessory buildings.*
>
> ***Farm Quarry*** *means an open pit or excavation from which quantities of soil, stone, gravel or mineral ~~is~~ **are** extracted for farming activities on the same ~~site~~ property.*
>
> ***Intensive Indoor Primary Production*** *means primary production activities that principally occur within buildings and involve growing fungi or keeping or rearing livestock (excluding calf-rearing for a specified time period) or poultry.*
>
> ***Advice Note:*** *For the avoidance of doubt, intensive indoor primary production does not include wintering barns or herd homes where the primary production activity principally occurs in an outdoor environment.*

Rural Production *means agricultural, pastoral, horticultural, or forestry activities.*

Hearing and Submitter Evidence

62. NZAAA supported the revised definitions of *Agricultural aviation activities, Agricultural, Pastoral and Horticultural activities,* and *Rural Production* in the s.42A report and seeks that these are accepted.

63. NZAAA continued to seek a new definition for *Rural Airstrip*, noting that it would provide clarity between regularly used airstrips for general aviation and those used intermittently for agricultural aviation activities. NZAAA acknowledged the concerns raised in the s42A Report regarding the proposed definition of Helicopter Landing Area and sought a definition that provides clarity to prevent future ambiguity. They noted that the inclusion of these additional definitions would provide clarity for the proposed policies.

64. In relation to the *Farm Quarry* and Quarrying definitions, Federated Farmers supported the reporting officer's recommendation to replace the words '*on the same site'* with the phrase '*on the same property'*. Federated Farmers continued to request a new definition of quarrying, maintaining that it is sufficiently different from other forms of mineral extraction to justify its own definition.

65. Federated Farmers also suggested that a definition of *Stock Sale Yards* may be necessary to differentiate these from stock yards used in normal farming operations.

66. HortNZ accepted the officer's recommendation to retain the exclusion of intensive primary production from the *Agricultural, Pastoral and Horticultural Activities* definition, but sought an amendment to include *Greenhouses* in the list of activities covered by the definition of *Agricultural, Pastoral and Horticultural Activities* to provide specificity and clarity.

67. HortNZ continued to seek a new definition for an *Artificial Crop Protection Structure* and an additional definition of a *Crop Support Structure*.

68. Frida Inta, representing herself and Buller Conservation Group, sought changes to the *Agricultural, Pastoral and Horticultural Activities* definition because it did not exclude small cottage industries such as selling surplus home garden produce or eggs, etc. She also noted that the Plan does not include a definition of *Woodlot*, although the term is used in the Plan rules. Neither Ms Inta nor the Buller Conservation Group had made submissions on these definitions.

69. ANZCO Kokiri's planner sought the addition of a new definition for *Meat Processing Facility/Meat Processing* as follows:

> *means the use of a site for the yarding and slaughtering of animals; the associated processing of meat including fish processing, stock finishing, by-product and co-product processing; rendering; fellmongery, tanning, casing and pelt processing; the associated chilling, freezing, packaging and storage of meat and associated products; the treatment and disposal of effluent from the above processes; and ancillary activities.*

Reporting Officer Reply Evidence

70. In relation to the definition of a *Farm Quarry*, Ms Easton considered that referring to '*farm property'* rather than just '*property*' is an appropriate amendment, and that there is scope to make this change under the Federated Farmers submission.

> ***Farm Quarry*** *means an open pit or excavation from which quantities of soil, stone, gravel or mineral are extracted for farming activities on the same ~~site~~ farm property.*

71. In response to a Panel question on the regulatory framework for *Woodlots*, Ms Easton noted that a definition had been recommended under the Sites and Areas of Significance to Māori topic as follows:

> *Woodlot means a forest of up to 1ha of continuous forest cover of deliberately established forest species that has been planted and has or will be harvested or replanted. It does not include forest species in urban areas, nurseries and seed orchards, trees grown for fruit or nuts, long-term ecological restoration planting of forest species or willows and poplars, or space planted for soil conservation purposes.*

72. Ms Easton noted that the NES-CF does not regulate *Woodlots* established for personal, not commercial purposes and considered it prudent to amend the proposed definition to include forests greater than 1ha that the NES does not regulate. She recommends the following changes:

> *Woodlot means a forest of ~~up to 1ha of continuous forest cover~~ deliberately established forest species that has been planted and has or will be harvested or replanted ~~and is not regulated by the NES – CF due to its size or non-commercial nature.~~ It does not include forest species in urban areas, nurseries and seed orchards, trees grown for fruit or nuts, long-term ecological restoration planting of forest species or willows and poplars, or space planted for soil conservation purposes.*

73. In response to the Panel asking whether the NPSHPL definition of Land Based Primary Production could be used rather than the proposed *Rural Production* definition, Ms Easton replied that she did not support using the NPSHPL definition, as Primary Production is an NPS definition. Ms Easton also noted that there are technical problems with using definitions that include words from another definition for the automatic definition pop-ups in the e-plan. Ms Easton also stated that, as no submitters had sought to use this definition, there may not be scope for this change.

74. Ms Easton confirmed her support for the HortNZ submission point, requesting that *Greenhouses* and *Artificial Crop Protection Structures* be listed as sub clauses l. and m. respectively in the definition of Agricultural, Pastoral or Horticultural Activities.

75. In response to a Panel question about Highly Productive Land, Ms Easton confirmed the submission points from HortNZ and Federated Farmers both sought to add a new definition of *Highly Productive Land*, providing scope for this change. However, Ms Easton did not include a new definition of *Highly Productive Land* in her Appendix 1 of recommended changes to the Plan.

Hearing Panel's Evaluation

76. Concerning the definition of ***Agricultural Aviation Activity***, the Panel agrees with Ms Easton and NZAAA (S166.006) that a new definition of *Agricultural Aviation Activity* should be included in the Plan. We prefer Ms Easton's version, as it is more in keeping with the zone chapter. Ms Easton noted that the definition of *Primary Production* includes mineral extraction, and she considers that the focus of the *Agricultural Aviation Activity* needs to relate to *rural production activities*, as she prefers. We agree.

77. We also note that, arising from the recommendation to include this definition, further changes result, namely the deletion from clause k. of the notified definition of Agricultural, Pastoral

and Horticultural Activities, the words '*rural production purposes'* to be replaced by *'agricultural aviation activities'.*

78. The Panel agrees with Ms Easton's reasons not to include the definitions of a *Rural Airstrip* or a *Helicopter Landing Area*. The Panel notes that, other than being included within the definition of both *Agricultural aviation activities and Agricultural, Pastoral and Horticultural Activities,* these two terms are not used elsewhere within the Plan, so defining them is unnecessary.

79. Regarding the definition of **Rural Production**, the Panel notes that Ms Easton supported including a definition in the Plan, mainly because a clear definition would aid interpretation of how the term is used in the Plan's policies. Ms Easton also agreed with NZAA's submission (S166.013) that "*While the primary definition around farming type activities in relation to the rules is Agricultural, Pastoral and Horticultural activities, in terms of policies, there is a need for a term that includes forestry activities which would apply where the NESPF does not permit these."* We concur with Ms Easton that this submission offers an additional reason—namely, the reference to forestry—to include such a definition. We disagree with Ms Easton that '*Rural production*' is the right term to use, given that the NPSHPL contains a definition that achieves the same result of incorporating forestry, and we must give effect to the higher order instrument. Our preference is therefore to use the term '*Land based primary production'* from the NPSHPL, which we consider is supported by the HortNZ submission seeking implementation of the NPSHPL. We note that '*Rural Production'* has been used as the topic heading in the Strategic Directions Chapter and are satisfied with that heading remaining.

80. Ms Easton supported submissions from (S601.004) Birchfield Coal Mines Ltd, (S603.004) BRM Developments Limited, (S604.004) Birchfield Ross Mining Limited, (S606.004) Phoenix Minerals Limited, (S607.004) Whyte Gold Limited, (S608.492) GDC, and (S493.004) Tiga Minerals and Metals Limited, seeking the inclusion of the National Planning Standards definition of *Primary Production* in the Plan. , noting that the definition would be helpful for interpretation as the term is used in the Plan policies. However, she did not include a definition for *Primary Production* within her s42A Report, Appendix 1. We note that the NPS provides that where terms defined in the Definitions List of the NPS are used in a policy statement or plan, and the term is used in the same context as the definition, local authorities must use the definition as defined in the Definitions List. To avoid confusion caused by the absence of a definition and for the reasons Ms Easton provides, we recommend the inclusion of the NPS definition of *Primary Production* within the plan.

81. Regarding the notified definition of **Agricultural, Pastoral and Horticultural Activities** we agree with Ms Easton's recommendations for the reasons she provides, to reject the submissions from both HortNZ (S486.001) and Federated Farmers (S524.003) that sought to amend the title to this notified definition to include the words "*Rural Production Activities*", and to delete the exclusion of intensive indoor primary production from this definition (i.e. to include intensive indoor primary production).

82. The Panel agree that an amendment to the title of the definition is not required and support retaining the definition. The Panel also agrees with Ms Easton's reasons for not including intensive indoor primary production within this definition. We note that when presenting evidence to the hearing, HortNZ accepted Ms Easton's recommendation to retain the exclusion of intensive primary production from the Agricultural, Pastoral and Horticultural activities definition, as it then was.

83. Concerning the inclusion of a definition for **Greenhouse and Artificial Crop Protection Structures,** the Panel notes that HortNZ, in their submission, (S486.077), originally sought the addition of a new definition for a Greenhouse and specific rules attached to this. However, in their supplementary statement of 31 July, they proposed an alternative to include Greenhouse within the definition of "Agricultural, Pastoral or Horticultural Activities". Ms Easton supported this approach because she considered that both Greenhouses and Artificial Crop Protection Structures implicitly fall within the notified definition of "Agricultural, Pastoral or Horticultural Activities". However, in the interests of clarity, she supported the addition of both types of structures to that definition. The Panel agrees with Ms Easton's reasoning and recommendation to add both types of structure to the definition of Agricultural, Pastoral or Horticultural Activities.

84. While on the point of these structures, the Panel notes Ms Easton considered that an amendment to Rule RURZ–R1 to specifically clarify that the rule applies to structures as well as buildings would be useful, as the definition of "*Agricultural, Pastoral or Horticultural Activities"* specifically includes "*ancillary structures/accessory buildings*". She considered that this could be regarded as either a consequential amendment or a minor amendment. She considered that this rule is the most appropriate for managing these structures, rather than the Minor Structures rule or another bespoke rule. We agree with her reasoning and her recommendation to amend RURZ-R1 by adding the word '*structures'* to the rule, clarifying that the rule applies to buildings and structures.

85. Concerning the submission from Rural Contractors New Zealand Incorporated (S489.001) seeking a new definition for *Rural Contractor Depot*, as Ms Easton considered this activity falls within the definition of a rural industry and that other plan provisions apply to that activity. The Panel agrees with her reasoning and agrees with her recommendation not to include a definition of a Rural Contractors Depot. In any event, the Panel is concerned about the ramifications of including the definition promoted by the Rural Contractors due to its extensive reach.

86. The Panel agrees with Ms Easton that a *Quarry* is defined elsewhere in the Panel and a further definition of a *Quarry* for this chapter is not required as sought by Federated Farmers (S524.026). However, the Panel agrees with her recommendation to amend the definition of a *Farm Quarry*, as the amendment recognises that a farm may comprise more than one site. Using the descriptor '*farm property'* provides recognition that a farm may operate over several sites. We recommend one clause 16 amendment to delete the word '*is'* and replace it with '*are'*.

87. Concerning *farm quarries*, the Panel agrees with Ms Easton that such quarries are a regular part of farming operations, and there is no need to exclude them from this definition. We agree with Ms Easton that the Forest and Bird issue of concern, namely that SNAs are protected from farm quarries, is addressed, on the basis that the provisions for safeguarding SNAs and vegetation clearance are found in the Ecosystems and Biodiversity chapter, not the zone rules of this chapter.

88. Regarding the definition of *Intensive Indoor Primary Production*, the Panel agrees with Ms Easton, for the reasons she outlines, that the only suitable way to address BDCs' submission point (S538.012) is to add an advice note to the rule. We concur with her proposed wording for that advice note. We have considered the submission by BCG (S552.224) on including a definition of Factory Farming and consider it is not necessary.

89. Regarding the definition of '*Meat works'* sought by ANZCO Kokiri's planner, we note Ms Easton makes no recommendation on that definition, and the definition is not included in Ms Easton's recommendations for Plan provisions in her Appendix 1. We note that the submitter sought rezoning of the meat works site, which Ms Easton supported. We also recommend rezoning, so to that extent, the submitters' needs are met. The words *Meat works* are not used extensively in the Plan, so we see no need to define them.

90. Regarding the *Woodlot* definition, the Panel have given consideration to the definitions before us. We do not consider the definition proposed by Ms Easton which eliminates the 1ha requirement is appropriate as it would mean that there is no distinction between Woodlots and Plantation Forestry which is defined in the NES-CF. We consider that the 1ha distinction is important and as a belts and braces approach, we consider adding in '*and is not regulated by the NES–CF due to its size or non-commercial nature*', which ensures that Woodlots are separately regulated in the Plan. We also consider that the definition of Plantation Forestry in the NES-CF should be included in the Plan as requested in submissions.[10]

91. The Panel also note that the NES-CF was amended after notification of the Plan and now differentiates between Plantation Forestry and Commercial Forestry. The Panel consider that the definition of Commercial Forestry is required to be included in the Plan in order to understand the definition of Plantation Forestry as requested by submitters. The definition of Commercial Foresty relies on a definition of exotic continuous-cover forestry that the Panel also consider is required in the Plan. The Panel notes that these definitions have implications for other chapters which utilise them.

92. Regarding the submission to include a definition of *Highly Productive Land*, the Panel consider a definition is required in the Plan and recommends the sentiments of the NPS-HPL definition are adopted in the Plan as set out below.

93. The Panel has included a definition of *Specified Māori Land*, which arises from discussion of RURZ-P5 and implementation of the NPSHPL, as well as the NPSIB.

Hearing Panel's Recommendation

94. We agree with the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends the following amendments be made to the **Definitions**:

Term	Definition
Agricultural aviation activities	**means the intermittent operation of an aircraft from a rural airstrip or helicopter landing area for rural production activities, plantation forestry production, and conservation activities for biosecurity, or biodiversity purposes, including stock management, and the application of fertiliser, agrichemicals, or vertebrate toxic agents (VTA's). For clarity, aircraft includes fixed-wing aeroplanes, helicopters, and unmanned aerial vehicles (UAVs).** [11]

[10] Poutini Ngāi Tahu (S620.026), Buller Conservation Group (S552.026)
[11] New Zealand Agricultural Aviation Association (S166.006)

Agricultural, Pastoral and Horticultural Activities	means the use of land or buildings where the primary purpose is to produce livestock, crops and other agricultural produce that relies on the productive capacity of land, and includes: a. agriculture, pastoral/livestock farming, dairying and horticulture except for intensive indoor primary production; b. beekeeping; c. sphagnum moss collection; d. storage of products and initial processing of horticultural and agricultural products produced on that site; e. the storage, treatment and disposal of solid and liquid animal waste; f. wood lots; g. stock sale yards; h. rural research; i. rural produce retail (where the rural produce is grown or produced on site, and products manufactured from it are offered for sale); j. farm quarries; k. intermittent use of rural airstrips and landing areas by aircraft undertaking activities for ~~rural production purposes~~ **agricultural aviation activities**;[12] ~~and~~ **l. greenhouses** **m. artificial crop protection structures; and**[13] n. ancillary structures/accessory buildings.
Commercial Forestry	**means exotic continuous-cover forestry or plantation forestry.**[14]
Exotic continuous-cover forestry	**means** **(a) a forest that is deliberately established for commercial purposes, being at least 1 ha of continuous forest cover of exotic forest species that has been planted and—** **(i) will not be harvested or replanted; or** **(ii) is intended to be used for low-intensity harvesting or replanted; and** **(b) includes all associated forestry infrastructure; but** **(c) does not include—** **(i) a shelter belt of forest species, where the tree crown cover has, or is likely to have, an average width of less than 30m; or**

[12] New Zealand Agricultural Aviation Association (S166.038, S166.039)
[13] HortNZ (S486.077),
[14] Consequential amendment stemming from Poutini Ngāi Tahu (S620.026)

	(ii) forest species in urban areas; or **(iii) nurseries and seed orchards; or** **(iv) trees grown for fruit or nuts; or** **(v) long-term ecological restoration planting of indigenous forest species; or** **(vi) willows and poplars space planted for soil conservation purposes.**[15]
Farm quarry	means an open pit or excavation from which quantities of soil, stone, gravel or mineral ~~is~~ **are**[16] extracted for farming activities on the same ~~site~~ **farm property.**[17]
Intensive Indoor Primary Production	Means primary production activities that principally occur within buildings and involve growing fungi, or keeping or rearing livestock (excluding calf-rearing for a specified time period) or poultry. **Advice Note: For the avoidance of doubt intensive indoor primary production does not include wintering barns or herd homes where the primary production activity principally occurs in an outdoor environment.**[18]
Primary Production	**Means:** **a. any aquaculture, agricultural, pastoral, horticultural, mining, quarrying or forestry activities; and** **b. includes initial processing, as an ancillary activity, of commodities that result from the listed activities in a);** **c. includes any land and buildings used for the production of the commodities from a) and used for the initial processing of the commodities in b); but** **d. excludes further processing of those commodities into a different product.**[19]
Land Based Primary Production	**means production from agricultural, pastoral, horticultural, or forestry activities that is reliant on the soil resource of the land.**[20]
Plantation Forestry	**means a forest deliberately established for commercial purposes, being—** **a. at least 1 ha of continuous forest cover of forest species that has been planted and has or will be harvested or replanted; and** **b. includes all associated forestry infrastructure; but**

[15] Consequential amendment stemming from Poutini Ngāi Tahu (S620.026)
[16] Clause 16(2) of the RMA
[17] Federated Farmers (S524.008)
[18] Buller District Council (S538.012), Grey District Council (S608.007), Jared Avery (S508.001), Kyle Avery (509.001), Avery Bros (S510.001), Bradshaw Farms (S511.001), Paul Avery (S512.001), Brett Avery (S513.001), Leonie Avery (S507.001), Geof Volkman (S563.001), Catherine Smart-Simpson (S564.004), Koiterangi Lime Co Ltd (S577.001), Chris J Coll Surveying Limited (S566.307), William McLaughlin (S567.037), Laura Coll McLaughlin (S574.307), Chris + Jan Coll (S558.307), Avery Bros (S609.001), Karamea Lime Company (S614.001), Peter Langford (S615.001), Ngai Tahu (S620.033)
[19] Birchfield Coal Mines Ltd (S601.004), BRM Developments Limited (S603.004), Birchfield Ross Mining Limited (S604.004), Phoenix Minerals Limited (S606.004), Whyte Gold Limited (S607.004), TiGa Minerals and Metals Limited (S493.004)
[20] New Zealand Agricultural Aviation Association (S166.013)

	c. does not include— **(i) a shelter belt of forest species, where the tree crown cover has, or is likely to have, an average width of less than 30m; or** **(ii) forest species in urban areas; or** **(iii) nurseries and seed orchards; or** **(iv) trees grown for fruit or nuts; or** **(v) long-term ecological restoration planting of forest species; or** **(vi) willows and poplars space planted for soil conservation purposes.**[21]
Specified Māori land	**means:** **(a) Māori customary land and Māori freehold land (as defined in Te Ture Whenua Māori Act 1993):** **(b) land set apart as a Māori reservation under Part 17 of Te Ture Whenua Māori Act 1993 or its predecessor, the Māori Affairs Act 1953:** **(c) land held by or on behalf of an iwi or a hapū if the land was transferred from the Crown, a Crown body, or a local authority with the intention of returning the land to the holders of mana whenua over the land:** **(d) land vested in the Māori Trustee that is constituted as a Māori reserve by or under the Māori Reserved Land Act 1955, and remains subject to that Act:** **and in the context of implementing the National Policy Statement on Indigenous Biodiversity, also means:** **(e) Treaty settlement land, being land held by a post-settlement governance entity (as defined in the Urban Development Act 2020) where the land was transferred or vested and held (including land held in the name of a person such as a tipuna of the claimant group, rather than the entity itself):** **(i) as part of redress for the settlement of Treaty of Waitangi claims; or** **(ii) by the exercise of rights under a Treaty settlement Act or Treaty settlement deed.**[22]
Woodlot	**means a forest of up to 1ha of continuous forest cover of deliberately established forest species that has been planted and has or will be harvested or replanted and is not regulated by the NES – CF due to its size or non-commercial nature. It does not include forest species in urban areas, nurseries and seed orchards, trees grown for fruit or nuts, long term ecological restoration**

[21] Poutini Ngāi Tahu (S620.026), Buller Conservation Group (S552.026)
[22] Consequential amendment as a result of HortNZ (486.068) and their overarching submission

	planting of forest species or willows and poplars space planted for soil conservation purposes.[23]

3. RURAL ZONES

3.1. Whole Chapter

Submissions and Further Submissions

95. Six submission points and one further submission point were received on the chapter as a whole.

96. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report.

Section 42A Report

97. Ms Easton acknowledges support from several submitters for the approach of having three zones, the chapter generally, and the use of NES-PF to manage exotic forestry.

98. Ms Easton did not support GDC's submission point (S608.106) seeking references to "*Site or Area of Significance to Māori*" be deleted, noting that cross-referencing in the Plan is important for clarity.

99. Ms Easton supported in part the submission point by HortNZ (S486.086) seeking that the provisions manage reverse sensitivity pressures on horticultural growers. Ms Easton noted that the Plan was drafted with consideration given to reverse sensitivity and that this was a key matter that TTPP sought to address. She did not propose any amendments as a result of this submission point. HortNZ also sought that the provisions recognise highly productive land in line with the National Policy Statement Highly Productive Land.

Hearing and Submitter Evidence

100. There was no specific hearing or submitter evidence on the topic as a whole.

Reporting Officer Reply Evidence

101. There was no specific consideration of these general matters in the reply evidence.

Hearing Panel's Evaluation

102. The Panel agrees, for the reasons put forward by Ms Easton, that no changes to the Plan provisions are required as a consequence of the matters raised in the submissions and further submissions. We note however that we have addressed a component of the HortNZ submission in our discussion of Highly Productive Land later and have recommended amendments.

Hearing Panel Recommendation

103. No changes to the provisions are recommended in relation to the general matters raised in submissions and further submissions across the GRUZ.

[23] Poutini Ngāi Tahu (S620.026)

3.2. General Rural Overview-RURZ and GRUZ Overviews

Submissions and Further Submissions

104. Seventeen submission points and seven further submission points relating to the zone Overview were received and are summarised in a table on pages 27-30 of the s42A report and pages 2-4 of the s42A addendum report.

105. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and addendum report.

Section 42A Report

106. Ms Easton acknowledged support for the Overview from several submitters.

107. Forest and Bird (S560.370) sought that a section "*Other relevant Te Tai o Poutini Plan provisions*" be included, listing all relevant chapters, that it be made clear that the ECO chapter deals with clear vegetation clearance, and that cross references be included. Ms Easton supported listing other relevant Plan provisions, consistent with amendments made to other plan chapters, but considered additional cross-referencing within rules to be unnecessary. She recommended the following amendments:

> ~~*Overlay Chapters - the Overlay Chapters have provisions in relation to Historic Heritage; Notable Trees; Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscapes; Natural Character and the Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply*~~
>
> ***Sites and Areas of Significance to Māori**, Historic Heritage and Notable Tree Chapters - there may be sites and areas of significance to Māori, historic heritage or notable trees identified on individual sites within the General Rural Zone. Specific information on the provisions that apply to these can be found in the Sites and Areas of Significance to Māori, Historic Heritage, and Notable Trees Chapters.*
>
> ***Natural Hazards** - natural hazards are widespread on the coast and in some locations natural hazard overlays may affect areas in the General Rural Zone. Information on natural hazard overlays and provisions can be found in the Natural Hazards chapter.*
>
> ***Natural Character and Margins of Waterbodies** -in some locations areas of General Rural Zone may extend into the riparian margins of waterbodies. The Natural Character and Margins of Waterbodies Chapter contains provisions on how these areas must be managed.*
>
> ***Ecosystems and Biodiversity** – Where indigenous vegetation clearance is proposed within a Rural Zone, the provisions of the Ecosystems and Biodiversity chapter apply.*

108. NZAAA (S166.028) sought a note or amendment to ensure that *Agricultural aviation activities* are part of forestry production activities. Ms Easton supported the submission point in part, recommending a new definition and amendments to the *Agricultural, Pastoral and Horticultural Activities* definition to address this issue. No change to the overview was recommended.

109. Ms Easton did not support the Foodstuffs submission point (S464.034), seeking additional wording to the Overview, and noted that settlements include existing commercial activities, such as supermarkets. Ms Easton stated that paragraph 4 identifies that commercial activity can be in settlements, and that there are no supermarkets in the rural zones.

110. Ms Easton supported a submission point (S489.003) from Rural Contractors New Zealand Incorporated ("RCNZ") seeking an amendment to paragraph 6 to include the words "*including through enabling support industries and services*". Ms Easton did not support a similar change to the seventh paragraph of the overview section as she considered it unnecessarily repetitive.

111. Ms Easton did not support the Celine Stokowski Anthony Thrupp submission point (S522.007), seeking to delete text referring to the mineral extraction strategic direction. Ms Easton noted that consequential changes to the Overview resulting from decisions affecting the strategic direction would be made at the time.

112. Buller Conservation Group's submission (S552.172) sought that the third paragraph of the Overview be amended to refer to proximity to resource extraction sites as a driver for some settlements becoming more like commuter areas. Ms Easton disagreed with this assessment and did not support the submission point.

113. Ms Easton did not support Buller Conservation Group's submission point (S552.172), seeking a cap on dairy and other intense rural production, noting that many of the effects of intensive rural production are managed through regional plans, and that the TTPP manages land use effects of intensive rural production by requiring a resource consent. (Note – the s.42A report addresses this submission point in the overview section, but the original submission indicates that this submission point relates to the chapter as a whole).

114. Ms Easton supported Federated Farmers' submission point (S524.104), seeking a minor error correction to the Overview text. The submission also sought an amendment to note that since on-farm accommodation for workers is often located near other dwellings, separation from neighbours is not guaranteed. Ms Easton did not support this part of the submission, noting that the Overview provides a general statement about the character of rural areas, and that dwellings are generally separated by much greater distances than in urban environments.

115. Manawa Energy (S438.136) seek amendments to the Rural Zones Objectives and Policies Overview, identifying the Connections and Resilience strategic directions around regionally significant infrastructure and renewable electricity generation. Ms Easton supported this submission and the proposed amendments, as the Rural Zones are a major location for these activities.

Hearing and Submitter Evidence

116. Frida Inta and the Buller Conservation Group sought minor changes to the Overview reference to strategic direction AG-Agriculture, and to insert the word '*economic*' into the last paragraph.

117. Federated Farmers agreed with Ms Easton that the statement that there are '*lower levels of development*' in rural areas is generally correct. Still, they continued to seek an amendment to delete the wording '*and greater separation distance from neighbours.'*

118. Manawa continued to seek several changes to the Overview to recognise renewable energy generation operation, which had not been addressed in the original s42A report.

S.42A Addendum Report

119. The addendum addressed several submission points that were not addressed in the original s42A report. Ms Easton supported the submission point from Manawa Energy seeking amendments to identify that regionally significant infrastructure and renewable electricity generation are located within the zone.

Reporting Officer Reply Evidence

120. There was no specific consideration of these general matters in the reply evidence.

121. The reporting officer considered changes to the Rural Zones Overview sought in the Scenic Hotel Group presentation to the hearing to be outside the scope of their original submission.

Hearing Panel's Evaluation

122. The Panel agrees, for the reasons put forward by Ms Easton, that the Federated Farmers submission to delete the word '*a* 'from the seventh line of the Overview should be accepted along with the Buller Conservation Group submission to include the word '*is*' within the first line following the heading *"Key Points to Note are*".

123. The Panel agrees, for the reasons Ms Easton provides, that the submission of RCNZ to add the words, "*including through enabling support industries and services*." to the first bullet point under the heading '*Key Points to note are'* should be accepted as the addition is a clarification.

124. The Panel agrees, for the reasons Ms Easton provides, that all of Manawa's submission points on the Overview should be accepted for inclusion within the Overview because there is a range of structures, including regionally significant infrastructure and renewable energy, associated with regionally significant infrastructure that are a feature of the rural areas. Recognition within the Overview is considered appropriate, however we have amended this to better reflect the revised strategic directions, and the following wording is recommended:

> *Regionally significant infrastructure, and renewable electricity generation activities are provided for in the strategic directions around climate change and resilience, and are necessary activities within Rural zones.*

125. The Panel agrees with Ms Easton's reasons for accepting the submission points made by Forest and Bird to amend that part of the Overview that details the relationship between this chapter and others within the Plan. We agree this change should be applied to all 3 Rural Chapters.

126. The Panel does not agree with Ms Easton's reasons to amend the General Rural Zone Overview to detail the relationship between this chapter and the Energy, Infrastructure and Transport chapters, and instead recommends including reference to these chapters under the other plans provisions section of the Overview.

127. Regarding the remaining submission points on the Overview, the Panel agrees with Ms Easton's analysis of them and her reasons for not supporting them. We agree with her that no changes or amendments to the Overview are appropriate after considering those submission points.

Hearing Panel Recommendation

128. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are

accepted or accepted in part, and recommends amendments be made to the Overviews for the **Rural Zones-Objectives and Policies** and the **General Rural Zone**.

Rural Zones – Objectives and Policies
Overview

Rural areas represent the majority of private land within the West Coast/Te Tai o Poutini. They are working environments – with farming, mining, tourism, horticulture, and forestry being undertaken alongside a number of smaller industries. They contain native bush, wetlands, renewable electricity generation sites and national grid infrastructure. Rural areas are also residential environments – characterised by ~~a~~[24] lower levels of built development and greater separation distance from neighbours.

The rural area is characterised by its open vistas and natural features that are of importance to the wider community. Components of the rural area include the coastline, waterbodies, vegetation and the absence of built-up areas.

Small settlements and townships are a significant feature within the rural areas of the West Coast/Te Tai o Poutini, with numerous coastal and inland settlements around the districts. Some of these settlements were once much larger, due to past mining and forestry activities which supported the settlements population. Some are expanding, mainly due to the increase in tourism activities or their proximity to the main centres meaning they are becoming more like commuter areas.

Settlements have a range of characteristics – coastal, historic, bush living and rural. They are often typified by the presence of historic or longstanding industrial uses, although commercial activity is only found in the largest of these places.

Because the Rural areas represent such a large part of the West Coast/Te Tai o Poutini, in addition to the RURZ - Rural Zones Objectives and Policies the Strategic Objectives also provide particularly relevant considerations for the management of these areas.

Key points to note are:

- The strategic direction for **LBPP** – **Land Based Primary Production is** to maintain productive values and maintain agricultural viability **including through enabling support industries and services.**[25]
- **Regionally significant infrastructure, and renewable electricity generation activities are provided for in the strategic directions around climate change and resilience, and are necessary activities within Rural zones**[26]
- The importance of identifying and protecting unique and important NENV - Natural Environments as well as areas where subdivision use and development can occur;
- Supporting POU - Poutini Ngāi Tahu as kaitiaki, in economic activity around tourism and visitors and in their management of Pounamu and Aotea stone resources;
- The role that the rural areas play in terms of supporting TRM – Tourism as a major economic activity on the West Coast/Te Tai o Poutini.

[24] Federated Farmers (S524.104)
[25] Rural Contractors New Zealand Inc (S489.003)
[26] Manawa Energy (S438.136)

There are three RURZ - Rural Zones on the West Coast/Te Tai o Poutini - the GRUZ - General Rural Zone, the RLZ - Rural Lifestyle Zone and the SETZ - Settlement Zone.

- The GRUZ - General Rural Zone covers much of the land on the West Coast/Te Tai o Poutini where primary production uses are the major activities. There are two Precincts within the Zone - GRUZ - PREC1 - Community Living Precinct and GRUZ - PREC5 - Highly Productive Land Precinct.
- The SETZ - Settlement Zone covers all the wide range of settlements that are outside of the four main towns throughout the West Coast/Te Tai o Poutini. Because of the range of conditions within the Settlement Zone there are three Precincts within the Zone - SETZ - PREC2 -Settlement Centre Precinct, SETZ - PREC3 Coastal Settlement Precinct, and SETZ - PREC4 - Rural Residential Precinct.
- The RLZ - Rural Lifestyle Zone is located around the edges of towns and settlements. It includes areas that were predominantly farmed in the past, but have gradually moved out of economic primary production, although they still may have rural activities occurring.

Alongside the RURZ - Rural Zone Policies there is a specific policy for each Precinct.

Note with Regard to ~~Plantation~~ Commercial Forestry[27]

There are no specific provisions as relate to ~~plantation~~ **commercial**[28] forestry within the RURZ - Rural Zone Chapters. This is because ~~plantation~~ **commercial**[29] forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial**[30] Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered.

3.3. General Rural Objectives

Submissions and Further Submissions

129. Seventy-three submission points relating to the Rural Zone objectives were received and are summarised in a Table on pages 32-39 of the s42A Report. Nineteen submission points related to the objectives as a whole, and four sought the addition of a new objective.

130. Twenty-four submission points related to **RURZ-O1**, of which twelve were in support, and sought to retain the objective as notified. The remaining twelve submission points sought amendments.

131. Nine submission points related to **RURZ-O2**, of which six were in support, and three sought amendments.

132. Six submission points related to **RURZ-O3**, of which four were in support, and two sought amendments.

133. Eight submission points related to **RURZ-O4**, of which six were in support, and two sought amendments.

[27] Clause 16(2) of the RMA
[28] Clause 16(2) of the RMA
[29] Clause 16(2) of the RMA
[30] Clause 16(2) of the RMA

134. Seven submission points related to **RURZ-O6**, of which six were in support, and one requested amendments.

135. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and the addendum report.

Section 42A Report

Objectives (General)

136. Concerning the objectives (as a group), Ms Easton acknowledged the support from the submitters that sought to retain the objectives as notified.

137. Ms Easton did not support a submission point (S419.005) from Richard Aldridge seeking that the objectives and policies be amended to reflect better that the rural zones are residential locations and that agriculture and mineral extraction are not prioritised over rural residential living. Ms Easton noted that the Rural Lifestyle and Settlement Zones are identified explicitly as zones that prioritise residential living over agriculture and primary production, and the objectives and policies reflect this.

138. HortNZ (S486.085) sought policy support for future potential horticultural development on the west coast. Ms Easton supported this submission point in part, noting that RURZ-O1 and RURZ-P5 recognise the need to protect the future potential for horticultural development.

139. Forest and Bird (S560.373) sought a new objective requiring the maintenance and protection of natural values. Frida Inta (S553.173) and Buller Conservation Group (S552.173) sought similar relief through a new objective to protect indigenous biodiversity. Ms Easton did not support these submission points on the basis that these matters are addressed in the Natural Environmental Values chapters in the district-wide provisions.

140. HortNZ (S486.062) sought a new objective to give effect to the NPS-HPL. Ms Easton supported this submission point in part, but did not recommend any changes to the provisions, noting that this matter would be more appropriately addressed after WCRC develops the required amendments to the WCRPS to give effect to the NPS-HPL, which TTPP must, in turn, give effect to.

141. GDC (S608.107) sought a new objective stating, *'The General Rural Zone is managed to ensure its availability for primary production activities and its long term protection from being compromised by reserve sensitivity*'. Ms Easton supported this submission point, noting that the notified objectives are not sufficiently clear that the General Rural Zone is being managed principally for primary production activities, and this objective addresses this omission. Ms Easton recommends the following objective wording:

> *RURZ-OX The General Rural Zone is managed to maintain its availability for primary production purposes and its long term protection from being compromised by reverse sensitivity*

RURZ-O1

142. Ms Easton acknowledged the submissions in support of this objective.

143. Ms Easton supported submission points from Federated Farmers (S524.106) and HortNZ (S486.061), seeking to amend the objective to focus on primary production activities. Ms

Easton noted that the recommended new objective addresses the relief sought in these submission points.

144. Ms Easton did not support three submission points from Peter Jefferies (S544.003), Martin and Lisa Kennedy (S545.003), Nick Pupich and Sandy Jeffries (S546.005), seeking to delete the reference to *Highly Productive Land*, noting that this reference is appropriate and recognises the clear direction in the NPSHPL clause 3.5(7).

145. Six submission points from WMS Group (HQ) LTD and WMS Land Co Ltd (S599.105), Tiga Minerals and Metals LTD (S493.090), Birchfield Coal Mines Ltd (S601.084), Birchfield Ross Mining Ltd (S604.074), Phoenix Minerals Ltd (S606.059) and Whyte Gold Ltd (S607.059) sought that the objective be amended to add the words '*including primary production'* and that it refer to highly productive land '*and*' rural activities rather than '*for*' rural activities. Ms Easton supported these submission points in part, noting that the recommended new objective addresses the relief sought by these submitters. Ms Easton did not consider any further amendment to RURZ-O1 necessary. She considered that replacing '*and*' with '*for*' would alter the intent of the objective concerning why highly productive land is being retained.

RURZ-O2

146. Ms Easton acknowledged the submissions in support of this objective.

147. HortNZ (S486.063) and Federated Farmers (S524.107) sought to amend the objective to refer to the Rural Lifestyle Zone specifically. Ms Easton supported this part of these submission points, noting that although the objective relates to the rural lifestyle zone, this is not explicitly addressed in the wording, and she recommended the following amendment:

> *~~To~~ **The Rural Lifestyle zone** provide~~s~~ for low density rural lifestyle living while still enabling primary production to occur, while avoiding conflicts and reverse sensitivity effects with rural production activities.*

148. These submissions also sought amendments to the objective, which would remove reference to rural character and instead focus on enabling primary production and avoiding reverse sensitivity. Ms Easton did not support these parts of these submission points, noting that rural character is important to reference and that this zone may not be an appropriate location for some types of primary production

149. Ms Easton did not support a submission point (S461.005) from Cashmere Bay Dairy Limited seeking to amend the objective to cater for residential activity, noting that the objective correctly provides direction for the Rural Lifestyle Zone, which has an intermediary role between the General Rural Zone and the Settlement Zone.

RURZ-O3 and RURZ-O4

150. Ms Easton acknowledged the submissions in support of these objectives.

151. HortNZ (S48.064) and Federated Farmers (S524.108) sought that these objectives be moved to the Settlement zone chapter and renamed SETZ-O1 and SETZ-O2, respectively. Ms Easton did not support these submission points as all Rural zones objectives are found in the RURZ chapter, and this is consistent with the structure of the pTTPP's other zone chapters.

RURZ-O6

152. Ms Easton acknowledged the submissions in support of these objectives.

153. Cashmere Bay Dairy Ltd, (S461.008), sought an amendment that would allow on-site servicing where there are no existing Council services and where effects can be contained on-site. Ms Easton supported this submission point in part, as the objective already states that on-site servicing is expected outside of settlements and major developments. Ms Easton noted that the Settlement policies and rules also recognise that on-site servicing may be required, as provision of community infrastructure varies by location across the West Coast.

Hearing and Submitter Evidence

154. SFF sought the addition of a new, issue-specific objective to be added if the zoning configuration for five lots, adjacent to SFF's Hokitika meat processing facility, recommended in the residential zones s42A Report is accepted. The requested objective wording is as follows:

RURZ-O8 The Rural Lifestyle Zone is managed to avoid reverse sensitivity effects on lawfully established industrial activity located at 140 Kumara Junction Highway, Hokitika.

RURZ-O1

155. HortNZ sought an amendment to change the wording from 'retain' to 'protect' in relation to highly productive land.

156. Federated Farmers maintained that a highly productive rural working environment should be the first and foremost objective for the rural zone. They continued to seek an amendment to RURZ-O1 to provide for primary production activities.

RURZ-O2

157. Scenic Hotels requested that the objective be reworded to refer to the Rural Lifestyle Zone specifically. The following wording is requested:

The Rural Lifestyle Zone ~~*To*~~ *provide**s** for low-density rural lifestyle living on the outskirts of settlements where this will support settlement viability and not lead to conflicts with productive rural land use or rural character*

RURZ-O3

158. HortNZ accepted the s42A Report assessment in part, but sought an amendment to make it clear that this objective relates to the Settlement Zone, through the following wording:

*To maintain and enhance the distinctive rural character and amenity of West Coast/Te Tai o Poutini settlements **in the Settlement Zone** while:*

1. *Allowing settlements to grow and adapt as economic activity changes;*
2. *Providing for commercial and industrial land uses in larger settlements*

where these land uses provide for the local community and rural services

RURZ-O4

159. HortNZ accepted the s42A Report assessment in part, but sought an amendment to make it clear that this objective relates to the Settlement Zone, through the following wording:

> *To support the expansion of existing settlements **in the Settlement Zone** and necessary infrastructure in areas at low risk of natural hazards, and implement hazard management to reduce the risk where existing development is located in high-risk locations*

RURZ-O7

160. Federated Farmers considered the recommended new objective 'a step in the right direction' but sought that it be reworded to provide more actively for primary production and associated activities.

Reporting Officer Reply Evidence

161. The Panel asked Ms Easton whether the term '*protect*' should be used in Objective RURZ-O1 rather than 'retain' concerning highly productive land. Ms Easton considered the term 'protect' to be appropriate if the objective is referring specifically to Highly Productive Land as defined in the NPS-HPL.

162. No changes to the wording of the objectives were recommended in the Right of Reply.

Joint Right of Reply

163. A joint right of reply was prepared by Briar Belgrave, Ruth Evans and Lois Easton, all Reporting Officers, concerning the SFF submission and noted that Ms Easton did not support the additional objective that the submission sought on the basis that there was insufficient supporting evidence for this amendment. The reply acknowledged that the request to refer specifically to the SFF site was only a secondary request and not the submitter's preferred option.

Hearing Panel's Evaluation

164. In relation to Objective RURZ-O1, the Panel agrees with the reasoning provided by Ms Easton to amend this objective. However, we consider that the objective requires further amendment to emphasise the importance of protecting highly productive land and to give effect to the NPS-HPL. We therefore have recommended reordering and rewording the objective to better reflect this position.

165. In relation to Objective RURZ-O2, the Panel agrees with Ms Easton's reasons to amend this objective to refer to the Rural Lifestyle Zone specifically based on submissions. Ms Easton supported this part of these submission points, noting that although the objective relates to the rural lifestyle zone, this is not explicitly addressed in the wording, and she recommended an amendment to achieve that outcome. We agree with that amendment.

166. The Panel agrees with Ms Easton's reasons for rejecting all other submission points on RURZ-02, including those from Cashmere Bay Dairy Limited seeking to amend the objective to cater for residential activity, noting that the objective correctly provides direction for the Rural Lifestyle Zone, which has an intermediary role between the General Rural Zone and the Settlement Zone.

167. In relation to Objectives RURZ-O3 and RURZ-04, the Panel agrees with Ms Easton's analysis of the HortNZ and Federated Farmers submissions that sought that these objectives be moved to the Settlement zone chapter and renamed SETZ-O1 and SETZ-O2, respectively. Ms Easton

did not support these submission points as all Rural zones objectives are found in the RURZ chapter, and this is consistent with the structure of the pTTPP's other zone chapters. We agree. Additionally, we do not support including the words in the Settlement Zone in each of the objectives because Settlement Zones are not the subject matter of these objectives. We support the retention of both objectives as notified.

168. In relation to Objective RURZ-O5, the Panel supports retention of this objective as notified.

169. In relation to Objective RURZ-O6, the Panel considers that the submission of Cashmere Bay Dairy Ltd is met to a significant degree by the objective as notified. Whether or not on-site servicing of wastewater can or should occur may depend on either meeting permitted activity requirements in the WCRPS or obtaining Regional Council consents. So, we consider adding further words to the objective unnecessary and could create confusion. We consider RURZ-06 as notified to be appropriate.

170. In relation to New Objective RURZ-O7, the Panel agrees with Ms Easton that, as notified, the objectives are not sufficiently clear that the General Rural Zone is being managed principally for primary production activities, and a new objective is required. Ms Easton provided wording for the new objective, however we consider this needs to be refined and have recommended a more succinct wording of the objective.

171. Forest and Bird sought a new objective requiring the maintenance and protection of natural values. Frida Inta and Buller Conservation Group sought similar relief through a new objective to protect indigenous biodiversity. Ms Easton did not support these submission points on the basis that these matters are addressed in the Natural Environmental Values chapters in the district-wide provisions. We agree.

172. SFF sought the addition of a new, issue-specific objective if the zoning configuration, namely the Rural Lifestyle Zone, for the five lots adjacent to SFF Hokitika meat processing facility, as recommended in the residential zones s42A Report, is accepted. Ms Easton considered that the submitter provided insufficient evidence to support the inclusion of a new objective. We agree.

173. In respect of other submissions where Ms Easton recommends rejecting those submissions, we agree with that outcome for the reasons she provided.

Hearing Panel's Recommendation

174. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends that the following amendments are made to the Rural Zone Objectives:

RURZ-O1	To provide for a range of activities, uses and developments that maintain the amenity and rural character values of the rural environment, while **protecting** ~~retaining~~ highly productive ~~and rural activities~~ **land for land based primary production**, and supporting a productive rural working environment **and rural activities**.[31]

[31] Horticulture New Zealand (S486.062)

RURZ-O2	~~To~~ **The Rural Lifestyle Zone**[32] provide**s** for low-density rural lifestyle living on the outskirts of settlements where this will support settlement viability and not lead to conflicts with productive rural land use or rural character.
RURZ-O3	To maintain and enhance the distinctive rural character and amenity of West Coast/Te Tai o Poutini settlements while: a. Allowing settlements to grow and adapt as economic activity changes; b. Providing for commercial and industrial land uses in larger settlements where these landuses provide for local community and rural services.
RURZ-O4	To support the expansion of existing settlements and necessary infrastructure in areas at low risk of natural hazards, and implement hazard management to reduce the risk where existing development is located in high risk locations.
RURZ-O5	To support the use and extraction of mineral resources located within the rural environment, recognising that mineral resources are widespread, and that provided adverse effects are minimised and rehabilitation of land occurs following mineral extraction, mineral extraction can be appropriate in a range of locations.
RURZ-O6	To ensure appropriate levels of infrastructure servicing for communities and development within rural areas, recognising that outside of settlements or major developments, on site infrastructure servicing is expected.
RURZ-O7	**The General Rural Zone is managed to ensure its primary production purpose is not compromised by reverse sensitivity effects.**[33]

3.4. General Rural Policies

Submissions and Further Submissions

175. Two hundred and sixty-nine submission points and fifty-three further submission points relating to the Rural Zone policies were received and are summarised in a Table on pages 42-65 of the s42A Report. Fourteen submission points related to the policies as a whole, and fifty-nine related to specific policies.

176. Fourteen submission points were received on the Rural Zone policies as a whole and are summarised in a Table on pages 42-44 of the s42A Report. One was in support of the policies in general, and four were in support of several specific policies. The remaining nine submission points sought amendments. The Panel adopts these summaries.

177. Two submission points were received in support of policies RURZ-P1-P4 and are summarised in a Table on page 44 of the s42A Report.

178. Twenty-six submission points were received on RURZ-P1, of which nineteen were in support of retaining the policy as notified and are summarised in a Table on pages 44-47 of the s42A Report. The remaining seven submission points sought amendments.

[32] Horticulture New Zealand (S486.063) and Federated Farmers (S524.107)

[33] Grey District Council (S607.107)

179. Twelve submission points were received on RURZ-P2 and are summarised in a Table on page 48 of the s42A Report. Nine were in support of retaining the policy as notified. The remaining three sought amendments.

180. Seventeen submission points were received on RURZ-P3 and are summarised in a Table on pages 48-50 of the s42A Report. Ten were in support of retaining the policy as notified. The remaining seven sought amendments.

181. Sixteen submission points were received on RURZ-P4 and are summarised in a Table on pages 50-51 of the s42A Report. Twelve were in support of retaining the policy as notified. The remaining four sought amendments.

182. Fourteen submission points were received on RURZ-P5 and are summarised in a Table on pages 51-52 of the s42A Report, of which twelve were in support of retaining the policy as notified. The remaining two sought amendments.

183. Seven submission points were received in support of policies RURZ-P6-P8 and are summarised in a Table on page 52 of the s42A Report

184. Thirteen submission points were received on RURZ-P6 and are summarised in a Table on pages 52-54 of the s42A Report. Nine were in support of retaining the policy as notified. The remaining four sought amendments.

185. Eight submission points were received on RURZ-P7 and are summarised in a Table on pages 54-55 of the s42A Report. Six were in support of retaining the policy as notified. The remaining two sought amendments.

186. Eight submission points were received in support of RURZ-P8 and are summarised in a Table on page 55 of the s42A Report.

187. Seven submission points were received in support of RURZ-P9-10 and are summarised in a Table on page 55 of the s42A Report.

188. Six submission points were received on RURZ-P9 and are summarised in a Table on pages 55-56 of the s42A Report. Five are in support, and one sought an amendment.

189. Seven submission points were received on RURZ-P9 and are summarised in a Table on page 56 of the s42A Report. Six are in support, and one has sought an amendment.

190. Fifteen submission points were received on RURZ-P11 and are summarised in a Table on pages 56-57 of the s42A Report. Eleven were in support of retaining the policy as notified. The remaining four sought amendments.

191. Twelve submission points were received on RURZ-P12 and are summarised in a Table on pages 57-58 of the s42A Report. Eleven were in support of retaining the policy as notified, and one sought an amendment.

192. Eight submission points were received on RURZ-P13 and are summarised in a Table on page 58 of the s42A Report. Four were in support, and the remaining four sought to delete the policy.

193. Nine submission points were received on RURZ-P14 and are summarised in a Table on pages 58-59 of the s42A Report. Eight were in support of retaining the policy as notified, and one sought an amendment.

194. Six submission points were received in support of policies RURZ-15 and RURZ-P16 and are summarised in a Table on page 59 of the s42A Report.

195. Eighteen submission points were received on RURZ-P15 and are summarised in a Table on pages 59-60 of the s42A Report. Thirteen were in support of retaining the policy as notified, and the remaining five sought amendments.

196. Nine submission points were received on RURZ-P16 and are summarised in a Table on pages 60-62 of the s42A Report. Five were in support of retaining the policy as notified, and the remaining four sought amendments.

197. Eleven submission points were received on RURZ-P17 and are summarised in a Table on page 62 of the s42A Report. Ten were in support of retaining the policy as notified, and one sought an amendment.

198. Five submission points were received in support of policies RURZ-P26-P28 and are summarised in a Table on pages 62-63 of the s42A Report

199. Six submission points were received on RURZ-P26 and are summarised in a Table on page 63 of the s42A Report. Four were in support of retaining the policy as notified. The remaining two sought amendments.

200. Seven submission points were received on RURZ-P27 and are summarised in a Table on pages 63-64 of the s42A Report. Three were in support of retaining the policy as notified. The remaining four sought amendments.

201. Seven submission points were received on RURZ-P28 and are summarised in a Table on page 64 of the s42A Report. Six were in support of retaining the policy as notified, and one sought an amendment.

202. Eight submission points were received on GRUZ-PREC1-Policy P1 and are summarised in a Table on page 65 of the s42A Report. Six were in support of retaining the policy as notified. The remaining two sought amendments.

203. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and the addendum report.

Section 42A Report

RURZ Policies (General)

204. Ms Easton acknowledged the submissions in support of the policies as a whole.

205. Ms Easton did not support a submission (S595.009) from Frank O'Toole seeking to allow a minimum allotment size of 4000m² in the Rural Lifestyle Zone. She noted that this is the minimum lot size in the Rural Residential Precinct of the Settlement Zone, and that the Rural Lifestyle Zone is intended to accommodate some primary production uses.

206. Ms Easton did not support a submission (S619.053) from Snodgrass Road submitters, seeking a policy specific to their properties, providing for the continued reasonable use of these properties and supporting the establishment of natural hazard mitigation works. Ms Easton noted that many parts of the rural zone are subject to natural hazard overlays and that existing use rights protect current properties, while further development is restricted through those natural hazard overlays, in the overlay chapters. Furthermore, seeking continued reasonable use of a property is not a zoning matter.

207. Ms Easton did not support submissions from Rocky Mining Ltd (S474.044) and Papahaua Resources Ltd (S500.031) seeking a requirement to avoid sensitive activities establishing in proximity to mineral resources and extraction activities. She noted that reverse sensitivity effects are provided for through the zones, minimum setbacks, performance standards, and restrictions on further subdivision. She acknowledged the reverse sensitivity impact that widespread ad hoc lifestyle subdivision across the West Coast has had on primary production activities, but noted that the provisions, as notified, address reverse sensitivity, particularly RURZ-P 15 and 19.

208. Ms Easton did not support a submission from Forest and Bird (S560.374) seeking a new policy requiring the maintenance and protection of natural values in these zones, as these matters are addressed in the district-wide Natural Environment Values chapters.

209. In response to a submission from Federated Farmers (S524.112) seeking a new policy for rural industry, Ms Easton considered that rural industry is adequately provided for in RURZ-P6.

210. Ms Easton supported, in part, a submission from the Ministry of Education (S456.048) seeking a new policy that provides for education facilities in rural zones. She recommended an amendment to Policy RURZ-P6 to include 'educational facilities' to address this matter.

211. Ms Easton supported in part a submission from WMS Group (S599.107) seeking a new policy to support the operation, use and development of Jackson Bay Port. Ms Easton recommended an amendment to policy SETZ-PREC3-P3 to address this matter, as follows:

> ***SETZ - PREC3- P3***
> *Subdivision, use and development within the SETZ - PREC3 - Coastal Settlement Precinct should:*
>
> a. *Take into account the coastal natural character and scenic landscape values of the area;*
> b. *Have appropriate controls on design and height to protect the landscape and coastal natural character values and be undertaken in accordance with the coastal development guidelines;*
> c. *Recognise and provide for access to mahinga kai and Sites and Areas of Significance to Māori for Poutini Ngāi Tahu; and*
> d. ***Allow for the further development of the port area at Jackson Bay where this is of a scale and extent that is appropriate to the location;*** *and*
> e. *Be located to avoid the significant risks of natural hazards.*

212. In relation to a submission, from GDC (S608.108) seeking two additional policies to support the rural zone rules and specifically primary production, Ms Easton recommended a single additional policy that amalgamates elements of both proposed policies, as follows:

RURZ-PXXX Within the General Rural Zone enable primary production activities as the predominant land use, alongside activities that support primary production.

RURZ - Policy 1

213. Ms Easton acknowledged submission points in support of policies RURZ-P1-P4 as a whole, and those in support of RURZ-P1 specifically.

214. In relation to a submission point from Te Tumu Paeroa (S440.045) seeking the wording of RURZ-P1 to be changed to refer to profile and location rather than bulk and location, Ms Easton noted that 'bulk' is a well-understood planning term and is appropriate in this policy and throughout the Plan. Ms Easton did not support this submission point.

215. Ms Easton supported submission points from Federated Farmers (S524.109) and HortNZ (S486.066), seeking that RURZ-P1 be significantly redrafted to focus explicitly on the General Rural and Rural Lifestyle zones.

216. Ms Easton did not support a submission point from NZAAA (S166.030) seeking an additional clause g. 'be consistent with the level of noise and odour from rural production activities' to be added, noting that the HortNZ and Federated Farmers amendments that she supported sufficiently address this issue.

217. In response to submission points from Frida Inta (S553.174) and from the BCG (S552.174) seeking an additional clause to protect biodiversity, natural character, and waterbodies, Ms Easton did not support these changes, noting that these matters are addressed in the District Wide chapters.

218. Ms Easton did not support a submission point from Frank and Jo Dooley (478.020) seeking an amendment to state that appropriate levels of rural amenity can be achieved on allotments of 4,000m². Allotment sizes are discussed in section 4.2 of this report.

RURZ - Policy 2

219. Ms Easton acknowledged the support from submitters who sought to retain the policy as notified.

220. Ms Easton supported in part a Federated Farmers submission point (S524.110) seeking that RURZ-P2 be moved to SETZ-P1. Ms Easton did not support renaming/renumbering the policy, but recommended it be amended to make explicit that this policy applies to the Settlement zone and not the General Rural or Rural Lifestyle zones.

221. Ms Easton supported a submission point from the Director General (S602.229) seeking to delete the words 'dominance of the' from clause f, noting that the wording was cumbersome.

RURZ- Policy 3

222. Ms Easton acknowledged the support from submitters who sought to retain the policy as notified.

223. Ms Easton did not support a submission point from Federated Farmers (S524.125) seeking to renumber the policy SETZ-P2

224. Ms Easton supported several submission points form WMS Group (HQ) Ltd and WMS Land Co Ltd (S599.109), Birchfield Coal Mines Ltd (S601.087), Tiga Minerals and Metals Ltd (S493.093), Birchfield Ross Mining Ltd (S604.077), Phoenix Minerals Ltd (S606.062) and Whyte Gold Ltd (S607.062) seeking that the words '*significant agricultural values*' be replaced by '*primary production values*.' Ms Easton noted that this is important to ensure reverse sensitivity effects do not arise.

RURZ - Policy 4

225. Ms Easton acknowledged the submission points in support of this policy as a whole, as well as those in support of specific clauses.

226. Ms Easton supported, in part, a submission point from Cashmere Bay Dairy Ltd (S461.012), seeking an amendment that identified large lots may not be the most appropriate development in settlement outskirts and could result in the fragmentation of the rural land resource. Ms Easton recommended that, for clarity, this policy should specifically reference the rural lifestyle zone, to clarify that this is the policy direction for that zone.

227. Ms Easton supported in part a submission point from HortNZ (S486.067) seeking 'rural production values' to be replaced with 'rural production activities.' Ms Easton recommended that this be addressed by using the term 'primary production activities.'

228. Ms Easton did not support a submission point from Frank and Jo Dooley (S486.067) seeking an amendment to allow for a minimum allotment size of 4000m^2. Allotment sizes are discussed in sections 4.2 (General Rural Zone) and 4.5 (Rural Lifestyle Zone) of this recommendation report.

RURZ-P5

229. Ms Easton acknowledged the submission points in support of this policy.

230. Ms Easton did not support a submission point from HortNZ (S486.068) seeking to delete the words 'and soils' and amend the policy to refer to prioritising primary production. She noted that primary production includes mineral extraction and considered that the reference to soils is important, as there are few areas on the West Coast with high-quality soils suitable for horticultural uses.

231. Ms Easton did not support a submission point from Federated Farmers (S524.111) seeking to move this policy to GRUZ-P1, noting that this would be inconsistent with the plan's structure.

RURZ-P6

232. Ms Easton acknowledged the submission points in support of RURZ-P6.

233. Manawa Energy (S438.137) sought that this policy be amended to include a reference to regionally significant infrastructure and to amend the '*functional relationship*' to '*functional and operational need*'. Ms Easton supported the addition of regionally significant infrastructure but considered that '*functional and operational need*' would significantly change the intent of the policy.

234. In relation to a submission point from RNZ (S476.037), Ms Easton supported the addition of the wording 'In particular, critical infrastructure may have a functional need to be located in rural areas in order to operate effectively'.

235. In response to a submission point from HortNZ (S486.069) seeking to streamline and refocus the policy on providing for non-rural activities with a functional need to locate in the rural zone, Ms Easton considered the policy, as drafted, to be better aligned with the plan provisions it supports.

RURZ-P7

236. Ms Easton acknowledged the submission points in support of policy P7.

237. In response to a submission point from Cashmere Bay Dairy (S461.014) seeking an amendment to recognise that most settlements have limited servicing and allow for on-site servicing, Ms Easton noted this policy supports the rules managing commercial and industrial activities within the rural zones. On this basis, she did not support this submission.

RURZ-P8

238. Ms Easton acknowledged the submission points in support of policy P8. As all submissions supported this policy, she did not recommend any amendments.

RURZ-P9 and RURZ-P10

239. Ms Easton acknowledged the submission points in support of policies P9 and P10.

240. In response to a Federated Farmers submission (S524.124) seeking an amendment to these policies so that the activities do not adversely affect rural production activities, Ms Easton recommended an amendment to Policy P10. She considered the amendment to Policy P9 unnecessary and did not align with the policy's intent.

RURZ-P11

241. Ms Easton acknowledged the submission points in support of Policy P11.

242. In response to several submission points from Te Mana Ora Community and Public Health (S190.944), Fire and Emergency NZ (S573.039) and David Ellerm (S581.053, S581.054) seeking amendment to this policy, Ms Easton noted that the policy sets in place expectations and understanding for infrastructure development, reflecting the Council's insufficient capacity to provide and service such infrastructure, and that such infrastructure changes the character of an area from rural to urban. In particular, she noted that the second submission point of David Ellern sought an outcome opposite to that which the policy aims to achieve. Ms Easton did not support these submission points and did not recommend any changes to the policy wording.

RURZ-P12

243. Ms Easton acknowledged the submissions in support of Policy P12.

244. Ms Easton did not support a submission point from Cashmere Bay Dairy (S461.016) seeking that the policy be amended to provide for on-site servicing where settlements are not already fully serviced, noting that the general expectation in the zone is that on-site servicing is expected.

RURZ-P13

245. Ms Easton acknowledged the submissions in support of Policy P13.

246. In relation to several submission points from Chris + Jan Coll (S558.481), Chris J Coll Surveying Ltd (S566.481), William McLaughlin (S567.528) and Laura Coll McLaughlin (S574.481), requesting that the policy be deleted, Ms Easton noted that the policy has arisen due to past issues where private developers retained ownership of water supply and wastewater infrastructure and failed to maintain it, requiring the Council to take over and fund maintenance and repairs. Ms Easton notes that from the Council's perspective, this is a failed model, and this policy signals that community-scale infrastructure will be vested to prevent similar failures in the future.

RURZ-P14

247. Ms Easton acknowledged the submissions in support of Policy P14.

248. Ms Easton did not support a submission point from Cashmere Bay Dairy (S461.018) seeking that the policy be amended to recognise that some rural lifestyle/settlement development is more appropriately serviced using on-site infrastructure, noting that this policy is about who pays for the infrastructure.

RURZ-P15

249. Ms Easton acknowledged the submissions in support of Policies P15 and P16.

250. Ms Easton did not support a submission point from Suzanne Hills (S443.042) requesting an amendment to the policy wording to specify that reverse sensitivity of new development encompasses all new development, including mineral extraction. Ms Easton noted that the submission seeks to address adverse effects, not reverse sensitivity.

251. Ms Easton supported submission points from Waka Kotahi (S450.269), HortNZ (S486.070) and Federated Farmers (S524.115) seeking that the policy be amended to refer to lawfully established activities rather than consented activities.

252. Cashmere Bay Dairy (S461.019) sought an amendment to enable the testing and addressing of reverse sensitivity effects at the resource consent stage. Ms Easton did not support this submission point, noting that the policies will be assessed as part of any assessment of Discretionary or Non-complying activities; otherwise, this is a matter for assessment criteria or matters of control.

RURZ-P16

253. Ms Easton supported a submission point from Manawa (S438.139), seeking the addition of a reference to renewable electricity generation, but did not support including a reference to other regionally significant infrastructure, noting that not all regionally significant infrastructure is affected by reverse sensitivity.

254. Ms Easton supported a submission point from RNZ (S476.038) seeking that the policy includes telecommunication/radio communication equipment.

255. Ms Easton did not support a submission point from SFF (S441.069) seeking an amendment to include '*industry*,' noting that only rural industry is provided for in the rural zones, so reference to industrial activities is unnecessary.

256. Ms Easton supported a submission point from HortNZ (S486.071) seeking that the policy be reworded to state: '*to ensure that reverse sensitivity effects do not compromise infrastructure*.'

RURZ-P17

257. Ms Easton acknowledged the submissions in support of Policy P17.

258. Ms Easton supported a submission point from Te Tumu Paeroa (S440.046) seeking that the policy be amended to refer to Māori landowners, noting that it is consistent with the agreed definition of papakāinga.

RURZ-P26

259. Ms Easton acknowledged the submissions in support of Policy 26.

260. Ms Easton supported a submission point from NZAAA (S166.032) seeking several amendments to the wording of the policy, noting that the proposed changes better capture the aspects the policy is intended to support, but proposed minor amendments for clarity.

261. Ms Easton supported a submission point from HortNZ (S486.072) seeking similar relief, noting that the NZAAA changes address this submission.

RURZ-P27

262. Ms Easton acknowledged the submissions in support of Policy 27.

263. NZAAA (S166.033), Federated Farmers (S524.116), and HortNZ (S486.073) sought similar amendments to this policy to specify that it relates to activities other than primary production and conservation. Ms Easton supported this part of these submission points. HortNZ and Federated Farmers also sought to delete Settlements from the policy. Ms Easton did not support this change, noting that managing the adverse effects of airfields and helicopter landing areas on settlements' amenity is a significant issue.

264. Balance Agri-nutrients (S345.011) sought that the policies be amended to refer to practicable alternative locations for air strips and landing areas. Ms Easton did not support this submission point, noting that the activities the submission concerns are permitted activities supported by policy, and the amendment is unnecessary.

RURZ-P28

265. Ms Easton acknowledged the submissions in support of Policy 28.

266. NZAAA (S166.034) sought that the policy be amended to refer to agricultural aviation activities. Ms Eston supported this change, which uses a defined term.

GRUZ-PREC1-P1

267. Ms Easton acknowledged the submission points in support of policy GRUZ-PREC1-P1.

268. Ms Easton did not support a submission point from BCG (S552.177) seeking that reference to the GDC be amended to '*relevant*' District Council, as the precinct only occurs in Grey District.

Hearing and Submitter Evidence

269. The joint statement presented by Frida Inta and the BCG sought several amendments to the policies including:

(a) Reword RURZ-P1 clause e. to state 'and avoid activities being sited on ridge lines and *ancestral mountains'*. The submitters considered that the s42A Report proposed amendments to clause e and the recommended deletion of clauses f and g diluted the original intent of the clauses and conflicted with Policy 2.f, which seeks to avoid development on the ridgelines and peaks of ancestral mountains.

(b) Add reference to '*primary production'* to RURZ-P3 and delete '*primary production values'.*

(c) Minor rewording of RURZ-P7 to improve syntax.

(d) Addition of the words *'nor create reverse sensitivity effects on residents or residential activities'* to RURZ-P8.

(e) Delete the words '*settlement zone'* from RURZ-P11. The submitters considered this to be confusing and out of step with SETZ-PREC3.

270. HortNZ accepted the s42A Report comments on RURZ-P5 in part but sought recognition of agricultural, pastoral and horticultural activities in the policy wording.

271. RNZ supported the recommended changes to P6 to refer to regionally significant infrastructure and noted that the proposed changes to P16 supported the relief RNZ sought.

272. In further legal submissions, Hadleigh Pedler (on behalf of RNZ), responded to matters raised by the Panel at the hearing and confirmed that RNZ considered the draft provisions provided by the s42A officer to be sensible and within the scope of RNZ's submission. The provisions included a new overlay and associated policy. RNZ sought that an advice note be included, noting that RNZ can provide technical advice and risk management.

273. Scenic Hotel Group sought an amendment to RURZ-P10 to reference workers accommodation.

274. Steve Tuck presented evidence on behalf of SFF. He sought a new reverse sensitivity policy (P17) to be added, protecting SFF's Hokitika site from reverse sensitivity effects, and the subsequent policies were renumbered. The requested policy is worded as follows:

RURZ-P17 Lawfully established industrial activities located at 140 Kumara Junction Highway, Hokitika must not be constrained or curtailed by reverse sensitivity effects associated with land in the Rural Lifestyle Zone identified below:

- *124 Kumara Junction Highway (Lot 1 DP 2378 BLK XIII Waimea SD);*
- *128B Kumara Junction Highway (Lots 1 2 DP 1603 BLK XIII Waimea SD);*
- *128C Kumara Junction Highway (Lot 2 DP 1818 BLK XIII Waimea SD,*
- *Lot 3 DP 1818 BLK XIII Waimea SD and Lot 4 DP 1818 BLK XIII Waimea SD)*

275. Mr Tuck noted that two other sites were not recommended to be rezoned to Rural Lifestyle Zone in the Residential s42A Report but should be included in the above policy if they are rezoned. These properties are identified in his evidence as:

- *120 Kumara Junction Highway (PT Lot 1 DP 1365 BLK XIII Waimea SD); and*
- *128A Kumara Junction Highway (Lot 2 DP 2378 BLK XIII Waimea SD)*

276. Mr Tuck notes that this policy change is only sought if the properties listed above are not zoned General Rural Zone and acknowledges that this change sought is a less efficient and effective solution. However, he considered the benefits of protecting the SFF Hokitika site from reverse sensitivity outweigh the costs of the 'inelegant' site-specific provisions.

277. Mr Tuck supported the amendments to RURZ-P6 recommended in the s42A Report.

278. Mr Tuck supported the recommended amendment to RURZ-P15 and noted that this change, if accepted, would provide the relief that SFF sought through the requested amendment to RURZ-P16, which was not supported in the s42A Report.

279. The statement of Evidence[34] on behalf of Federated Farmers supported the s42A Report recommended amendments to RURZ-P1, RURZ-P2, RURZ-P10, RURZ-P15, RURZ-P27 and the recommended new policy. Federated Farmers continued to seek further amendments to RURZ-P27 concerning settlement areas, suggesting that a distinction could be made between aircraft activity supporting primary production and other activity, including tourist flights, and that flight numbers for primary production are likely to be substantially less overall and less constant than tourist flights.

280. Ms Styles for Manawa supported the recommended amendment to RURZ-P6. Concerning the second amendment sought to this policy, Ms Styles acknowledged that 'functional and operational need' could be interpreted to apply to other activities within the rural zone. Ms Styles noted that the s42A Report nevertheless included an additional sentence at the end of the policy "In particular, regionally significant infrastructure may have a functional need to be located in rural areas in order to operate effectively." She noted that the Panel can clarify this matter, within the scope of the Manawa submission, and that this could be achieved either by adopting the change in the s42A appendix or through rewording the policy as follows:

> *Recognise that the rural areas may be the most appropriate location for some utility, regionally significant infrastructure, educational facilities, industrial or commercial uses to establish, where these have a functional relationship with rural areas,* ***or where regionally significant infrastructure has a functional or operational need to locate in that area****, provided the character and amenity of the rural areas is maintained and adverse effects are managed.*

281. Ms Styles for Manawa supported the s42A officer's recommended changes to RURZ-P15 and RURZ-P16.

282. Mr Alec Duncan, by way of a letter dated 19 July 2024 for FENZ, continued to seek an amendment to RURZ-P11 to provide the policy framework to support the relief sought to the zone rules.

283. Te Tumu Paeroa and Poutini Ngāi Tahu provided an agreed statement of their position in relation to policy 17 as follows:

> *Enable ~~the housing needs of~~* ***Māori land and*** *Poutini Ngāi Tahu* ***housing*** *~~to be met~~ in rural areas and locations safe from significant natural hazards.*

Reporting Officer Reply Evidence

284. In response to a question from the Panel about whether reference to prominent ridgelines or skylines was necessary in Policies 1 and 2, Ms Easton noted that this matter was raised in the verbal evidence of Frida Inta but was not included in her original submission. Ms Easton, therefore, considered that there was no scope to consider this matter.

285. Ms Easton recommended that an additional policy and advice note be introduced to address the issues raised by RNZ concerning electromagnetic radiation, noting that the legal

[34] Lionel Hume and Simon Cameron

submission of Mr Pedlar considers that there is scope within the original submission to pursue alternative relief. The recommended policy is worded as follows:

> *RURZ – PXXX Ensure that buildings of 18m or more in height within the Westport Radio Mast EM Overlay are designed and constructed to prevent significant safety risks from electromagnetic radiation.*
>
> *Advice note: The primary electromagnetic risk in the Westport Radio Mast EM Overlay arises from the potential for tall structures to absorb radio-wave energy from Radio New Zealand's AM transmission station at Cape Foulwind. Radio New Zealand can provide technical advice on the risk to specific proposed structures as well as advice on steps to minimise and reduce risks.*

286. Upon reviewing the HortNZ evidence, Ms Easton confirmed that she supported an amendment to Policy 5 to refer to both agricultural and horticultural production.

287. Ms Easton considered that a consequential amendment should be made to Policy RURZ-P27 to refer to 'rural airstrip' rather than '*airfield*' as follows:

> *RURZ - P27*
>
> *Manage the location and operation of* ***rural airstrip*** ~~*airfield*~~ *and helicopter landing areas within the rural area* ***for activities other than rural production and conservation*** *to provide for the amenity values of the surrounding rural and settlement areas.*

288. A joint right of reply responding to the SFF submission did not support a 'carve out approach' for the Hokitika site, and Ms Easton considered there was insufficient information to support the amendments Mr Tuck sought to the rural policies.

Hearing Panel's Evaluation

289. In relation to a submission from GDC seeking two additional policies to support the rural zone rules and specifically primary production, Ms Easton recommended a single additional policy that amalgamates elements of both proposed policies, as follows:

> *RURZ-PXXX Within the General Rural Zone, enable primary production activities as the predominant land use, alongside activities that support primary production.*

290. The Panel agrees with Ms Easton's recommendation to include a new policy crafted from the words used within the GDC submission, making clear that the predominant uses within the General Rural zone are primary production and those activities that support it.

291. Ms Easton recommended a new policy relating to the Westport Radio Mast in her reply. She had considered the evidence and legal submissions from RNZ. She supported the inclusion of a new policy to ensure that buildings located within the Masts overlay are designed and constructed to prevent safety risks from electromagnetic radiation. Because this is a highly specialised area, she also supported, including an advice note to the policy that further detailed the nature of the risk and directed the reader to which party could provide advice on those risks. That party is RNZ, who operate the mast. We agree with her reasons to include the new policy and advice note.

292. Regarding other new policies, the Panel notes that Mr Tuck for SFF sought to include in the Plan a new policy directed at protecting SFF Hokitika from reverse sensitivity effects. He was supportive of other changes made to other rural policies that also addressed reverse sensitivity effects.

293. We further note that a joint right of reply, from Ms Easton, Briar Belgrave, and Ruth Evans, all of whom are Reporting Officers responding to the SFF submissions on the Plan, was provided to us. The joint officer's reply was needed because SFF submissions were on the Noise, Industrial and Commercial, as well as Rural chapters. Different Reporting Officers reported on other chapters, hence the need for a joint reply. We do discuss the SFF submissions in our other recommendation reports.

294. In respect of the Rural chapter, Ms Easton considered that there was insufficient information to support the amendments Mr Tuck sought to the rural policies. We agree with her for the reasons she provided and do not support the inclusion of Mr Tuck's new rural policy within the Plan.

295. In relation to RURZ-P1, the Panel agrees with Ms Easton's analysis of the submissions that sought changes to this policy. We agree with her reasons for rejecting some of the submissions and accepting others.

296. We agree with her recommendations to amend the beginning of this policy because those amendments focus on the policy's purpose compared to the notified version. We agree with her recommended amendments to clause a. The word '*bulk*' that appears in clause a. has a well-understood meaning in the planning context. We agree that, for this reason, it needs to be retained and not replaced with the word '*profile*'. We agree with adding the phrase '*and primary production activities*' as she recommends, because primary production activities are pivotal activities undertaken within the zone. We agree with her recommended minor wording changes to clauses b. and c. as they assist with clarity. We agree with her recommended amendments to clause d. noting this clause will help in achieving good amenity outcomes as well as providing for reverse sensitivity effects on primary production activities. We generally agree with her recommendation to amalgamate clauses f. and g. into new clause e and her recommended wording for new clause e., particularly the threshold for effects being to minimise adverse visual and cultural effects. However, we have recommended an amendment to the clause to be consistent with SASM-P10. We do not consider that further changes to this policy beyond those detailed are required.

297. In relation to RURZ-P2, the Panel agrees with Ms Easton's recommendation to amend, but not renumber, the policy. The amendment is necessary to clarify that this policy applies specifically to the Settlement zone, rather than the General Rural or Rural Lifestyle zones. We also agree with her support of the submission point from the Director General, seeking to delete the words 'dominance of the' from clause f, because the notified wording was cumbersome. Other than these amendments, we do not recommend further change.

298. In relation to RURZ-P3, the Panel agrees with Ms Easton's analysis of the submissions on this policy and agrees with her recommendation that the words 'significant agricultural values' be replaced by 'primary production values.' Ms Easton noted that this is important to ensure reverse sensitivity effects do not arise. We agree. We also agree with her recommendation that no further changes to this policy are required.

299. In relation to RURZ-P4, the Panel agrees with Ms Easton's recommendations to support, in part, a submission point from Cashmere Bay Dairy Ltd, seeking an amendment that identifies large lots may not be the most appropriate development in settlement outskirts and could result in the fragmentation of the rural land resource. Ms Easton recommended that, for clarity, this policy should specifically reference the rural lifestyle zone, to ensure that this is the policy direction for that zone. We agree.

300. Ms Easton also supported, in part, a submission point from HortNZ seeking 'rural production values' to be replaced with 'rural production activities.' Ms Easton recommended that this be addressed by using the term 'primary production activities. We agree that these amendments ensure the policy is appropriately focused.

301. In relation to RURZ-P5, the Panel agrees with the HortNZ that the policy requires amendment to give effect to the NPS-HPL. We also note that the West Coast has a very limited amount of high productive land and as such protection of that land should be a priority. We have therefore recommended a substantial amendment to the policy to reflect this situation. Additionally, we agree with Ms Easton's recommendation not to renumber this policy to GRUZ-P1, as that would be inconsistent with the plan's structure.

302. As a consequence of giving effect to the NPS-HPL a definition of Specified Māori Land is required. We recommend that a definition is included in the interpretation section of the Plan as shown in the definition section of this Recommendation Report.

303. In relation to RURZ-P6, the Panel agrees with Ms Easton's recommendation that this policy be amended to include a reference to '*regionally significant infrastructure*'. We agree with Manawa and RNZ that including '*functional and operational need*' is appropriate and we do not consider it would significantly change the intent of the policy. We consider as radio communication has been included in the definition of regionally significant infrastructure no further amendment to Policy 6 is required as this addressed RNZ's concerns.

304. The Panel notes Ms Easton supported, in part, a submission from the Ministry of Education seeking a new policy that provides for education facilities in rural zones. She recommended an amendment to Policy RURZ-P6 to include '*educational facilities*' to address this matter. We agree that it is appropriate to provide for education facilities in rural zones and further agree that this policy is the proper place to give that reference.

305. In relation to RURZ-P7 and RURZ-P8 the Panel agrees with Ms Easton's analysis of submissions on this policy and further agrees that this policy remains as notified. We note in response to Ms Inta that reserve sensitivity is addressed in RURZ-P15.

306. In relation to RURZ-P9 and RURZ-P10, the Panel agrees with Ms Easton's consideration of the Federated Farmers submission, which sought an amendment to these policies to ensure that tourism and visitor activities do not adversely affect rural production activities. Ms Easton recommended an amendment to Policy 10. She considered the amendment to Policy 9 unnecessary and did not align with the policy's intent. We agree. Ms Easton did not support the Scenic Hotel Group position on workers accommodation due to their submission being out of scope. We agree with Ms Easton's position, but we acknowledge the issue raised by Scenic Hotel Group.

307. In relation to RURZ-P11, the Panel agrees in part with Ms Easton's analysis of submissions seeking amendments to this policy. We agree with Ms Easton that this policy establishes clear expectations and understanding for character and form of rural-based infrastructure development. That character and form, for example, roads with roadside ditches rather than kerb and channel, also reflect the Council's limited capacity to provide and maintain such infrastructure, and that such infrastructure changes the character of an area from rural to urban. However, we consider it would be appropriate to include reference to fire-fighting capacity within the policy as sought by FENZ and have recommended such an amendment.

308. In relation to RURZ-P12, the Panel agrees with Ms Easton's analysis of submissions seeking amendment to this policy. We agree that this policy supports the general expectation in the zone that on-site servicing is expected. So, we do not see any need to amend the policy. We agree with Ms Easton for the reasons she provides that this policy be retained as notified.

309. In relation to RURZ-P13, the Panel accepts Ms Easton's advice that this policy has arisen due to past issues where private developers retained ownership of water supply and wastewater infrastructure and failed to maintain it, requiring the Council to take over and fund maintenance and repairs. Ms Easton noted that from the Council's perspective, this is a failed model, and this policy signals that community-scale infrastructure will be vested to prevent similar failures in the future. So, for these reasons, we agree with Ms Easton's recommendation to reject those submissions seeking that the policy be deleted. We agree with her that the policy should be retained as notified.

310. In relation to RURZ-P14, the Panel agrees with Ms Easton that this policy is about timing of infrastructure provision and who pays for the infrastructure, rather than recognising that some rural lifestyle/settlement development is more appropriately serviced using on-site infrastructure, as referenced in the Cashmere Bay Dairy submission. We agree with Ms Easton's assessment of that submission and agree that this policy be retained as notified.

311. In relation to RURZ-P15, the Panel agrees with the amendment proposed by Ms Easton to delete the word '*consented*' and include the words '*lawfully established*' because inclusion of those words captures not only consented activities but those that have valid existing use rights. We also agree with Ms Easton's analysis of those submissions seeking other amendments to this policy and her reasons for rejecting those submissions. She noted that the policies, that is RURZ-P15 and RURZ-P16, will be assessed as part of any assessment of Discretionary or Non-complying activities, enabling sufficiency of design and buffer distances to be tested. Otherwise, reverse sensitivity is a matter for assessment criteria or matters of control. So, no further amendments were required. We agree.

312. In relation to RURZ-P16, also deals with reverse sensitivity, but is focused on infrastructure located in the rural zone. The Panel agrees with Ms Easton's recommendation to include a specific reference to both renewable electricity generation and telecommunication/radio communication equipment within the policy, as both are located in rural zones and the Plan should provide for consideration of reverse sensitivity effects on them. We do not agree with Ms Easton regarding the non-inclusion of '*regionally significant infrastructure'*, as we consider it is important to address reverse sensitivity in relation RSI.

313. We also agree with her additional amendment, accepting the submission from HortNZ, that the policy be reworded to state: '*to ensure that reverse sensitivity effects do not compromise infrastructure*.' Ms Easton's recommended wording is slightly different but conveys the same meaning. Linked with this amendment is the deletion of the notified words, 'to avoid reverse sensitivity effects on the infrastructure'. Ms Easton supports that deletion as we do. The notified words, particularly the word 'avoid', effectively mean do not allow. So, as notified, no reverse sensitivity effects would be permissible. The amended wording allows for a different threshold that is to 'ensure no compromise'. While still a suitably high threshold, which is justifiable given that infrastructure is the subject matter, the amended wording provides greater flexibility in that assessment, which we consider preferable to the blanket approach notified. We agree with her analysis of the other submissions on this policy and agree with her recommendations relevant to them.

314. In relation to RURZ-P17, the Panel do not agree with Ms Easton that the policy should be amended to also refer to Māori landowners. Te Tumu Paeroa and Poutini Ngāi Tahu provided a joint statement of position to the Panel dated 10 November 2023 that confirmed the term *Papakainga* was specific to Poutini Ngāi Tahu on Māori land, as opposed to Māori land owners with whakapapa other than to Poutini Ngāi Tahu. The Panel received evidence that owners of Māori land in the region may not be Poutini Ngāi Tahu, and in that case development of their land is provided for in the Māori Purpose Zone.

315. In relation to RURZ-P26, the Panel agrees with Ms Easton, support for submission points from NZAAA and HortNZ seeking several amendments to the wording of the policy, noting that the proposed changes better capture the aspects that the policy is intended to support, namely rural airstrips and helicopter landing areas which support rural production, conservation and recreation. We agree with Ms Easton's recommended wording amendments.

316. In relation to RURZ-P27, the Panel agrees with Ms Easton's analysis of submissions on this policy and her recommendations for amendments. The amendments broaden the policy to encompass aviation activities beyond those for rural production and conservation, while managing these activities and preserving the amenity values of rural and settlement areas surrounding the airstrips and helicopter landing areas. The subject matter of RURZ-P26 and Policy 27 is similar, so there are consequential amendments to Policy 27 arising from the Policy 26 amendment, such as ensuring that both policies use the term *'rural airstrips'*.

317. In relation to RURZ-P28, the Panel agrees with Ms Easton that this policy should be amended to use a defined term that NZAAA sought, namely, to use agricultural aviation activities.

318. In relation to GRUZ-PREC1-P1 (Community Living Precinct), which covers both Gloriavale sites, the majority of the Panel agrees with Ms Easton that this policy can be retained as notified. In the majorities view the developed Gloriavale site represents a significant physical resource and is home to some 600 people. In such situations it is accepted practise at Plan review to use a zone or precinct approach where sites of significant scale have initially established via resource consent (often a Special Purpose Zone) e.g. the Dairy Processing Zone in Selwyn for Synlait and Fonterra or the Flock Hill Station Visitors Zone in Selwyn. Doing so is effective and efficient in reducing further consenting and Council administrative costs.

319. Without the Precinct any activity on the sites would be a fully discretionary activity under the revised provisions because the activity(ies) do not appear to fit into any other category. This leads to inefficiencies.

320. Accepting the s32 did not provide significant detail on these sites and that could apply to a number of other matters included the TTPP. A report to the Committee by Lois Easton in October 2021 which forms part of the s32 noted:

- Feedback from the Grey District Council staff is that they support a precinct, to cover the new site as well as the existing location. The main point of a precinct would be to reduce the complexity of consenting requirements – so more like the approach of a special purpose zone.
- A mechanism to give some certainty on environmental effects, while recognising that the development should be allowed to proceed without unnecessary consenting requirements would be ideal. A Concept Plan developed by the Gloriavale community – which identified specific locations for different facilities would seem to be the best approach. This could be included in the relevant appendices of TTPP.

- Without such a concept plan, staff consider that more oversight and resource consents for many activities would be necessary, though for "expected and appropriate" activities, a less restrictive approach than the General Rural Zone provisions could be provided for

321. The Panel majority note that we did not receive any equivocal evidence at the hearing regarding the removal of the Community Living Precinct. We note submissions from Ngāi Tahu (S620.243), Te Mana Ora (S190.962), Chris & Jan Coll (S558.488), Chris J Coll Surveying Limited (S566.488), William McLaughlin (S567.534), Laura Coll McLaughlin (S574.488) all support retention of the Policy.

322. The Panel majority have only identified one submission that possibly could be relied upon to delete the precinct (Misato Nomura (S151.008)) who said "*There are currently too many precinct and overlay layers that makes the plan harder to read. Some of the overlays and precincts are similar and it is not clear if it is necessary to have them separated*." The decision sought was "*To combine or delete some of the overlays present*". There is no specific mention of the Community Living Precinct. The submitter did not appear at the hearing to explain what was meant by the submission. As we read the submission, we see it opposing all precincts because their inclusion in the Plan makes the Plan complex. We do not consider this a sufficient reason when balanced against what we have written above to support deletion of Precinct 1.

323. The Panel majority in the absence a compelling to delete Precinct 1 we consider retention and not deletion as supported by the submitters and the s42A reporting officer best meets the purpose of the Act.

324. The Panel minority position is contained in Appendix 2.

Hearing Panel's Recommendation

325. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends that the following amendments be made to the **Rural Zone Policies**:

Rural Amenity and Character	
RURZ-P1	**Within the General Rural Zone enable primary production activities as the predominant land use, alongside activities that support primary production**.[35]
RURZ-P~~1~~**2**	~~Enable a variety of activities to occur within RURZ - Rural Zones while maintaining rural amenity and character. Outside of settlements, activities should:~~ **Rural character and amenity within the GRUZ - General Rural Zone and RLZ - Rural Lifestyle Zone is maintained by:** a. ~~For b~~**B**uildings and structures hav~~e~~**ing** a bulk and location that is characteristic of rural environments **and primary production activities**; b. Maintain**ing** privacy and rural outlook for residential buildings;

[35] GDC (S608.108)

	c. **Ensuring activities are** ~~Be~~ compatible with existing development and the surrounding area **while recognising that primary production activities can generate noise, odour and dust;** d. Have**ing** appropriate setbacks from the road **and adjacent primary production activities** ~~significant natural and cultural features~~; **and** e. **Locating activities sensitively in the environment to minimise adverse visual and cultural effects including restricting activities on ridge lines or ancestral mountains.** ~~f. Minimise adverse visual effects if sited on prominent ridges or immediately adjacent to public roads; and~~ ~~g. Have awareness of cultural landscapes and avoid activities being located on the ridgelines and peaks of ancestral mountains~~[36]
RURZ-P~~2~~**3**	Provide for growth and change to settlements **within the SETZ – Settlement Zone**[37] that: a. Improves the long-term viability of the settlements and their communities; b. Fits with the historic, cultural and environmental character of the existing settlement; c. Provides new housing opportunities in locations that are away from significant risks to life, safety and property damage from natural hazards; d. Integrates with the existing residential settlement and maintains a consolidated settlement form; e. Supports rural community needs by providing for community facilities and educational facilities; and f. Does not compromise the ~~dominance of the~~[38]natural and cultural landscape setting and minimises ribbon residential development along the coastline, on prominent spurs, ridges and skylines and avoids development on the ridgelines and peaks of ancestral mountains.
RURZ-P~~3~~**4**	Expansion of existing settlements beyond current boundaries should support the existing character and amenity of the settlement and avoid areas of high hazard risk, high natural or Poutini Ngāi Tahu cultural values, or ~~significant agricultural~~ **primary**[39] production values.
RURZ-P~~4~~**5**	Provide for rural lifestyle development **within the RLZ – Rural Lifestyle Zone**[40] on the outskirts of towns and settlements where this will not conflict with ~~rural production values~~ **primary production activities**, [41] and recognising that these have the following characteristics: a. Large lots with onsite infrastructure servicing;

[36] Federated Farmers (S524.109) and Horticulture New Zealand (S486.066)
[37] Federated Farmers of New Zealand (524.110)
[38] Director General (602.229)
[39] Tiga Minerals and Metals Limited (S493.0930, WMS Group (S599.109), Birchfield Coal Mines Ltd (S601.087), Birchfield Ross Mining Limited (S604.077), Phoenix Minerals Limited (S606.062), Whyte Gold Limited (S607.062)
[40] Cashmere Bay Dairy Ltd (S461.012)
[41] HortNZ (S486.067)

	b. A mix of activities; c. Low traffic and moderate noise levels; d. Dominance of open space and plantings over buildings; and e. Setbacks from property boundaries.
Production Values	
RURZ-P~~5~~**6**	~~Recognise that there are only~~ **Protect the remaining** small areas of highly productive land for **land based primary** ~~and soils for agricultural~~ production ~~on the West Coast/Te Tai o Poutini and where possible locate non-agricultural activities outside of these highly productive locations~~ **including by**: **a. avoiding subdivision, unless:** **i. the proposed lots will maintain the overall productive capacity of the land over the long-term;** **ii. on specified Māori land; or** **iii. for regionally significant infrastructure;** **b. avoiding inappropriate use or development that is not land based primary production; and** **c. any subdivision, use or development:** **i. minimises or mitigates loss of the availability or capacity of high productive land; and** ii. **avoids or otherwise mitigates any reserve sensitivity effects on land based primary production**. **Advice Note: For the purposes of determining what is inappropriate use or development for the purposes of clause b. reference is to be made to the NPS-HPL.** [42]
Non-rural activities	
RURZ-P~~6~~**7**	Recognise that the rural areas may be the most appropriate location for some utilit~~y~~**ies**,[43] **regionally significant infrastructure,**[44] **educational facilities,**[45] industrial or commercial uses to establish, where these have a functional relationship with rural areas, **or where regionally significant infrastructure has a functional need or operational need to locate in that area**[46] provided the character and amenity of the rural areas is maintained and adverse effects are managed.
RURZ-P~~7~~**8**	Recognise that where non-rural activities are located in rural areas, this should not be to the detriment of the effective function**ing**[47] of towns and settlements, **n**or[48] to avoid the costs of connection to community funded infrastructure.

[42] HortNZ (S486.068)
[43] RMA First Schedule, Clause 16
[44] Manawa Energy (S438.137)
[45], Clause 16(2) of the RMA
[46] Manawa (S438.137), RNZ (S476.037)
[47] Clause 16(2) of the RMA
[48] Clause 16(2) of the RMA

RURZ-P~~8~~**9**	Provide for new commercial and industrial activities within settlements where this does not detract from residential amenity.
Visitor Economy	
RURZ-P~~9~~**10**	Recognise that the rural areas form an important part of the visitor economy of the West Coast/Te Tai o Poutini, particularly as a location where tourism and visitor attractions are established.
RURZ-P~~10~~**11**	Support the development of appropriate tourism and visitor businesses such as accommodation, education and other facilities which relate to the rural environments in which they are located~~.~~ **and which do not adversely affect primary production activities**[49]
Infrastructure in Rural Areas	
RURZ-P~~11~~**12**	Subdivision and development in GRUZ – General Rural and RLZ - Rural Lifestyle Zones, the SETZ - PREC3 – Coastal Settlement Precinct and the SETZ - PREC4 -Settlement Zone – Rural Residential Precinct should recognise the character and form of rural infrastructure including: a. Roads with roadside ditches rather than kerb and channel; b. An absence of street lights and urban style footpaths; and c. On-site provision of water supply **with sufficient capacity for firefighting purposes**[50] and on-site land treatment and disposal of stormwater and wastewater.
RURZ-P~~12~~**13**	Within the SETZ – Settlement Zone (outside of the SETZ - PREC3 Coastal Settlement Precinct and SETZ-PREC4 – Rural Residential Precinct) ensure that sufficient wastewater, water supply, refuse disposal, roading, footpath, open space and parking infrastructure servicing is provided as part of new development.
RURZ-P~~13~~**14**	Where community scale infrastructure is developed to support more than 10 privately owned lots this should be to appropriate standards and vested in the Council to ensure ongoing maintenance and renewal.
RURZ-P~~14~~**15**	Where new infrastructure is required to support rural lifestyle development or settlement expansion this new infrastructure should be put in place at the time of development at the expense of the developer.
RURZ – P16	**Ensure that buildings of 18m or more in height within the Westport Radio Mast EM Overlay are designed and constructed to prevent significant safety risks from electromagnetic radiation.** **Advice note: The primary electromagnetic risk in the Westport Radio Mast EM Overlay arises from the potential for tall structures to absorb radio-wave energy from Radio New Zealand's AM transmission station at Cape Foulwind. Radio New Zealand can provide technical advice on the risk to specific proposed structures as well as advice on steps to minimise and reduce risks**[51]

[49] Federated Farmers (S524.124)
[50] Fire and Emergency New Zealand (S573.039)
[51] RNZ (S489.XXX)

Reverse sensitivity	
RURZ-P1~~5~~**7**	New development should be designed and located with sufficient buffers so that existing rural uses and ~~consented~~ **lawfully established**[52] activities are not unreasonably compromised by the proximity of sensitive neighbouring activities.
RURZ-P1~~6~~**8**	There should be sufficient buffers provided from infrastructure such as wastewater treatment plants and land disposal areas, **renewable electricity generation activities,**[53] **electricity**[54] transmission **and other regionally significant**[55] infrastructure and **telecommunication and radiocommunications infrastructure**[56], and water supply catchments ~~to avoid reverse sensitivity effects on the infrastructure~~ **to ensure that infrastructure is not compromised by reverse sensitivity effects.**[57]
Papakainga Housing	
RURZ-P1~~7~~**9**	Enable the housing needs of Poutini Ngāi Tahu whānui to be met in rural areas and locations safe from significant natural hazards.
Mineral Extraction	
RURZ-P1~~8~~**20**	Addressed in the Mineral Extraction Recommendation
RURZ-P1~~9~~**21**	Addressed in the Mineral Extraction Recommendation
RURZ-P20~~22~~	Addressed in the Mineral Extraction Recommendation
Airfields and helipads	
RURZ-P2~~6~~**8**	Provide for development **and use**[58] of ancillary infrastructure such as **rural** airstrips and ~~helipads~~ **helicopter landing areas** which support rural land uses ~~such as farming~~ **including rural production, conservation** and recreation.
RURZ-P2~~7~~**9**	Manage the location and operation of **rural airstrips** ~~airfield~~ and helicopter landing areas within the rural area **for activities other than primary production, and conservation**[59] to provide for the amenity values of the surrounding rural and settlement areas.
RURZ-P2~~8~~**30**	Enable aircraft and helicopter movements within the rural area for ~~purposes~~ **agricultural aviation activities**[60] ancillary to rural production on a seasonal and short-term basis.
GRUZ-PREC1 - Community Living Precinct	
GRUZ-PREC1-P1	Subdivision, use and development within the GRUZ - PREC1 - Community Living Precinct should:

[52] Waka Kotahi (S450.269), Horticulture New Zealand (S486.071), and Federated Farmers (S524.115)
[53] Manawa Energy (S438.139)
[54] RMA First Schedule, Clause 16
[55] Manawa (S438.139)
[56] Radio New Zealand (S476.038)
[57] HortNZ (S486.071)
[58] New Zealand Agricultural Aviation Association (S166.032), HortNZ (S486.072)
[59] New Zealand Agriculture Aviation Association (S166.033), HortNZ (S486.073) and Federated Farmers (S524.116)
[60] New Zealand Agricultural Aviation Association (S166.034)

1. Provide for grouped housing, community infrastructure and other activities with appropriate buffers to avoid impacts on the amenity of surrounding properties and the environment;
2. Minimise any impacts on natural environment values and appropriately locate wastewater treatment infrastructure to avoid adverse effects on water quality;
3. Provide for appropriate expansion and redevelopment of the buildings and activities within the Precinct, allowing for change and growth of the communities within it; and
4. Be undertaken in a planned manner, in accordance with a concept plan agreed with the Grey District Council.

4. GENERAL RURAL ZONE

4.1. General/Whole Chapter

Submissions and Further Submissions

326. Four hundred eighty-eight submission points and thirty-eight further submission points were received for the zone chapter and are summarised in a table on pages 75-113 of the S42A report.

327. Eight submission points were received on the General Rural Zone Chapter and are summarised in a Table on pages 75-76 of the s42A Report. Four were in support of the zone or rules. The remaining five submissions sought amendments.

328. Seven submission points were received on the chapter overview and are summarised in a table on pages 76-77 of the s42A report. All submissions sought amendments.

329. Thirty submission points were received on GRUZ-R1 and are summarised in a table on pages 77-82 of the s42A report. Three were in support of the rule, and the remainder sought amendments.

330. Twenty-two submission points were received on GRUZ-R2 and are summarised in a table on pages 82-84 of the s42A report. Five were in support of the rule, and the remainder sought amendments.

331. Forty-five submission points were received on GRUZ-R3 and are summarised in a table on pages 84-88 of the s42A report. Two were in support of the rule as a whole, six were in support of subclause 2, and two were in support of subclause 3. Thirty-five submissions sought amendments.

332. Eight submission points were received on GRUZ-R4 and are summarised in a table on pages 88-89 of the s42A report. Five were in support of the rule and three sought amendments.

333. Twenty-three submission points were received on GRUZ-R5 and are summarised in a table on pages 89-90 of the s42A report. Two were in support of the rule, and twenty-one sought amendments.

334. Fifteen submission points were received on GRUZ-R6 and are summarised in a table on pages 90-91 of the s42A report. All submission points were in support of the rule, with one conditional on a requested amendment to GRUZ-R1.

335. Nine submission points were received on GRUZ-R7 and are summarised in a table on pages 91-92 of the s42A report. One was in support of the rule, and one was in support conditional on a requested amendment to GRUZ-R1. Five submissions opposed the rule and sought its deletion, and one sought amendment.

336. Twenty-one submission points were received on GRUZ-R8 and are summarised in a table on pages 92-94 of the s42A report. Four were in support of the rule and one was in support, conditional on a requested amendment to GRUZ-R1. One opposed the rule and sought to have it deleted. Sixteen submissions sought amendments.

337. Eleven submission points were received on GRUZ-R9 and are summarised in a table on page 94 of the s42A report. Two were in support of the rule and one was in support, conditional on a requested amendment to GRUZ-R1. Nine sought amendments.

338. Fourteen submission points were received on GRUZ-R10 and are summarised in a table on pages 94-95 of the s42A report. Three were in support of the rule and one was in support, conditional on a requested amendment to GRUZ-R1. Eleven sought amendments.

339. Thirteen submission points were received on GRUZ-R13 and are summarised in a table on pages 95-96 of the s42A report. One was in support of the rule, and one was in support conditional on a requested amendment to GRUZ-R1. Eleven sought amendments.

340. Seven submission points were received on GRUZ-R14 and are summarised in a table on pages 96-97 of the s42A report. All submissions were in support of the rule, with one in support conditional on a requested amendment to GRUZ-R1.

341. Six submission points were received in support of GRUZ-R15 and are summarised in a table on page 97 of the s42A.

342. Thirteen submission points were received on GRUZ-R16 and are summarised in a table on pages 97-98 of the s42A report. Two were in support of the rule, and the remainder sought amendments.

343. Fourteen submission points were received on GRUZ-R17 and are summarised in a table on pages 98-99 of the s42A report. One was in support of the rule, five were opposed and sought its deletion, and eight sought amendments.

344. Six submission points were received on GRUZ-R19 and are summarised in a table on page 99 of the s42A report. One was in support of the rule, and the remainder sought amendments.

345. Eighteen submission points were received on GRUZ-R20 and are summarised in a table on pages 99-101 of the s42A report. Two were in support of the rule and the remainder sought amendments.

346. Eighteen submission points were received on GRUZ-R21 and are summarised in a table on pages 101-102 of the s42A report. Four were in support of the rule and the remainder sought amendments.

347. Fifteen submission points were received on GRUZ-R22 and are summarised in a table on pages 102-103 of the s42A report. Three were in support of the rule and the remainder sought amendments.

348. Four submission points were received on GRUZ-R23 and are summarised in a table on pages 103-104 of the s42A report. Three were in support of the rule and one sought amendment.

349. Twenty-four submission points were received on GRUZ-R24 and are summarised in a table on pages 104-105 of the s42A report. Three were in support of the rule, eight were opposed and sought its deletion, and thirteen sought amendments.

350. Thirteen submission points were received in support of GRUZ-R26 and are summarised in a table on pages 105 -106 of the s42A report.

351. Twelve submission points were received in support of GRUZ-R27 and are summarised in a table on page 106 of the s42A report.

352. Seventeen submission points were received on GRUZ-R28 and are summarised in a table on pages 106-107 of the s42A report. Nine were in support of the rule, and the remainder sought amendments.

353. Fourteen submission points were received on GRUZ-R29 and are summarised in a table on pages 107-108 of the s42A report. Thirteen were in support of the rule and one sought amendment.

354. Twenty-eight submission points were received on GRUZ-R30 and are summarised in a table on pages 108-110 of the s42A report. One was in support of the rule, and the remainder sought amendments.

355. Twenty-three submission points were received on GRUZ-R31 and are summarised in a table on pages 110-111 of the s42A report. One was in support of the rule, and the remainder sought amendments.

356. Thirteen submission points were received on GRUZ-R33 and are summarised in a table on pages 111-112 of the s42A report. Twelve were in support of the rule and one sought amendment.

357. Eleven submission points were received on GRUZ-R34 and are summarised in a table on page 112 of the s42A report. One was in support of the rule, five were opposed and sought its deletion, and five sought amendments.

358. Six submission points were received on GRUZ-R35 and are summarised in a table on pages 112-113 of the s42A report. Two were in support of the rule, and four were opposed and sought that the rule be deleted.

359. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and the addendum report.

Section 42A Report

Chapter as a whole

360. Ms Easton acknowledged submissions in support of the chapter.

361. Ms Easton did not support a submission point from Buller Conservation Group (S552.021) seeking an amendment to the zone description, as the zone description is set out in the National Planning Standards.

362. Ms Easton did not support a submission point from Skyline Enterprises Ltd (S250.001) seeking to have their amenities area identified on the planning maps and zone provisions, noting that she had considered this site in the Special Purpose Zones report. She concluded that the most appropriate zone would be an Open Space zone.

363. Ms Easton supported a submission point (S488.028) from WCRC seeking that biosecurity and biodiversity-associated helicopter operations be provided for as a Permitted Activity, noting that this has already been addressed through recommended amendments to the definition of Conservation Activities.

364. Ms Easton supported, in part, a submission point from the New Zealand Motor Caravan Association (S490.015), seeking to permit camping, noting that recreational activities, including camping, are permitted activities. She also noted that establishing new commercial camping grounds would be a Discretionary activity. She considered this activity status appropriate given that these activities can result in adverse effects, including reverse sensitivity.

365. Ms Easton supported a submission point from Manawa Energy (S438.141) seeking the following sentence be added: The ENG chapter contains rules applying to energy activities and renewable electricity generation activities throughout the district, and accordingly, the rules in this chapter do not apply to these activities. However, she considered that this should be part of a wider statement explaining the relationship with the Energy, Infrastructure, and Transport chapters.

366. Manawa Energy (S438.140) also sought amendments to the General Rural Zones Overview to identify that regionally significant infrastructure and renewable electricity generation is located within the zone. Ms Easton supported this submission and the proposed amendments which she considered reflect the importance of these activities in the General Rural Zone lands.

367. Ms Easton supported a submission point from Forest and Bird (S560.382) seeking that the overview be amended to reference other relevant District Wide chapters, including the ECO chapter, consistent with her recommendations on the other chapters.

368. Ms Easton did not support a submission point from Craig Schwitzer (S96.024) seeking stronger rules controlling intensive farming, noting that the District Plan provisions control indoor intensive farming due to the adverse effects these activities can create, and she considered this level of restriction appropriate. She noted that regional plans regulate other aspects of farming, including discharges to land, air, and water.

369. The s42A report states that Ms Easton did not support a submission point from Riarnne Klempel (S67.005) seeking that intensive farming operations should not be able to locate near cemeteries. This submission does not explicitly seek setbacks from cemeteries but raises more general concerns about the impacts of intensified dairying and large animal herds on Barrytown Township. Ms Easton noted that the issues raised may relate to the broader issue of reverse sensitivity that the Plan is attempting to address.

370. Concerning Ms Klempel's submission point (S296.003) regarding the need for greater regulation of large-scale industry, Ms Easton did not support this submission, as she considered that the Plan provisions provide an appropriate level of regulation for rural industries and direct industrial activities to industrial zones.

371. Ms Easton did not support a submission point from Rural Contractors NZ Incorporated (S489.006), which sought to have rural contract depots permitted as an activity in the zone. She considered this to be a rural industry and that the proposed definition and rule do not address the potential adverse effects to the degree that permitted activity status is justified.

GRUZ-R1 Agricultural, Pastoral and Horticultural Activities

372. Ms Easton acknowledged the submissions received in support of the rule.

373. Ms Easton supported in part a submission point (S476.041) from RNZ seeking an advice note highlighting notification to RNZ for structures within 100m of their Cape Foulwind facility. She noted that a 10m height limit applies under R1 and did not consider any need for an amendment to the rule, but indicated that amendments to R10 Emergency Service Facilities may be necessary. We note that, as discussed below, when considering GRUZ-R10 amendments, they were recommended within her Reply to GRUZ-R10, which addresses the core of the RNZ submission.

374. Ms Easton did not support a submission point (S560.056) from Forest and Bird seeking three advice notes referring to the NES-F regulations on sphagnum moss and other Plan chapters, noting that cross-references to other chapters will be contained in the chapter overview. She said that WCRC administers the NES-F and that sphagnum moss regulation is in the Land and Water Regional Plan.

375. Ms Easton supported a submission point (S450.271) from Waka Kotahi seeking an amendment to require sites to meet vehicle crossing standards in the transport chapter in order to be permitted activities. She noted that a large proportion of rural areas are accessed from state highways and that while existing use rights apply to existing crossings, new or expanded activities should have crossings constructed to a safe standard.

376. Ms Easton supported a submission point (S465.033) from Davis Ogilvie, seeking to reduce internal boundary setbacks from 10m to 5m, to be more consistent with the operative Plan rules. She noted that all three councils considered a 5m setback to be appropriate.

377. Ms Easton did not support a submission point (S570.006) from Dean Van Mierlo seeking reduced setbacks for GRUZ sections less than 1000m^2. She considered that a reduced setback may encourage landowners to seek subdivision consent to create more small lots. Ms Easton considered that, as there are a very small number of sites this size that are not already built upon, the matter can be managed through the resource consent process, noting that the deemed permitted approach could also be used with neighbours' written approval.

378. Ms Easton supported submission points by submitters, Chris + Jan Coll (S558.503), Chris J Coll Surveying Ltd (S566.503), William McLaughlin (S567.548) and Laura Coll McLaughlin (S574.503), seeking reduced setbacks, and considered that the reduced internal boundary setback addressed these submissions.

379. Ms Easton did not support submissions by submitters, John Brazil (S360.050), Steve Croasdale (S516.110), Geoff Volckman (S563.113), Catherine Smart Simpson (S564.122), Koiterangi Lime Co Ltd (S577.095), William McLaughlin (S567.561), Karamea Lime Company (S614.177), Peter

Langford (S615.177) and Chris J Coll Surveying Ltd (S566.518) seeking to ensure that existing non-compliance with permitted activity standards would not preclude the application of the rule. Ms Easton noted that existing use rights cover existing activities, but new and expanding activities should be subject to the standards to ensure effects are adequately managed.

380. Ms Easton did not support submission points from Hort NZ (S486.075) and Federated Farmers (S524.118) seeking that the rule be split into two rules for buildings and activities, as she did not think this would make the Plan more straightforward.

381. Ms Easton did not support a submission point (S486.075) from HortNZ seeking that artificial crop protection structures and temporary workers' accommodation be included with the activities rule. She considered that these structures would not meet the NPS definition of a building and would be permitted under R5 Minor Structures. Concerning temporary workers' accommodation, she considered that the minor residential unit provisions under R3 would be sufficient to provide for workers' accommodation.

382. Ms Easton supported a submission point (S538.497) from BDC seeking a minimum ground floor area standard, noting that BDC suggested a 500m^2 standard, but GDC considered this to be too small for farm buildings. Ms Easton proposed a maximum of 500 m² for residential buildings and 1000 m² for farm buildings. Ms Easton also supported BDC's submission seeking a 150m setback from a wastewater treatment plant, noting that this issue is relevant in several small communities.

383. Ms Easton did not support submission points from Chris + Jan Coll (S558.504), Chris J Coll surveying Ltd (S566.504), William Mc Laughlin (S567.549), and Laura Coll McLaughlin (S574.504) seeking a controlled activity status for activities that do not meet the permitted standards, noting that the proposed Discretionary activity status is consistent with the operative plans. She considered that landowners and residents should be able to have confidence in a basic level of amenity, density, infrastructure capacity and rural character. She did not consider controlled activity status to be appropriate, given that controlled activities must be granted.

384. Ms Easton did not support submission point (S560.383) from Forest and Bird seeking to remove quarrying from the permitted activities, noting that farm quarries are an expected activity on farms and are defined in the Plan, and must comply with District-wide and zone rules.

385. Ms Easton supported in part submission point (S573.040) from FENZ seeking a maximum height of 10m for emergency service facilities and critical facilities, and that these activities be exempt from setback requirements. She considered 10m an appropriate height for emergency service facilities but noted critical facilities are not provided for in the zone and did not consider a setback exemption appropriate.

386. FENZ also sought an additional standard requiring new developments to have connections to public reticulated water supply or an alternative satisfactory on-site water supply. Ms Easton considered that this submission appeared to anticipate significant development in the rural zones, which is not expected or provided for in the zone rules. She also considered water supply to be a subdivision matter and covered by Building Act requirements.

GRUZ-R2 Conservation and recreation areas

387. Ms Easton acknowledged the submissions received in support of the rule.

388. Ms Easton supported submission point (S336.012) from the Westport Pistol Club seeking to amend standard 2 to read: "Within the Rifle Range Protection Areas, Recreation Activities are restricted to Recreational Firearms Shooting," and other submissions seeking similar relief61.

389. Ms Easton did not support submission points by submitters, John Brazil (S360.049), Steve Croasdale (S516.111), Chris & Jan Coll (S558.508), Catherine Smart Simpson (S564.123), Geoff Volckman (S563.114), Chris J Coll Surveying Ltd (S566.508), William McLaughlin (S567.552), Laura Coll McLaughlin (S574.508) and Koiterangi Lime Company (S577.096) seeking to ensure that existing non-compliance with permitted activity standards would not preclude the application of the rule. Ms Easton noted that existing use rights cover existing activities, but new and expanding activities should be subject to the standards to ensure effects are adequately managed.

GRUZ-R3 Residential Activities and Residential Units

390. Ms Easton acknowledged the submissions received in support of the rule.

391. Several submission points sought reductions in residential density standards, with Frank O,Toole (S595.008) seeking minimum allotment sizes of 4000m^2, and Christopher and Donna Meates (S430.002), Russel and Joanne Smith (S477.022), Tim Mc Farlane (S482.022), Lauren Nyhan, Anthony Philips (S533.022), Stewart and Catherine Nimmo (S559.022), Dennis and Wendy Cadigan (S532.005) and Claire and John West (S506.022) were seeking minimum allotment sizes of 5000m^2 and Bert Hoffmans (S504.014) was seeking two dwellings per property with 2ha density. Ms Easton did not support these submissions, noting that TTPP zoning approach differs from the Operative Plans, and provides specific, identified locations for Rural Lifestyle Zone (1ha lots) and Settlement Zone Rural Residential Precinct (4000m^2). She noted that this is in direct response to the fragmentation of rural land, the proliferation of lifestyle living in rural areas, and the consequent reverse sensitivity effects that primary production is facing on the West Coast.

392. Ms Easton did not support the submission point (S571.011) from Greg Maitland, seeking that there be no restrictions on where minor units can be located on a property, noting that tying minor units to the main house is a key mechanism to prevent minor units from being subdivided off.

393. Ms Easton did not support submission point from Elley Group Ltd (S164.001) seeking that minimum lot sizes be replaced by a maximum concentration approach, as she considered this to be more complex and would not meet the Plan's objectives concerning reverse sensitivity and maintaining production values.

394. Ms Easton supported, in part, the submission points by BDC (S538.499) and Graeme Cavaney (S121.002), seeking a maximum of two dwellings per property, as she considered that the proposed minimum densities addressed the issues submitters were concerned with, relating to the fragmentation of rural land and the proliferation of residential development.

395. Ms Easton did not support submission points from Westport Pistol Club (S336.013) and Silver Fern Farms (S441.070) seeking that the advice note be amended to refer to the rifle range and adjoining industrial sites. She noted that this matter is addressed in the Noise chapter, and the advice note would be amended as a consequential amendment if Noise-R3 is amended.

396. Ms Easton did not support submission points (S558.511) Chris & Jan Coll, (S566.511) Chris J Coll Surveying Ltd, (S567.555) William McLaughlin, (S574.511) Laura Coll Mclaughlin, seeking the advice note to be deleted, noting that whether acoustic insulation should be required is a matter addressed in the Noise s42A.

397. Ms Easton supported, in part, submission point (S450.272) from Waka Kotahi, seeking that the rule be amended to require sites to meet vehicle crossing standards in the transport chapter, noting that the requirement in R1 will also apply here.

398. Ms Easton did not support submission point (S486.078) from Hort NZ seeking the deletion of a reference to primary production buildings. She noted that minor units are required to be associated with existing buildings to prevent a proliferation of residential units throughout the zone.

399. Ms Easton did not support submission point (S524.119) from Federated Farmers seeking a maximum of 5 minor units per 10 hectares, noting that this would significantly increase residential activity within the rural environment. She considered that the proposed rule allows for sufficient accommodation to support dairy farming, which is the main primary production land use on the West Coast.

400. Ms Easton supported submission points (S552.178) by BCG and (S553.178) Frida Inta on the use of the term 'site' vs 'allotment,' but noted this matter has already been addressed in the s42A reports on General Provisions and Historic Heritage.

401. Several submissions, (S558.509), (S566.509), (S567.553), (S574.509), (S577.097), (S614.179), (S615.179) sought that the rule be amended to accommodate existing non-compliance. Ms Easton did not support these submission points for the reasons outlined in relation to similar submissions.

GRUZ-R4 Papakāinga Developments

402. Ms Easton acknowledged the submissions received in support of the rule.

403. Ms Easton did not support submission point (S360.074) from John Brazil seeking that pre-existing non-compliance does not preclude application of the rule. She considered that, outside of a resource consent process, existing non-compliance should not be accommodated in the rules, as this could result in a range of adverse effects.

404. Te Tumu Paeroa (S440.047) sought that the Papakāinga definition be amended to reference Maori Landowners. Ms Easton supported this submission point in part, noting that Ngāi Tahu and the Māori Trustee had since agreed upon the definition, and she endorsed the agreed-upon definition.

GRUZ-R5 Minor Structures

405. Ms Easton acknowledged the submissions received in support of the rule.

406. Ms Easton supported submission point (S538.500) from BDC seeking that Clause 2 be replaced with a setback requirement. She considered the setbacks for buildings under R1, including the recommended 5m internal boundary setback, to be appropriate.

407. Ms Easton did not support submission point from Horticulture New Zealand (S486.079) seeking the rule be amended to refer to rural production activities rather than agricultural,

horticultural or pastoral activities, as she did not support the change to the definition. She supported, in part, their submission seeking that Clause 2 be deleted, as she had recommended the change discussed above.

408. In response to submission points, (S577.098) Koiterangi Lime Co Ltd, (S614.180) Karamea Lime Company, (S516.113) Steve Croasdale, (S563.116) Geoff Volckman, (S564.126) Catherine Smart Simpson, and (S615.180) Peter Langford that sought to simplify the rule and address existing non-compliance, Ms Easton supported the submissions in part, particularly in relation to her recommended change to Clause 2.

409. She did not support providing for existing non-compliance, for reasons previously given. As sought by Laura Coll McLaughlin (S574.512), William McLaughlin (S567.556), Chris J Coll Surveying Ltd (S566.512), Catherine Smart Simpson (S564.125), Geoff Volckman (S563.117), Steve Croasdale (S516.114), Chris & Jan Coll (S558.512), John Brazil (S360.051)

GRUZ-R6 Fences, Walls and Retaining Walls

410. Ms Easton acknowledged the submissions received in support of the rule. As all submissions were in support of this rule, she did not recommend any amendments.

GRUZ-R7 Relocated Buildings/GRUZ-R17 Relocated Buildings not meeting permitted activity standards

411. Ms Easton acknowledged the submissions received in support of the rule.

412. Submission points (S538.502) BDC, (S558.021, S558.514) Chris & Jan Coll, (S566.021,S566.514) Chris J Coll Surveying, (S567.011, S567.558) William McLaughlin, (S574.021, S574.514) Laura Coll Mclaughlin, sought that these rules be deleted, and Ms Easton supported these submissions, noting that amenity concerns relating to relocated buildings are associated principally with urban locations. She considered that these issues do not arise in the same way in rural areas and that the TTPP does not need to manage this matter in the Rural zone.

413. Ms Easton did not support submission point (S616.007) from the New Zealand Heavy Haulage Association, as she had recommended that the rule be deleted.

GRUZ – R8 Residential Visitor Accommodation

414. Ms Easton acknowledged the submissions received in support of the rule.

415. Ms Easton did not support submission point (S251.001) from Charles Elley, seeking that the rule be deleted, and opposed the regulation of this activity through the Plan. She noted that the impacts of residential visitor accommodation were the single most significant issue raised by the community, and that the TTPP committee considered the matter in substantial detail and consulted on the proposed approach. Ms Easton considered residential visitor accommodation to be a business, and where a whole house is rented out, it is no different to a commercial visitor operation except in scale. However, as the scale is small, a permitted activity status is provided within a framework to manage adverse effects.

416. Ms Easton supported submission point (S608.109) from GDC seeking that records of letting activity be provided to the Council annually, rather than on request, placing the onus on landowners to provide evidence of compliance. She considered this a reasonable requirement to ensure permitted activity standards are met and that it would assist the Council in discharging Building Act compliance duties.

417. Ten submitters, John Brazil (S360.053), Steve Croasdale (S516.116), Chris & Jan Coll (S558.515), Geoff Volckman (S563.119), Catherine Smart Simpson (S564.128), Chris J Coll surveying Ltd (S566.515), William McLaughlin (S567.559), Laura Coll McLaughlin (S574.515), Karamea Lime Company (S614.183), and Peter Langford (S615.183) sought to amend the rule to allow for existing non-compliance. Ms Easton did not support these submissions, noting that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

418. Ms Easton did not support submission points (S566.517) Chris J Coll SurveyingLtd, (S558.517) Chris & Jan Coll, (S567.560) William McLaughlin and (S574.517) Laura Coll McLaughlin seeking that the noise advice note be deleted, as the substantive matter is dealt with in the Noise topic. She noted that if the rule is amended, a consequential amendment would be made to the advice note.

GRUZ – R9 Home Business

419. Ms Easton acknowledged the submissions received in support of the rule.

420. Ms Easton supported submission point (S538.504) from BDC seeking that the permitted activity standards allow no more than two full-time equivalent persons engaged in the home business who reside off-site. The Council are concerned that traffic generation standards are difficult to monitor on sites with combined uses, and this change would provide a clear compliance method to ensure the scale of home business doesn't exceed that expected in a rural area. Ms Easton was persuaded by this argument and noted that the operative Buller and Westland District Plans have this requirement in their rules.

421. Ms Easton supported, in part, the submission point (S450.275) from Waka Kotahi, seeking the rule be amended to reduce the permitted vehicle movement to 30 per day, as use of the vehicle access at this level is considered a high trip-generating activity. She noted the standard as drafted could allow up to 210 vehicle movements on a single day and recommended it be amended as follows: a maximum of 10 heavy vehicle movements per day, and whichever is the greater of 30 light vehicle movements per day or and 210 light vehicle movements per week.

422. Submitters Steve Croasdale (S516.117), John Brazil (S360.054), Geoff Volckman (S563.120), Catherine Smart Simpson (S564.129), Karamea Lime Company (S614.184) and Peter Langford (S615.184) sought the rule be amended to allow for existing non-compliance. Ms Easton did not support these submissions, noting that existing use rights covers existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ-R10 Emergency Service Facility

423. Ms Easton acknowledged the submissions received in support of the rule.

424. Submitters John Brazil (S360.055), Steve Croasdale (S516.118), Chris & Jan Coll (S558.519), Geoff Volckman (S563.121), Catherine Smart Simpson (S564.130), Chris J Coll Surveying Ltd (S566.519), William McLaughlin (S567.562), Laura Coll McLaughlin (S574.519), Karamea Lime Company (S614.185) and Peter Langford (S615.185) sought the rule be amended to allow for existing non-compliance. Ms Easton did not support these submission points, noting that

existing use rights covers existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ-R13 Community Halls

425. Ms Easton acknowledged the submissions received in support of the rule.

426. Nine submissions supported the rule but requested that an error in the text be corrected, as it states 12:00 p.m. instead of 12:00 a.m. Ms Easton supported these submission points.

427. Ms Easton supported a submission point from BDC (S538.508) and GDC (S608.111), seeking that the wording of Standard 3 be amended to refer to the correct numbering of Standards 1 and 2.

428. A submission from BDC (S538.508) sought a schedule of Community Halls to be included in the Plan, to provide certainty on which community facilities are considered halls for this rule. Ms Easton noted that existing halls would have existing use rights, and the Plan does not include schedules of other similar facilities. She suggested that a definition would more appropriately address this issue and invited Buller DC to propose a suggested wording.

GRUZ-R14 Community Facilities and Educational Facilities in the Community Living Precinct.

429. Ms Easton acknowledged the submissions received in support of the rule. As all submissions were in support of this rule, she did not recommend any amendments.

GRUZ-R15 Community Facilities and Educational Facilities in the Community Living Precinct not meeting Permitted Activity Standards

430. Ms Easton acknowledged that all submissions were in support of the rule.

GRUZ-R16 Minor structures not meeting Permitted Activity Standards

431. Ms Easton acknowledged the submissions received in support of the rule.

432. Submitters John Brazil (S360.059), Steve Croasdale (S516.121), Chris & Jan Coll (S558.529), Geoff Volckman (S563.127), Catherine Smart Simpson (S564.136), Chris J Coll Surveying Ltd (S566.529), William McLaughlin (S567.571), Laura Coll McLaughlin (S574.529), Koiterangi Lime Co Ltd (S577.103) and Peter Langford (S615.191) sought to amend the rule to allow for existing non-compliance. Ms Easton did not support these submission points, noting that existing use rights covers existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ – R19 Intensive Indoor Primary Production in the Community Living Precinct

433. Ms Easton acknowledged the submission received in support of the rule.

434. Ms Easton did not support submission point (S190.986) from Te Mana Ora seeking that the rule be amended to require that the activity not be established within a Drinking Water Source Protection Zone. Ms Easton acknowledged that this is an important issue, but no such zones currently exist on the Coast, and she had not been able to gather information about where they should be located. She noted that the NES for drinking water addresses protection of

drinking water sources and is required to be implemented by Regional Councils, and therefore, she considered that WCRC would most appropriately manage the matter.

435. Submitters Chris & Jan Coll (S558.532), Chris J Coll Surveying Ltd (S566.532), William McLaughlin (S567.574), Laura Coll Mclaughlin (574.532), sought the rule be amended to allow for existing non-compliance. Ms Easton did not support these submission points, noting that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ-R20 Intensive Primary Production

436. Ms Easton acknowledged the submissions received in support of the rule.

437. Ms Easton did not support submission point (S608.113) from GDC seeking that the activity status be amended to controlled, noting that the effects of intensive primary production can be considerable, and that larger-scale industries can require significant management, warranting a restricted discretionary activity status. Ms Easton considered that the recommended advice note to the intensive primary production definition, confirming that herd homes are excluded, may address the submitters' concerns.

438. Ms Easton did not support submission point (S190.987) from Te Mana Ora seeking that the rule be amended to require that the activity not be established within a Drinking Water Source Protection Zone. Ms Easton acknowledged that this is an important issue, but no such zones currently exist on the Coast, and she had not been able to gather information about where they should be located. She noted that the NES for drinking water addresses protection of drinking water sources and is required to be implemented by Regional Councils, and therefore, she considered that WCRC would most appropriately manage the matter.

439. Ms Easton did not support submission point (S560.387) from Forest and Bird seeking additional conditions requiring these activities not to be located in overlays, SNAs, the coastal environment, or where indigenous vegetation clearance would occur, noting that these matters are addressed in the relevant District-wide chapters. She did not support the proposal that such activities should be non-complying if these matters are breached.

440. Ms Easton did not support submission points (S552.184) from BCG and (S553.184) from Frida Inta seeking that the number and type of livestock be a matter of discretion, as she considered the District Plan primarily manages building bulk and location, traffic and noise effects, and that the number and type of livestock is more relevant to discharge effects which the Regional Council manages.

441. Submitters John Brazil (S360.062), Steve Croasdale (S516.124), Chris & Jan Coll (S558.533), Geoff Volckman (S563.130), Catherine Smart Simpson (S564.139), Chris J Coll Surveying Ltd (S566.533), William McLaughlin (S567.575), Laura Coll McLaughlin (S574.533), Koiterangi Lime Company (S577.106), Karamea Lime Company Ltd (S614.194) and Peter Langford (S615.194) sought to amend the rule to allow for existing non-compliance. Ms Easton did not support these submission points, noting that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ-21 Rural Industry

442. Ms Easton acknowledged the submissions received in support of the rule.

443. Ms Easton did not support submission points (S524.120) from Federated Farmers and (S486.080) from HortNZ seeking that the activity be permitted, or a submission from Rural Contractors NZ Inc seeking that the rule exclude rural contractor depots. She noted that a proliferation of industrial activities in rural areas surrounding the main towns has become a significant issue. She said that the nature of the West Coast economy is that many activities service both urban and rural sectors. She considered that requiring resource consent for these activities means that effects can be appropriately managed and ensures that activities established in the rural zone serve the rural economy as intended.

444. Submitters Steve Croasdle (S516.125), John Brazil (S360.063), Chris & Jan Coll (S558.534) Geoff Volckman (S563.131) Catherine Smart Simpson (S564.140), Chris J Coll Surveying Ltd (S566.534), William McLaughlin (S567.576), Laura Coll McLaughlin (S574.534) Koiterangi Lime Co Ltd (S577.107), Karamea Lime Company (S614.195) and Peter Langford (S615.195) sought to amend the rule to allow for existing non-compliance. Ms Easton did not support these submission points, noting that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ-R22 Visitor and Temporary Worker Accommodation not meeting Permitted Activity Standards

445. Ms Easton acknowledged the submissions received in support of the rule.

446. Ms Easton did not support submission point (S486.081) from HortNZ seeking provision for temporary workers' accommodation in a new permitted activity rule. She considered that the minor unit provisions sufficiently provide for worker accommodation of the type required on the Coast.

447. Submitters John Brazil (S360.064), Steve Croasdale (S516.126), Chris & Jan Coll (S558.535), Geoff Volckman (S563.132), Catherine Smart Simpson (S564.141), Chris J Coll Surveying Ltd (S566.535), William McLaughlin (S567.577), Laura Coll McLaughlin (S574.535), Koiterangi Lime Co Ltd (S577.108), Karamea Lime Company (S614.196) and Peter Langford (S615.196) sought to amend the rule to allow for existing non-compliance. Ms Easton did not support these submission points, noting that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects.

GRUZ – R23 Papakāinga Developments not meeting Permitted Activity Standard

448. Ms Easton acknowledged the submissions received in support of the rule.

449. Ms Easton supported, in part, submission point (S608.758) from GDC seeking that management of access, parking, and traffic generation be added as a matter of discretion. She considered access and parking to be relevant, but not traffic generation, as Papakāinga are a residential activity.

GRUZ-R24 Non-rural Activities/ GRUZ–R30 Non-rural activities not meeting Permitted or Restricted Discretionary Activity Rules

450. Ms Easton acknowledged the submissions received in support of the rules.

451. Ms Easton supported in part submission point (S538.516) from BDC seeking that the title be amended to ‘commercial and industrial activities’ as non-rural activities are not a defined

term. Ms Easton noted that there is a definition and rules for rural industry, so rules R24 and R30 must be clear that they do not apply to rural industry.

GRUZ-R24 Non-rural Activities

452. Submitters Tiga Minerals and Metals Limited (S493.104), Westland Farm Services (S550.017), WMS Group (HQ) Limited and WMS Land Co Limited (S599.120),Birchfield Coal Mines Ltd (S601.098), Birchfield Ross Mining Limited (S604.088), Phoenix Minerals Limited (S606.073), Whyte Gold Limited (S607.073), sought that the rule be deleted. Federated Farmers (S524.121) and Hort NZ (S486.082) sought the rule be deleted or amended to Discretionary as they were concerned it was too permissive given the policy framework, which directs that the General Rural Zone be used for primary production ahead of other uses. Ms Easton supported these submission points, agreeing that the objective and policy direction is clear and noting that the issue of the proliferation of commercial and industrial activities in the rural zones is significant. She recommended deleting GRUZ-24 and retaining GRUZ-30 and renaming it 'Industrial and commercial activities excluding rural industry'.

453. Submission points Chris & Jan Coll (S558.536), Chris J Coll Surveying Ltd (S566.536), William McLaughlin (S567.578), Luara Col McLaughlin (S574.536), John Brazil (S360.065), Steve Croasdale (S516.127), Geoff Volckman (S563.133), Catherine Smart Simpson (S564.142), Koiterangi Lime Co Ltd (S577.109), Karamea Lime Company (S614.197) and Peter Langford (S615.197) sought amendments to the rule. Ms Easton did not support these, as she recommended that the rule be deleted.

GRUZ-R30 Non-rural activities not meeting Permitted or Restricted Discretionary Activity Rules

454. Ms Easton supported submission point (S538.522) from Buller DC, seeking either that a definition of Large Format Retail be included or that Clause 1 refer to commercial activities, and recommended that the standard refer to commercial activities.

455. Submission points Chris & Jan Coll (S558.544), Geoff Volckman (S563.139), Catherine Smart Simpson (S546.148), Chris J Coll Surveying ltd (S566.544), William McLaughlin (S567.585), Laura Coll McLaughlin (S574.544), Koiterangi Lime Co Ltd (S577.115), Karamea Lime Company (S614.203) and Peter Langford (S615.203) sought that the rule have more clearly defined terms. Ms Easton supported these submissions and considered that her recommended amendments addressed this matter. Ms Easton did not support several submission points from these submitters that sought that Clauses 1 and 2 be deleted and that activity status where compliance is not achieved be n/a. She noted that the focus of the General Rural Zone is to provide for primary production activities, and the rule recognises that some commercial or industrial activities may be appropriate in the zone, but not at the expense of productive land values, with the standards providing this framework. She also noted that the submissions gave no reasons for opposing the standards, other than that they were too restrictive.

GRUZ – R26 Community Facilities, Educational Facilities and Emergency Service Facilities not Meeting Permitted Activity Standards / GRUZ – R27 Agricultural, Pastoral and Horticultural Activities, Conservation and Recreation Activities not meeting Permitted, Controlled or Restricted Discretionary Activity Standards

456. Ms Easton acknowledged the submissions received in support of the rule. As all submissions were in support, no changes were recommended to the rule.

GRUZ-R28 Minor Structures, Fences, Walls, Retaining Walls and Relocated Buildings not meeting Permitted or Controlled Activity Standards

457. Ms Easton acknowledged the submissions received in support of the rule.

458. Ms Easton supported submission points from Frank and Jo Dooley (S478.040) and from Frank O'Toole (S595.022), seeking that fences, walls, and retaining structures be removed from this rule and placed in a separate, restricted discretionary rule, with matters of discretion relating to the effects of these types of structures. She noted that these submitters sought a similar change to the rules in other zones and considered that a restricted discretionary activity is appropriate for structures that do not meet permitted activity standards.

459. Ms Easton supported submission points Chris & Jan Coll, (S558.043, S558.542) Chris J Coll Surveying Ltd (S566.043, 566.542), William McLaughlin, (S567.013, 567.583) Laura Coll McLaughlin (S574.043) seeking to delete relocated buildings from this rule, noting that this is a consequential amendment from her recommendation to delete relocated buildings to not regulate relocated buildings in the General Rural Zone.

GRUZ- R29 Intensive Indoor Primary Production or Rural Industry not meeting Permitted or Restricted Discretionary Activity Standards

460. Ms Easton acknowledged the submissions received in support of the rule.

461. Ms Easton did not support submission point from GDC (S608.114) seeking to include reference to controlled activity, as a consequence of their submission seeking a controlled activity status for intensive indoor primary production. Ms Easton noted that she had also not supported that submission.

GRUZ-R31 Visitor and Temporary Worker Accommodation not meeting Permitted or Restricted Discretionary Activity Standards

462. Ms Easton acknowledged the submissions received in support of the rule.

463. Submission points John Brazil (S360.071), Steve Croasdale (S516.133), Geoff Volckman (S563.142), Catherine Smart Simpson (564.151), Koiterangi Lime Co Ltd (S577.118), Karamea Lime Company (S614.206), Peter Langford (S615.206), Chris & Jan Coll (S558.547), Chris J Coll Surveying Ltd (S566.547), William McLaughlin (S567.588), and Laura Coll McLaughlin (S574.547) sought that Clause 1 be removed and that the activity status not be escalated to non-compliant. Ms Easton supported these submissions, as she considered a Discretionary activity status to enable all relevant matters to be assessed. She also noted that some visitor accommodation, such as campgrounds, is appropriate in the General Rural Zone and considered a non-complying activity status unnecessary for these activities.

GRUZ-R33 Residential Activities and Residential Units not meeting Permitted or Restricted Discretionary Activity Standards

464. Ms Easton acknowledged the submissions received in support of the rule.

465. Ms Easton supported submission point from HortNZ (S486.084), seeking clarification of the rule, as there are no restricted discretionary rules concerning residential activities. She recommended the words *'or restricted discretionary'* be removed.

GRUZ-34 Non-rural Activities, Visitor and Temporary Worker Accommodation not meeting any other Rule in the zone

466. Ms Easton acknowledged the submission received in support of the rule.

467. Ms Easton supported submission point from BDC (S538.526), seeking that the rule title be amended to "Commercial and Industrial activities not meeting any other rule in the zone," noting that this is a consequential amendment to other submissions she had supported.

468. Submitters Geoff Volckman (S563.146), Catherine Smart Simpson (S564.155), Koiterangi Lime Co Ltd (S577.122), Karamea Lime Company (S614.210), Peter Langford (S615.210), Chris J Coll Surveying Ltd (S566.552), William McLaughlin (S567.592) and Laura Coll Mclaughlin (S574.552) sought that the activity status be Discretionary or that the rule be deleted. Ms Easton did not support these submissions, noting that no reasons are provided for opposing the rule, other than it being too restrictive. She noted that the focus of the rural zone is to provide for primary production.

GRUZ – R35 Any Activity not provided for by another Rule in the zone

469. Ms Easton acknowledged the submission received in support of the rule.

470. Submission points (S558.553) Chris & Jan Coll, (S566.553) Chris J Coll Surveying Ltd, (S567.593) William Mclaughlin and (S574.553) Laura Coll McLaughlin sought that the rule be deleted. Ms Easton did not support these submissions, noting that no reasons were given. She acknowledged that a Discretionary activity status is often applied to this type of 'catch-all' rule and invited the submitters to provide information at the hearing on whether they would support this alternative relief.

Hearing and Submitter Evidence

471. Frida Inta, on behalf of herself and BCG, sought that GRUZ-R1 address livestock herd intensities via additional wording under GRUZ-R1.3, as follows: no detectable odour or fly problem beyond zone boundaries, for both housed and free-range stock. She sought a consistent set of rules that define animal number thresholds, more logical setback distances and address cattle, pigs and sheep separately. She considered a blanket intensity of 10 animals to be inadequate. She also sought to have specific standards for dairy sheds included to control adverse effects.

472. Regarding GRUZ-R5, Ms Inta noted that the road and state highway setbacks were onerous but did not request a specific change to this standard. She inquired whether the Plan could enforce restrictions on secondary buildings smaller than 30 m², as these are now permitted under a national ruling.

473. Ms Inta considered that if GRUZ-R7 relating to relocated buildings is to be deleted, then GRUZ-R1 should be amended to include relocated buildings.

474. Ms Inta queried why GRUZ-R8.7 only applies to Buller and noted that this Clause is not addressed in the s42A report. She considered the traffic generation standards under GRUZ-R9 to be disruptive to quiet neighbourhoods and pointed out that the traffic movement standards under GRUZ-R8 and GRUZ-R9 are inconsistent. She supported the GRUZ-R9 standard controlling dust, odour or smoke, noting that these can be debilitating.

475. In response to the s42A report comments on GRUZ-R20, Ms Inta queried why this rule could not include a matter of discretion about the number and type of livestock when other matters

of discretion include effluent management and wastewater and stormwater disposal, which are also related to discharges managed by the Regional Council. She raised concerns with the grammar used in the wording of GRUZ-30.

476. Mr Vance Boyd raised concerns that the maximum permitted size (1m) for antenna dishes was insufficient, as dishes can be up to 1.4m in diameter, and the cost of a resource consent for an oversized dish is not justifiable.

477. Steve White on behalf of RNZ continued to seek controls for structures over 10m in height and in proximity to the RNZ Cape Foulwind site. Mr White did not consider the recommendations in the s42A report to be appropriate, noting that there would be no requirement for electromagnetic radiation risk to be considered for any structures except emergency service facilities. He said that while structures over 18m may be unusual, it is precisely the higher and more unusual structures that are exposed to greater risk and he considers that it makes sense for this risk to be assessed at the resource consent stage.

478. Further legal submissions from RNZ, provided in response to matters raised by the Panel in the hearing, confirmed that RNZ and Ms Easton had reached an agreed position on a proposed overlay, with accompanying permitted activity standards and matters of discretion for restricted discretionary activities. RNZ consider that the s42A officers' proposed provisions provide good protection. The legal submission considered that there was scope in the original RNZ submission to propose an appropriate alternative relief, including an overlay.

479. In a letter dated 1 July 2024 KiwiRail indicated support for the building setbacks in GRUZ-R1, noting that their original submission sought a minimum 5m setback from the rail corridor boundary in all zones, and sought that both structures and buildings be subject to these Clauses. They also sought several amendments, including that the following standard be added to GRUZ-R13, requiring community halls to comply with the building setbacks under GRUZ-R1: Performance Clause 2 of GRUZ-R1, relating to building and structure setbacks from roads, State Highways and internal boundaries, is complied with that home businesses that do not comply with standards be subject to a discretionary activity status, and that the following additional matters of discretion relating to reduced setbacks be added to GRUZ-R23 and 26:

> *The location and design of the building or structure as it relates to the ability to safely use, access and maintain buildings or structures without requiring access on, above or over the rail corridor; and*
>
> *The safe and efficient operation of the rail network.*

480. In a letter tabled at the hearing, on behalf of FENZ acknowledged Ms Easton's response to their original submission and noting that the intent of their relief sought was to capture potential scenarios where reticulation may be available. They considered there to be a gap in the Plan as there is no rule or standard requiring on-site water supply or firefighting water supply to be provided for new developments. To address this perceived gap, FENZ requested the Panel consider the requested relief further and proposed an alternative wording to that in the original submission, as follows:

> *7. Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008).*
>
> *Advice Notes: […]*

3. The New Zealand Fire Service Firefighting Water Supplies Code of Practice SNZ PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

481. HortNZ[62] accepted in part the s42A recommendations on GRUZ-R1 and did not continue to seek amendments to this rule. They accepted in part Ms Easton's recommendations on GRUZ-R3. They supported the provision of workers' accommodation under this rule, noting that activities not meeting the standards are restricted and discretionary under GRUZ-R22. They sought an amendment to GRUZ-R3 to clarify this as follows: Activity status where compliance not achieved with GRUZ–R3 (4): Restricted Discretionary (under GRUZ–R22).

482. Hort NZ sought a new rule for Artificial Crop Protection Structures (ACPS), as follows:

GRUZ – RX Artificial crop protection structures

Where:

i. ***The height of the structure does not exceed 6m; and***

ii. Either: green or black cloth is used on any vertical faces within 30m of a property boundary, including a road boundary, except that a different colour may be used if written approval of the owner(s) of the immediately adjoining property or the road controlling authority (in the case of a road) is obtained and provided to the Council;

OR

iii. the structure is setback 3m from the boundary

When compliance with GRUZ-RX is not achieved: Restricted Discretionary

Matters of discretion: Assessment of the potential glare on neighbouring properties (or road users) from the colour of the cloth.

483. HortNZ also sought further amendments to GRUZ-R5 to remove area restrictions and raise the height limit for Crop Protection Structures, as follows:

GRUZ - R5 Minor structures

Activity Status Permitted

Where:

1. These are ***Artificial Crop Protection Structures, Crop Support Structures, or*** ~~*not*~~ *structures* ***not*** *associated with Agricultural, Pastoral and Horticultural Activities Permitted under Rule GRUZ - R1;*

2. All performance standards for Rule GRUZ - R1 are complied with; Structures are set back a minimum of 10m from the road boundary, 20m from the State Highway boundary and 5m from internal boundaries

3. Masts, poles, aerials and pou whenua must not exceed 7m in height;

4. Any antenna dish must be less than 1m in diameter;

[62] Emily Levenson

5. Artificial Crop Protection Structures and Crop Support Structures must not exceed 6m and no site coverage will apply.

*~~5~~**6**. Any other structure must not exceed 10m^2 and 2m in height; and*

*~~6~~**7**. Within the Rifle Range Protection Area only minor structures that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities undertaken within the area are established.*

Activity status where compliance not achieved: Controlled

484. Following the hearing, Ms Levenson provided a memo on behalf of HortNZ responding to questions from the Panel and providing additional commentary on greenhouses, ACPS, and other District Plan approaches to these structures. She proposed an amended wording of the new rule HortNZ seeks for ACPS, as follows:

GRUZ – RX Artificial crop protection structures

Where:

i. The height of the structure does not exceed 6m; and

ii. Either: green or black cloth is used on any vertical faces

within 30m of a property boundary, including a road boundary, except that a different colour may be used if written approval of the owner(s) of the immediately adjoining property or the road controlling authority (in the case of a road) is obtained and provided to the Council;

OR

iii. the structure is setback 3m from the boundary

iv. Setbacks for Artificial Crop Protection Structures do not apply except for where they are located adjacent to an internal boundary where there is an existing lawfully established residential unit located on an adjacent site and within 12m of the boundary. In this circumstance, a minimum 5m setback shall apply to that portion of the Artificial Crop Protection Structure that is parallel to the face of the neighbouring residential unit.

When compliance with GRUZ-RX is not achieved: Restricted Discretionary

Matters of discretion: Assessment of the potential glare on neighbouring properties (or road users) from the colour of the cloth

485. SFF acknowledged the s42A report's comments on GRUZ-R3, specifically regarding the acoustic insulation addressed in the Noise topic.

486. Lionel John Hulme and Simon Cameron, on behalf of Federated Farmers, continued to seek that up to 5 minor units be permitted per 10ha of site area, noting that they considered there would be little difference in the effects of minor residential units on two blocks of 10ha compared to more units on one 10ha block. In relation to GRUZ-R21 they continued to seek that rural industry be allowed to locate in the GRUZ as a permitted activity as of right subject to suitable safeguards in the form of standards.

487. Federated Farmers supported the s42A recommendations to delete GRUZ-R24.

488. Jonathan Bhana-Thomson on behalf of New Zealand Heavy Haulage Association Inc., opposed the s42A report recommendations to delete the relocated building rules, noting that this may result in building relocations defaulting to non-complying status under the catch-all rule R35. He also stated that relocated building rules were recommended to be retained in residential zones, as per the s42A report. He considered that a consistent approach to relocated buildings should be taken across the district. Mr Bhana-Thomson stated that the association supports a move to a permitted activity status, subject to meeting performance standards and criteria, and a restricted discretionary activity status for activities that do not meet the standards. He clarified that the association does not oppose a permitted activity status with no performance standards, but if the Panel considered that standards were not necessary, they requested that the Plan identifies that building relocation is permitted.

489. The associations draft rule framework attached to Mr Bhana-Thompson's statement and included in their original submission is as follows:

a. *Any relocated building intended for use as a dwelling must have previously been designed, built and used as a dwelling.*

b. *A building pre-inspection report shall accompany the application for a building consent for the destination site. That report is to identify all reinstatement works that are to be completed to the exterior of the building.*

c. *The building shall be located on permanent foundations approved by building consent, no later than 2 months of the building being moved to the site.*

d. *All other reinstatement work required by the building inspection report and the building consent to reinstate the exterior of any relocated dwelling shall be completed within 12 months of the building being delivered to the site. Without limiting (c) (above) reinstatement work is to include connections to all infrastructure services and closing in and ventilation of the foundations.*

e. *The proposed owner of the relocated building must certify to the Council that the reinstatement work will be completed within the 12- month period.*

Reporting Officer Reply Evidence

490. In relation to the agreed amendments to address the matters raised by RNZ, Ms Easton's right of reply recommended the following changes to GRUZ-R10:

GRUZ - R10 Emergency Service Facility

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ - R1 are complied with except that:

a. Hose drying towers are exempt from the height standard; and

b. A setback of 5m from the road or State Highway Boundary is required.

2. Where the facility will be located within ***the Westport Radio Mast EM Overlay*** ~~*1000m of the Cape Foulwind Radio New Zealand radiocommunications site*~~*, any hose drying or siren tower of a height* ~~*greater than*~~ ***of 108m or greater*** *must be certified by Radio New Zealand that the risk of Electromagnetic coupling with this structure has been mitigated.*

Activity status where compliance not achieved: Restricted Discretionary

491. Ms Easton also recommended that rules GRUZ-R23 and R26 have the following matter of discretion added:

> *Within the Westport Radio Mast EM Overlay, any requirements to mitigate the risk of electromagnetic coupling, including during the construction phase.*

492. Ms Easton agreed that a discretionary activity for GRUZ-R27 status was unnecessarily onerous and agreed with HortNZ's submission that a restricted discretionary activity status would be appropriate. She noted this would be consistent with the management of other activities with a comparable level of effects on amenity. She proposed a new rule as follows:

> *GRUZ – RXXXX Agricultural, Pastoral and Horticultural Activities where the Maximum Ground Floor Area of any Building does not Meet Permitted Activity Standards Activity Status Restricted Discretionary*
>
> *Discretion is restricted to:*
>
> *a. Bulk and location of buildings;*
>
> *b. Effects on visual amenity and rural character;*
>
> *c. Landscape measures; and*
>
> *d. Methods of stormwater treatment and disposal.*
>
> *Activity Status where Compliance Not Achieved: N/A*

493. In relation to submissions and evidence from HortNZ seeking specific rules for greenhouses, Ms Easton stated, on careful reading of the definition for agricultural, pastoral and horticultural activities, she considered GRUZ-R1 applies to structures, and that the rule wording should be amended to clarify this. Ms Easton considered that this could be regarded as a consequential or minor amendment. She considered GRUZ-R1 is a more appropriate rule to manage greenhouses than the minor structures rule or a new bespoke rule. She recommended the following text changes:

> *GRUZ-R1 Agricultural, Pastoral or Horticultural Activities and Buildings **and Structures***
>
> *Activity Status Permitted*
>
> *Where:*
>
> *1. Maximum building **or structure** height above ground level is:*
>
> *i. 10m; except that*
>
> *ii. No building, structure or tree shall protrude into the Airport Approach Path of any airport or aerodrome identified on the planning maps and as described in Appendix Nine;*
>
> *2. Buildings **and structures** are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary, and 10m 5m from internal boundaries;*

494. In relation to worker accommodation, Ms Easton noted it is not defined in the Plan and would fit within the definition of a residential unit. She agreed with HortNZ that there is a conflict between the activity status where compliance not achieved in GRUZ-R3 (Discretionary) and the activity status in GRUZ-R22 (Restricted Discretionary), and recommended an amendment to GRUZ-R3 to correct this as follows:

> *Activity status where compliance not achieved: Restricted Discretionary where this is Temporary Worker Accommodation subject to Rule GRUZ – R22, Otherwise Discretionary*

495. In response to a verbal submission from Mr Boyd, Ms Easton agreed there were valid issues supporting a change to the maximum permitted activity size for antenna dishes in the General Rural Zone, and recommended Clause 4 be amended as follows:

> 4. *Any antenna dish must be less than 1**.5**m in diameter;*

496. In response to Frida Inta's submission Ms Easton stated that she did not consider that an additional setback was necessary for dairy sheds within the rural zone. However, she considered that it would be appropriate to specify a larger setback of 10m from boundaries with adjoining settlement-zoned properties. Ms Easton considered that there is scope within Davis Ogilvie's submission to amend the setbacks and retain the notified 10m setback from boundaries with the settlement zone. She recommended the following change to GRUZ-R1 Clause 2:

> 2. *Buildings are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary, **10m from any Settlement Zone boundary** and 5m from other internal boundaries;*

497. Regarding relocated buildings, Ms Easton confirmed that there are several other District Plans that do not regulate this activity in rural zones, while others have rules governing controlled or permitted activity status.

498. Concerning the firefighting water supply, Ms Easton revised her view following the additional information provided by FENZ. She considered that there was merit in a consistent approach to this issue across the rural zones. She proposed that an additional standard and an advice note be added to GRUZ-R3 and GRUZ-R4 as follows:

> *Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008).*
>
> *Advice Note: The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this*.

499. In a joint right of reply on the KiwiRail submission, Ms Easton and Ms Briar Belgrave considered a 5m setback from the rail corridor to be appropriate in the General Rural and Rural Lifestyle zones. The planners noted that the Midland line, being the most frequently utilised rail line, adjoins both of these rural zones.

Hearing Panel's Evaluation

500. In relation to General submissions on the Rules the Panel agrees with Ms Easton's evaluation and recommendations on the general submissions on the rules. In particular we agree with her support of a submission points from Manawa on the Overview seeking to add '*regionally significant infrastructure*' the following sentences:

> *A number of renewable electricity generation activities are located within this zone and these activities provide a crucial role in ensuring provision of electricity supply to the West Coast and are recognised as regionally significant assets.*
>
> ***Relationship With Energy, Infrastructure and Transport provisions***
> *The ENG chapter contains rules applying to energy activities and renewable electricity generation activities throughout the district, and accordingly the rules in this chapter do not apply to these activities. A number of renewable electricity generation activities are located within this zone and these activities provide a crucial role in ensuring provision of electricity supply to the West Coast and are recognised as regionally significant assets*

501. The Panel agrees with Ms Easton that this should be part of a wider statement explaining the relationship with the Energy, Infrastructure, and Transport chapters.

502. Ms Easton supported a submission point from Forest and Bird seeking that the overview be amended to reference other relevant District Wide chapters, including the ECO chapter, consistent with her recommendations on the other chapters. We agree.

503. In relation to GRUZ-R1, the Panel agrees with Ms Easton that, with regard to submissions and evidence from HortNZ seeking specific rules for greenhouses, a careful reading of the definition for agricultural, pastoral, and horticultural activities indicates that GRUZ-R1 applies to structures. The rule wording should therefore be amended to clarify this. Ms Easton considered that this could be regarded as a consequential or minor amendment. She considered GRUZ-R1 to be a more appropriate rule to manage greenhouses than the minor structures rule or a new bespoke rule. The amendments include adding the word Structures to the rule heading and into Clauses 1 and 2. We agree with that reasoning and outcome.

504. The Panel agrees with Ms Easton's reasoning and recommendation to amend Clause 2. to provide for a 10m setback from any Settlement Zone boundary. While considering Ms Inta's submission, Ms Easton stated that she did not think that an additional setback was necessary for dairy sheds within the rural zone. However, she considered that it would be appropriate to specify a larger setback of 10m from boundaries with adjoining settlement-zoned properties. Ms Easton thought that there is scope within Davis Ogilvie's submission to amend the setbacks and retain the notified 10m setback from boundaries with the settlement zone. For the reasons she provides, we agree.

505. The Panel agrees with Ms Easton's reasoning and recommendation to amend clause 2 further. Ms Easton supported a submission point from Davis Ogilvie, seeking to reduce internal boundary setbacks from 10m to 5m, to be more consistent with the operative Plan rules. She noted that all three councils considered a 5m setback to be appropriate. For the reasons given we agree with this amendment.

506. The Panel agrees with Ms Easton's reasoning and recommendation to amend clause 7. and 9. Ms Easton supported a submission point from BDC seeking a minimum ground floor area standard, noting that BDC suggested a 500m^2 standard, but GDC considered this to be too small for farm buildings. Ms Easton proposed a maximum of 500m² for residential buildings and 1000m² for farm buildings. Ms Easton also supported BDC's submission seeking a 150m

setback from a wastewater treatment plant, noting that this issue is relevant in several small communities.

507. The Panel agrees with Ms Easton's reasoning and recommendation to amend clause 8. based on her evaluation of a submission point from Waka Kotahi seeking an amendment to require sites to meet vehicle crossing standards in the transport chapter in order to be permitted activities. She noted that a large proportion of rural areas are accessed from state highways and that while existing use rights apply to existing crossings, new or expanded activities should have crossings constructed to a safe standard.

508. The Panel agrees with Ms Easton's recommendations regarding activity status under GRUZ-R1. Ms Easton did not support submission points[63] seeking a controlled activity status for activities that do not meet the permitted standards, noting that the proposed Discretionary activity status is consistent with the operative plans. She considered that landowners and residents should be able to have confidence in a basic level of amenity, density, infrastructure capacity and rural character. She did not consider controlled activity status to be appropriate, given that it must be granted. We agree and note that, consequent upon the amendment of Clause 7. Ms Easton recommends that any agricultural, pastoral or horticultural building that does not meet Clause 7 should be restricted discretionary. Given the purpose of the zone and those buildings, we agree. In all other circumstances, such as for a residential building, status is fully discretionary, which we agree with.

509. In relation to GRUZ-R2, the Panel agrees with Ms Easton's reasons for and her recommendation to amend clause 2 of this rule, deleting the word '*Target*' and replacing it with the word '*Shooting*'.

510. In relation to GRUZ-R3 the Panel does not agrees with the amendment to clause 3. To delete the words '*Highly Productive Land*' and replace them with '*Rural Production Precinct*' in response to the GDC[64] submission to rename GRUZ-PREC5 Rural Production Precinct Policy from the notified Highly Productive Land, noting that we have recommended the retention of Highly Productive Land for the reasons outlined below.

511. Ms Easton reconsidered her s42A recommendation concerning the water supply for firefighting. She recommended wording for an additional clause 5 in GRUZ-R3, and an advice note to be added to both GRUZ-R3 and GRUZ-R4 in her reply. We agree with her reasons for change and her recommendations. We note a further minor amendment, adding an 's' to the word 'Note' as it appears in the heading 'Advice Note'.

512. In relation to worker accommodation, Ms Easton noted it is not defined in the Plan and would fit within the definition of a residential unit. She agreed with HortNZ that there is a conflict between the activity status where compliance is not achieved in GRUZ-R3 (Discretionary) and the activity status in GRUZ-R22 (Restricted Discretionary) and recommended an amendment to GRUZ-R3 to correct this. We agree with her recommended wording.

513. In relation to GRUZ-R4, the Panel accepts Ms Easton's recommendations to make minor corrections, such as adding an '*s*' on the end of the word Note in the heading Advice note and creating a new clause 1. Because of the addition of a new clause 2 relating to the earlier discussed water supply for firefighting.

[63] Chris & Jan Coll, Chris J Coll Surveying Limited, William McLaughlin and Laura Coll McLaughlin
[64] Grey District Council (S608.484)

514. In relation to GRUZ-R5, the Panel accepts Ms Easton's recommendation to amend clause 2 to replicate clause 2 in GRUZ-R1 except for the setback distance of 10m from any Settlement Zone boundary. This rule addresses minor structures as permitted activities and Clause 1. makes it plain that these minor structures this rule covers are not structures permitted under GRUZ-R1, hence the need for this amendment.

515. Ms Easton also recommends a minor amendment to clause 4 increasing the diameter of a permitted antenna dish from the notified 1m to 1.5m. This recommendation arose from a response to a verbal submission from Mr Boyd. Ms Easton agreed there were valid reasons supporting a change to the maximum permitted activity size for antenna dishes in the General Rural Zone, and recommended clause 4 be amended to increase the width to 1.5m We have reservations as to scope supporting this amendment but given its minor nature in this instance we rely on clause 16 to support the amendment.

516. In relation to GRUZ-R6, the Panel agrees with Ms Easton it can be retained as notified.

517. In relation to GRUZ-R7, the Panel agrees with Ms Easton's recommendation to delete this rule We accept that amenity concerns relating to relocated buildings are associated principally with urban locations and consider that these issues do not arise in the same way in rural areas. We therefore agree that the TTPP does not need to manage this matter in the Rural zone and recommend the deletion of this rule.

518. In relation to GRUZ-R8, the Panel agrees with Ms Easton's evaluation and rejection of submissions seeking to delete this rule. She advised that the impacts of residential visitor accommodation were the single most significant issue raised by the community, and that the TTPP committee considered the matter in substantial detail and consulted on the proposed approach. Ms Easton considered residential visitor accommodation to be a business, and where a whole house is rented out, it is no different to a commercial visitor operation except in scale. However, as the scale is small, a permitted activity status is provided within a framework to manage adverse effects.

519. We noted that Ms Easton supported a submission point from the GDC, seeking that records of letting activity be provided to the Council annually, rather than on request, placing the onus on landowners to provide evidence of compliance. She considered this a reasonable requirement to ensure permitted activity standards are met and that it would assist the Council in discharging Building Act compliance duties, so she recommended an amendment to clause 5.

520. In relation to GRUZ-R9, the Panel agrees with Ms Easton's recommended amendments in response to submissions and accepts the submission point from BDC seeking that the permitted activity standards allow no more than two full-time equivalent persons engaged in the home business who reside off-site. The Council is concerned that traffic generation standards are difficult to monitor on sites with combined uses, and this change would provide a precise compliance method to ensure the scale of home businesses does not exceed that expected in a rural area. Ms Easton was persuaded by this argument and noted that the operative Buller and Westland District Plans have this requirement in their rules. We agree that clause 3. should be amended to give effect to this recommendation.

521. While the Panel notes Ms Easton’s recommendation to amend Clause 4 in relation to traffic movement as a result of the Waka Kotahi submission, as a result of our recommendations in the Transport Chapter on trip generation, this standard is to be deleted to avoid the potential for uncertainty between provisions. We note that the inclusion of the no more than one full-

time equivalent person should address the amenity issue associated with people and vehicle numbers.

522. In relation to GRUZ-R10, the Panel agrees with Ms Easton's recommended amendments detailed in clause 2. in response to RNZ's request. We note that Ms Easton also recommended that rules GRUZ-R23 and GRUZ-R26 have the following matter of discretion added:

> *Within the Westport Radio Mast EM Overlay, any requirements to mitigate the risk of electromagnetic coupling, including during the construction phase.*

523. We agree with her reasons, namely, to limit the risk and harm associated with electromagnetic radiation, and the wording of the additions to these three rules. While we agree that structures over 18m may be rare, it is precisely the higher and more unusual structures that are exposed to greater risk, and it makes sense for this risk to be assessed at the resource consent stage.

524. Further legal submissions from RNZ, provided in response to matters raised by the Panel in the hearing, confirmed that RNZ and Ms Easton had reached an agreed position on a proposed overlay, with accompanying permitted activity standards including clause 1. b. as to a setback and matters of discretion for restricted discretionary activities within GRUZ-R23 and GRUZ-R26. RNZ considered that the s42A officers' proposed provisions provide good protection. The legal submission considered that there was scope in the original RNZ submission to propose an appropriate alternative relief, including an overlay. We accept these views and agree with the recommended amendments.

525. In relation to GRUZ-R13, the Panel agrees with Ms Easton's recommended amendments. We note that several submissions[65] supported the rule but requested that an error in the text be corrected, as it states 12:00 p.m. instead of 12:00 a.m. Ms Easton supported these submission points. We agree.

526. Ms Easton supported a submission point from BDC and GDC, seeking that the wording of Standard 3 be amended to refer to the correct numbering of Clauses 1 and 2. Again, we agree.

527. A submission from BDC sought a schedule of Community Halls to be included in the Plan, to provide certainty on which community facilities are considered halls for the purpose of this rule. Ms Easton noted that existing halls would have existing use rights, and the Plan does not include schedules of other similar facilities. She suggested that a definition would be more appropriate for addressing this issue and invited BDC to propose suggested wording. We agree with Ms Easton, and we note we did not receive any wording for consideration from BDC.

528. In relation to GRUZ-R14 the Panel agrees with Ms Easton to retain this rule as notified.

529. While the Panel acknowledges Ms Easton's recommendation to retain GRUZ-R15, as notified we note at this point that as part of a Plan wide amendment stemming from a submission by Manawa (S438.100) reference to '*landscape measures*' and '*landscape treatment*' have been removed from the matters of control and discretion and replaced with '*measures to mitigate landscape effects*'. This will apply to all such situations with the GRUZ and RLZ provisions.

530. In relation to GRUZ-R16, the Panel agrees with Ms Easton in not supporting several submitters[66] who sought to amend the rule to allow for existing non-compliance. Ms Easton

[65] Buller District Council, Chris & Jan Coll, Geoff Volckman, Catherine Smart-Simpson, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, Koiterangi Lime Co Ltd, Karamea Lime Company, Peter Langford

[66] John Brazil, Steve Croasdale, Chris and Jan Coll, Geoff Volckman, Catherine Smart-Simpson, Karamea Lime Company and Peter Langford, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin.

noted that existing use rights cover existing, lawfully established activities. Outside of a resource consent process, she considered that accommodating existing non-compliance within the rules would result in a range of adverse effects. We agree with her analysis and her recommendation to retain the rule as notified.

531. In relation to GRUZ-R17, the Panel agrees, based on the reasons provided by Ms Easton in respect of GRUZ-R7, that this rule should subsequently be deleted.

532. In relation to GRUZ-R19, the Panel agrees with Ms Easton that this rule should be retained as notified. We agree with Ms Easton's consideration of a submission point from Te Mana Ora seeking that the rule be amended to require that the activity not be established within a Drinking Water Source Protection Zone. Ms Easton acknowledged that this is an important issue, but no such zones currently exist on the Coast, and she had not been able to gather information about where they should be located. She noted that the NES for drinking water addresses the protection of drinking water sources and is required to be implemented by Regional Councils. Therefore, she considered that WCRC would most appropriately manage the matter. We agree. We also agree with her recommendation to reject those submissions that sought to amend the rule to allow for existing non-compliance for the reasons she provides in her s42A.

533. In relation to GRUZ-R20, the Panel agrees with Ms Easton that this rule should be retained as notified. We accept that the effects of intensive primary production can be considerable, and that larger-scale industries can require significant management, warranting a restricted discretionary activity rather than a controlled status. Ms Easton considered that the recommended advice note to the intensive primary production definition, confirming that herd homes are excluded, may address GDC's concerns.

534. Ms Easton did not support a submission point from Te Mana Ora seeking that the rule be amended to require that the activity not be established within a Drinking Water Source Protection Zone for reasons earlier discussed. We agree.

535. Ms Easton did not support a submission point from Forest and Bird seeking additional conditions requiring these activities not to be in overlays, SNAs, the coastal environment, or where indigenous vegetation clearance would occur, noting that these matters are addressed in the relevant District-wide chapters. We agree. She did not support the proposal that such activities should be non-complying if these matters are breached. Again, we agree.

536. Ms Easton did not support a submission point from BCG and Frida Inta seeking that the number and type of livestock be a matter of discretion, as she considered the District Plan primarily manages building bulk and location, traffic and noise effects, and that the number and type of livestock is more relevant to discharge effects which the Regional Council manages. We also note that livestock numbers could be the subject of By-laws. We agree with this analysis.

537. Several submitters[67] sought to amend the rule to allow for existing non-compliance. This issue has been discussed earlier, and we agree with Ms Easton's analysis of these submissions.

538. In relation to GRUZ-R21, the Panel agrees with Ms Easton that the restricted discretionary status of this rule remains unchanged. We do not consider separating rural contractors' yards from rural industry is appropriate and we note as reported that there has been a proliferation of industrial activities in rural areas surrounding the main towns and it has become a significant

[67] John Brazil, Steve Croasdale, Chris and Jan Coll, Geoff Volckman, Catherine Smart-Simpson, Karamea Lime Company and Peter Langford, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, Koiterangi Lime Co LTD.

issue. We acknowledge that the nature of the West Coast economy is that many activities serve both urban and rural sectors and consider that requiring resource consent for these activities means that effects can be appropriately managed and it ensures that activities established in the rural zone serve the rural economy as intended. We recommend that the rule remain as notified.

539. In relation to GRUZ-R22, the Panel agrees with Ms Easton's reasons for rejecting the submission point from HortNZ seeking provision for temporary workers' accommodation in a new permitted activity rule. She considered that the minor unit provisions sufficiently provide for worker accommodation of the type required on the Coast. We agree, however we consider the heading of the rule needs to be amended to make it clear there is no permitted status for Temporary Worker Accommodation.

540. Several submitters[68] sought to amend the rule to allow for existing non-compliance. We have addressed that issue earlier and retain the same position on it. We agree with Ms Easton's recommendation to retain this rule as notified.

541. In relation to GRUZ-R23, the Panel agrees with Ms Easton's recommendation to support, in part a submission point from GDC seeking that management of access, parking, and traffic generation be added as a matter of discretion. She considered access and parking to be relevant, but not traffic generation, as Papakāinga are a residential activity. Adding the additional matter of discretion requires minor editing of the rule to relocate the word 'and'. As well, we agree with adding the matter of discretion relating to the Westport Radio Mast EM overlay as a consequential amendment to this rule.

542. In relation to GRUZ-R24, the Panel agrees with Ms Easton's recommendation to delete this rule based on the submissions from Federated Farmers and Hort NZ. The submitters were concerned that the rule was too permissive given the policy framework, which directs that the General Rural Zone be used for primary production ahead of other uses. Ms Easton supported these submission points, agreeing that the policy direction is clear and noting that the issue of the proliferation of commercial and industrial activities in the rural zones is significant. She recommended deleting GRUZ-24 and retaining GRUZ-30 and renaming it '*Industrial and commercial activities excluding rural industry'.* We agree with her reasoning and recommendation to delete the rule and to amend GRUZ-R30.

543. In relation to GRUZ-R26, the Panel acknowledges the submissions received in support of the rule. As all submissions were in support, no changes were recommended by Ms Easton to the rule. We note the consequential amendment to include a new matter of discretion at clause e. relating to the Westport Radio Mast EM overlay, which we support.

544. In relation to New Rule GRUZ-RXXX Fences, Walls and Retaining Walls not meeting Permitted Activity Standards Ms Easton supported submission points from Frank and Jo Dooley and Frank O'Toole, seeking that fences, walls, and retaining structures be removed from GRUZ-R28 and placed in a separate, restricted discretionary rule, with matters of discretion relating to the effects of these types of structures. She noted that these submitters sought a similar change to the rules in other zones and considered that a restricted discretionary activity is appropriate for structures that do not meet permitted activity standards. We agree with Ms Easton's recommendation to remove fences, walls, and retaining structures from GRUZ-R28 and create

[68] John Brazil, Steve Croasdale, Chris and Jan Coll, Geoff Volckman, Catherine Smart-Simpson, Karamea Lime Company and Peter Langford, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, Koiterangi Lime Co LTD.

a new restricted discretionary rule for these matters, as doing so would be consistent with other recommendations.

545. In relation to New Rule GRUZ-RXXXX Agricultural, Pastoral and Horticultural Activities where the Maximum Ground Floor Area of any Building does not Meet Permitted Activity Standards, Ms Easton agreed that a discretionary activity for GRUZ-R27 status was unnecessarily onerous and agreed with HortNZ's submission that a restricted discretionary activity status would be appropriate. She noted this would be consistent with the management of other activities with a comparable level of effects on amenity. She proposed a new rule which we have detailed above. For the reasons she provides we agree with the wording and need for a new rule and recommend its inclusion.

546. In relation to GRUZ-R27, the Panel acknowledges the submissions received in support of the rule. As all submissions were in support, Ms Easton recommended no changes to the rule. We agree with that recommendation.

547. In relation to GRUZ-R28, the Panel has already recorded above agreement to remove from this rule Fences, Walls, Retaining Walls and Relocated Buildings and to include a new rule covering these matters, except for Relocated Buildings, for which no provision within this zone is being made.

548. In relation to GRUZ-R29, the Panel agrees with Ms Easton to not support a submission point from GDC seeking to include reference to controlled activity, as a consequence of their submission seeking a controlled activity status for intensive indoor primary production. Ms Easton noted that she had also not supported that submission. We agree to the retention of this rule as notified.

549. In relation to GRUZ-R30, the Panel agrees with Ms Easton's recommendation to amend the rule's heading. Ms Easton supported in part a submission point from BDC seeking that the title be amended to 'commercial and industrial activities' as non-rural activities are not a defined term. Ms Easton noted that there is a definition and rules for rural industry, so Rule R30 must be clear that it does not apply to rural industry. The same issue arose concerning GRUZ-R24, which we have discussed above. For the reasons she provides, we agree with Ms Easton's recommendation to both amend the rule heading and amend clauses 1 and 2 to clarify the Rule applies to both commercial and industrial activities seeking to locate in the rural zone.

550. In relation to GRUZ-R31, the Panel agrees with Ms Easton's recommendation that Clause 1 be removed and that the activity status does not escalate to non-complying. Ms Easton supported those submissions, seeking that amendment. She considered a Discretionary activity status to enable all relevant matters to be assessed was appropriate for this zone. She also noted that some visitor accommodation, such as campgrounds, is appropriate in the General Rural Zone and considered a non-complying activity status unnecessary for these activities. We agree with her reasoning and recommendation to delete clause 1 from this rule.

551. In relation to GRUZ-R33, the Panel agrees with Ms Easton's recommendation that, as there are no restricted discretionary rules concerning residential activities, the words 'or restricted discretionary' be removed.

552. In relation to GRUZ-R34, the Panel agrees with Ms Easton's recommendation that, the rule title be amended to "Commercial and Industrial activities not meeting any other rule in the zone," noting that this is a consequential amendment to other submissions she had supported

for the likes of GRUZ-R30. She further noted several submission points[69] sought that the activity status be Discretionary or that the rule be deleted. Ms Easton did not support these submissions, noting that no reasons were provided for opposing the rule, other than it being too restrictive. She noted that the focus of the rural zone is to provide for primary production. We agree with Ms Easton that to give proper focus to the purpose of the rural zone her recommended activity status for the activity the rule covers is appropriate.

553. In relation to GRUZ-R35, while the Panel agrees that the rule should not be deleted, we consider, in line with other recommendations we have made, that it should become discretionary activity. We note that Ms Easton acknowledged that a Discretionary activity status is often applied to this type of 'catchall' rule. We recommend that approach is taken here.

554. In relation to non-complying rules GRUZ-R34, the Panel notes the escalation for residential activities and residential units not meeting the discretionary status in GRUZ 33 in relation to a Rifle Range Protection Area to a non-complying status was missing a rule in the notified Plan. We consider this to be a Clause 16(2) of the First Schedule of the RMA matter and have accordingly recommended the amendment.

Hearing Panel's Recommendation

555. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends the following amendments be made to the **General Rural Zone Overview and rules:**

General Rural Zone

Overview

The GRUZ – General Rural Zone is the largest zone that affects private land on the West Coast/Te Tai o Poutini. Rural land is an important resource as it underpins the social and economic well-being of the West Coast/Te Tai o Poutini. The rural area is a dynamic environment, influenced by changing farming practice and by a wide range of productive activities. The RURZ – Rural Objectives and Policies and GRUZ – General Rural Zone Rules provide the framework for managing the effects of development within this zone.

The GRUZ - General Rural Zone provides for primary production, such as pastoral farming, livestock, horticulture and forestry. It also provides for resource extraction such as quarrying and mining**, regionally significant infrastructure**[70], and intensive indoor farming, such as indoor poultry and pig farms. These activities have the potential to generate adverse activities beyond the boundaries of a site, for example: noises from farm animals and machinery, odour from dairy-sheds and associated effluent treatment and discharge systems, silage/baleage and agricultural fertiliser, light overspill, and traffic effects from milk tankers, aggregate trucks and stock trucks. The effects of rural production activities therefore need to be appropriately managed and mitigated, while recognising that the GRUZ – General Rural Zone is a production-oriented working environment that is characterised by these activities.

The GRUZ - General Rural Zone is also characterised by an open, vegetated landscape that is interspersed with low density buildings and structures that are predominantly used for rural activities, such as barns and sheds, or larger, more numerous buildings of industrial scale and

[69] Chris and Jan Coll, Geoff Volckman, Catherine Smart-Simpson, Karamea Lime Company and Peter Langford, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, Koiterangi Lime Co LTD
[70] Manawa Energy (S438.140)

appearance used for intensive primary production or rural industry. **A number of renewable electricity generation activities are located within this zone and these activities provide a crucial role in ensuring provision of electricity supply to the West Coast and are recognised as regionally significant assets.**[71] Rural halls, domains and schools which serve the needs of the rural community are also present, however there is a general lack of urban infrastructure in the zone such as street lighting and footpaths. Te Tai o Poutini Plan seeks to maintain this rural character.

Where numerous or larger scale buildings or structures are proposed, their location, height and scale are managed to ensure development does not compromise the qualities of the rural setting or rural character.

A range of structures associated with regionally significant infrastructure are also a feature of the rural areas.[72]

Urban activities such as commercial and retail, or industrial activities not associated with primary production, are restricted within the zone. Rural lifestyle subdivision is also limited due to the potential for reverse sensitivity effects impacting on primary production activities and the potential for fragmentation of productive land.

The RURZ – Rural Zones Objectives and Policies and GRUZ – General Rural Zone Rules provide the framework for managing the effects of development in the GRUZ – General Rural Zone. However, there are additional specific policies and different rules for the two precincts – the GRUZ – PREC1 – Community Living Precinct and the GRUZ – PREC5 – Highly Productive Land Precinct. Where there is a conflict between a GRUZ – General Rural Zone provision and the GRUZ – PREC1 – Community Living Precinct or GRUZ – PREC5 – Highly Productive Land provision, within each Precinct, the relevant Precinct provision applies.

Note with Regard to ~~Plantation~~ Commercial Forestry

There are no specific provisions as relate to ~~plantation~~ **commercial** forestry within the RURZ – Rural Zone Chapters. This is because ~~plantation~~ **commercial** forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial** Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered. [73]

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of Part 2: District-wide Matters chapters also contain provisions that may be relevant for activities in the GRUZ – General Rural Zone, including:

- ~~Overlay Chapters – the Overlay Chapters have provisions in relation to Historic Heritage; Notable Trees; Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscapes; Natural Character and the Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.~~[74]
- **The ENG Energy chapter contains rules applying to energy activities and renewable electricity generation activities throughout the district, and accordingly the rules in this chapter do not apply to these activities. Similarly, the INF Infrastructure chapter contains rules applying to specified infrastructure such as telecommunications, wastewater,**

[71] Manawa Energy (S438.140)
[72] Manawa Energy (S438.140)
[73] Clause 16(2) of the RMA
[74] Forest and Bird (S560.370 and S560.0543)

stormwater and water supply installations, pipelines and meteorological facilities and accordingly the rules in this chapter do not apply to those activities.

The TRN Transport chapter contains the rules around the development of the transport network and the performance standards that apply for construction of these facilities and accordingly the rules in this chapter do not apply to those activities.[75]

- **Sites and Areas of Significance to Māori, Historic Heritage and Notable Tree Chapters - there may be sites and areas of significance to Māori, historic heritage or notable trees identified on individual sites within the General Rural Zone. Specific information on the provisions that apply to these can be found in the Sites and Areas of Significance to Māori, Historic Heritage, and Notable Trees Chapters.**
- **Natural Hazards - natural hazards are widespread on the coast and in some locations natural hazard overlays may affect areas in the General Rural Zone. Information on natural hazard overlays and provisions can be found in the Natural Hazards chapter.**
- **Natural Character and Margins of Waterbodies -in some locations areas of General Rural Zone may extend into the riparian margins of waterbodies. The Natural Character and Margins of Waterbodies Chapter contains provisions on how these areas must be managed.**
- **Ecosystems and Biodiversity – Where indigenous vegetation clearance is proposed within a Rural Zone, the provisions of the Ecosystems and Biodiversity chapter apply.**[76]
- **General District Wide Matters** - provisions in relation to Earthworks in particular may be relevant to many activities.
- **Subdivision** - The Subdivision Chapter sets out the requirements for subdivision activities in the GRUZ - General Rural Zone.
- **Financial Contributions** – The Financial Contributions Chapter sets out the requirements for contributions of costs for activities which impact on the local network utility operators.

Relationship with Other Plans

Many activities that occur in rural areas are also regulated by the West Coast Regional Council through Regional Plans, including the Regional Land and Water Plan, Regional Air Plan and Regional Coastal Plan. When planning to undertake an activity, the status under the relevant Regional Plans should also be confirmed and any necessary resource consents applied for under both Plans.

GRUZ – R1 Agricultural, Pastoral or Horticultural Activities and Buildings and structures[77]

Activity Status Permitted

Where:

1. Maximum building **or structure**[78] height above ground level is:
   i. 10m; except that

[75] Manawa Energy (S438.141)
[76] Forest and Bird (S560.370)
[77] HortNZ (S486.075)
[78] HortNZ (S486.075)

ii. No building, structure or tree shall protrude into the Airport Approach Path of any airport or aerodrome identified on the planning maps and as described in Appendix Nine;

2. Buildings **and structures**[79] are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary, **5m from the rail designation,**[80] **10m from any settlement zone boundary** and ~~10~~**5**m[81] from internal boundaries;

3. The minimum separation distance between buildings housing more than 10 animals or commercial livestock and a residential/settlement/rural lifestyle zone boundary shall be 30m and from any residential building on another site 50m, and from any other boundary 20m;

4. Woodlots are not established within:

i. 10m of the boundary of an adjoining property unless that property is within plantation forest; and

ii. 40m of a dwelling.

5. Within the Rifle Range Protection Areas only buildings that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities are established; ~~and~~

6. Performance standards for beekeeping in the Westland District apply as follows:

i. No bees may be kept on a property less than 600m2 net site area; and

ii. Beehives must be placed with an obstruction in front of them or be elevated to enable bees to be 2.5m above ground level prior to crossing the site boundary~~;~~.

7. **The maximum ground floor area of any single building is 1000m² or 500m² for any residential building**;[82]

8. **Vehicle crossing standards in Rule TRN – R1 are met**;[83] **and**

9. **No building housing sensitive activities shall be located within 150m of a Designated community wastewater treatment facility site boundary**.[84]

Advice Note:

1. If land is used for disposal of effluent or solid waste then there may be rules in the Regional Air Plan and Regional Land and Water Plan administered by West Coast Regional Council.

2. Quarrying activity within the Pounamu and Aotea Overlays is subject to Rule SASM – R7.

Activity status where compliance not achieved: **Restricted Discretionary for Agricultural, Pastoral or Horticultural buildings not meeting standard 7, Otherwise**[85] Discretionary

GRUZ – R2 Conservation and Recreation Activities

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with.

[79] HortNZ (S486.075)
[80] KiwiRail (S442.093)
[81] Davis Ogilvie & Partners (S465.033)
[82] Buller District council (S538.497)
[83] Waka Kotahi (S450.271)
[84] Buller District Council (S538.497)
[85] Buller District Council (S538.497)

2. Within the Rifle Range Protection Areas, Recreation Activities are restricted to Recreational Firearms ~~Target~~ **Shooting.**[86]

Activity status where compliance not achieved: Discretionary where 1 is not complied with Non-complying where 2 is not complied with.

GRUZ-R3 Residential Activities and Residential Units

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with;
2. No residential activities or residential units occur within the Rifle Range Protection Area;
3. Residential unit density is no more than one unit per 10ha net site area in the Highly Productive Land Overlay and one unit per 4ha net site area in the rest of the General Rural Zone except
   i. Where:
      a. The site is already in existence and complied with the previous relevant Grey, Buller or Westland District Plan density provisions; or
      b. The site is subject to an approved subdivision consent at the operative date of the plan;
      c. Then the residential unit density is no more than one unit per site;
   ii. Where this is within the Community Living Precinct and in accordance with the Concept Plan contained in Appendix Eight; ~~and~~
4. There is no more than 3 minor residential units per 10ha net site area that:
   i. Are located within 20 metres of and share the driveway with either the principal dwelling; or
   ii. Are worker accommodation associated with primary production buildings; **and**
5. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008**).[87]

Activity status where compliance not achieved:

Restricted Discretionary where this is Temporary Worker Accommodation subject to Rule GRUZ – R22, Otherwise[88] Discretionary

Advice Notes:

1. Where a residential building or noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

[86] Westport Pistol Club (S336.012), Westport Rifle Club Incorporated (S457.011), Chris & Jan Coll (S558.507), Chris J Coll Surveying Ltd (S566.507), William Mc Laughlin (S567.551), and Laura Coll McLaughlin (S574.507)
[87] Fire and Emergency New Zealand (S573.040)
[88] HortNZ (S486.075)

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements are set out in Rule NOISE – R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.[89]

GRUZ-R4 Papakāinga Developments

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with;
2. No papakāinga development occurs within any Rifle Range Protection Area;
3. Residential building density is no more than one unit per hectare net site area, however units are able to be clustered; ~~and~~
4. On-site wastewater, water supply and stormwater systems are developed to serve the entire papakāinga**; and**
5. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008)**[90]

Advice Note**s**:

1.Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements set out in Rule NOISE – R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.[91]

GRUZ – R5 Minor structures

[89] Fire and Emergency New Zealand (S573.040)
[90] Fire and Emergency New Zealand (S573.040)
[91] Fire and Emergency New Zealand (S573.040)

Activity Status Permitted

Where:

1. These are not structures associated with Agricultural, Pastoral and Horticultural Activities Permitted under Rule GRUZ – R1;
2. ~~All performance standards for Rule GRUZ – R1 are complied with~~; **Structures are set back a minimum of 10m from the road boundary, 20m from the State Highway boundary and 5m from internal boundaries**[92]
3. Masts, poles, aerials and pou whenua must not exceed 7m in height;
4. Any antenna dish must be less than **1.5m**[93] in diameter;
5. Any other structure must not exceed 10m^2 and 2m in height; and
6. Within the Rifle Range Protection Area only minor structures that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities undertaken within the area are established.

Activity status where compliance not achieved: Controlled

GRUZ-R6 Fences, Walls and Retaining Walls

Activity Status Permitted

Where:

1. Fences, walls and retaining walls are a maximum 2m height above ground level;
2. The fence, wall or retaining wall is not used for advertising or any other purpose other than a fence, retaining wall or wall; and
3. Within the Rifle Range Protection Area only fences walls and retaining walls that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities undertaken within the area are established.

Activity status where compliance not achieved: **Restricted** Discretionary[94]

~~**GRUZ-R7 Relocated Buildings**~~

~~Activity Status Permitted~~

~~Where:~~

~~1. All performance standards for Rule GRUZ – R1 are complied with;~~
~~2. Any relocated building intended for use as a dwelling must have been designed and built to be used as a dwelling;~~
~~3. A building pre-inspection report shall accompany the application for a building consent for the destination site. That report is to identify all reinstatement works that are to be completed to the exterior of the building. The report shall include a certification by the property owner that the reinstatement works shall be completed within a 12 month period;~~

[92] Buller District Council (S538.500)
[93] Amendment made on Vance Boyd evidence
[94] Frank O'Toole (S595.028, S595.022)

~~4. The building shall be located on permanent foundations approved by building consent no later than 2 months of the building being moved to the site; and~~

~~5. All other reinstatement work required by the building inspection report and the building consent to reinstate the exterior of any relocated dwelling shall be completed within 12 months of the building being delivered to the site. This reinstatement work is to include connections to all infrastructure services and closing in and ventilation of the foundations.~~

~~Activity status where compliance not achieved: Controlled~~ [95]

GRUZ -R~~8~~7 Residential Visitor Accommodation

Activity Status Permitted

Where:

1. This is ancillary to a residential or rural activity or is located within the GRUZ – PREC1 – Community Living Precinct;
2. All performance standards for Rules GRUZ – R1, NOISE – R1, -R2 and -R5, LIGHT – R1 and -R3 and SIGN – R15 are complied with;
3. There is a maximum of 6 paying guests at any one time;
4. Notification to the District Council is required 10 working days prior to the activity commencing;
5. Records of letting activity must be kept and provided to the Council ~~on request~~ **annually**;[96]
6. No heavy vehicle movements are generated; and
7. In the Buller District, the accommodation is homestay accommodation with a permanent resident living on site.

Advice Note:

Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or
ii. 40m of a State Highway with a speed limit of less than 70kph; or
iii. 40m of a Railway Line; or
iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or
v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements set out in Rule NOISE – R3 will apply.

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R~~9~~8 Home Business

Activity Status Permitted

[95] Buller District Council (S538.502), Chris & Jan Coll (S558.021, S558.514), Chris J Coll Surveying Limited (S566.021 S566.514), William McLaughlin (S567.011 S567.558), Laura Coll McLaughlin (S574.021 S574.514)
[96] Grey District Council (S608.109)

Where:

1. This is ancillary to a residential activity;
2. All performance standards for Rules GRUZ – R1, NOISE – R1, -R2 and -R5, LIGHT – R1 and -R3 and SIGN – R15 are complied with;
3. **There are no more than two full-time equivalent persons engaged in the home business that reside off site; and**[97]
4. ~~A maximum of 10 heavy vehicle movements occurs per day and whichever is the greater of 30 light vehicle movements per day or 210 light vehicle movements per week; and~~[98]
4. No external generation of dust, odour or smoke occurs as part of the activity.

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R~~10~~9 Emergency Service Activity

Activity Status Permitted
Where:

1. All performance standards for Rule GRUZ – R1 are complied with except that:
    a. Hose drying towers are exempt from the height standard; and
    b. A setback of 5m from the road or State Highway Boundary is required~~.~~**; and**
2. **Where the facility will be located within the Westport Radio Mast EM Overlay, any hose drying or siren tower of 18m or greater must be certified by Radio New Zealand that the risk of Electromagnetic coupling with this structure has been mitigated.**[99]

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R1~~1~~0 Mineral Prospecting and Mineral Explorations – Addressed in Mineral Extraction Recommendation

GRUZ-R1~~2~~1 Mineral Extraction– Addressed in Mineral Extraction Recommendation

GRUZ-R1~~3~~2 Community Halls

Activity Status Permitted

Where:

1. No restriction on hours is in place for up to 12 days per calendar year;
2. No restriction on hours is in place where the hall is in use for Civil Defence Emergency Management purposes;
3. For circumstances other than outlined in **1 and** 2 ~~and 3.~~ [100] above, hours of operation are limited to:
    i. 7am to 10pm Sunday – Thursday;

[97] Buller District Council (S538.504)
[98] Consequential amendment stemming from amendments to the Transport Chapter, Buller District Council S538.083
[99] Radio New Zealand (S476.040)

GRUZ-~~21~~19 Rural Industry

Activity Status Restricted Discretionary

Where:

1. All performance standards for Rule GRUZ – R1 are complied with.

Discretion is restricted to:

a. Bulk and location of buildings;
b. Management of access, traffic and parking;
c. Management of odour, noise, lighting and dust;
d. Hours of operation
e. ~~Landscape measures~~ **Measures to mitigate landscape effects**;[107]
f. Any requirement for financial contributions;
g. Any impacts on the production values of the surrounding land;

[106] Consequential Plan wide amendment to Manawa Energy Limited S438.100
[107] Consequential Plan wide amendment to Manawa Energy Limited S438.100

h. Effects on visual amenity and rural character; ~~and~~

i. Methods of water supply; **and**

j. Methods of wastewater and stormwater treatment and disposal.

Activity status where compliance not achieved: Discretionary

GRUZ-R2~~2~~0 Visitor Accommodation ~~and~~ not meeting Permitted Activity Standards and Temporary Worker Accommodation[108]

Activity Status Restricted Discretionary

Where:

1. This is ancillary to a farming, conservation or residential activity; and
2. All performance standards for Rule GRUZ – R1 are complied with.

Discretion is restricted to:

a. Number of visitors/workers staying on site;

b. Number of days of use for the accommodation;

c. Management of traffic and parking;

d. ~~Landscape measures~~ **Measures to mitigate landscape effects**;[109]

e. Any requirement for noise insulation where these are located by a State Highway or within an Airport Noise Overlay;

f. Any impacts on the production values of the surrounding land;

g. Any requirement for financial contributions;

h. Effects on visual amenity and rural character; and

i. Methods of wastewater treatment and disposal.

Activity status where compliance not achieved: Discretionary

GRUZ-R2~~3~~1 Papakāinga Developments not meeting Permitted Activity Standards

Activity Status Restricted Discretionary

Where

1. These are not established within any Rifle Range Protection Area.

Discretion is restricted to:

a. Design and location of structures;

b. Requirements for wastewater, water supply or stormwater servicing;

4.2. SUB-S1 in relation to the General Rural Zone

Submissions and Further Submissions

556. Thirty-three submission points and twenty-eight further submission points were received on the standard and are summarised in a table on pages 131-136 of the s42A report. Two submission points were received in support of the standard, one opposed the standard and sought that subdivision does not occur in rural zones, and the remaining 30 sought amendments.

557. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and the addendum report.

s42A Report

558. Ms Easton acknowledged submissions in support of the chapter.

559. Ms Easton did not support submission point (S121.001) from Graeme Cavaney seeking that subdivisions do not occur in rural areas but acknowledged the submitter's concerns. She noted

[123] Horticulture New Zealand (S486.084)
[124] Chris & Jan Coll (S558.553), Chris J Coll Surveying Limited (S566.553), William McLaughlin (S567.593), Laura Coll McLaughlin (S574.553)
[125] Clause 16(2) of RMA
[126] Buller District Council (S538.526)

that the TTPP provisions seek to address the matters raised, in response to the issues that have resulted from ad-hoc subdivision.

560. Ms Easton supported submission point (S403.001) from Charlie McBeath seeking that the 20ha minimum size be reduced, noting that there is no 20ha minimum size proposed. She noted that the draft plan had included a 20ha minimum lot size but that, based on feedback and further analysis, this was reduced to 4ha generally and 10ha within a Highly Productive Land precinct in Grey District and the Land Use Capability Class 3 land in Buller District.

561. Several submission points Sarah Bushby (S9.001), Garry Howard (S358.003), Julie Madigan (S363.002), Christopher and Donna Meates (S430.004, S430.003), Denis and Wendy Cadigan (S532.003), Lauren Nyhan Anthony Philips (S533.021), Russell and Joanne Smith (S477.021), Tim Macfarlane (S482.021), Michael Snowden (S492.010), Claire and John West (S506.021), Stewart & Catherine Nimmo (S559.021), BRM Developments Limited (S603.038), Birchfield Ross Mining Limited (S604.048), Phoenix Minerals Limited (S606.039), Whyte Gold Limited (S607.037), Chris J Coll Surveying Ltd (S566.260), William Mc Laughlin (S567.327), Laura Coll McLaughlin (S574.260), Steve Croasdale (S516.063), G E, and C J Coates (S415.010, S415.007), Glenn Elley (S249.001), John Brazil (S360.025), Lara Kelly (S421.014), Lynley Hargreaves (S481.019) and Chris & Jan Coll (S558.260) sought a reduction to either 1ha or 5000m2. Ms Easton did not support these submissions. She noted that many submissions sought to keep the 'status quo,' and acknowledged that the TTPP changes the subdivision framework significantly in all three districts. One of the early and most significant issues identified when developing the rural zone framework was the adverse effects of ad-hoc subdivision on primary production, both mineral extraction and loss of productive land. She noted that although subdivision was a discretionary activity in both Buller and Westland Districts, in practice consents appear to have always been granted, with 5000m2 lot sizes the norm. She noted that the TTPP takes a planned approach to subdivision, directing it to identified areas where there are services to support rural residential/lifestyle communities, or where there are less likely to be conflicts with primary production activities. This is achieved through providing three different types of zones, each with different lot sizes, having a larger lot size for the General Rural Zone subdivision, and a policy framework that supports this approach.

562. Ms Easton considers that submitters seeking changes to the proposed framework seek a return to an ad-hoc approach with the ability for widespread subdivision throughout the rural areas. She stated she does not support these submission points because the problems identified with this approach would be perpetuated. Ms Easton noted that in the Buller and Westland Districts, the introduction of a controlled activity standard for complying subdivision means that the provisions are less restrictive. However, she agreed with submitters that the precise minimum lot size of 4ha, and the accompanying policy framework, makes unrestrained lifestyle development less likely to occur under the TTPP.

563. In response to submission point (S524.085) from Federated Farmers seeking that SUB-S1 be amended to specify that the minimum lot size is 4000m^2 where it contains an area of significant indigenous biodiversity, Ms Easton did not support this submission. She noted that this matter would be considered in the Ecosystems and Biodiversity s.42a report, but that Rule SUB-R7 is not subject to SUB-S1. Therefore, the standard does not need to be amended.

564. Ms Easton did not support submission point (S617.006) from Scoped Planning seeking an amendment to allow productive rural landholdings to be subdivided from existing lawfully established dwellings. She considered that the TTPP rule framework seeks to prevent/reduce ongoing residential development in the General Rural zone and that this submission point seeks the opposite outcome.

565. Ms Easton did not recommend any amendments to the Plan as a result of these submissions.

Hearing and Submitter Evidence

566. No submitter evidence was presented in support of the submissions.

Reporting Officer Right of Reply

567. The officer's right of reply does not address this matter further.

Hearing Panel's Evaluation

568. In relation to SUB-S1 in the General Rural Zone the Panel has carefully reviewed Ms Easton's evaluation of the submission points seeking amendment and agrees with her findings and recommendation that there be no change. We accept that the pTTPP takes a planned approach to subdivision, directing it to identified areas where there are services to support rural residential/lifestyle communities, or where there are less likely to be conflicts with primary production activities. This is achieved through providing three different types of zones, each with different lot sizes, having a larger lot size for the General Rural Zone subdivision, and a policy framework that supports this approach. This being the case, we agree with Ms Easton, and we recommend no change to the notified provisions

Hearing Panel's Recommendation

569. The Panel recommends that SUB-S1 be retained as notified aside from a name change referred to below regarding Highly Productive Land.

4.3. General Rural Zones Highly Productive Land Precinct 5

Submissions and Further Submissions

570. Twenty-eight submission points and twenty-two further submission points were received on the Highly Productive Land Precinct and are summarised in a table on pages 138-141 of the s42A report.

571. Seven general submission points on the precinct were received and are summarised in a table on pages 138-139 of the s42A report. One opposed the provisions, and the remainder requested amendments.

572. Ten submission points were received on policy GRUZ-PRC5-P5 and are summarised in a table on pages 139-140 of the s42A report. Five submission points supported the policy, three sought amendments, and two sought that it be deleted.

573. Eleven submission points were received on subdivision size in precinct/SUB-S1 in relation to the precinct. One submission point was in support of the standard, one sought amendment, and the remainder were in opposition and sought to delete the provisions.

574. The Panel has considered the relevant submissions and further submissions received and adopts the summaries in the s42A Report and the addendum report.

s42A report

General submissions on the precinct

575. WCRC (S488.036) sought that the Highly Productive Land Provisions be placed on hold and reviewed with further consultation with landowners. Ms Easton did not support these submissions. She acknowledged that WCRC is yet to provide an update to the WCRPS to implement the NPSHPL, creating a policy vacuum at the regional level, and that there are no indications of what future policy provisions may be. However, she considered that the TTPP must give effect to the NPS-HPL in its absence and manage the significant issues in the districts. She considered subdivision of rural land to be a significant issue, with tensions between landowner desires to profit from development and the impacts of subdivision on neighbouring primary production. She noted that this was a significant topic of consultation through the development of TTPP, with the proposed minimum lot sizes determined following feedback from the community and stakeholder organisations. Ms Easton considered the proposed approach to be consistent with the policy direction in the NPS-HPL, which states:

> *Until a regional policy statement containing maps of highly productive land in the region is operative, each relevant territorial authority and consent authority must apply this National Policy Statement as if references to highly productive land were references to land that, at the commencement date:*
>
> > *(a) is zoned general rural or rural production; (b) and LUC 1, 2, or 3 land; but is not*
> >
> > *i) identified for future urban development; or*
> >
> > *ii) subject to a Council initiated, or an adopted, notified plan change to rezone it from general rural or rural production to urban or rural lifestyle.*

576. Ms Easton considered that the TTPP provisions appropriately give effect to the NPSHPL, which is focused on ensuring highly productive land is prioritised for land-based primary production activities and not rezoned for urban lifestyle or urban development uses.

577. Ms Easton supported the submission (S608.484) from GDC seeking that the Highly Productive Land Precinct be renamed the Rural Production Precinct and that a definition be included, noting that she had previously supported this approach in the Introduction and General Provisions report. She considered that the proposed name is confusing, as it creates the impression that the precinct is solely linked to the NPS-HPL. She noted that the recommended definition of rural production links to the purpose of the precinct and considered that the National Planning Standards provide a useful definition for the similarly named zone that could be used, as follows:

> > *Areas used predominantly for primary production activities that rely on the productive nature of the land and intensive indoor primary production*

Submissions on GRUZ-P5 Highly Productive Land Precinct and Associated Policy

578. Ms Easton acknowledged the submissions received in support of the policy.

579. Hort NZ (S486.007) and Federated Farmers (S524.027) sought a new definition for highly productive land. Ms Easton did not support these submissions on the basis that the proposed definition is less than what the NPSHPL specifies. She considered that no definition is required with the change to the name of the precinct, noting that the WCRPS would, in time, provide a definition at the regional scale.

580. Several submissions Nick and Sandy Jeffries (S546.006), Peter Jeffries (S544.004) and Martin and Lisa Kennedy (S545.004) sought that the policy be deleted as part of deleting the overall

provisions, in part because the precinct is not based on Land Use Capability (LUC) assessments. Ms Easton noted that the precinct intends to be more than protecting highly productive land as identified in the NPS. In the absence of the WCRC identifying highly productive land, she noted all general rural zoned land on the West Coast meets the NPS definition. Ms Easton clarified that in the Buller District, only LUC class 3 land is included in the precinct, and there is no highly productive land precinct in the Westland District. The Grey Valley and surrounding farms are primarily identified as a Highly Productive Land Precinct based on the land uses in these areas. Ms Easton acknowledged that there are a range of lifestyle developments that had already occurred in these areas and that there may be a question of whether these individual properties should be included but did not support the wholesale deletion of the precinct or policy.

Subdivision Size in the Precinct/ Residential Density in the Precinct

581. Ms Easton acknowledged the submission received in support of the precinct.

582. Several submissions, Glenn Elley (S249.002), Martin and Lisa Kennedy (S545.005), Peter Jeffries (S544.005) and Nick and Sandy Jeffries (S546.003) sought to have the subdivision and residential density provisions deleted. Ms Easton did not support these submissions for the reasons outlined above.

Hearing and Submitter Evidence

583. Martin Kennedy submitted on behalf of several submitters, Peter Jeffries (S544.006) Nick and Sandy Jeffries (S546.002) and Martin and Lisa Kennedy (S545.002) and sought that the HPL matters be reconsidered. He considered that the process did a disservice to Grey District landowners impacted by the HPL precinct and that there had been a lack of consultation and no transparent process for identifying the land to be included. He noted that the process appeared to have been based on general and broad statements. He considered the maps to be inaccurate and not reflective of historic subdivision patterns, with no commentary available on the misidentification of his land. Mr Kennedy was concerned about the potential implications and impacts on land values by removing the ability to subdivide.

Reporting officers' right of reply

584. In response to a Panel query, Ms Easton confirmed there are areas of LUC Class 3 land that are not included in the HPL land precinct and provided maps showing a comparison of Class 3 land compared to the extent of the proposed HPL precinct. Ms Easton advised that WCRC are not currently progressing work on the HPL as the government had indicated some changes to the NPS, and they are awaiting final changes before progressing that work, as they have heard LUC3 land may be removed.

585. Ms Easton confirmed that the submissions provide some scope for a change of approach for the HPL precinct to relate only to LUC3 land, including submissions from HortNZ and Federated Farmers, as follows:

Hort NZ (S486)– this submission states:

We seek provisions that recognise highly productive land in line with the National Policy Statement for Highly Productive Land

Include a new definition for highly productive land: Until the regional policy statement contains maps identifying highly productive land in the West Coast, highly productive land is: LUC 1, 2, or 3 land which is zoned general rural or rural production and is not identified

for future urban development. Amend all uses of 'versatile soil' to 'highly productive land. We seek policies to manage ad-hoc urban and lifestyle development to maintain highly productive land resource for future generations and enable horticultural production in the future.

A new objective should be included [in the Rural Zones Chapter] to give effect to the NPSHPL. RURZ-P5 provides for highly productive land which is supported. The policy should give effect to the NPS-HPL and amendments are sought for this.

There should be provisions in the subdivision chapter that give effect to the NPSHPL to ensure that subdivision of highly productive land is avoided except as provided for in the NPSHPL.

[Re SUB – O3] Highly productive land should be added to the list of matters that are protected.

[Re SUB – P6] The policy lists areas where subdivision is to be avoided. This should be amended to give effect to the NPSHPL by avoiding subdivision as set out in the NPSHPL.

Federated Farmers (S524)– this submission states:

Include a new definition for highly productive land: Until the regional policy statement contains maps identifying highly productive land in the West Coast, highly productive land is:

LUC 1, 2, or 3 land which is zoned general rural or rural production and is not identified for future urban development. Amend all uses of 'versatile soil' to 'highly productive land. [Re SUB – P1] Whilst subdivision should be consistent with the qualities listed, it should also provide for the same. For example, with regard to highly productive land. Changes are sought to address these matter

586. Ms Easton considered that any spatial mapping that affects landowners should be shown on the planning maps if possible, so that people do not need to go to another location to find this information. She noted that LUC3 land would be easy to show in the planning maps as the GIS shape files are freely available from Landcare Research.

Hearing Panel's Evaluation

587. In relation to the General Rural Zones, Highly Productive Land Precinct, and GRUZ-P5 Highly Productive Land Precinct and Associated Policy, the Panel agrees with Ms Easton that the TTPP must give effect to the NPS-HPL in the absence of the WCRC updating its Regional Plan to give effect to the NPS-HPL. As well, the pTTPP must, in this interim period, manage the significant issues in the districts. She considered subdivision of rural land to be a significant issue, with tensions between a landowner's desire to profit from development and the impacts of subdivision on neighbouring primary production. She noted that this was a significant topic of consultation through the development of TTPP, with the proposed minimum lot sizes determined following feedback from the community and stakeholder organisations. Ms Easton considered the proposed approach to be consistent with the policy direction in the NPS-HPL.

588. Doing nothing to address this significant issue, particularly given the opportunity the pTTPP provides, would not, in the Panel's view, be giving effect to the RMA, in particular the obligation under the RMA to give effect to higher order documents in the course of plan making.

589. In our view the pTTPP provisions appropriately give effect to the NPS-HPL, which is focused on ensuring highly productive land is prioritised for land-based primary production activities and not rezoned for urban lifestyle or urban development uses.

590. The Panel does not agree with Ms Easton view that that the Highly Productive Land Precinct be renamed the Rural Production Precinct and that a definition be included, noting that she had previously supported this approach in the Introduction and General Provisions report. We consider it is appropriate that the NPS-HPL is given effect to and in our view the precinct should reflect the requirements of the NPS-HPL. In that regard we consider the Precinct should follow the direction of the NPS-HPL (Clause 3.5 (7) (a) ii) and use the NZLRI Land Use Capability (2021) classification LUC 1-3 to identify and map the area of the Precinct in the Plan and remove those areas which are not within that classification.

591. We agree with Ms Easton that a new definition of highly productive land requested by HortNZ (S486.007) and Federated Farmers (S524.027) is not needed.

592. The Panel considers that GRUZ-PREC1-P5 should be retained as notified based on our decision later in the recommendation to retain the Highly Productive Land Precinct but to confine it the Land Use Capability 1-3 land.

Hearing Panel's Recommendation

593. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below be accepted or accepted in part and recommends that the following amendments be made to the **Highly Productive Land Precinct** the following:

GRUZ-PREC5-P5
Subdivision and development of residential units within the GRUZ - PREC5 - Highly Productive Land Precinct should ensure that economic farming units are retained and that the fragmentation of land for other uses is avoided.
SUB-S1
Each allotment, including the balance allotment must meet the following minimum lot size: a. General Residential Zone 350m^2; b. Large Lot Residential Zone 1000m^2; c. Medium Density Residential Zone 200m^2; and d. Neighbourhood Centre Zone 350m^2; e. Settlement Zone, Settlement Zone – Coastal Settlement Precinct and Settlement Zone – Settlement Centre Precinct 1000m^2 in unsewered areas and 500m^2 in sewered areas; f. Settlement Zone – Rural Residential Precinct 4000m^2; g. Rural Lifestyle Zone 1 hectare; h. General Rural Zone 4 hectares, except that it is 10 hectares in the Highly Productive Land; and i. Future Urban Zone 4 hectares

Mapping	
Identify all LUC 1-3 on land the Planning Maps as the Highly Productive Land Precinct and delete land that is not LUC 1-3.[127]	

4.4. Rural Lifestyle Zone Chapter

Submissions and Further Submissions

594. Two hundred and fifty submission points and eighteen further submission points on the Rural Living Zone chapter were received and are summarised in a table on pages 144-165 of the s42A report.

595. Four submission points were received on the chapter as a whole or seeking new rules and are summarised in a table on pages 144-145 of the s.42a report. One was in support of the chapter, two sought amendments, and one was in opposition.

596. Twenty submission points were received on RLZ-R1 and are summarised in a table on pages 145-147 of the s.42a report. One was in support of the chapter, two sought amendments, and one was in opposition.

597. Seven submission points were received on RLZ-R2 and are summarised in a table on pages 147-148 of the s.42a report. Three were in support, and four sought amendments.

598. Twenty-three submission points were received on RLZ-R3 and are summarised in a table on pages 148-149 of the s42A report. One was in support, and twenty-two sought amendments.

599. Five submission points were received in support of RLZ-R4 and are summarised in a table on page 150 of the s42A report.

600. Ten submission points were received on RLZ-R5 and are summarised in a table on pages 150-151 of the s42A report. One was in support, and nine sought amendments.

601. Nine submission points were received in support of RLZ-R6 and are summarised in a table on page 151 of the s42a report.

602. Twelve submission points were received on RLZ-R7 and are summarised in a table on pages 151-153 of the s.42A report. Three were in support, four sought amendments, and five were in opposition and sought that the rule be deleted.

603. Eleven submission points were received on RLZ-R8 and are summarised in a table on pages 153-154 of the s42A report. Three were in support, and eight sought amendments.

604. Nineteen submission points were received on RLZ-R9 and are summarised in a table on pages 154-155 of the s42A report. Four were in support, and fifteen sought amendments.

[127] Horticulture New Zealand (S486.007), Federated Farmers (S524.027)

605. Fourteen submission points were received on RLZ-R10 and are summarised in a table on pages 156-157 of the s42A report. Two were in support, and twelve sought amendments.

606. Eight submission points were received on RLZ-R12 and are summarised in a table on pages 157-158 of the s42A report. Two were in support, and six sought amendments.

607. Eight submission points were received on RLZ-R13 and are summarised in a table on page 158 of the s42A report. One was in support, two sought amendments, and five were in opposition and sought that the rule be deleted.

608. Nine submission points were received on RLZ-R14 and are summarised in a table on pages 158-159 of the s42A report. Three were in support, and six sought amendments.

609. Fourteen submission points were received on RLZ-R16 and are summarised in a table on pages 159-160 of the s42A report. Three were in support, and eleven sought amendments.

610. Twelve submission points were received on RLZ-R17 and are summarised in a table on pages 160-161 of the s42A report. One was in support, and eleven sought amendments.

611. Six submission points were received in support of RLZ-R18 and are summarised in a table on page 161 of the s42A report.

612. Ten submission points were received on RLZ-R19 and are summarised in a table on pages 161-162 of the s42A report. Four were in support, and six sought amendments.

613. Eight submission points were received in support of RLZ-R20 and are summarised in a table on page 162 of the s42A report.

614. Eight submission points were received in support of RLZ-R21 and are summarised in a table on pages 162-163 of the s42A report.

615. Nine submission points were received on RLZ-R22 and are summarised in a table on page 163 of the s42A report. Eight were in support, and one sought an amendment.

616. Eight submission points were received on RLZ-R23 and are summarised in a table on pages 163-164 of the s42A report. Two were in support, four sought amendments, and two were in opposition and sought that the rule be deleted.

617. Eight submission points were received on RLZ-R24 and are summarised in a table on page 164 of the s42A report. Two were in support, four sought amendments, and two were in opposition and sought that the rule be deleted.

618. Eight submission points were received on RLZ-R25 and are summarised in a table on pages 164-165 of the s42A report. Two were in support and six were in opposition, seeking to delete the rule.

619. The Panel adopts these summaries and has considered all the relevant submissions and further submissions.

Section 42A Report

Submissions on RLZ Chapter as a whole or seeking new rules

620. Ms Easton acknowledged the submission in support of the overall approach to the zone.

621. Ms Easton supported in part the submission point (S443.050) from Suzanne Hills seeking that commercial dog kennels be non-complying or prohibited or at least clarified that they are not permitted or controlled. She considered kennels to fall within the definition of commercial activity, which is a discretionary activity in the zone. She did not recommend any changes as a result of this submission point.

622. Ms Easton did not support submission point (S490.007) from the New Zealand Motor Caravan Association seeking that campgrounds be a permitted activity, noting that they would be either discretionary under RLZ-18 or subject to RLZ-17.

623. Ms Easton supported in part the submission point (S82.027) from Sophia Allen seeking more protection from communities, which Ms Easton understood to mean protection from mining activities. She noted that the Plan differentiates productive rural areas and rural lifestyle areas, but acknowledged that it is challenging to address reverse sensitivity issues that are already occurring because of past decisions to allow rural lifestyle development adjacent to primary production activities. She did not propose any changes as a result of this submission point.

RLZ-R1 Agricultural, Horticultural and Pastoral Activities and Buildings

624. Ms Easton acknowledged the submissions in support of the rule.

625. Ms Easton supported submission point (S304.001) from Gina Hogarth seeking a reduced internal boundary setback of 3m for lots adjoining another rural lifestyle zoned lot. She noted that a reduction to 5m had already been recommended in the General Rural Zone and considered a 3m setback appropriate for the Rural Lifestyle Zone.

626. Ms Easton did not support submission point (S443.048) from Suzanne Hills seeking that standard seven on beekeeping apply in all districts, noting that Westland District has the most evident issues relating to beekeeping effects, as Grey and Buller Districts have bylaws managing beekeeping that address these issues.

627. Ms Easton supported submission point (S450.277) from Waka Kotahi seeking the rule to require sites to meet vehicle crossing standards. She noted that while existing sites would have existing use rights, a large proportion of sites are accessed from state highways and expanding or new activities should be required to upgrade crossings to a safe standard.

628. Federated Farmers (S524.122) sought clarity as to why stock yards and farm quarries are excluded from the permitted activity standard and sought that these activities be permitted. Ms Easton did not support this submission, noting that the smaller site sizes in the Rural Living Zone mean activities that may have adverse effects on the amenity of adjoining properties are not provided for. She also noted the exclusion is for stock sale yards, which are not part of normal farming operations. She also noted that on rural lifestyle sites, the need for farm quarries for track maintenance is likely to be small.

629. BDC (S538.529) sought that standard 6 (poultry and pig keeping) be simplified and extended to cover all buildings used to house or feed livestock within a 30m setback. GDC seeks to increase the setback to 20m for poultry. Ms Easton supported a simplified approach but noted the BDC proposal relates only to buildings, whereas the standard refers to activities. She supported a reduction to a 30m setback, noting that the Timaru District Plan applies a 25m setback, and acknowledging the size and potential dimensions of lifestyle properties.

630. Ms Easton noted that other District Plans generally only specify setbacks for pigs and poultry. Therefore, she did not recommend widening the restriction to apply to buildings for housing

or feeding livestock. She considered that where these are expected to have significant effects, they are likely to be caught by the definition of intensive indoor primary production.

631. Several submitters, Chris & Jan Coll (S558.556), Chris J Coll Surveying Ltd (S566.556), William McLaughlin (S567.596), and Laura Coll McLaughlin (S574.556), sought to amend the rule to provide for free-range poultry and egg farming. Ms Easton supported these submission points in part, in that she considered the amendment to standard six partly addresses this issue and makes it clear that the standard applies to shelters and buildings. She did not think it necessary to specifically state that poultry range activities are permitted, as these activities are not included in the definition of Intensive Indoor Primary Production.

632. Ms Easton supported in part submission (S573.054) from FENZ seeking several changes to the standards, including an increased maximum height limit and exemption from setbacks for emergency service and critical facilities, and a requirement for firefighting water supply. Ms Easton supported an increased maximum height limit for emergency service facilities, to 10m. She did not support critical facilities being included, as these activities are not provided for in the zone. She did not support an exemption from setback requirements, noting that the deemed permitted activities provisions in the RMA would be the best approach to reduce setbacks. Ms Easton considered the proposed amendment regarding water supply to be inappropriate as rural lifestyle zone properties are not connected to reticulated water supplies, and she considered water supply to be a subdivision and building act matter.

633. Ms Easton did not support submission points Chris J Coll Surveying ltd (S566.557), Chris & Jan Coll (S558.557), William McLaughlin (S567.597) and Laura Coll McLaughlin (S574.557) seeking a Controlled activity status when compliance is not achieved. She noted that existing activities would have existing use rights but considered that new or expanding activities should comply with the standards to ensure effects are managed.

RLZ-R2 Conservation Activities

634. Ms Easton acknowledged the submissions in support of the rule.

635. Ms Easton did not support several submission points, Chris & Jan Coll (S558.558), Chris J Coll Surveying ltd (S566.558), William McLaughlin (S567.598), and Laura Coll McLaughlin (S574.558), seeking that the rule be amended so that existing non-compliance doesn't preclude application of the rule. She noted that existing activities would have existing use rights but considered that new or expanding activities should comply with the standards to ensure effects are managed.

RLZ-R3 Residential Activities and Residential Units

636. Ms Easton acknowledged the submissions in support of the rule.

637. Ms Easton supported in part the submission point (S82.028) from Sopia Allen seeking more protection for communities from heavy industry, noting that the zone rules are designed to protect landowners from the impacts of industrial activities, which are restricted. However, she noted that the Plan cannot address poor decision-making of the past around where residential and lifestyle development has occurred, or the conflict that has arisen between rural lifestyle landowners and primary production activities as a result.

638. Ms Easton supported submission point (S450.278) from Waka Kotahi seeking the rule be amended to require that vehicle crossing standards be met, noting the amendment to RLZ-R1 will achieve this outcome.

639. Ms Easton did not support submission points (S478.023) from Frank and Jo Dooley and (S595.011) from Frank O'Toole seeking to reduce residential density to 1 unit per 4000m2 on physically contiguous land, noting that the Settlement Zone – Rural Residential Precinct provides for this level of residential density. She noted that the TTPP provides a 3-tier framework for development density, with conscious decision-making around where each zone is located. The Settlement Zone – Rural Residential Precinct zone is located closer to existing settlement areas. This reflects a substantial move away from the previous ad-hoc approach to smaller lot development across the West Coast, which did not consider reverse sensitivity impacts or loss of primary production values.

640. Ms Easton did not support submission (S524.123) from Federated Farmers seeking that minor unit size be increased from 65m2 to 80m2, noting that this size is standard across the Plan and a common size nationally and at the large end of the spectrum. She noted the size is intended to effectively avoid two dwellings from being constructed, which would lead to subdivision.

641. Ms Easton did not support submission point (S571.002) from Greg Maitland, which sought to delete clause 3 and establish a minimum area for minor units of 90m2 and no requirement to be close to the main dwelling. The size issue is addressed in the response to the Federated Farmers submission point above. Ms Easton noted the minimum distance requirement is designed to avoid minor units leading to an argument for future subdivision.

642. Ms Easton supported submissions (S538.031) BDC, (S567.601) William McLaughlin, (S566.562) Chris J Coll Surveying ltd, (S558.562) Chris & Jan Coll, and (S574.562) Laura Coll McLaughlin seeking that Standard 2 be amended to state: Residential unit density is no more than one unit per 1ha net site area, by deleting the words on physically contiguous land except where the site is already in existence at the date of notification of the Plan. BDC argued that this clause, as notified, would allow a second residential unit and a minor dwelling to be constructed on existing lots. They considered this inappropriate on 1ha land parcels, given that the predominant rural character and open space are expected to be maintained. Ms Easton accepted the reasons in the Council submission and recommended that the standard be amended. She also noted that the words 'on physically contiguous land' were unnecessary and could be deleted.

643. Ms Easton did not support submission points Chris & Jan Coll (S558.561), Steve Croasdale (S516.136), John Brazil (S360.073), Chris J Coll Surveying Ltd (S566.561), William Mc Laughlin (S567.600), and Laura Coll McLaughlin (S574.561) seeking the rule be amended so that existing non-compliance doesn't preclude application of the rule. She noted that existing activities would have existing use rights but considered that new or expanding activities should comply with the standards to ensure effects are managed.

644. Ms Easton did not support submission points Chris & J Coll (S558.559), Laura Coll McLaughlin (S574.559), William McLaughlin (S567.599), and Chris J Coll Surveying Ltd (S566.559) seeking the noise advice note be deleted. She noted that noise would be considered in the Noise topic, and if the rule referenced is amended, the advice note would be updated as a consequential amendment.

RLZ – R4 Papakāinga Developments

645. Ms Easton acknowledged submissions received in support of the rule. As all submissions were in support, no amendments were recommended.

RLZ – R5 Minor Structures

646. Ms Easton supported submission point (S538.532) from BDC seeking Standard 1 be amended so that only the setback rules for the zone apply, noting this is consistent with submissions they made on similar rules in other zones that she supported. She noted this amendment partially addresses the relief sought by David Moore, who sought to retain the height and site coverage standard but delete all other standards.

647. Ms Easton supported in part submission points Chris & Jan Coll (S558.563), Chris J Coll Surveying Ltd (S566.563), William Mc Laughlin (S567.602), John Brazil (S360.075), Steve Croasdale (S516.137), and Laura Coll McLaughlin (S574.563) seeking that the rule be amended so that existing non-compliance with RLZ-R1 does not preclude application of the rule, in that her recommendation to amend standard 1 removes the requirement to comply with RLZ-R1 and instead only refers to setbacks. However, as a principle, she did not support providing for existing non-compliance.

RLZ – R6 Fences, Walls, and Retaining Walls

648. Ms Easton acknowledged submissions received in support of the rule. As all submissions were in support, no amendments were recommended.

RLZ – R7 Relocated Buildings/ RLZ – R13 Relocated Buildings not meeting Permitted Activity Standards

649. Ms Easton supported submission points BDC (S538.534), Chris & Jan Coll (S558.142, S558565), Chris J Coll Surveying Ltd (S566.142, S566.565), William Mc Laughlin (S567.022, S567.604), Laura Coll McLaughlin (S574.142, S574.565) seeking that these rules be deleted, as she considered the amenity concerns that apply to relocated buildings are principally associated with urban locations and do not arise in the same way in rural areas or need to be managed through the zone rules.

650. Ms Easton did not support submission points seeking amendments to the rules as she recommended, they be deleted.

RLZ – R8 Home Business

651. Ms Easton acknowledged submissions received in support of the rule.

652. Ms Easton supported submission (S538.535) from BDC seeking that the rule be amended to include a standard specifying that the activity must be ancillary to a residential activity and that no more than one full-time person engaged in the activity may reside off-site. BDC considered that this provides a clear compliance method to ensure the scale of home business does not exceed that anticipated in the zone. They were concerned that the traffic generation standards would be difficult to monitor and enforce when combined uses (residential, rural and home business) are occurring in a single dwelling. Ms Easton noted that Buller and Westland District Plans also have this requirement in their home business rules.

653. Ms Easton supported in part submission (S450.280) from Waka Kotahi seeking the rule be amended to reduce the maximum permitted number of vehicle movements to 30 per day. Above this, the use of the vehicle crossing is considered a high trip-generating activity. The notified standard allowed no more than 10 heavy vehicle movements per day, and the greater of 30 light vehicle movements per day or 210 light vehicle movements per week. Ms Easton acknowledged that the standard as drafted could allow 210 light vehicle movements in one day and none of the remainder of the week. She recommended the standard be amended to

allow a maximum of 10 heavy vehicle movements per day and 210 light vehicle movements per week.

654. Several submission points Steve Croasdale (S516.140), Chris & Jan Coll (S558.566), Chris J Coll Surveying Ltd (S566.566), William McLaughlin (S567.605), and Laura Coll McLaughlin (S574.566) sought that non-compliance with RLZ-R1 does not preclude application of the rule. Ms Easton did not support accommodating existing non-compliance, as this could result in adverse effects on amenity and the environment. She noted that existing use rights would protect existing activities.

RLZ – R9 Residential Visitor Accommodation

655. Ms Easton acknowledged submissions received in support of the rule. She noted that BDC support the approach of only permitting homestay accommodation in the Buller District, noting that the conversion of long-term rental accommodation to short-term visitor accommodation was the community's second most identified concern after natural hazards.

656. Ms Easton supported submission point (S181.042) from the WDC seeking the same approach (permitting homestay only) to be provided in the Westland District. She noted this approach was strongly recommended by WDC staff when TTPP was being developed, but the TTPP committee did not accept this. After reviewing the analysis undertaken on environmental effects and issues in the Westland District, Ms Easton concluded that the district is experiencing similar effects to those in Buller. Therefore, the management approach should be the same. She considered that the impact of residential visitor accommodation is substantially less in the Grey District, as it is not a major tourist destination.

657. Ms Easton did not support submission point (S561.003) from Fiona McDonald seeking that the same approach that applies in the Grey District be taken in Buller, noting that the analysis undertaken to develop the Buller Provisions was sound and circumstances have not changed since then to justify a change in management approach.

658. Ms Easton did not support submission point (S561.004) from Fiona McDonald, seeking the rule be amended to increase the maximum number of guests permitted, or (S572.003) Jon Barltrop, seeking no restriction on guest numbers. She noted that several key factors had been considered when setting the cap, and that environmental effects increase significantly with the number of paying guests. She thought 6 paying guests to be reasonable, and generally consistent with limits imposed by other nearby Councils.

659. Ms Easton supported submission (S608.116) from GDC seeking that records of letting activity be provided annually rather than on request. The Council believed landowners should provide evidence of compliance as a requirement, rather than the Council having to identify where these activities are operating and approach them. Ms Easton considered this requirement to be reasonably necessary to ensure permitted activity standards are met and will assist the Council in discharging Building Act compliance duties.

660. Ms Easton did not support several submission points seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

RLZ-R10 Community Facilities, Educational Facilities, Emergency Service Facilities and Recreational Facilities

661. Ms Easton acknowledged submissions received in support of the rule.

662. Ms Easton did not support submission point (S456.050) from the Ministry of Education seeking a Restricted Discretionary activity status where permitted activity standards are not met. She noted that larger-scale activities are not anticipated in the Rural Lifestyle Zone and would be better located in a Settlement Zone – Settlement Centre Precinct.

663. Ms Easton supported submission point (S538.537) from BDC to fix a minor error where the rule refers to 12 pm (noon) instead of 12 am (midnight).

664. Ms Easton supported submission points (S608.117) from GDC and (S573.062) from FENZ, which argued that hours of operation do not apply to emergency service facilities, considering this to be a minor error.

665. Several submission points, Chris & Jan Coll (S558.569), Chris J Coll Surveying ltd (S566.569), William McLaughlin (S567.608), and Laura Coll McLaughlin (S574.569), requested that the noise advice note be deleted. Ms Easton did not support these submissions, noting that this matter would be considered in the Noise topic and any changes to the rule would be reflected in consequential amendments to the advice note.

666. Ms Easton did not support several submission points seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

RLZ – R12 Minor structures not meeting Permitted Activity Standards

667. Ms Easton acknowledged submissions received in support of the rule.

668. Ms Easton did not support several submission points seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

RLZ – R14 Residential Visitor Accommodation not meeting Permitted Activity Standards

669. Ms Easton acknowledged submissions received in support of the rule.

670. Ms Easton did not support several submission points seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

RLZ – R16 Agricultural, Horticultural and Pastoral Activities and Buildings not meeting Permitted Activity Standard

671. Ms Easton acknowledged submissions received in support of the rule.

672. Ms Easton did not support submission points John Brazil (S360.083), Steve Croasdale (S516.145), Chris & Jan Coll (S558.578), William McLaughlin (S567.616), Chris J Coll Surveying Ltd (S566.578), and Laura Coll McLaughlin (S574.578), seeking that standard one be deleted. She noted that no reason is given as to why the submitters consider the standard too

restrictive, and the standard identifies activities considered inappropriate due to the size of Rural Lifestyle Zone sites.

673. Ms Easton did not support several submission points seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules as this could result in adverse effects.

RLZ – R17 Commercial Activities

674. Ms Easton acknowledged the submission received in support of the rule.

675. Ms Easton supported in part the submission points BDC (S538.544), Chris & Jan Coll (S558.580), Chris J Coll Surveying Ltd (S566.580), William McLaughlin (S567.618) and Laura Coll McLaughlin (S574.580) seeking either the performance standard for floor and yard area to be deleted, or that the rule be amended to be more enabling of development. She noted this standard differs from the General Rural Zone rule, which only refers to large-format retail, not other types of commercial activities. She noted that the standard is intended to avoid these specific activities from establishing in rural areas to the detriment of commercial areas in the main townships and recommended amending the standard to refer to large formal retail activities.

RLZ – R18 Conservation Activities, Recreation Activities, Emergency Service Facilities, Educational Facilities and Community Facilities not meeting Permitted Activity Rules/ RLZ – R20 Residential Visitor Accommodation not meeting Permitted or Restricted Discretionary Activity Rules/ RLZ – R21 Home Business not meeting Permitted or Restricted Discretionary Activity Rules

676. Ms Easton acknowledged the submissions received in support of these rules.

RLZ – R19 Minor Structures, Fences, Walls, Retaining Walls and Relocated Buildings not meeting Permitted or Controlled Activity Rules

677. Ms Easton acknowledged the submissions received in support of the rule.

678. Ms Easton supported submission points Chris & Jan Coll (S558.584, S558.153), Chris J Coll Surveying Ltd (S566.584, S566.153), William Mc Laughlin (S567.621, S567.0230, and Laura Coll McLaughlin (S574.153, S574.584) seeking the references to relocated buildings be removed, as a consequential amendment to the deletion of the relocated buildings rules.

679. Ms Easton supported submission points (S478.035) from Frank and Jo Dooley and (S595.023) from Frank O'Toole seeking that Fences, Walls and Retaining walls be removed and placed in a separate restricted discretionary rule with matters of discretion relating to the effects of these structures, consistent with their submissions on other zones. She agreed a restricted discretionary activity status is appropriate to manage these structures when permitted activity standards are not met.

RLZ – R22 Residential Activities, Residential Units and Papakāinga Developments not meeting Permitted Activity Rules

680. Ms Easton acknowledged the submissions received in support of the rule.

681. Ms Easton did not support submission point (S620.047) from Ngāi Tahu seeking a restrictive discretionary activity status where permitted activity standards are not met. She noted that

extensive provision had been made for papakāinga, but the same resource management issues (loss of productive land, reverse sensitivity) occur regardless of the type of residential development. She considered the notified discretionary activity status to be appropriate.

RLZ – R23 Agricultural, Horticultural and Pastoral Activities and Commercial Activities not meeting the Permitted or Discretionary Activity Rules

682. Ms Easton acknowledged the submissions received in support of the rule.

683. Ms Easton did not support several submission points John Brazil (S360.089), Steve Croasdale (S516.152), Chris J Coll Surveying Ltd (S566.588), Chris & Jan Coll (S558.588), William Mc Laughlin (S567.625) and Laura Coll Mc Laughlin (S574.588) seeking the rule be deleted and these activities be Discretionary, for the same reasons outlined in relation to these submitters' points on RLZ-R16.

RLZ – R24 Industrial Activities including Rural Industry

684. Ms Easton acknowledged the submissions received in support of the rule.

685. Ms Easton did not support several submission points Chris & Jan Coll (S558.589), Chris J Coll Surveying Ltd (S566.589), William McLaughlin (S567.626), Laura Coll McLaughlin (S574.589), John Brazil (S360.090) and Steve Croasdale (S516.153) seeking the rule be deleted and these activities be a Discretionary activity. She considered industrial activities do not fit with the purpose of the zone, which is a combined living and rural environment, noting there have been some strong submissions from submitters about the concerns and amenity effects that rural lifestyle dwellers find from industrial-type activities. She considered these activities to be inappropriate in these areas.

686. Ms Easton noted that the International Panel and Lumber supported these submissions because it has a property and carpark on Osmond Road, Gladstone, that is zoned Rural Lifestyle Zone that would be affected by this rule. She noted she would support this site being rezoned as a General Industrial Zone to reflect the existing use but was unclear on whether there is scope to do this.

RLZ – R25 Any activity not provided for in another rule in the zone

687. Ms Easton acknowledged the submissions received in support of the rule.

688. Ms Easton did not support submission points John Brazil (S360.0910, Steve Croasdale (S516.154), Chris & Jan Coll (S558.590), Chris J Coll Surveying Ltd (S566.590), William Mc Laughlin (S567.627) and Laura Coll McLaughlin (S574.590) seeking the rule be deleted and that these activities be Discretionary, noting that no reasons are given for requesting this change. She noted this type of 'catch-all' rule is more commonly a discretionary activity in other plans. She invited the submitters to provide information at the hearing on whether they would support that alternative relief.

Hearing and Submitter Evidence

689. Frida Inta, on behalf of herself and BCG, queried how the site coverage rule would be applied and stated she considered 30% to be too large and more suitable for smaller urban properties. She requested that the minimum size for minor units be aligned with kitset building sizes. She considered the traffic movement standards for home businesses to be too high and noted that

there is repetition in the rules between zones that she considered unnecessary. She also sought the rule to be amended to prevent the external generation of dust, odour, or smoke.

690. Jonathan Bhana-Thomson, on behalf of the Heavy Haulage Association, opposed the submissions seeking the deletion of relocated building rules. Mr Bhana-Thomson supported a permitted activity status for relocated buildings and the Council retaining a degree of control through performance standards, with a restricted discretionary activity standard for relocated buildings not meeting those standards. If the Commissioners did not support the standards sought, he confirmed he did not oppose a permitted activity status with no standards, so long as the activity is clearly identified as permitted.

691. Federated Farmers sought that if stock sale yards are to be excluded from RLZ-R1, it be made clear that this only refers to yards built specifically for agents selling stock on behalf of clients and does not include stock yards used as part of normal farming operations. They noted that stock yards will occasionally be used for sale processes, for example, so a potential buyer can view stock, without being a 'sale yard.'

692. Federated Farmers continued to seek that farm quarries are not excluded from RLZ-R1, as they considered there are potential needs for quarries on lifestyle blocks, but that they are subject to requirements and constraints set out elsewhere in the plan.

693. In a letter to the Panel tabled at the hearing, KiwiRail sought that the setback standard in RLZ-R1 be amended to apply to buildings and structures and to require a 5m setback from any rail designation boundary, noting that the designation is clearly identified on the planning maps.

694. In a letter, dated 19 July 2024, to the Panel tabled at the hearing, FENZ confirmed they would not pursue any amendments relating to critical facilities, acknowledging that these are not provided for in the zone. FENZ continued to seek a reduced road boundary setback, on the basis that buildings located 8-10m from the road boundary support their logistical and operational requirements, including the need for fire appliances to be strategically located adjacent to the transport corridor for prompt emergency responses. They also noted that greater setbacks increase civil costs, land parcel size, and can create fire separation issues at rear property boundaries.

695. FENZ continued to seek that RLZ-R1 be amended to require a firefighting water supply, requesting that the alternative wording provided for GRUZ-R1 be also included in this rule. They noted that water supply is not solely a subdivision matter, as new developments are subject to the need for new services, and that provision of firefighting water supply is not a matter covered in the Building Act. The amendments requested include a new standard and advice note as follows:

Where […]

7 Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008)

Advice Notes: […]

The New Zealand Fire Service Firefighting Water Supplies Code of Practice SNZ PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

696. In a letter to the panel dated 1 August 2024, Martin Kennedy, on behalf of Westpower Limited, noted that the s42A report had misallocated Westpower's further submission, (FS222.065) as a submission in support of BDC's submission on RLZ-R14 (FS222.065) was made in support of a BDC submission on the noise chapter and should not have been included in the RLZ submission table.

Reporting officers' right of reply

697. In response to Mr Boyd's verbal submission, Ms Easton recommended the maximum permitted activity size for antenna dishes be increased from 1m to 1.5m, consistent with her recommendations on the GRUZ chapter.

698. In response to a question from the Panel on whether RLZ-R1 should refer to enclosures as well as shelters and buildings, and whether there is a need for setback for stock runs, Ms Easton considered 'shelter' to be an inclusive term that would include enclosures. She considered adverse effects on amenity to arise from the congregation of animals in a shelter, and that it is not necessary to regulate stock runs.

699. Ms Easton recommended that an advice note be added to confirm that on-farm sale of stock, raised on the farm, does not fall within the term 'stock saleyard' in terms of standard 1.iii.

700. In response to a question from the Panel querying the activity status for new dwellings constructed on existing under-sized lots in the Rural Lifestyle Zone, Ms Easton confirmed that RLZ-R3.2 'grandparents' the right to build a dwelling on an undersized lot existing at the date of notification. She advised that any new sites under 1ha that are subdivided but not built upon when the Plan becomes operative would require a Discretionary resource consent. Still, she considered this situation to be unlikely and that there would be few, if any, lots created where this situation would arise.

Hearing Panel's Evaluation

701. In respect of submissions on the RLZ as a whole and those that sought new rules, the Panel agrees with Ms Easton's analysis of those submissions and accepts her recommendation that no changes to the Plan provisions are required for the reasons she provides.

702. Notwithstanding the above, the Panel has made changes to the Rural Lifestyle Overview for reasons of consistency with the other overviews in the chapter and to update the Plan with the current national guidance wording.

703. In relation to RLZ-R1, the Panel agrees with Ms Easton's analysis of the FENZ submission (S573.054) and agrees with her recommendation to amend clause 3i. to permit emergency service facilities to a height of 10m, being the same height limit as for residential buildings. FENZ sought a range of additional amendments to this rule, but we agree with Ms Easton's reasons for recommending they mostly be rejected.

704. The Panel agrees that the notified 10m setback from all internal boundaries is not appropriate for the zone. Ms Easton supported a submission point (S304.001) from Gina Hogarth seeking a reduced internal boundary setback of 3m for lots adjoining another rural lifestyle zoned lot. She noted that a reduction to 5m had already been recommended in the General Rural Zone and considered a 3m setback appropriate for the Rural Lifestyle Zone. We agree with this reasoning and her recommendation to delete 10m and replace it with 3m in clause 4. of the rule. We also not that the reduce setback will go some way towards addressing the FENZ submission.

705. The Panel agrees with Ms Easton's analysis of the BDC submission (S538.529) seeking to amend clause 6, which deals with performance standards for poultry and pig keeping. BDC sought that standard 6 (poultry and pig keeping) be simplified and extended to cover all buildings used to house or feed livestock within a 30m setback. GDC sought to increase the setback to 20m for poultry. Ms Easton supported a simplified approach but noted the BDC proposal relates only to buildings, whereas the notified standard refers to activities. Acknowledging this change, we consider that it is when the pigs or poultry are sheltered and housed that issues of concern would arise, as distinct from when the animals are ranging in the paddock. We note in her reply in response to our questions about regulating runs as well as shelters, Ms Easton considered that adverse effects on amenity would arise from the congregation of animals in a shelter, and that it is not necessary to regulate stock runs. We agree.

706. Ms Easton supported a reduction to a 30m setback, noting that the Timaru District Plan applies a 25m setback, and acknowledging the size and potential dimensions of lifestyle properties.

707. Ms Easton noted that other District Plans generally only specify setbacks for pigs and poultry. Therefore, she did not recommend widening the restriction to apply to buildings for housing or feeding livestock. She considered that where these are expected to have significant effects, they are likely to be caught by the definition of intensive indoor primary production.

708. The Panel agrees for the reasons advanced by Ms Easton to delete clause 6 as notified and replace it with her recommended wording.

709. The Panel agrees with Ms Easton's consideration of the Waka Kotahi submission (S450.277) seeking the rule to require sites to meet vehicle crossing standards. Ms Easton noted that while existing sites would have existing use rights, a large proportion of sites are accessed from state highways and expanding or new activities should require upgrading crossings to a safe standard. We agree with that reasoning and her recommendation to add a new clause 8, providing a new permitted activity Standard, namely that the vehicle crossing standards in Rule TRN-R1 are met.

710. As to the issue of Stock sale yards as it appears in notified clause 1. iii., the Panel agrees with Ms Easton's consideration of the Federated Farmers submission (S524.122) that sought clarity as to why stock yards and farm quarries are excluded from the permitted activity standard and sought that these activities be permitted. Ms Easton did not support this submission, noting that the smaller site sizes in the Rural Living Zone mean activities that may have adverse effects on the amenity of adjoining properties are not provided for. She also noted the exclusion is for stock sale yards, which are not part of normal farming operations. She also noted that on rural lifestyle sites, the need for farm quarries for track maintenance is likely to be small. We agree with her reasoning.

711. We note that Federated Farmers sought, through their evidence, that if stock sale yards are to be excluded from RLZ-R1, it should be made clear that this only refers to yards explicitly built for agents selling stock on behalf of clients and does not include stock yards used as part of normal farming operations. They noted that stock yards will occasionally be used for sale processes, for example, so a potential buyer can view stock, without being a 'sale yard.' Ms Easton responded to this issue within her reply, recommending the inclusion of an advice note, which made it clear that the sale of stock produced on a property is not to be considered a stock yard in terms of the rule. We agree with this response to the evidence and recommend including advice note 2.

712. In relation to RLZ-R2, the Panel agrees with Ms Easton's analysis of submissions on this rule. We agree with her recommendation that this rule be retained as notified for the reasons she provides.

713. In relation to RLZ-R3, the Panel agreed with Ms Easton that Standard 2 be amended to state: Residential unit density is no more than one unit per 1ha net site area, by deleting the words on physically contiguous land except where the site is already in existence at the date of notification of the Plan. BDC argued that this clause, as notified, would allow a second residential unit and a minor dwelling to be constructed on existing lots. They considered this inappropriate on 1ha land parcels, given that the predominant rural character and open space are expected to be maintained. Ms Easton accepted the reasons in the Council submission and recommended that the standard be amended. She also noted that the words 'on physically contiguous land' were unnecessary and could be deleted. We agree with these reasons and agree with her recommendation to amend clause 2.

714. The Panel agrees with Ms Easton's consideration of all other submissions on this rule, apart from the FENZ submission, noting her recommendation not to make any further amendments to this rule as notified. For the reasons she provides, we agree with that recommendation.

715. As to the FENZ submission (S573.054) that sought to include in the rules a clause relating to the provision of sufficient water supply and access to it for firefighting, and a related advice note advising consultation with the Fire service as to design for firefighting water supply we agree with Ms Easton's reply recommendation to include both when the subject matter of the rule is residential activity including Papkainga developments. We agree with the recommendation to include a new permitted activity standard as new clause 4. of this rule and a new advice note 2. detailing what we have described above.

716. In relation to RLZ-R4, the Panel agrees with Ms Easton that, except for the FENZ submission, all submissions on this rule supported it as notified. So, the amendments she recommends for this rule are consequential to those for RLZ-R2 and include a new standard 4 and a new advice note 2, both of which replicate amendments to RLZ-R3.

717. In relation to RLZ-R5, the Panel agrees with Ms Easton's support of a submission point from BDC (S539.532) seeking that Clause 1 be amended so that only the setback rules for the zone apply. Ms Easton advised that her recommendation on this rule is consistent with her recommendations on other submissions that BDC made on similar rules in other zones that she also supported. We agree that utilising the zone setback rules is appropriate. She noted this amendment partially addresses the relief sought by David Moore, who sought to retain the height and site coverage standard but delete all other standards.

718. The Panel notes that in respect of Clause 3, in response to Mr Boyd's verbal submission that the smaller dishes do not work as well with the heavy rainfall they have in the Haast area, Ms Easton, in her reply, recommended the maximum permitted activity size for antenna dishes be increased from 1m to 1.5m, consistent with her recommendations on the GRUZ chapter. We agree.

719. In relation to RLZ-R6, the Panel agrees with Ms Easton's recommendation to retain this rule as notified with no amendments.

720. In relation to RLZ-R7, the Panel agrees with Ms Easton that this rule dealing with relocated buildings should be deleted, because the amenity concerns that apply to relocated buildings are principally associated with urban locations and do not arise in the same way in rural areas

or need to be managed through the zone rules. A consequence of this recommendation is that RLZ-R13 will also be deleted.

721. In relation to RLZ-R8, the Panel agrees with Ms Easton that the rule should be amended to include a new Clause 3 that no more than one full-time person engaged in the activity may reside off-site. BDC considered that this provides a clear compliance method to ensure the scale of home business does not exceed that anticipated in the zone. They were concerned that the traffic generation standards would be difficult to monitor and enforce when combined uses (residential, rural and home business) are occurring in a single dwelling. Ms Easton noted that Buller and Westland District Plans also have this requirement in their home business rules. Ms Easton also noted that the rule should specify that the activity must be ancillary to a residential activity. While the rule does not explicitly detail that requirement, we consider Standard 2. Ii. b. achieves that result.

722. While the Panel notes Ms Easton's recommendation to amend Clause 4 in relation to traffic movement as a result of the Waka Kotahi submission, as a result of our recommendations in the Transport Chapter on trip generation, this standard is to be deleted to avoid the potential for uncertainty between provisions. We note that the inclusion of the no more than one full-time equivalent person should address the amenity issue associated with people and vehicle numbers.

723. In relation to RLZ-R9, the Panel agrees with Ms Easton's approach in supporting a submission from the WDC seeking the same approach (permitting homestay only) to be provided in the Westland District. She noted this approach was strongly recommended by WDC staff when TTPP was being developed, but the TTPP committee did not accept this. After reviewing the analysis undertaken on environmental effects and issues in the Westland District, Ms Easton concluded that the district is experiencing similar effects to those in Buller. Therefore, the management approach should be the same. She considered that the impact of residential visitor accommodation is substantially less in the Grey District as it is not a major tourist destination. We accept her evidence on this point and agree to the inclusion of the Westland District Council within clause 7 of the rule. We also agree with her analysis that the environmental effects of home stay activity in the Grey District do not support the inclusion of the Grey District in the rule.

724. The Panel has considered her assessment of the remaining submissions on this rule, both those seeking retention as notified and those seeking amendment, and we agree with her recommendation to retain the balance of the rule as notified, although we agree with GDC that records of letting activity should be provided annually rather than on request. We note Ms Easton supported this amendment, but it does not appear in Appendix 1 to the Right of Reply

725. In relation to RLZ-R10, the Panel agrees with Ms Easton's recommendations to make two amendments in response to submissions on this rule. Ms Easton supported a submission point (S538.537) from BDC to fix a minor error to Clause 3. where the rule refers to noon instead of 12 am (midnight) and also supported a submission point (S608.117) from GDC and (S573.062) FENZ, which argued that hours of operation do not apply to emergency service facilities, considering this to be a minor error to be resolved by including new clause 4. that recorded there are no hours of operation for emergency service facilities. We agree with both recommendations as they clarify the rule and its coverage.

726. In relation to RLZ-R12, the Panel agrees with Ms Easton that no amendments are required to this rule and it can be retained as notified. We agree with Ms Easton not supporting several

submission points[128] seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

727. In relation to RLZ-R14, the Panel agrees with Ms Easton's recommendation that this rule be retained as notified. We note and agree with Ms Easton's recommendation, where she did not support several submission points from, John Brazil (S360.082), Steve Croasdale (S516.144), Chris & Jan Coll (S558.576), Chris J Coll Surveying Ltd (S566.576), William Mc Laughlin (S567.614), and Laura Coll Mc Laughlin (S574.576) seeking that existing non-compliance with RLZ-R1 does not preclude application of the rule, noting that existing activities have existing use rights, but existing non-compliance should not be accommodated in the rules, as this could result in adverse effects.

728. In relation to RLZ-R16, the Panel agrees with Ms Easton's recommendation that this rule be retained as notified. We agree with her that submitters seeking to delete clause 1 did not provide reasons. As well, we agree with her that the standard identifies activities considered inappropriate due to the size of Rural Lifestyle Zone sites.

729. In relation to RLZ-R17, the Panel agrees with Ms Easton's recommendation to amend clause 1. We note Ms Easton supported in part the submission points (S538.544), Chris & Jan Coll (S558.580, S558.581), Chris J Coll Surveying Ltd (S566.580, S566.581), William Mc Laughlin (S567.618, S567.619), Laura Coll McLaughlin (S574.580, S574.581) John Brazil (S360.084) and Steve Croasdale (S516.147) seeking either the performance standard for floor and yard area to be deleted, or that the rule be amended to be more enabling of development. She noted this standard differs from the General Rural Zone rule, which only refers to large-format retail, not other types of commercial activities. She advised that the standard is intended to avoid these specific activities from establishing in rural areas to the detriment of commercial areas in the main townships and recommended amending the standard to refer to large formal retail activities. We agree with her reasoning and her recommendation to amend this rule to specifically refer to large format retail activities because we agree that the location of those activities outside of main centres can cause adverse effects on the economic health and vitality of main centres

730. In relation to RLZ-R18, the Panel notes all submissions were in support of retaining this rule, and we agree with Ms Easton's recommendation that the rule be retained as notified.

731. In relation to RLZ-R19, the Panel agrees with Ms Easton's recommendations that the references to relocated buildings be removed, as a consequential amendment to the deletion of the relocated buildings rules. As well we agree with her recommendation that Fences, Walls and Retaining walls be removed from the rule and placed in a separate restricted discretionary rule with matters of discretion relating to the effects of these structures, consistent with submissions on other zones seeking a similar outcome. She agreed that a restricted discretionary activity status is appropriate to manage these structures when permitted activity standards are not met. We note however that this restricted discretionary rule was not included in the s42A report or the Right of Reply in Appendix 1 and we have therefore included it.

732. In relation to RLZ-R20, the Panel agrees with Ms Easton's recommendation to retain this rule as notified for the reasons provided within her s42A report.

[128] Chris & Jan Coll, Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, John Brazil, Steve Croasdale

733. In relation to RLZ-R21, the Panel agrees with Ms Easton's recommendation to retain this rule as notified for the reasons provided within her s42A report.

734. In relation to RLZ-R22, the Panel agrees with Ms Easton's recommendation to retain this rule as notified. The panel agrees with Ms Easton and does not support a submission point (S620.247) from Ngāi Tahu seeking a restricted discretionary activity status where permitted activity standards are not met. Ms Easton noted that extensive provision had been made for papakāinga, but the same resource management issues (loss of productive land, reverse sensitivity) occur regardless of the type of residential development. She considered the notified discretionary activity status to be appropriate. We agree.

735. In relation to RLZ-R23, the Panel agrees with Ms Easton's recommendation to retain the rule as notified for the reasons she provides within her s42A. In particular, the Panel agrees with Ms Easton that several submission points seeking the rule to be deleted and that these activities to be discretionary should not be supported, for the same reasons outlined concerning these submitters' points on RLZ-R16.

736. In relation to RLZ-R24, the Panel agrees with Ms Easton's recommendation that this rule be retained as notified for the reasons contained within the s42A report. The Panel notes that Ms Easton did not support several submission points from Chris & Jan Coll (S558.589), Chris J Coll Surveying Ltd (S566.589), William McLaughlin (S567.626), Laura Coll McLaughlin (S574.589), John Brazil (S360.090), and Steve Croasdale (S516.153), seeking the rule be deleted and these activities be a Discretionary activity. She considered that industrial activities do not fit with the purpose of the zone, which is a combined living and rural environment, noting there have been some strong submissions from submitters about the concerns and amenity effects that rural lifestyle dwellers find from industrial-type activities. She considered these activities to be inappropriate in these areas. We agree with that assessment and outcome.

737. Ms Easton noted that the International Panel and Lumber (FS98.005, FS98.006, FS98.007) supported these submissions because it has a property and carpark on Osmond Road, Gladstone, that is zoned Rural Lifestyle Zone that would be affected by this rule. She noted she would support this site being rezoned as a General Industrial Zone to reflect the existing use but was unclear on whether there is scope to do this.

738. In relation to RLZ-R25, while the Panel agrees that the rule should not be deleted, we consider, in line with other recommendations we have made, that it should become discretionary activity. We note that Ms Easton acknowledged that a Discretionary activity status is often applied to this type of 'catchall' rule. We recommend that approach is taken here.

Hearing Panel's Recommendation

739. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends the following amendments are made to the following **Overview and Rural Lifestyle Zone Rules**:

Overview
…
Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of Part 2: District-wide Matters chapters also contain provisions that may be relevant for activities in the GRUZ - General Rural Zone, including:

- ~~Overlay Chapters - the Overlay Chapters have provisions in relation to Historic Heritage; Notable Trees; Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscapes; Natural Character and the Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.~~
- **Sites and Areas of Significance to Māori, Historic Heritage and Notable Tree Chapters - there may be sites and areas of significance to Māori, historic heritage or notable trees identified on individual sites within the Rural Lifestyle Zone. Specific information on the provisions that apply to these can be found in the Sites and Areas of Significance to Māori, Historic Heritage, and Notable Trees Chapters.**
- **Natural Hazards - natural hazards are widespread on the coast and in some locations natural hazard overlays may affect areas in the Rural Lifestyle Zone. Information on natural hazard overlays and provisions can be found in the Natural Hazards chapter.**
- **Natural Character and Margins of Waterbodies -in some locations areas of Rural Lifestyle Zone may extend into the riparian margins of waterbodies. The Natural Character and Margins of Waterbodies Chapter contains provisions on how these areas must be managed.**
- **Ecosystems and Biodiversity – Where indigenous vegetation clearance is proposed within a Rural Lifestyle Zone, the provisions of the Ecosystems and Biodiversity chapter apply.**[129]
- **General District Wide Matters** - provisions in relation to Earthworks in particular may be relevant to many activities.
- **Subdivision** – The Subdivision chapter sets out the requirements for subdivision activities the RLZ - Rural Lifestyle Zone.
- **Financial Contributions** – The Financial Contributions chapter sets out the requirements for contributions of costs for activities which impact on the local network utility operators

Relationship with Other Plans
Many activities that occur in rural areas are also regulated by the West Coast Regional Council through Regional Plans, including the Regional Land and Water Plan, Regional Air Plan and Regional Coastal Plan. When planning to undertake an activity, the status under the relevant Regional Plans should also be confirmed and any necessary resource consents applied for under both Plans.

Note with Regard to ~~Plantation~~ Commercial Forestry
There are no specific provisions as relate to ~~plantation~~ **commercial** forestry within the RURZ - Rural Zone Chapters. This is because ~~plantation~~ **commercial** forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial** Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered. [130]

RLZ - R1 Agricultural, Horticultural and Pastoral Activities and Buildings

Activity Status Permitted

Where:

[129] Forest and Bird (S560.370, S560.0543)
[130] Clause 16(2) of the RMA

1. The activity does not include:
   i. Intensive indoor primary production;
   ii. The storage and disposal of solid or liquid animal waste other than that generated on the site;
   iii. Stock sale yards; or
   iv. Farm quarries;
2. The maximum gross ground floor area of a single building is 350m^2;
3. The maximum height above ground level is:
   i. 10m for residential buildings **and emergency service facilities**[131];
   ii. 7m for non-residential buildings; except
   iii. No building, structure or tree shall protrude into the Airport Approach Path of any airport or aerodrome identified on the planning maps and as described in Appendix Nine;
4. Buildings are set back a minimum of 10m from the road boundary, **5m from any rail designation boundary,**[132] 20m from the State Highway Boundary and ~~10~~ **3m**[133] from all internal boundaries;
5. Site coverage is a maximum of 30%; ~~and~~
6. ~~Performance standards for poultry farming and pig keeping apply as follows:~~

   ~~Shelters and buildings used to house or feed poultry or pigs must be setback at least 30m from any boundary;~~

~~7. For poultry setbacks of 10m from any residential building on another site and 2m from the site boundary;~~

~~8. For pig keeping setbacks of 50m from any residential building on another site and 100m for any shelter holding 4 or more pigs;~~

   Shelters and buildings used to house or feed poultry or pigs must be set back at least 30m from any boundary.[134]

7. Performance standards for beekeeping in the Westland District apply as follows:
   a. No bees may be kept on a property less than 600m^2 net site area; and
   b. Beehives must be placed with an obstruction in front of them or be elevated to ensure all bees are able to be 2.5m above ground level prior to crossing the site boundary**; and**
8. **Vehicle crossing standards in Rule TRN – R1 are met**.[135]

Advice Note**s**:

1. If land is used for disposal of effluent or solid waste then there may be rules in the Regional Air Plan and Regional Land and Water Plan administered by West Coast Regional Council.

[131] Fire and Emergency NZ (S573.054)
[132] KiwiRail (S442.093)
[133] Gina Hogarth (S304.001), FENZ (S573.054)
[134] Buller District Council (S538.529)
[135] Waka Kotahi (S450.277)

2. Sale of stock produced on the property is not considered a stock sale yard in terms of standard 1.iii[136]

Activity status where compliance not achieved: Discretionary

RLZ - R2 Conservation Activities

Activity Status Permitted
Where:

1. All relevant performance standards for Rule RLZ - R1 are complied with.

Activity status where compliance not achieved: Discretionary

RLZ - R3 Residential Activities and Residential Units

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1 are complied with.
2. Residential unit density is no more than one unit per 1ha net site area ~~on physically contiguous land except where the site is already in existence at the date of notification of the Plan; and~~[137]
3. There is no more than 1 minor residential unit with a maximum gross floor area of 65m^2 where this is located within 20 metres of and shares the driveway with the principal dwelling**; and**
4. **Provision shall be made for a sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008).**[138]

Advice Notes:

1. Where a residential building or noise-sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

vi. Then the acoustic insulation requirements set out in Rule NOISE - R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.[139]

[136] Fed Farmers (S524.122)
[137] Buller District Council (S538.531)
[138] Fire and Emergency New Zealand (S573.040)
[139] Fire and Emergency New Zealand (S573.040)

Activity status where compliance not achieved: Discretionary

RLZ - R4 Papakāinga Developments

Activity Status Permitted

Where:

1. Performance standards 3-5 for Rule RLZ - R1 are complied with;
2. Residential building density is no more than one unit per 1000m^2 net site area, however units can be clustered; ~~and~~
3. On-site wastewater, water supply and stormwater systems are developed to serve the entire papakāinga~~.~~**; and**
4. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008)**[140]

Advice Note**s**:

1. Where a residential building or noise sensitive activity is located within:

   i. 80m of a State Highway with a speed limit of 70kph or greater; or
   ii. 40m of a State Highway with a speed limit of less than 70kph; or
   iii. 40m of a Railway Line; or
   iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or
   v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

   Then the Noise Insulation Requirements set out in Rule NOISE - R3 will apply.

2. **The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.**[141]

Activity status where compliance not achieved: Discretionary

RLZ - R5 Minor Structures

Activity Status Permitted

Where:

1. ~~All performance standards for Rule RLZ - R1 are complied with~~. **Structures are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary and 3m from internal boundaries**[142]
2. Masts, poles, aerials and pou whenua must not exceed 7m in height;
3. Any antenna dish must be less than 1**.5m**[143] in diameter;

[140] Fire and Emergency New Zealand (S573.040)
[141] Fire and Emergency New Zealand (S573.040)
[142] Buller District Council (S539.532)
[143] Clause 16(2) of the RMA

4. Any ornamental or garden structure must not exceed 2.4 m in height; and
5. Any other structure must not exceed 10m^2 and 2m in height.

Activity status where compliance not achieved: Controlled

RLZ – R6 Fences Walls and Retaining Walls

Activity Status Permitted

Where:

1. Fences, walls and retaining walls are a maximum 2m height above ground level; and
2. The fence, wall or retaining wall is not used for advertising or any other purpose other than a fence, retaining wall or wall.

Activity status where compliance not achieved: **Restricted** Discretionary

~~**RLZ – R7 Relocated Buildings**~~

~~Activity Status Permitted~~

~~Where:~~

~~1. All performance standards for Rule RLZ - R1 are complied with.~~
~~2. Any relocated building intended for use as a dwelling must have been designed and built to be used as a dwelling;~~
~~3. A building pre-inspection report shall accompany the application for a building consent for the destination site. That report is to identify all reinstatement works that are to be completed to the exterior of the building. The report shall include a certification by the property owner that the reinstatement works shall be completed within a 12 month period;~~
~~4. The building shall be located on permanent foundations approved by building consent no later than 2 months of the building being moved to the site; and~~
~~5. All other reinstatement work required by the building inspection report and the building consent to reinstate the exterior of any relocated dwelling shall be completed within 12 months of the building being delivered to the site. This reinstatement work is to include connections to all infrastructure services and closing in and ventilation of the foundations.~~

~~Activity status where compliance not achieved: Controlled~~[144]

RLZ – R~~8~~7 Home Business

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1 are complied with.
2. Hours of operation are limited to:
   i. 7am-10pm weekdays; and

[144] Buller District Council (S538.534), Chris & Jan Coll (S558.142, S558.565), Chris J Coll Surveying Limited (S566.142, S566.565), William McLaughlin (S567.022, S567.604), Laura Coll McLaughlin (S574.142, S574.565)

ii. 8am - 8pm weekends and public holidays; except where:

a. The entire activity is located within a building;

b. Each person engaged in the activity outside the above hours resides permanently on site; and

c. There are no visitors, customers or deliveries to the activity outside of the above hours; and

3. **There is no more than one full-time equivalent person engaged in the home business that resides off-site.**[145]

~~4. A maximum of 10 heavy vehicle movements per day and whichever is the greater of 30 light vehicle movements per day or 210 light vehicle movements per week; and~~[146]

4. No external generation of dust, odour or smoke occurs as part of the activity.

Activity status where compliance not achieved: Discretionary

RLZ – R~~9~~8 Residential Visitor Accommodation

Activity Status Permitted

Where:

1. This is ancillary to a Residential Activity;
2. All performance standards for Rule RLZ - R1, NOISE - R1, -R2, and -R4, LIGHT - R1 and -R3 and SIGN -R15 are complied with;
3. There is a maximum of **6** paying ~~6~~ guests at any one time;[147]
4. Written Notification to the District Council is required 10 working days prior to the activity commencing;
5. No heavy vehicle movements are generated; and
6. Records of letting activity must be kept and provided to the Council **annually**[148] ~~on request~~; and
7. In the Buller **and Westland** District**s**[149] the accommodation is homestay accommodation with a permanent resident living on site.

Advice Note:

Where a residential building or noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

[145] Buller District Council (S538.504)
[146] Consequential amendment stemming from amendments to the Transport Chapter, Buller District Council S538.083
[147] Clause 16(2) of the RMA
[148] Grey District Council (S608.116)
[149] Westland District Council (S181.042)

Then the acoustic insulation requirements set out in Rule NOISE - R3 will apply

Activity status where compliance not achieved: Restricted Discretionary

RLZ – R~~10~~9 Community Facilities, Educational Facilities, Emergency Service Facilities and Recreational Facilities

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1, NOISE - R1, -R2, and -R4 and LIGHT - R1 and -R3 are complied with;
2. Hours of operation are limited to:
   i. 7am-10pm weekdays; and
   ii. 8am - 8pm weekends and public holidays; except
   iii. For community halls lawfully established at the time of notification of the Plan:
3. Hours of operation on Friday and Saturday are 7am - 12~~pm~~**am** [150]midnight; ~~and~~
4. No restriction on hours is in place for up to 12 days per calendar year; **and**
5. **There are no hours of operation for emergency service facilities**[151]

Advice Note:

Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or
ii. 40m of a State Highway with a speed limit of less than 70kph; or
iii. 40m of a Railway Line; or
iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or
v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the Noise Insulation Requirements are set out in Rule NOISE - R3 will apply.

Activity status where compliance not achieved: Discretionary

Controlled Activities

RLZ – R1~~2~~1 Minor structures not meeting Permitted Activity Standards

Activity Status Controlled

Where:

1. The minor structure does not exceed 10m in height; and
2. All other performance standards for Rule RLZ - R5 are met.

Matters of control are:

[150] Buller District Council (S538.537)
[151] Grey District Council (S608.117), and FENZ (S573.062)

a. Design and location of structures; and

b. ~~Landscape measures~~ **Measures to mitigate landscape effects**.[152]

4.5. Sub-S1 in relation to the Rural Lifestyle Zone

Submissions and Further Submissions

740. Six submission points and six further submission points were received on the minimum allotment size and are summarised in a table on pages 179-180 of the s42A report. No submission points were in support of the standard, and all sought amendments. All submissions sought to reduce the minimum allotment size to either 4000m^2 or 5000m^2.

Section 42A Report

741. Ms Easton did not support these submissions from, Frank O'Toole (S595.010), Frank and Jo Dooley (S478.022), Lara Kelly (S421.013), Chris J Coll Surveying Ltd (S566.260), William Mc Laughlin (S567.327) and Laura Coll McLaughlin (S574.260), noting that the zone is new to the West Coast and intended to be an intermediate zone in terms of site size and rural production

[159] Chris & Jan Coll (S558.590), Chris J Coll Surveying Limited (S566.590), William McLaughlin (S567.627), Laura Coll McLaughlin (S574.590) John Brazil (S360.090), Steve Croasdale (S516.154)

potential, sitting between the General Rural Zone and the Settlement Zone – Rural Residential Precinct. She confirmed that the latter has a minimum allotment size of 4000m^2. Ms Easton considered that the submissions do not provide any compelling arguments as to why the zone should mirror the Rural Residential Precinct allotment sizes.

742. No amendments were recommended as a result of these submissions.

Hearing and Submitter Evidence

743. Frank O'Toole continued to seek a 4000m^2 lot size in the Rural Lifestyle Zone. As a group home builder, Mr O'Toole advised that he receives 1-2 enquiries per month for small lifestyle blocks on the edge of town but has observed that there are very few small lifestyle blocks available. He considered larger lifestyle blocks to be inherently more demanding and the cost of maintaining them to be beyond the finances of most West Coasters. As a result, he considered larger sites to be less desirable than a 4000m^2 site. He considered that 4000m^2 sites would allow developers to offer lifestyle sections at an affordable price point, and that the proposed 1ha site size would not meet demand.

744. Anna Bensemann presented evidence on behalf of Mr O'Toole. She noted that, given the history of ad-hoc development on the West Coast, and based on Mr O'Toole's experience, it is apparent that there is demand for sections with a sense of rural space, that are of a manageable size, alongside the demands of full-time employment. Ms Bensemann provided a comparison of minimum allotment sizes in other zones. She considered that there is merit in providing greater flexibility in the allotment sizes in the Rural Lifestyle Zone. Ms Bensemann considered that Ms Easton's description of the Rural Lifestyle Zone, as one intended to provide lot sizes where some primary production uses could occur, is inconsistent with the zone description in the Plan, which states the zone includes areas that have been farmed in the past but have moved out of economic primary production, although they may still have rural activities occurring. Ms Bensemann considered that, as there is a clear distinction between the intended purpose of the Rural Lifestyle Zone and the Settlement Zone, the Rural Lifestyle Zone could be reduced in area without compromising the Settlement Zone Rural Residential Precinct. She considered that allowing subdivision to 4000m^2 as requested by Mr O'Toole would allow for continued development to the sizes anticipated in the existing rural zones, but limited to specific areas, avoiding ad-hoc development but providing greater freedom of choice.

Reporting Officer Right of Reply

745. In response to a Panel query on how bonus lot provisions for protection of SNAs would work in the Rural Lifestyle Zone, Ms Easton confirmed they would apply, but that, depending on the size of the property, fewer bonus lots could be created. She noted that a 1ha Rural Lifestyle property could only accommodate one additional 4000m^2 bonus lot under Rule SUB-R9 (restricted discretionary activity), and further bonus allotments would be assessed as a discretionary activity under Rule SUB-R15.

Hearing Panel Evaluation

746. The Panel agrees with Ms Easton and does not support lowering the subdivision standard down the to 4,000m^2 in the Rural Lifestyle Zone. We agree that this is an intermediate zone in terms of size, and rural production potential between the General Rural Zone, and the Settlement Zone – Rural Residential Precinct which has a minimum lot size of 4000m^2. In our view a zone at the 4000m^2 level already exists and we no reason for amending the RLZ down to this level.

Hearing Panel Recommendation

747. The Panel recommends no amendment to the Plan as a result of these submissions.

4.6. Rural Zones (Zoning and Rezoning)

Submissions and Further Submissions

748. Submissions points relating to the zoning of land in the Rural Zones are summarised in a table on pages 180-195 of the s42A report. Twenty-six submissions were received in support of the zoning. A large number of submissions were received seeking the rezoning of properties.

749. The Panel adopts these summaries and has considered all of the relevant submissions and further submissions

Section 42A Report

Buller District

750. Ms Easton acknowledged submissions in support of the zoning of their properties within the Buller District.

751. Many submissions sought rezoning in the Cape Foulwind area, including sites associated with the former Holcim Cement site. Ms Easton sets out the background to the sites in paragraphs 414-416 of the s42A report, and the Panel adopts this description.

752. In response to the submission point made by Steve Croasdale (S516.109) seeking that Lot 1 DP 450105 and Lot 2 DP 450105 (115 Okari Road, Cape Foulwind) be rezoned Rural Lifestyle, Ms Easton did not support this submission (s42A para 417-418). She noted that this property is located within a wider area of the General Rural Zone and is not in an area where the BDC would support Rural Lifestyle Zoning.

753. Several submitters, Chris J Coll Surveying Ltd (S566.260), William Mc Laughlin (S567.327), Laura Coll McLaughlin (S574.260), Bradshaw Farms (S511.078), Avery Brothers (S609.070), Brett Avery (S513.078), Paul Avery (S512.078), Avery Bros (S510.078), Chris & Jan Coll (S558.499), Leonie Avery (S507.078), Jared Avery (S508.078), Kyle Avery (S509.078), and John Brazil (S360.047) sought that the land between Bulls Road and Bradshaw Road south of State Highway 67A be rezoned to Settlement Zone: Rural Residential precinct. Ms Easton did not support this submission, noting that the property is not connected to any other Rural Lifestyle Zoned land and is within a wider area of General Rural Zone. (s42A para 419-420).

754. In response to a submission from James Hamilton (S4.001) seeking that his property on Alma Road/Cape Foulwind Tce be rezoned to a Future Urban Zone or Settlement Zone, Ms Easton did not support the submission. She noted that the property is classed as Land Use Capability 3, so rezoning results in potential loss of productive values, and that the BDC considers Alma Tce has sufficient Residential and Settlement zoned land to meet future growth requirements. (s42A para 421).

755. In response to submissions from Bevan Te Tai (S75.001) and Cape Foulwind Staple 1 Ltd seeking to rezone Larson Street at Cape Foulwind to Residential and Lot 1 DP 574635 to settlement, Ms Easton did not support these submissions (s42A para 422-424). She noted that these properties are not serviced by water or wastewater infrastructure and that rezoning could create reverse sensitivity issues for the Light Industrial former Holcim Cement site which

is across the road. While houses are already developed on Larsen Street, which have existing use rights, Ms Easton did not support zoning that provides for further residential dwellings and considered that General Rural zoning is a more appropriate zoning for the area.

756. In response to a submission from Mark Wiechern (S254.001), seeking to rezone his property Lot 5 DP 460905 Blk II Steeples SD to Settlement Zone: Rural Residential Precinct, Ms Easton did not support this submission (s42A para 425). She noted that the property is twice the size of the currently zoned Settlement Zone: Rural Residential Precinct area at Tauranga Bay, is bush-covered and has not had an ecological assessment. BDC has advised that past development has been subject to significant restrictions due to the ecological sensitivity of the area.

757. In response to a submission from Garry Howard (S358.004) seeking that the property at Cape Foulwind- Tauranga Bay is rezoned to Rural Lifestyle Zone, Ms Easton did not support the submission, noting that the property includes the former Holcim quarry with unconsolidated fill, stability issues and potential contamination, requiring significant remediation, which is not addressed in the submission. (s42A para 426)

758. Ms Easton did not support a submission from Cape Foulwind Staple 1 Ltd (S557.004) seeking that the Quarry Lake area in their development be rezoned to Rural Lifestyle Zone, noting that BDC advised the area was unsuitable for Rural Lifestyle development due to historic quarrying activities, unconsolidated fill and potential contamination (s42A para 427-428).

759. In response to a submission from Cape Foulwind Staple 1 Ltd (S557.003) seeking that the land known as Guardian Lakes Flats (adjacent to Tauranga Bay Road) be rezoned to Settlement Zone – Rural Residential Precinct, Ms Easton did not support this submission (s42A para 429). She noted this area includes former Holcim quarry workings, and there are concerns around unconsolidated fill and contamination. Ms Easton considered that there has been sufficient upzoning to Rural Residential Precinct in the area to meet the community's needs.

760. Ms Easton supported a submission from Cape Foulwind Staple 1 Ltd (S557.005) and Cape Foulwind Staple 2 Ltd (S568.009), seeking that the strips of former road land along Cape Foulwind Road at Omau be zoned in accordance with the adjacent zoning for consistency (s42A para 430).

761. Ms Easton did not support a submission from CFS2 (S568.005) seeking that an area identified as Area 2 is rezoned to Settlement Zone- Coastal Settlement Precinct (s42A para 431-432). The area is currently zoned Rural Residential Precinct, and BDC consider this lower density precinct to be more appropriate. Ms Easton noted that no expansion of infrastructure services is planned, and there is significant concern that lower lot sizes would lead to expectations of such services being provided. Ms Easton noted that the BDC prefers smaller lot development to be limited to the Alma Road terrace, where funding for infrastructure is focused.

762. Ms Easton supported a submission from Cape Foulwind Staple 2 Ltd seeking that a small triangle of land identified as Area 3 be rezoned to Light Industrial, as a correction to the zoning area (s42A para 433).

763. Ms Easton did not support a submission from Cape Foulwind Staple 2 Ltd (S568.006) seeking to rezone an area identified as Area 5 to be rezoned Settlement Zone: Coastal Settlement Precinct (s42A para 434-436). The area is currently zoned Rural Residential Precinct, and BDC consider this lower density precinct to be more appropriate. Ms Easton noted that no expansion of infrastructure services is planned, and there is significant concern that lower lot

sizes would lead to expectations of such services being provided. Ms Easton noted that the BDC prefer smaller lot development to be limited to the Alma Road terrace, where funding for infrastructure is focused.

764. Ms Easton did not support a submission from Tauranga Bay Holdings Ltd (S597.001) seeking to rezone 100ha of land at Lot 1 DP 19769, Section 2 SO 14304 and Section S014304 from General Rural Zone to Rural Lifestyle Zone and Rural Residential Precinct. Ms Easton considered the already substantial rezoning at the Cape Foulwind Area, including part of this site, to be sufficient to provide for the likely demand for rural lifestyle development in the area, and that further rezoning was not appropriate (s42A para 437-438).

Wider Westport Area

765. Ms Easton did not support a submission from John Brazil (S360.047) seeking rezoning of Lot 1 DP 336364 (261 Utopia Road, Westport), to Rural Lifestyle Zone, noting that the property is subject to the Coastal Hazard Alert and the updated coastal hazard mapping shows that the hazard is worse than shown in the proposed plan (s42A para 439).

766. Several submitters, Chris & Jan Coll (S558.554, S558493), Chris J Coll Surveying Ltd (S566.554, S566.493), Laura Coll Mc Laughlin (S574.554, S574.493), and William Mc Laughlin (S567.594), sought that 8677 State Highway 6 be rezoned for Rural Lifestyle Zone. Ms Easton did not support these submissions, noting that the property is within a wider area of General Rural Zone and not connected to any other Rural Lifestyle Zoned land (s42A para 440).

767. Ms Easton did not support a submission from Shannon Carlson (S19.001) seeking to rezone an area on the east side of Buller Road, from the Buller Bridge to the crossroads, as Settlement Zone. Ms Easton noted that while much of the land in this area was upzoned to Settlement Zone: Rural Residential Precinct, land was specifically excluded where there is flood risk and that denser development within SASM 17 is also not considered appropriate. Ms Easton noted that BDC are concerned that smaller lot sizes would come with expectations for servicing that are not proposed to be extended to this area (s42A para 441)

768. In response to a submission from Michael and Alyson Duff (S23.001) seeking that 28 Tuis Way be rezoned from General Rural to Settlement Zone Rural Residential Precinct, Ms Easton did not support this submission. She noted the site is subject to flood hazard overlays, and BDC are concerned there is insufficient information to confirm the land is suitable for this density of development (s42A para 442).

769. The s42A report states that Ms Easton did not support a submission from John A Menlove (S289.001) seeking to rezone his property at Sergeants Hill for residential sections, noting that the property is bush-covered and has not been assessed for ecological significance. The s42A report states that the property is in an area identified for rural lifestyle zoning but was excluded for this reason (s42A para 443-444). The Panel note that Ms Easton may have misinterpreted this submission, as the original submission from Mr Menlove does not request rezoning, and states that he wishes to put house sites/sections on his property and has constructed a road and cleared land in anticipation of this. The submission does not confirm how many house sites were planned.

770. Ms Easton did not support a submission from Frank and Jo Dooley and Frank O'Toole (S478.024) seeking that the portion of Nine Mile Road from Stafford Street to the Nine Mile, Victoria and Harneys Roads intersection, extending from the railway corridor to the banks of the Buller River, be rezoned from General Rural Zone to Rural Lifestyle Zone. Ms Easton noted

that the site is within Land Use Capability 3 area, which supports the NPSHPL and is subject to the Westport hazard Overlay and is not in an area identified as appropriate for Rural Lifestyle development.

771. Ms Easton did not support a submission from Frank and Jo Dooley and Frank O'Toole (S478.0270) requesting that 211 Utopia Road be rezoned to the Rural Lifestyle zone, noting that a Coastal Alert Hazard Overlay almost entirely covers it.

772. Ms Easton did not support a submission from O'Connor Crossroads Limited (S496.002) seeking that Section 26 Blk VII Kawatiri Survey District, Section 30 Blk VII Kawatiri Survey District, and Pt Section 27 Blk VII Kawatiri Survey District be rezoned to Settlement Zone: Rural Residential Precinct, and that Sec 1 SO 9139 Secs 1-2 SO 14816 Secs 3-4 23 Pt Sec 25 Blk VII Kawatiri SD be rezoned to Future Urban Zone. The BDC considered that sufficient land has been zoned for residential lifestyle on the riverside of the State Highway, the submission area is adjacent to the rifle range, and the BDC are concerned about reverse sensitivity effects. BDC consider there is sufficient land rezoned for residential activities on the east side of the highway to meet future growth. The s42A notes that the Council's masterplan process for the wider Westport area provides further opportunity for the submitter to have input into future rezoning in the area (s.42A para 447-448).

Buller Bay Settlements

773. Ms Easton supported a submission from Kathleen Mansell (S39.001) seeking that 3 Bayfield Street, Seddon, be rezoned to General Rural Zone, noting that she considers the split zoning in the proposed plan to be an error (s42A para 449)

774. Ms Easton did not support a submission from Julie Palmer (S334.001) seeking that her property at New Castle Street Waimangaroa be rezoned to rural residential, as she was unable to confirm the location of the property. (s42A para 450).

Karamea

775. Ms Easton did not support a submission from Ruth and Richard Henschel (S150.002, S285.002) seeking that 4456 Karamea Highway be rezoned to Rural Lifestyle Zone because it is within Flood Susceptibility and High Coastal Natural Character overlays, and not in the vicinity of other Rural Lifestyle zones. (s42A para 451)

776. Ms Easton did not support a submission from Nikau Farms Limited (S499.001) seeking that 51 ha of land along the Karamea Highway at Little Wanganui Karamea (legally described as Lots 1-3 DP 409294 Lot 2 DP 407416 Lot 2 DP 547019 Sec 32 Pt Secs 7-8 Blk III Pt Secs 14-16 Blk II Kongahu Sd) be rezoned as Settlement Zone. Ms Easton noted there has been substantial zoning at Little Wanganui to allow for expansion of the settlement, with the Rural Residential area intended to provide a lower density transition between the settlement and wider rural area. Ms Easton considered that any future subdivision would be more appropriate at rural residential rather than higher densities. (s42A para 452)

777. Ms Easton supported a submission from BP and CA Jones (S526.001) seeking that the Highly Productive Land Precinct be removed from 4300 Karamea Highway because it is a wetland and subject to coastal inundation with limited production value (s42A para 453-454).

778. Ms Easton did not support a submission from Rosalie Sampson (S529.003) seeking that the Highly Productive Land Precinct be removed from land at Karamea, noting that this land is one

of the few areas in the West Coast favourable for horticulture, and that studies of the soil types and land suitability informed the identification of the Precinct (s42A para 455-456).

779. Ms Easton did not support a submission from Rosalie Sampson (S529.002) seeking that the township of Karamea be rezoned to Settlement Zone, noting that downzoning of undeveloped land is due to the area being within the Flood Susceptibility Hazard Overlay, and the township itself is under the Coastal Alert Hazard Overlay. The West Coast Regional Council had advised that the flood scheme is not designed or constructed to a high level of service and cannot be relied upon to protect the town from flood hazards (s42A para 457).

780. Ms Easton did not support a submission from Jackie and Bart Mathers and Gillman (228.008) seeking that their and their northern neighbours' land at Granity is rezoned to Rural Lifestyle Zone. Ms Easton notes there is no Rural Lifestyle Zone at Granity due to the high erosion and coastal inundation risk and land instability concerns. The submitter's property is also within the High Natural Character Overlay (s42A para 458).

781. Ms Easton did not support a submission from Andrew Beaumont (S225.001) opposing Rural Residential zoning in the Fox River Punakaiki area, noting that no information was provided about the specific location of the zoning referred to or the reasons for opposing it (s42A para 459).

Grey District

782. The report acknowledges submissions from David Moore (S65.020) and T Croft (S460.002) in support of Rural Lifestyle Zoning on their properties.

783. Ms Easton did not support a submission from Ngāi Tahu (S620.017) seeking that the highly productive land precinct be removed from Lot 1 DP 464514 and Lot 1 DP 2850, on the basis that the purpose of the precinct did not align with the land use for production forestry. Ms Easton noted that the precinct restricts subdivision and residential development and is not inconsistent with the existing land use (s42A para 460-462).

784. Ms Easton did not support a submission from Riarnne Klempel (S67.009) seeking that Lot 8 DP 361177, 0 State Highway 6, Barrytown, be rezoned from Rural Lifestyle zone due to concerns about erosion and inundation hazards. Ms Easton discussed this with the GDC, who considered the natural hazard provisions sufficient to control the associated issues and noted that a significant part of the site is not subject to hazard overlays (s42A para 463-464).

785. Ms Easton did not support a submission from David Pugh (S40.001) seeking that the Highly Productive Land Precinct is removed from 1297 Haupiri Road, Haupiri 7872, (Lot 1 DP 377882), as the intention of the precinct is to retain farm size to support primary production (s42A para 465-466).

786. Ms Easton supported a submission from Barbara King (S71.001) seeking to rezone 42 Hatters Terrace, Nelson Creek, to a single zone, rather than the current split zoning, Settlement Zone and Rural Lifestyle Zone. Ms Easton recommended the whole site be rezoned to a Rural Lifestyle Zone (s42A para 467-468).

787. Ms Easton did not support a submission from Kirsty Dittmer (S148.001) seeking that 26 Pandora Avenue be included in the settlement zone, as the property is partly covered by High Natural Character and Coastal Hazard Alert overlays. Ms Easton acknowledged that part of the site may be appropriate for development but does not support split zoning as a general

principle, so she considered General Rural to be the most appropriate zone for the site (s42A para 469-470).

788. Ms Easton did not support a submission from Graham Wood (160.001) opposing the rezoning of properties on Barrytown flats from rural Lifestyle Zone, noting that the submitter may not be aware that these properties have been upzoned as there was no RLZ in the operative Plan (s42A para 471).

789. Ms Easton supported a submission from Te Tai o Poutini Plan Committee (S171.020) seeking that 3316 Coast Road, Barrytown, and two adjacent properties be rezoned to Rural Lifestyle Zone, on the basis that it corrected a zoning error (s42A para 472-473).

790. Ms Easton supported a submission from Te Tai o Poutini Plan Committee (S171.022) seeking that two sites at Rutherglen be rezoned to Rural Lifestyle Zone, on the basis that it corrected a zoning error (s42A para 474-475).

791. Ms Easton supported a submission from Te Tai o Poutini Plan Committee (S171.023) seeking that three sites at Te Kinga be rezoned to Rural Lifestyle Zone, noting that these small sites are adjacent to an area of Rural Lifestyle Zone and the zone is appropriate for these properties (s42A para 474-475).

792. Several submitters, John Boyles (S175.001), David McInroe (S176.001), Benjamin and Shari Ferguson (S173.001), and Kaye Leighton (S174.001) sought that 31ha of land at Waipuna, Grey District, be rezoned from general Rural to Rural Lifestyle, and others (Ken and Robyn Ferguson) sought that the Highly Productive Land Precinct be removed. Ms Easton supported this submission as it was supported by GDC, who considered that the zoning would recognise the small settlement that has been established in this location (s42A para 478-479).

793. Ms Easton did not support a submission from Christina Bushby (S178.001) seeking that Zone DP2764 Lots 3 & 4 adjacent to 406 State Highway 7, Kaiata, is rezoned as General Rural Zone, noting that the rezoning creates no obligation on landowners to develop their land, but provides for growth at Kaiata (s42A para 480-481).

794. Ms Easton did not support a submission from Mitchells 2021 Ltd (S448.002) to rezone Lot 4 DP 440795 from General Rural to General Rural and Rural Lifestyle, noting that the land is bush and understood to be covenanted in favour of DOC as part of the Forests Accord. GDC have raised concerns about the capacity of road infrastructure (a gravel road on the edge of the lake) to accommodate further development (s42A para 482-483).

795. Ms Easton did not support a submission from Mitchells 2021 Ltd (S448.001) to rezone PT RS 2032 from Rural Lifestyle to Settlement Zone, noting that there has already been significant upzoning at Mitchells to provide for additional development and that the block is bush covered and partly within an Outstanding Natural Landscape (s42A para 484-485).

796. Ms Easton did not support a submission from Davis Ogilvie & Partners Ltd (S465.001) seeking that Lot1 DP2617, Lot1 DP2512, Lots 1 and 2 DP2489, Lot 1 DP2781, and Part RS2082 at Mitchells be rezoned as Rural Lifestyle Zone, noting that the site is bush-covered and partly within an outstanding Natural Landscape. Ms Easton noted that the site is not in an area identified for Rural Lifestyle development and that the character is best described as General Rural zone (s42A para 486-487).

797. Ms Easton supported a submission from Riarnne Klempel (S296.001) seeking land to be rezoned to expand the Barrytown township settlement area, noting that there has been

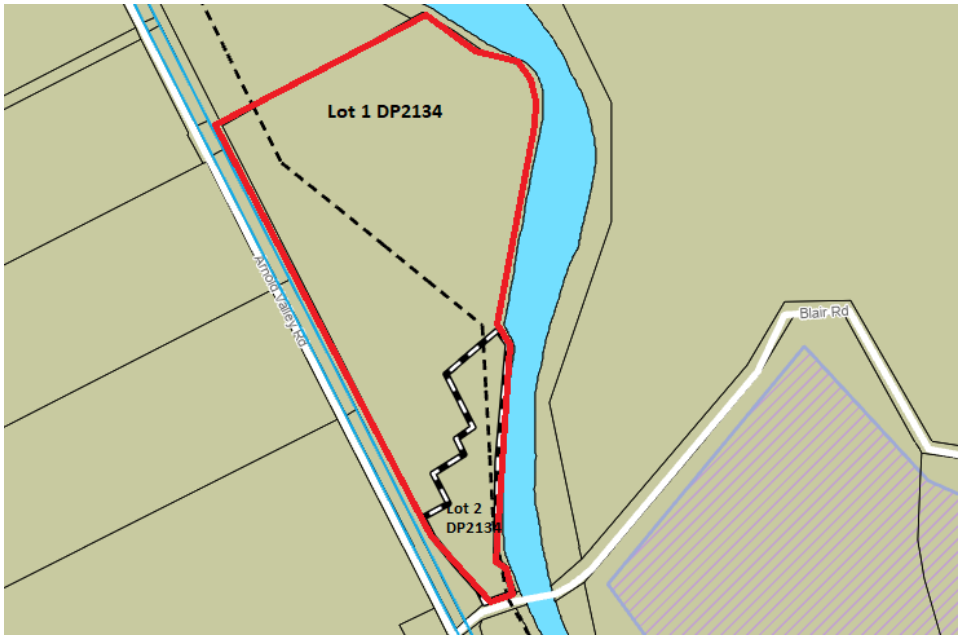
substantial upzoning in Barrytown to allow the township to expand and that further rezoning is unnecessary (s.42a para 488).

798. Ms Easton did not support a submission from Shirley Godfrey (S406.001) seeking that two parcels of land, described as 'PT RS 1999 BLK VII WAIMEA SD. Area 11.9559 ha, and Sec 11 SO557707. Area 1.2126 ha,' be rezoned to rural residential as she could not determine the location of the properties (s42A para 489).

799. Ms Easton supported a submission from Suzanne Hills (S433.047) seeking that 3345 Coast Road be rezoned to Rural Lifestyle, as the adjacent properties have been rezoned, and Ms Easton could not identify any reason why this property had been excluded (s42A para 490-491).

800. Ms Easton did not support a submission (S96.0250) from Craig Schwitzer and Riarnne Klempel to rezone 64 Cargill Road from General Rural zone to Rural Residential Zone, noting there has been substantial upzoning in Barrytown to provide for expansion and allow for rural lifestyle development. Ms Easton considered that rezoning this large site would substantially expand rural residential use at the detriment of primary production values (s42A para 492-493).

801. Ms Easton did not support a submission from Te Kinga Estates (S517.003) to rezone Lot 2 DP 568525, Arnold Valley Road, Moana, from Rural Lifestyle Zone to Rural Residential Precinct Settlement Zone. Ms Easton noted that the zoning at Moana follows a concentric cascade around the core community, with areas of residential zone surrounded by Settlement Zone – Rural Residential Precinct. In the outer area, the Rural Lifestyle Zone, the property is in the outer area (s42A para 494-495).



802. Ms Easton did not support a submission from Peter Jeffries (S544.001) seeking that the Highly Productive Land Precinct be removed from 843 Atarau Road, noting the property is within a significant farming area and the precinct is appropriate (s42A para 496-497).

803. Ms Easton did not support a submission from Martin and Lisa Kennedy (S545.001) seeking to remove the Highly Productive Land Precinct from Lot 3 DP 2743) in the Grey Valley, at Atarau, noting that while she couldn't determine the exact location of the property, it is in a significant farming area (s42A para 498-499).

804. Ms Easton did not support a submission from Nick Pupich & Sandy Jefferies (S546.001) seeking to remove the Highly Productive Land Precinct from 729 Atarau Road, noting that it is in a significant farming area (s42A para 500-501).

805. Ms Easton supported a submission from CMP Kokiri (S611.001) seeking Lots 1 and 2 DP2134, (containing a meat processing plant), be rezoned to General Industrial or similar relief, noting that General Industrial would be an appropriate zoning. Ms Easton considered Light Industrial to be the most appropriate zoning. She said the plant is located at the southern end of the property, with other parts being bush and farmland, including a Significant Natural Area, but she does not support split zoning in general and considers the ecosystem and biodiversity provisions are intended to manage impacts on the SNA (s42A para 502-503).

806. The map identifying this area in the s42A report does not clearly show the boundaries of Lot 1. For clarity, the lots are identified in the map below, outlined in red.

807. Ms Easton did not support a submission from Bede Udy (S154.001) seeking to rezone 2 Cashmere Bay Road, Moana, from Rural Lifestyle to Rural Residential, noting this would be out of character with the surrounding zoning and land uses (s42A para 504-505).

808. Ms Easton supported a submission (S620.116) from Ngai Tahu seeking that Section 2 SO12078 be rezoned to General Rural, noting that this was an error correction as the Plan maps incorrectly show it as a water body (s42AQ para 506).

809. Ms Easton did not support a submission from Murray Stewart (S217.002) seeking that the Highly Productive Land Precinct be removed from rocky and landslide areas of 746 Taramakau Settlement Road, noting that the focus of the precinct is retaining economic farming units and avoiding further fragmentation of rural land (s42A para 507-508).

Westland District

810. Several submitters, Denis and Wendy Cadigan (S532.001 S532.002), Birchfield Ross Mining Limited (S604.118), and Phoenix Minerals Limited (S606.096) sought to rezone 148 Kumara Junction Highway to Settlement Zone - Rural Residential Precinct. Ms Easton did not support these submissions due to concerns about reverse sensitivity on the SFF site, noting that SFF has concerns about residential uses on their southern boundary and rezoning on the northern boundary would magnify these issues (s42A para 509-510).

811. Ms Easton supported a submission from Westland Farm Services (S550.015) seeking that the General Rural part of Rural Section 1264 and Section 8-10 Survey Office Plan 12249 be rezoned to Settlement Rural Residential Precinct, as she considered this a zoning error (s42A para 511).

812. Ms Easton did not support a submission from Freehold Properties (Investments) LLP (FP) (S 73.001) seeking that 2902 Franz Josef Highway be rezoned as Settlement Zone, as there is no Settlement Zone on the west side of the State Highway and this site is in a wider rural area. Westland District Council confirmed this would not accord with the wider plan for the Franz Joseph area (s42A para 512)

813. Ms Easton supported a submission from Forest Habitats Ltd and Jacbrat Holdings Limited (S220.001) seeking that the zoning of 135 Ruatapu-Ross Road is changed from General Rural

to Rural Lifestyle, as Westland District Council consider this would be an appropriate transition from the Settlement Zone and allow some expansion of the Ruatupu community (s42A para 513-514).

814. Ms Easton did not support a submission from Forest Habitats Limited (S186.001) seeking that 117 Arthurstown Road be rezoned to Settlement Zone - Rural Residential Precinct. Ms Easton noted that this property is within a wider area of the General Rural Zone; the rezoning would result in fragmentation of that zone and could create reverse sensitivity effects with primary production. In addition, the surrounding roads are subject to flood risk and the increased residential population in this area is considered undesirable (s42A para 515).

815. Ms Easton did not support a submission from Erin Stagg (S314.006) seeking a larger area of Settlement Zone around Haast township, noting that the pTTPP already provided substantial Settlement Zoning to allow for growth, and further rezoning would take residential development closer to the airport with associated reverse sensitivity risks. She also noted that updated coastal hazard mapping identifies a larger area that will be affected by inundation hazard than the Proposed Plan hazard mapping indicates, making the larger block inappropriate for upzoning (s42A para 516).

816. Ms Easton did not support a submission from Totally Tourism (S449.008) to rezone Lot 33 DP 409401, to Settlement zone - Settlement Centre Precinct, as there is no planned servicing infrastructure in this area, and the existing Franz Alpine Resort water supply is non-compliant with new residents required to provide on-site wastewater and water supply tanks. Ms Easton also notes that the Alpine Fault traverses this site (s42A para 517).

817. Ms Easton did not support a submission from Gavin Molloy (S485.001) seeking that the zoning of the land at Franz Alpine Resort as Tourist and Residential Zone and the Westland District Plan provisions are carried over into TTPP. Ms Easton noted that downzoning of this area has occurred in response to issues that have arisen over time, including concerning water infrastructure and the availability of better information about natural hazard risks (s42A para 519-520).

818. Ms Easton did not support a submission (from Hapuka Landing Ltd S514.001) seeking to rezone Lots 1-18 DP 498766, Lot 19 DP 498766 and Lot 100 DP 498766 from General Rural Zone to Settlement Zone Coastal Settlement Precinct or an alternative that recognises the existing environment. Ms Easton acknowledged that the area has been subdivided with one house developed on the site but did not support the rezoning as she was not clear on what the most appropriate zoning would be and had concerns about the development being within the Coastal Hazard Severe Overlay. Ms Easton noted that residential buildings are non-complying under this overlay, and this is why a General Rural zone was applied to the site, although permitted activity standards in this zone do not apply to these properties. She considered that a Settlement Zone – Coastal Settlement Precinct Zone would send a message that further development was appropriate (s42A para 521)

819. Ms Easton supported a submission from Hindman Smartsaw Ltd (S37.001) seeking to rezone Lot 1 and Lot 2 DP 462928 (a sawmill) for industrial use, noting this zoning would appropriately reflect the use of this site. (s42A para 522).

820. Ms Easton did not support a submission from Vance & Carol Boyd (S447.005) seeking a review of the Rural Lifestyle Zone because some sites within this zone are below the minimum permitted lot size. Ms Easton notes that the zone is new and has been applied across a range of property sizes based on what is considered an appropriate zone, with consideration given

to whether further subdivision is appropriate. Ms Easton notes that the submitter's property is in Hannah's Clearing, where the main settlement has a Settlement zone, but the periphery is zoned Rural Lifestyle Zone, with these lots being larger than those in the main settlement and subject to the Coastal Hazard Severe Overlay (s42A 523-524)

General Mapping Issues

821. Ms Easton supported a submission from Westpower limited (S547.501) seeking that a hashed line shown in the planning maps on 10 West Drive be deleted, considering this a mapping error (s42A 525-526).

822. Ms Easton did not support a submission from Lynley Hargreaves (S481.024) seeking that there be no rezoning of areas where there has not been public consultation on the approach. Ms Easton noted that consultation had been carried out through the development of the pTTPP and that, as the operative Plans are very old, very substantial rezoning was necessary due to NPS requirements and the plan being a combined plan (s42A para 527).

823. Ms Easton supported in part a submission from Cape Foulwind Staple 2 Ltd (S568.002) seeking that all planning maps accurately reflect legal appellations at the time of printing, noting that the PTTPP maps were produced with the most up-to-date cadastral information available at the time. However, as updating of the pTTPP base maps is not automatic and will be undertaken periodically, at times, not all legal titles will show on the maps.

824. Ms Easton did not support a submission from Jackie and Bart Mathers and Gillman (S228.009) seeking the rail corridor to be rezoned from General Rural to Rural Lifestyle on the basis that it could provide for coastal retreat once no longer required for rail purposes. Ms Easton noted that this would require a split zoning as the corridor outside of the main towns is zoned General Rural, and that NZRC owns this land and is unlikely to be available for managed retreat.

S42A Addendum

825. The addendum report addressed an additional submission that was omitted from the s42A report.

826. Ms Easton supported a submission from Griffen and Smith (S353.004) seeking that an area of land in Greymouth zoned General Rural be rezoned to reflect the zoning of adjacent land (s42A addendum, para 6-8) including:

- That the railway line adjacent to the Commercial Zone is rezoned as Commercial Zone, not zoned General Rural Zone
- The legal road between Mitre 10 and the Greymouth Hospital (which includes the hospital entrance) should be shown as a road, not zoned General Rural Zone
- All the Council-owned land south of Raleigh Street that forms part of the Airport should be zoned Special Purpose (Airport Zone)
- The flood wall and the triangular parcels of land around Waterwalk Road should be zoned Open Space Zone.

Hearing and Submitter Evidence

CMP Kokiri

827. In legal submissions, Sarah Schulte considered meat processing activities to sit more comfortably within the General Industrial zone than the Light Industrial Zone recommended by Ms Easton. Ms Schulte confirmed that if the panel prefer a zoning approach, CMP's preferred relief is GIZ zoning, noting that this is consistent with the recommended rezoning of the Harihari sawmill.

828. Amy Callaghan presented planning evidence on behalf of CMP Kokiri (ANZCO Foods). Ms Callaghan raised concerns that the proposed rezoning of the ANZCO site to General Industrial Zone, sought in the original submission, would provide for a significant scale of development and could create significant adverse effects. She suggested an alternative approach of retaining the GRUZ and applying an activity-specific precinct would provide for ongoing operation of the meat processing plant and provide for limited expansion as a permitted activity while managing effects on the surrounding rural environment. Ms Callaghan considered that this approach would provide greater long-term protection of rural amenity. However, if the Panel were to disagree with the precinct approach, Ms Callaghan considered the GIZ to best align with the operation of the meat processing facility.

829. Katharine Jones presented traffic evidence and concluded that although minor safety improvements could be made, the ANZCO site is not contributing to safety issues on the existing road network. She noted that future development beyond permitted activity limits could trigger a need for assessment as a high-trip-generating activity through a resource consent process.

830. Following the hearing, a memorandum of Counsel, Sarah Eveleigh/Sarah Schulte dated 14 August 2024, was submitted in response to a request from the Panel that CMP identify the parts of the site that would need to be rezoned if only part of the site were rezoned to GIZ. CMP considered a split zoning unnecessary, noting that the site contains the plant, a wastewater treatment system, 7.1 ha of vacant land and a 5.3ha SNA. CMP considers the remaining vacant area to be a strategic asset with potential to be developed to support the plant (for example, if additional wastewater treatment were needed). While the SNA could be excluded from the rezoning, CMP agreed with Ms Easton's assessment that the Plan provisions for SNAs would appropriately manage this area. CMP continued to seek that the entire site be rezoned to GIZ or subject to a Rural Industry precinct.

831. An additional memorandum of Counsel, dated 12 December 2024, was submitted in response to the officer's right of reply, to clarify the officer's recommendation, being:

> If the Panel favour a split zoning, the Significant Natural Area should be zoned General Rural Zone and the remainder of the CMP Site should be zoned LIZ. The Memorandum also confirms that the recommendation is for the LIZ to apply to both Lots.

Cape Foulwind Staple 1 and 2

832. Jane Bayley submitted planning evidence on behalf of Cape Foulwind Staple 1 Ltd and Cape Foulwind Staple 2 Ltd.[160]

833. In relation to Pt Sec Blk 1 Steeples SD, also known as Guardian Lakes Flats, Ms Bayley considered the key difference in land use rules between the proposed Rural Lifestyle zoning and the Settlement Zone- Rural Residential Precinct 4 sought by Cape Foulwind Staple 1 Ltd relates to the density of residential units and site coverage. She noted that, while the change in zoning could result in up to 10 additional residential units, the site limitations, including

[160] Planning Evidence of Jane Bayley 22 March 2024

native vegetation to be retained or low-lying areas to be avoided, would reduce development potential, resulting in a similar density to that expected under the RLZ. A conceptual subdivision layout provided shows 18 smaller allotments and nine larger allotments. As a result, Ms Bayley considered any effects on density to be minor.

834. Concerning site coverage, Ms Bayley noted that the zone change could enable an increase of up to 1.98ha of coverage, but that, due to the site constraints stated above, coverage based on the conceptual layout would be 55,800 m², slightly less than that expected in the RLZ.

835. In response to BDC's objection in part against the zoning of Limestone Road, which noted there was insufficient information available about natural hazards, a geotechnical assessment from Terra Forma Geotechnical Ltd was attached as Appendix 1 to Ms Bayley's evidence. This report concluded that specific foundation designs would be required, but 'there are no geotechnical constraints within the regions designated as potential building areas that would prohibit rezoning for residential use…'. Ms Bayley considered that the reasons for BDC's opposition had been addressed in part and that the site is therefore suitable for rezoning.

836. Ms Bayley addressed BDC's objection in part to the Cape Foulwind Staple 1 Ltd submission requesting Quarry Lake Area be rezoned to Rural Lifestyle, based on insufficient information available about natural hazards. Ms Bayley noted that Cape Foulwind Staple 2 Ltd do not have development plans for the Quarry Area at present and has not sought a geotechnical assessment, but that any subdivision application will require assessment of natural hazards.

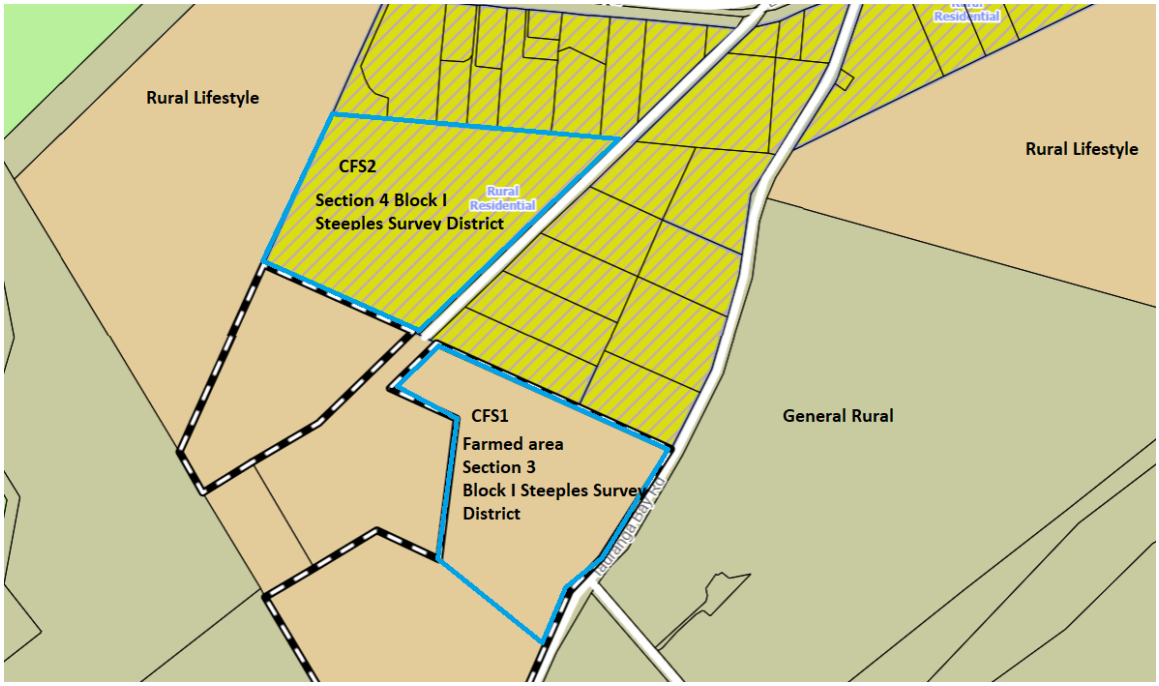
837. Ms Bayley also considered that the General Rural Zoning does not take account of the modified environment, including the removal of topsoil from the basin during limestone mining, which has reduced the productive potential of the area. She considered that the notified zoning would limit the development potential of this parcel. Ms Bayley noted that the 84ha Quarry Area includes a 20ha lake, which could be developed for commercial recreation. Ms Bayley and Cape Foulwind Staple 1 Ltd discussed this with BDC early in the pTTPP process, and Cape Foulwind Staple 2 Ltd sought to set this land aside for Future Urban Development, including commercial focus around the lake, residential within the basin and Rural Lifestyle-sized sections along the top flanks of the site; however, BDC indicated a preference for more certainty.

838. Ms Bayley considered that the amphitheatre nature of the Quarry Area means there are no viewshafts from public areas and therefore visual effects would be internal only. She noted that the site will naturally limit the extent of development and sought that allotment sizes be that of the Rural Lifestyle.

839. Ms Bayley sought that three strips of land (Secs 5 and 6 SO14770 and Lot 17 DP574635), owned by Cape Foulwind Staple 2 Ltd and adjacent to Cape Foulwind Road, be rezoned from General Rural to Light Industrial to match the zoning of the adjacent land.

840. With respect to Cape Foulwind Staple 2 Ltd zoned land adjacent to Larsen Street, Ms Bayley confirmed that this area had been subdivided into lots with areas between 1686m^2 and 4000m^2, with three adjacent sections also owned by Cape Foulwind Staple 2 Ltd being 4836m^2 and 7766m^2. She considered it was not appropriate to retain the notified General Rural Zone on these parcels as the lot areas are below the threshold of the rural zone. She also noted that adjoining land to the east is Settlement Zone-Rural Residential Precinct 4, and that the Light Industrial land to the south already has a boundary with a rural residential precinct.

841. In relation to the Larsen Street land, Ms Bayley noted that the s.42A report incorrectly commented that the submission sought rezoning to residential, and that Ms Easton did not support a Rural Residential zone as she was concerned it would generate additional residential units. Ms Easton also had concerns about soil contamination and reverse sensitivity for the Light Industrial zone across Cape Foulwind Road. Ms Bayley noted that none of the lots in this area are large enough to permit a second unit under the Settlement Zone – Rural Residential Precinct provisions. She also noted that a PSI undertaken as part of the subdivision did not identify the area as being potentially contaminated, and that Light Industrial activities are described in the TTPP as unlikely to produce objectionable environmental effects, but there may still be some adverse effects, including those associated with odour, dust or noise. Ms Bayley also noted that the subdivision consent covenanted an area where vegetation will be retained as a buffer from the future Light Industrial Zone. She concluded that the Settlement Zone-Rural Residential Precinct is the most appropriate zoning for this area



842. Ms Bayley confirmed that two submissions from Cape Foulwind Staple 2 Ltd were withdrawn, being S568-005, which sought to rezone land on Inner Cape Foulwind Road, and S568-007, relating to land east of Limestone Road. Ms Bayley noted that Cape Foulwind Staple 2 Ltd supported the notified zoning of these blocks.

843. With respect to the Inner Cape Foulwind Road land, Ms Bayley noted that BDC had opposed in part the notified zoning because there was insufficient information available about natural hazards. She attached a Geotechnical Assessment from Davis Ogilvie that concluded 'there are no geotechnical constraints … that would prohibit rezoning to residential land use'. She considered that this report addresses BDC's reasons for opposition in part and that the site is suitable for the notified zoning.

844. Ms Bayley also requested that a small sliver of land, Sec 1 SO 14304, be rezoned to Settlement Zone – Rural Residential Precinct 4 to match the notified zoning of Cape Foulwind Staple 2 Ltd adjoining (Area 2) land. She acknowledges that rezoning of this land is not included in the original submission and was incorrectly identified in Tauranga Bay's submission as being under their ownership.

845. In an additional statement of evidence dated 2 July 2024, Ms Bayley confirmed that Cape Foulwind Staple 1 Ltd continued to seek rezoning of the Quarry Area.

846. In relation to the rezoning sought at Guardian Quarry, Ms Bayley proposed a zoning swap and requested that the Panel utilise the provision under Clause 16(2) Schedule 1 of the RMA for this zoning change. She proposed that a 9.2ha block of farmed land west of the access track within the Guardian Quarry site be rezoned from Rural Lifestyle to Settlement Zone-Rural Residential precinct. Ms Bayley also proposed that this rezoning be 'offset' by rezoning a 12ha block of land owned by Cape Foulwind Staple 2 Ltd to Rural Lifestyle, noting that adjoining land to the west and south of this block are also Rural Lifestyle zones. This 12ha block is located north of Limestone Road and is zoned Settlement Zone – Rural Residential Precinct in the notified TTPP. Ms Bayley states that this area has limited development potential and is not suitable for Rural Residential Precinct zoning as it contains three important ecological areas that are SNAs, identified in an Ecological report from Richard Nichol Ecology, which was provided to pTTPP planners in 2021.

TTPP notified zoning map with the 12ha CFS2 owned site (section 4) and the 9.2ha farmed area within the CFS1 owned Section 3 outlined in blue.

847. Ms Bayley submitted a response to the WCRC Wastewater Discharge Report on 20 December 2024. This response confirmed that Cape Foulwind Staple 2 Ltd continued to seek that the 9.2ha area within Guardian Quarry be rezoned to Settlement zone, on the basis that drone mapping of the area confirmed that the whole of the area does not drain into the lake. She considered that restricting the density of development based on the potential for leaching into the lake is an overly cautious approach.

Tauranga Bay Holdings

848. Claire McKeever presented planning evidence on behalf of Tauranga Bay Holdings and confirmed that no changes were made to the rezoning sought in the original submission. Property Market evidence from Garry Howard, dated 2 September 2024, Geotechnical[161] Evidence from Andrei Coteiga, dated 4 July 2024, Landscape evidence from Jade Isaiah McFarlane, 4 July 2024, and Engineering evidence from Philippe Dumont, dated 4 July 2024, were also presented in support of the proposal. The engineering evidence concluded that area-specific investigations would be required regarding soil contamination and suitability for the disposal of treated wastewater.

849. Following the hearing, Eliot Sinclair responded to the Panel's request that the submitter consider and propose an Outline Development Plan framework that would provide certainty that the landscape mitigation measures could be achieved. The response provides an outline development plan and an accompanying rule framework. The proposed rules include:

SETZ-R2

7. In The Cape Development Area :

[161] Andrei Coteiga 4 July 2024

a. A minimum 7m wide buffer strip of indigenous vegetation is to be planted on all boundaries adjacent to Tauranga Bay Road and Wilsons Lead Road. Locally sourced native species will be selected and planted to ensure that, at maturity, buildings will be partially screened from the road, consisting of species that achieve a minimum mature width of 3.5m and height of 2.5m.

b. Indigenous vegetation within the gully overlay identified on The Cape Development Outline Plan are to be retained; and

c. Development will be in accordance with the Outline Plan set out in the Development Areas section of the Plan;

RLZ-R1

8. In The Cape Development Area:

a. Indigenous vegetation within the gully overlay identified on The Cape Development Outline Plan are to be retained; and

b. Development will be in accordance with the Outline Plan set out in the Development Areas section of the Plan

RLZ-R3

4. In the Cape Development Area:

a. Indigenous vegetation within the gully overlay identified on the Cape Development Outline Plan are to be retained; and

b. Development will be in accordance with the Outline Planset out in the Development Areas section of the Plan;

GRUZ-R1

7. In the Cape Development Area:

a. Indigenous vegetation within the gully overlay identified on the Cape Development Outline Plan are to be retained; and

b. Development will be in accordance with the Outline Plan set out in the Development Areas section of the Plan;

GRUZ-R3

5. In The Cape Development Area:

a. Indigenous vegetation within the gully overlay identified on the East Tauranga Bay Road Development Outline Plan are to be retained; and

b. Development will be in accordance with the Outline Plan set out in the Development Areas section of the Plan;

850. The Panel were also provided with a response to the WCRC Onsite Wastewater Disposal Report, prepared by Philipe Dumont of Eliot Sinclair and dated 21 November 2024. Mr Dumont notes that future parcels would require specific wastewater reports but concluded that the report confirms the submitters' proposed site rezoning ‘continues to be appropriate’.

Other submitters

851. Frank O'Toole continued to seek that his property on Nine Mile Road be rezoned to Rural Living Zone, noting that the area is close to Westport and serviced by reticulated water supply with power/phone utility available. He noted that floodwalls are currently under construction and will result in the flood hazard risk being extremely low.

852. Ms Bensemann presented planning evidence in support of Mr O'Toole and notes that the s42A report describes the Settlement Zone as a buffer close to existing urban areas. She considered this to conflict with the zone descriptions in the Plan, which describe the Rural Living Zone as providing this function.

853. Ms Bensemann acknowledged that although flood mitigation measures are proposed, there is a risk that funding may be lost, or the parameters of the scheme altered. However, she considered that the latest update (Resilient Westport: June 2024) on stop bank development and initial remediation work underway provided more certainty than had existed at the time that the pTTPP was drafted.

854. Ms Bensemann identified that the area south of Westport is Land Use Class (LUC) 3 and subject to the NPS-HPL, although it is not identified in the pTTPP as being within the Highly Productive Land Precinct. She acknowledged that a Rural Lifestyle Zone for a portion of Nine Mile Road would reduce the overall area of this but considered that as the area adjoins Westport's southern boundary, it would not fragment the HPL land. She noted that for many properties along Nine Mile Road, allotment sizes are already less than 4ha and utilised as residential lifestyle sections rather than production activities despite the rural zoning and high-quality soils. She considered that rezoning would contribute to the housing supply. She also considered that the zone standards would provide sufficient separation between Mr O'Toole's land and the General Rural Zone, with the road network providing a legible delineation between the zones.

855. Mr O'Toole also continued to seek that his property at 211 Utopia Road be rezoned to Rural Living, noting that under Variation 2 the site area affected by the Coastal Severe Risk Overlay was reduced. He advised that previous erosion analysis undertaken in relation to a subdivision concluded that erosion is no longer a risk, and that vegetation established on a former sand dune provides further protection from erosion. He also noted in relation to coastal inundation, his property is higher than adjoining properties that have been rezoned to Rural Living.

856. In relation to Mr O'Toole's Utopia Road land, Ms Bensemann saw no reason why this site should not be rezoned, given that Variation 2 sought to move the coastal hazard overlay 75m northward. In her opinion, the Rural Living Zone boundary should better reflect the coastal hazard overlay as the intended limitation to land use, and partial zoning would allow more efficient use of the land resource.

857. Murray Stewart continued to oppose the Highly Productive Land classification due to the restrictions it places on farming and maintaining infrastructure. He also raised concerns about minimum lot sizes, noting that enabling a subdivision of 2-3000m^2 on a farm leaves the remaining farm in a more financially manageable state compared to minimum lot sizes of 4ha. This matter was not included in his original submission.

858. International Panel and Lumber sought to have their car park rezoned from the notified Rural Lifestyle Zone to an industrial zoning, on the basis that the car park is currently zoned for industrial usage and the rezoning appears to be an error. International Panel and Lumber did not make a submission requesting this rezoning and have lodged further submissions only concerning the RLZ rules.

859. Frida Inta, on behalf of herself and the BCG, opposed zoning boundaries that cut through the middle of some properties, and having properties on one street subject to different zones. She also opposed residential zoning being applied to publicly owned land and requested that a section of Hope Street be rezoned from Settlement to 'Road.'

860. Steve Tuck presented planning evidence on behalf of SFF and continued to seek that the land adjacent to SFF Hokitika meat processing site is rezoned General Rural. He also provided his amendments to the rural zone provisions, which he recommended be added if the land is rezoned to Rural Lifestyle Zone (the proposed amendments to objectives and policies are included in those sections of this report). Mr Tuck supported Ms Easton's recommendation that submissions seeking to rezone land north of the Hokitika site to Rural Residential be declined.

861. Barry James MacDonell presented planning evidence and supporting documents on behalf of Forest Habitats Limited, responding to Ms Easton's reasons for not supporting the submission seeking that 117 Arthurstown Road be rezoned Rural Residential. Mr Macdonell noted that the land is not highly productive and there are no mining operations in the immediate vicinity. Mr Macdonell's evidence included engineering reports that concluded the land is suitable for development and considered that natural hazard risk can be mitigated through the consent process, including through raised floor heights.

862. Mr MacDonell submitted further evidence dated 1 October 2024 to the Panel following the hearing, noting that the s42A report for the Hazards Chapter recommended deleting the Flood Plain overlay due to mapping inaccuracy, consistent with WCRC's submission. Mr MacDonell emphasised that flood risk was the only issue raised by WCDC concerning the rezoning of this area, and that Ms Easton's recommendation to decline the submission appears to have been based on incomplete information. He disagreed that residential use is undesirable in this location, noting that the site adjoins a Settlement Zone. He noted that the land is currently held in 9 titles on which dwellings could be developed as a Controlled activity, and on this basis, considered that fragmentation already exists.

863. Mr Rob Kinney, a Director of Te Kinga Estates Limited presented a statement at the hearing. He said Te Kinga Estates Limited had submitted in support of the Rural Residential Precinct zoning of properties on the Arnold Valley Road and had sought for this zoning to be applied to the adjoining property being Lot 2 DP 568525, which currently had a Rural Lifestyle Zone. He said the site was located near the township of Moana and that Te Kinga Estates Limited anticipates further development of the site in the future. He noted that the property is generally flat with some areas which are slightly undulating and is naturally suited to development. He clarified that they sought Settlement Zone for the property (1000m^2 lots). Mr Kinney considered that, although the notified Settlement zone – Rural Residential Precinct appears extensive (approximately 50ha), the potential area for development is reduced due to the undulating and poorly drained nature of the area, likely natural hazards and remnants of mature native vegetation. The Moana transfer station is also located in the middle of the proposed settlement zone. He considered it to be at low risk from natural hazards. Mr Kinney requested the Panel consider rezoning this property to allow for potential future growth of the Moana township.

864. In response to Minute 52 Te Kinga Estates provided a letter to the Panel noting that BTW considered the cumulative effects associated with the proposed change of land use and primary treatment systems would be low. They advised that the report stated that where discharges are likely to occur, the effects would be within the bands for NPSFW guidelines. Te Kinga Estates Limited, therefore, supported the findings concerning Area E.

865. Pauline Hadfield presented planning evidence on behalf of T Croft Ltd. She noted that the s42A report omits any comment on the submitter's request that 139 Arnold Valley Road (Lot 3 DP2261) be rezoned from General Rural zone to Light Industrial to be consistent with the surrounding land. Ms Hadfield notes that Appendix 2 to the s42A report, which lists the reporting officer's recommendations to accept/reject each submission, recommends that the submission be accepted. She noted that this site is 4000m^2 and contains a house that was originally approved as a manager's residence and currently occupied by Frank (director and shareholder of T Croft Ltd), and Clare Croft. Ms Hadfield requested the panel rezone 139 Arnold Road to Light Industrial, consistent with the reporting officer's recommendation in her Appendix 2.

866. Mark Wiechern presented a statement in support of his submission. He noted that the greater Tauranga Bay area is part of an active subdivision with himself and other landowners in the process of subdivision. He considered there was a disconnect between the pTTPP and real-world activities occurring in the area. He sought that Cape Foulwind through to Tauranga Bay be recognised as a precinct.

867. Mr Wiechern stated that he had discussed the Rural Residential Precinct area at Tauranga Bay with BDC, who advised that past development had been subject to significant restrictions through consent notices due to the area's ecological sensitivity. He confirmed he was in the process of making a subdivision application and would be lodging in September/October 2024, with a supporting ecological assessment and blocks designed to replicate the existing character in relation to lot size. He noted his block is not suitable for agriculture and is immediately connected to properties that are lifestyle or rural residential.

868. Tom McGaveston presented a statement in support of his further submission in support of rezoning 367 Utopia Road. He noted that the neighbouring properties are proposed to be rural lifestyle and suggested his property be included with Deadman Creek, providing a natural zone boundary. He considered the flooding risk to be low, noting a significant rock wall protects the northern and eastern property boundaries, and that the Orowaiti River mouth has moved east with a sand bank protecting the property. He advised that recent large sea surges and flood events had not affected the property.

869. Ms Shari Ferguson, representing several submitters at Waipuna (McInroe, Boyles, Leighton and Ferguson), was seeking rezoning from General Rural Zone to Rural Lifestyle Zone. She indicated that the HPL needed to be correct and substantiated, and at this stage, she did not know how that had been done or what process had been gone through. They had no objection to the categorisation if it was correct. She said they had obtained their independent advice from a farm consultant who had concluded that the land was not HPL. She was concerned about what might be incorporated into HPL rules later.

870. Andrew Beaumont opposed the rural residential zoning at Fox River on the grounds of density standards. He contended the location was unusual, being bounded on all sides by the National Park. As a result, he said there was a need for a smaller density standard based on the adequate provision of septic and grey water to enable the growth of the community. He noted there were already lots smaller than 2ha.

871. Christina Bushby continued to seek that her property be 'downzoned' to the General Rural Zone. She sought that lots 3 and 4 DP2764 at Kaiata to remain as a General Rural Zone

872. Ms Shirley Godfrey provided additional information on the location of her property at 233 Taramakau Highway, Kumara Junction, which she is seeking to be rezoned Settlement (it is

proposed to be zoned General Rural in the PTTPP). The property is adjacent to the Kumara Junction Settlement Zone.

873. Mr John Menlove spoke at the hearing and sought to include his property at Caledonian Road in the Settlement. In his submission S289.001, he sought to rezone the site to develop it for residential sections. We visited the site at Sergeants Hill, we stopped at 71 Waterworks Road and viewed the site up on a hill.

Reporting Officer Reply Evidence

874. Rezoning was addressed in both the joint Rural Zones and Settlement Zones right of reply, and in a separate right of reply concerning rezoning at Moana, Grey District and Cape Foulwind, Buller. This was also informed by the technical report produced by BTW, addressing the cumulative effects of onsite wastewater disposal.

875. In response to the submission from Mr Wiechern, Ms Easton considered that the proposed subdivision layout presented is the type of proposal envisaged by the subdivision provisions relating to significant areas of indigenous biodiversity, being a bespoke design reflecting the values on the ground and providing for bonus lots where significant indigenous biodiversity is legally protected. Ms Easton considered that the Settlement Zone – Rural Residential Precinct was inappropriate for this site for the reasons outlined in the s42A report. She considered that General Rural Zone remained the most appropriate zone for this site.

876. In relation to CMP Kokiri, Ms Easton supported a split zoning of this site and considered that the most appropriate zone for the SNA area would be the General Rural Zone.

877. Ms Easton provided a map showing all areas sought to be rezoned within the Cape Foulwind and wider Westport area and provided the contaminated land report for the former Holcim site.

878. In relation to the Forest Habitats submission, requesting rezoning of land on Arthurstown Road, Ms Easton acknowledged that the s42A report map does not show the full extent of the land in question. Ms Easton considered this rezoning to be inappropriate due to the land being subject to a flood hazard and at significant risk of storm surge inundation in a large coastal hazard event. She noted that at the time of writing, a proposed subdivision consent hearing had not yet taken place, but the planner's s42A report recommended it be declined.

879. Ms Easton supported rezoning T Croft Limited caretaker's residence at 139 Arnold Valley Road, (Lot 2 DP2261) to Light Industrial.

880. Ms Easton did not support Shirley Godfreys request to rezone land at 233 Taramakau Highway, Kumara Junction, noting that rezoning at Kumara Junction was considered when TTPP was developed and that care was taken in identifying farm properties rather than bush lots for rezoning, because areas of significant indigenous biodiversity have not yet been assessed in the Westland District. Ms Easton noted that Ms Godfrey's land is not within the Kumara Junction Development outline plan area, where specific bush retention provisions apply, and no ecological assessment of the existing vegetation has been undertaken. On this basis, she did not support rezoning; however, she noted that the bonus lot provisions associated with indigenous biodiversity subdivision provisions are likely to be an appropriate pathway for future development of this site.

881. Concerning the International Panel and Lumber car park zoning error, Ms Easton confirmed that she considered the Rural Lifestyle Zoning to be an error. She agreed that amending the zoning to General Industrial could be treated as a Clause 16 amendment.

882. Ms Easton provided a map showing all zoning requests at Moana (noting that several of these are addressed in the Settlement s42A report and decision).

883. Ms Easton provided her thoughts on the demand that 4000m^2 sites create for infrastructure, noting that while the Plan is clear that rural infrastructure will be provided in the Settlement Zone: Rural Residential precinct, new residents often have higher expectations. Ms Easton confirmed this with planners from the three Councils who advised that the most common requests are for footpaths, streetlights, cycle connections and stormwater upgrades.

884. Ms Easton noted she could not provide a view on the updated zoning proposal for the Cape Foulwind Staples Land until information sought by the Panel on wastewater in Minute 38 was provided. This was subsequently addressed in the rezoning right of reply discussed below.

885. Concerning the wastewater servicing options for the Te Kinga Estates rezoning proposal, Ms Easton noted that GDC had advised they were about to approve a subdivision consent for Cashmere Bay Dairy, which would take most of the available capacity in the existing Council system. Any rezoning of the Te Kinga site would therefore require additional wastewater capacity. Ms Easton concurred with GDC staff that on-site wastewater disposal was inappropriate in this location. She noted that all other small sites are connected to reticulation, either the Council system or a private system owned by David Ellerm. Ms Easton advised that the Council system is newer and treats wastewater to a higher standard and considered that an expansion of the Council system would be required to accommodate the Te Kinga proposal.

886. Ms Easton considered that there was scope in Te Kinga Estate's original submission for the requested rezoning to Settlement Zone – Rural Residential Precinct but did not support this proposal as outlined in the s42A report.

887. In response to the Panel's query as to whether the Waipuna rezoning meets the purpose of the zone, and what the implications are of the area being LUC 3, Ms Easton considered that the pTTPP does not provide for specific zone purposes but includes general statements to provide context for the zones and where they are located.

888. Ms Easton noted that Waipuna is not located near a main town or settlement but is the historic location of a settlement area. She considered that it meets some aspects of the Rural Lifestyle Zone as described in the Plan, in that it has gradually taken on a more residential character with a cluster of houses. She noted that it sits within a large area of the General Rural Zone, with the nearest settlements being Ikamatua and Totara Flat. She confirmed that while the wider Waipuna area includes LUC 3 soils, they are not present in the area where the properties in question are located.

889. Concerning the submission from Julie Ann Palmer, Ms Easton noted there is substantial rezoning of the Settlement Zone, but no Settlement Zone Rural Residential Precinct at Waimangaroa. She advised that the Council provides a range of infrastructure there and wanted to ensure that any new development connects to this to help support the costs of this significant community investment. Ms Easton did not support rezoning this large area of land on the edge of Waimangaroa, which could result in potentially 60 additional lots, unconnected to services.

Te Kinga Estates

890. In response to the Te Kinga Estates submission, Ms Easton noted that no additional evidence had been provided concerning servicing, infrastructure or adverse environmental or cultural effects at the hearing. The site contains areas of sphagnum moss, pakihi and manuka wetlands that would be subject to the NESF, but no landscape, ecological or cultural assessment was provided.

891. Ms Easton summarised the BTW Company (BTW) assessment, noting it identified that key environmental risks from on-site wastewater systems on this property relate to cumulative effects from E.Coli and nutrients in the small streams and wetlands within the site, as well as increased E.coli at Molloy Bay in Lake Brunner. BTW considered that the current approach to on-site wastewater at Moana is inadequate to manage these effects due to the high permeability of the soils, and that, at a minimum, secondary treatment should be required.

892. Ms Easton concluded that no information presented at the hearing or within the BTW report had caused her to change her recommendations, and recommended the property remain Rural Lifestyle Zone as per the notified Plan.

Cape Foulwind

893. In response to the submitters and the BTW technical report, Ms Easton considered the current approach to on-site wastewater at Cape Foulwind to be generally inappropriate when applied to densities of 4000m^2 or more, noting that the BTW report identified that poor drainage creates a moderate to high risk of nutrient contamination occurring in local streams and wetlands.

894. Concerning the land known as Area 4 Guardian Lake Flats, Ms Easton noted this land is within an area where BTW considered there was insufficient information to assess the actual or potential adverse effects but considered these could be significant. Ms Easton had recommended that this land remain a Rural Lifestyle Zone in the s42A report and concluded that the BTW and evidence presented at the hearing had not altered her view. She recommended that this land remain a Rural Lifestyle Zone.

895. In response to the submitter's request at the hearing to 'downzone' a 12ha Settlement Zone Rural Residential Precinct area of land to Rural Lifestyle Zone as a 'swap,' Ms Easton considered there was no scope in the original submission of Cape Foulwind Staple 1 Ltd for this request. However, she supported it on its planning merits. She did not recommend any changes to the Plan concerning this matter.

Tauranga Bay Holdings

896. Ms Easton acknowledged the range of technical evidence presented at the hearing. She noted that BTW considered it may be possible to service this area with on-site wastewater systems appropriately, provided these are at least secondary and potentially tertiary systems.

897. Ms Easton retained her view that the development proposed was not appropriate at this time, noting that Omau is a small township and substantial rezoning to Settlement zone – Rural Residential Precinct (90ha) and Rural Lifestyle Zone (100ha) has already been provided for in the notified plan. She considered that the development this rezoning allows for will put significant pressure on existing infrastructure. She acknowledged that roading upgrades at the worst intersection at Limestone Road were about to proceed but was not aware of the capacity the upgrades would provide for development not included in the notified TTPP, noting that

the submitter had provided no evidence on infrastructure impacts. She also raised concerns about the proposed approach to stormwater management and the lack of evidence addressing the potential impacts on Gibsons Creek.

898. Ms Easton noted that the Westport masterplan had been released since the hearing, which confirms that the intention for long term development is for development onto the Alma Road terrace and the land area behind it. The masterplan anticipates that the current Omau population of 150 people might double within the life of the plan and within the existing infrastructure capacity. Ms Easton considered this to be consistent with the rezoning provided for in the notified plan.

899. Ms Easton considered that BDC has limited resources and does not have capacity to undertake infrastructure upgrades across several growing areas, noting that the Limestone Road/Cape Foulwind Road upgrade has been more than a decade in the planning. She considered that the absence of infrastructure planning and existing rezoning creates a risk that the Omau community will face significant increases in infrastructure need and improvement, and that the cumulative effects of development need to be specifically planned for ahead of any further rezoning.

900. Ms Easton concluded that, while the rezoning proposal may be appropriate in a future Plan change, it is not appropriate at this time. She recommended that the rezoning proposal be rejected.

901. Ms Easton did not recommend any amendments to the plan in this right of reply to the rezoning.

Silver Fern Farms, Joint right of reply

902. A joint right of reply was prepared to address the zoning submission points from SFF, prepared by Ms Easton, Briar Belgrave as reporting officer for the industrial and commercial zones topic, and Ruth Evans as reporting officer for the noise topic.

903. The planners were of the view that the direction on reverse sensitivity in the WCRPS principally relates to Regionally Significant Infrastructure and that this is the priority for reverse sensitivity management. They considered that the direction is to avoid, remedy or mitigate reverse sensitivity on other industrial uses.

904. The planners noted that all but one of the properties in question contain dwellings and all are currently being used for rural lifestyle purposes. They considered that landowners would be no more likely to complain about SFF activities, whether the properties were zoned General Rural or Rural Lifestyle.

905. Ms Easton considered the zoning of adjacent properties and considered the notified Rural lifestyle Zone to be appropriate.

<u>Hearing Panel's Evaluation</u>

Buller District

Broader Cape Foulwind Area

906. In relation to the submission by Steve Croasdale seeking that Lot 1 DP 450105 and Lot 2 DP 450105 (115 Okari Road, Cape Foulwind) be rezoned Rural Lifestyle, the Panel agrees with Ms

Easton's recommendation not to rezone this site and retain the site's zoning as notified for the reasons she provides within her s42A. We agree that this is an isolated site divorced from any other Rural Lifestyle Zone

907. In relation to the submission points made by Several submitters[162] sought that the land between Bulls Road and Bradshaw Road south of State Highway 67A be rezoned to Settlement Zone: Rural Residential precinct. The Panel agrees with Ms Easton's recommendation not to rezone this land and to retain its zoning as notified for the reasons she provides within her s42A.

908. In relation to the submission from James Hamilton seeking that his property on Alma Road/Cape Foulwind Tce be rezoned to a Future Urban Zone or Settlement Zone, the Panel agrees with Ms Easton's recommendation not to rezone this land and to retain its zoning as notified for the reasons she provides within her s42A.

909. In relation to the submission from Mark Wiechern, seeking to rezone his property Lot 5 DP 460905 Blk II Steeples SD to Settlement Zone: Rural Residential Precinct, the Panel agrees with Ms Easton's recommendation not to rezone this property for the reasons she provides within her s42A. Ms Easton noted that the property is twice the size of the currently zoned Settlement Zone: Rural Residential Precinct area at Tauranga Bay, so we have concerns as to the size and scale of this rezoning and the impacts of the same on Tauranga Bay. We agree with Ms Easton when she noted that the proposed subdivision layout presented is the type of proposal envisaged by the subdivision provisions relating to significant areas of indigenous biodiversity, being a bespoke design reflecting the values on the ground and providing for bonus lots where significant indigenous biodiversity is legally protected. The Panel agree after considering Mr Wichern's evidence, that the Settlement Zone – Rural Residential Precinct is inappropriate for this site. We considered that the General Rural Zone remains the most appropriate zone for this site. We acknowledge however that there may be an alternative pathway via the bonus lot provisions relating to indigenous biodiversity for Mr Wiechern to achieve a similar outcome to that he sought via submission.

Cape Foulwind/Omau Area

910. The Panel have considered the Cape Foulwind/Omau Area together as the issues arising from the rezoning requests are generally similar in their substance.

911. The issue before the Panel is that there are a number of individual submissions seeking rezonings of various scale. Some are relatively minor and are more akin to corrections, while others are of some scale and would enable a significant increase in housing development potential in this location. We accept that one of the key matters associated with this level of development is servicing and the potential pressure on BDC that could evolve to provide for or undertake infrastructure upgrades and provision of other services. This might include expectations for street lighting, footpaths, recycling and waste removal and quality of water.

912. As part of this process, a report from BTW (previously referred to) was commissioned to assess the impacts of wastewater associated with development. The Panel acknowledges that issues associated with wastewater could be addressed with onsite disposal. Whether this is the most

[162] Chris J Coll Surveying Limited, William McLaughlin, Laura Coll McLaughlin, Bradshaw Farms, Avery Brothers, Brett Avery, Paul Avery, Avery Bros, Chris & Jan Coll, Leonie Avery, Jared Avery and Kyle Avery in relation to Section 1 SO 14694, Part Section 2 Blk II Steeples SD, Section 3 Blk II Steeples SD, Section 4 Blk II Steeples SD, Section 5 Blk II Steeples SD, 197 Te Tai o Poutini Plan – Section 42A Report Rural Zones Section 42 Blk II Steeples SD and Section 71 Blk II Steeples SD

appropriate solution for the level of development proposed across the whole area remained unclear.

913. Another key factor is land use, and, in this context, we accept that much of the land concerned is of limited value in terms of farming or other agricultural uses. There may also be other yet to be identified constraints, such as geotechnical, associated with the land which may limit housing development as well.

914. In addition to the above is the recent release of a masterplan for the Westport - "Cutting our Own Track". This promotes the long-term intention for Westport to gradually move development up onto the Alma Road terrace and the land area behind it. As it was not addressed in evidence it was unclear to the Panel whether a significant increase in development in the Cape Foulwind/Omau area might impact upon the masterplan aspirations. What was clear however was that the focus of both the Council and Central Government investment in infrastructure for the foreseeable future will be on enabling the development of the wider Alma Road area.

915. Ms Easton noted that Omau has a current population of 150 people and that within the life of the TTPP, that might increase to around twice that size within the existing infrastructure capacity. This she said was consistent with the amount of rezoning that has already been provided for within the notified Plan.

916. Given the above, the Panel considers further rezoning to the densities sought in the Cape Foulwind/Omau Area is premature. Individual rezonings of the level proposed will not, in our view, lead to coordinated development or deployment of infrastructure enabling sites to leverage off infrastructure and share costs. Further, we accept that BDC has very limited resources and cannot undertake infrastructure upgrades across several areas, which poses a risk to any development.

917. Notwithstanding the above, we do consider rezoning in the Cape Foulwind/Omau Area could well be appropriate, however it needs to be undertaken in a coordinated and planned, rather than piecemeal manner, which addresses all environmental, infrastructure and servicing issues (and costs) in conjunction with necessary Council input.

918. For the reasons set out above as well as those provided by Ms Easton the Panel recommends the rezoning requests from the following submitters be rejected:

- Cape Foulwind Staple 1 Ltd (S557.003), (S557.004)
- Cape Foulwind Staple 2 Ltd (S568.003), (S568.005), (S568.007)
- Garry Howard (S358.004)
- Tauranga Bay Holdings (S597)
- Bevan Te Tai (S75.001)

919. The Panel agrees that the minor rezonings sought by Cape Foulwind Staple 1 Ltd (S557.005) and Cape Foulwind Staple 2 Ltd (S568.009) (S568.006) are appropriate and recommends these be included.

Wider Westport Area

920. In relation to John Brazil (S360.047) seeking rezoning of Lot 1 DP 336364 (261 Utopia Road, Westport), to Rural Lifestyle Zone, the Panel agrees with Ms Easton's recommendation to

retain the zoning as notified because the property is subject to the Coastal Hazard Alert and the updated coastal hazard mapping shows that the hazard is more severe than shown in the proposed plan.

921. Several submitters, Chris & Jan Coll (S558.554, S558.493), Chris J Coll Surveying Ltd (S566.554, S566.493), Laura Coll McLaughlin (S574.554, S574.493), and William McLaughlin (S567.594) sought that 8677 State Highway 6 be rezoned for Rural Lifestyle Zone. Ms Easton did not support these submissions, noting that the property is within a wider area of General Rural Zone and not connected to any other Rural Lifestyle Zoned land. The Panel agrees with her recommendation to retain the notified zoning of this property for the reasons she provides.

922. In relation to a submission from Shannon Carlson (S19.001) seeking to rezone an area on the east side of Buller Road, from the Buller Bridge to the crossroads, as Settlement Zone. The Panel agrees with Ms Easton's recommendation to retain the notified zoning for this site for the reasons she provides within her s42A.

923. In relation to a submission from Michael and Alyson Duff (S23.001) seeking that 28 Tuis Way be rezoned from General Rural to Settlement Zone Rural Residential Precinct, the Panel agrees with Ms Easton to retain the notified zoning for this site for the reasons she provides within her s42A report.

924. In relation to a submission from John A Menlove (S289.001) seeking to rezone his property at Sergeants Hill for residential sections, the Panel agrees with Ms Easton's recommendation that the notified zoning for the site be retained for the reasons she provides within her s42A report.

925. In relation to a submission from Frank and Jo Dooley (S478.0240) and Frank O'Toole seeking that the portion of Nine Mile Road from Stafford Street to the Nine Mile, Victoria and Harneys Roads intersection, extending from the railway corridor to the banks of the Buller River, be rezoned from General Rural Zone to Rural Lifestyle Zone the Panel after carefully considering the evidence of Ms Bensemann supporting the rezoning the Panel agrees with Ms Easton's recommendation to retain the notified zoning for this site. In our view, the evidence of Ms Bensemann did not fully resolve for us the issues that Ms Easton had identified with the rezoning. It seems to us that she had not considered the various clauses under the NPS-HPL (a higher order document) noting that clause 3.7 states: *Territorial authorities must avoid rezoning of highly productive land as rural lifestyle, except as provided in clause 3.10*. We were not provided with any evidence as to exceptions under clause 3.10 for this land.

926. In relation to a submission from Frank and Jo Dooley (S478.027) and Frank O'Toole (S595.015) requesting that 211 Utopia Road be rezoned to Rural Lifestyle zone, the Panel acknowledges the evidence of Mr O'Toole that under Variation 2 the site area affected by the Coastal Severe Hazard Overlay was reduced. He advised that previous erosion analysis undertaken concerning a subdivision concluded that erosion is no longer a risk, and that vegetation established on a former sand dune provides further protection from erosion. In terms of coastal inundation, he said his property is higher than adjoining properties that have been rezoned to Rural Living. Ms Bensemann said she saw no reason why this site should not be rezoned, given that variation 2 sought to move the coastal hazard overlay 75m northward. In her opinion, the Rural Living Zone boundary should better reflect the coastal hazard overlay as the intended limitation to land use, and a partial zoning would allow more efficient use of the land resource.

927. Notwithstanding the above, the Panel note that currently, a Coastal Alert Hazard Overlay almost entirely covers 211 Utopia Road. While there may be speculation as to future Plan provisions emerging from Variation 2 and while there have been landform changes overtime

in the vicinity of this site the Panel agrees with Ms Easton's assessment this site is not suitable for rezoning due to natural hazard risks. We agree with her recommendation that this site retain its notified zoning for these reasons as well as those provided by Ms Easton within her s42A report.

928. In relation to a submission from O'Connor Crossroads Limited (S496.001) seeking that Section 26 Blk VII Kawatiri Survey District, Section 30 Blk VII Kawatiri Survey District, and Pt Section 27 Blk VII Kawatiri Survey District be rezoned to Settlement Zone: Rural Residential Precinct, and that Sec 1 SO 9139 Secs 1-2 SO 14816 Secs 3-4 23 Pt Sec 25 Blk VII Kawatiri SD be rezoned to Future Urban Zone the Panel agrees with Ms Easton's analysis of this submission and that of BDC in opposition. We agree with Ms Easton for the reasons she provides within her s42A report that these sites retain the zoning as notified.

Buller Bay Settlements

929. In relation to a submission from Kathleen Mansell (S39.001) seeking that 3 Bayfield Street, Seddon, be rezoned to General Rural Zone, the Panel accepts the split zoning is an error and recommends it be rezoned.

930. In relation to a submission from Julie Palmer (S334.001) seeking that her property at New Castle Street, Waimangaroa, be rezoned to rural residential, initially Ms Easton recommended the submission be rejected as she was unable to confirm the location of the property. However, in her reply, she assessed the submission, noting that there is substantial rezoning of the Settlement Zone, but no Settlement Zone Rural Residential Precinct at Waimangaroa. Ms Easton advised that the BDC provides a range of infrastructure and wanted to ensure that any new development connects to this to help support the costs of this significant community investment. The Panel agree that rezoning this large area of land on the edge of Waimangaroa, which could result in upwards of 60 lots unconnected to services. In this situation we agree that the recommendation should be to retain the zoning as notified.

Karamea

931. In relation to a submission from Ruth and Richard Henschel (S150.002, S285.002) seeking that 4456 Karamea Highway be rezoned to Rural Lifestyle Zone, Ms Easton recommended the submission be rejected because it is within Flood Susceptibility and High Coastal Natural Character overlays, and not in the vicinity of other Rural Lifestyle zones. The Panel agrees with that recommendation for the reasons provided by Ms Easton.

932. In relation to a submission from Nikau Farms Limited (S499.001) seeking that 51ha of land along the Karamea Highway at Little Wanganui Karamea (legally described as Lots 1-3 DP 409294, Lot 2 DP 407416, Lot 2 DP 547019, Sec 32 Pt Secs 7-8 Blk III and Pt Secs 14-16 Blk II Kongahu Sd) be rezoned as Settlement Zone Ms Easton recommended this submission be rejected. She noted there has been substantial zoning at Little Wanganui to allow for expansion of the settlement, with the Rural Residential area intended to provide a lower density transition between the settlement and wider rural area. Ms Easton considered that any future subdivision would be more appropriate at rural residential rather than higher densities. The Panel agrees with Ms Easton's recommendation for the reasons she provides.

933. In relation to a submission from BP and CA Jones (S526.001) seeking that the Highly Productive Land Precinct be removed from 4300 Karamea Highway because it is a wetland and subject to coastal inundation with limited production value, Ms Easton recommended this submission be accepted. The Panel notes that a large proportion of this land is classified LUC3, therefore we

partially agree with removal following the mapping exercise if land is confirmed not to be LUC 1-3.

934. In relation to a submission from Rosalie Sampson (S539.001) seeking that the Highly Productive Land Precinct be removed from land at Karamea, Ms Easton recommended rejecting this submission noting that this land is one of the few areas in the West Coast favourable for horticulture, and that studies of the soil types and land suitability informed the identification of the Precinct. The Panel agrees with the recommendation and notes that Karamea has large areas of LUC 3 class land however whether this identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

935. In relation to submission from Rosalie Sampson (S539.002) seeking that the township of Karamea be rezoned to Settlement Zone, Ms Easton recommended this submission be rejected, noting that downzoning of undeveloped land is due to the area being within the Flood Susceptibility Hazard Overlay, and the township itself is under the Coastal Alert Hazard Overlay. Further, Ms Easton noted that the West Coast Regional Council had advised that the flood scheme is not designed or constructed to a high level of service and cannot be relied upon to protect the town from flood hazards. The Panel agrees with the recommendation that the notified zoning of this site be retained.

Granity

936. In relation to a submission from Jackie and Bart Mathers and Gillman (S228.008) seeking that their and their northern neighbours' land at Granity is rezoned to Rural Lifestyle Zone, Ms Easton recommended rejection of the submission. She noted that there is no Rural Lifestyle Zone at Granity due to the high erosion and coastal inundation risk and land instability concerns. The submitter's property is also within the High Natural Character Overlay. The Panel agrees with Ms Easton's recommendation that the submission be rejected, and the notified zoning be retained.

Fox River

937. In relation to a submission from Andrew Beaumont (S225.001) opposing Rural Residential zoning in the Fox River Punakaiki area, Ms Easton recommended rejecting this submission, noting that no information was provided about the specific location of the zoning referred to or the reasons for opposing it. The Panel agrees that the submission should be rejected for the reasons Ms Easton provides.

Grey District

938. In relation to a submission from Ngāi Tahu (S620.017) seeking that the highly productive land precinct be removed from Lot 1 DP 464514 and Lot 1 DP 2850, Ms Easton recommended this submission be rejected on the basis that the purpose of the precinct did not align with the land use for production forestry. Ms Easton noted that the precinct restricts subdivision and residential development and is not inconsistent with the existing land use. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

939. In relation to a submission from Riarnne Klempel (S67.009) seeking that Lot 8 DP 361177, on State Highway 6, Barrytown, be rezoned from Rural Lifestyle zone to General Rural, Ms Easton recommended this submission be rejected. She had discussed this issue with the GDC, who considered the natural hazard provisions sufficient to control the associated issues and noted

that a significant part of the site is not subject to hazard overlays. The Panel agrees with the recommendation to reject the submission for the reasons provided and to retain the notified zoning.

940. In relation to a submission from David Pugh (S40.001) seeking that the Highly Productive Land Precinct is removed from 1297 Haupiri Road, Haupiri 7872, (Lot 1 DP 377882), Ms Easton recommended the submission be rejected as the intention of the precinct is to retain farm size to support primary production. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

941. In relation to a submission from Barbara King (S71.001) seeking to rezone 42 Hatters Terrace, Nelson Creek, to a single zone, rather than the current split zoning, Settlement Zone and Rural Lifestyle Zone, Ms Easton recommended that the submission be accepted and the whole site be rezoned as a Rural Lifestyle Zone. The Panel accepts the zoning should be amended and recommends the site re fully zoned Rural Lifestyle Zone.

942. In relation to a submission from Kirsty Dittmer (S148.001) seeking that 26 Pandora Avenue be included in the settlement zone, Ms Easton recommended the submission be rejected as the property is partly covered by High Natural Character and Coastal Hazard Alert overlays. She acknowledged that part of the site may be appropriate for development, but she did not support split zoning as a general principle, so she considered General Rural to be the most appropriate zone for the site. The accepts Ms Easton's reasoning and recommends the submission be rejected.

943. In relation to a submission from Graham Wood (S160.001) opposing the rezoning of properties on Barrytown flats from rural Lifestyle Zone, Ms Easton recommended rejecting this submission, noting that the submitter may not be aware that these properties have been upzoned as there was no RLZ in the operative Plan. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides

944. In relation to a submission from Te Tai o Poutini Plan Committee (S171.020) seeking that 3316 Coast Road, Barrytown, and two adjacent properties be rezoned to Rural Lifestyle Zone, Ms Easton recommended this submission be supported on the basis that it corrected a zoning error. The Panel agrees with Ms Easton's recommendation to rezoned these properties Rural Lifestyle.

945. In relation to a submission from Te Tai o Poutini Plan Committee (S171.022) seeking that two sites at Rutherglen be rezoned to Rural Lifestyle Zone, Ms Easton recommended this submission be supported on the basis that it corrected a zoning error. The Panel agrees with Ms Easton's recommendation that the properties be rezoned to Rural Lifestyle.

946. In relation to a submission from Te Tai o Poutini Plan Committee (S171.023) seeking that three sites at Te Kinga be rezoned to Rural Lifestyle Zone, Ms Easton recommended this submission be supported noting that these small sites are adjacent to an area of Rural Lifestyle Zone and the zone is appropriate for these properties. The Panel agrees with Ms Easton's recommendation that the properties be rezoned to Rural Lifestyle.

947. In relation to submission from John Boyles (S175.001), David McInroe (S176.001), Benjamin and Shari Ferguson (S173.001), and Kaye Leighton (S174.001) who sought that 13ha of land at Waipuna, be rezoned from General Rural to Rural Lifestyle, and Ken and Robyn Ferguson seeking that the Highly Productive Land Precinct be removed, Ms Easton supported this

submission. She noted this submission was supported by GDC, which considered that the zoning would recognise the small settlement that has been established in this location. The Panel agrees with Ms Easton's recommendation that the properties concerned be rezoned to Rural Lifestyle and that the properties be removed from the Highly Productive Land Precinct.

948. In relation to a submission from Christina Bushby (S178.001) seeking that Zone DP2764 Lots 3 & 4 adjacent to 406 State Highway 7, Kaiata, is rezoned as General Rural Zone, Ms Easton did not support this submission, noting that the rezoning creates no obligation on landowners to develop their land, but provides for growth at Kaiata. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

949. In relation to a submission from Mitchells 2021 Ltd (S448.002) to rezone Lot 4 DP 440795 from General Rural to General Rural and Rural Lifestyle, Ms Easton did not support this submission, noting that the land is bush and understood to be covenanted in favour of DOC as part of the Forests Accord. She noted that GDC have raised concerns about the capacity of road infrastructure (a gravel road on the edge of the lake) to accommodate further development. The Panel has considered the submissions and agrees with Ms Easton's conclusions. We recommend rejecting the submission for the reasons outlined and retain the notified zoning.

950. In relation to a submission from Mitchells 2021 Ltd (S448.001) to rezone PT RS 2032 from Rural Lifestyle to Settlement Zone, Ms Easton did not support this submission, noting that there has already been significant upzoning at Mitchells to provide for additional development and that the block concerned is bush-covered and partly within an Outstanding Natural Landscape. The Panel agrees that rezoning in this area would be inappropriate and recommends rejecting the submission and retaining the notified zoning.

951. In relation to a submission from Davis Ogilvie & Partners Ltd (S465.001) seeking that Lot 1 DP2617, Lot 1 DP2512, Lots 1 and 2 DP2489, Lot 1 DP2781, and Part RS2082 at Mitchells be rezoned as Rural Lifestyle Zone, Ms Easton did not support this submission, noting that the site is bush covered and partly within an Outstanding Natural Landscape. Ms Easton noted that the site is not in an area identified for Rural Lifestyle development and that the character is best described as General Rural Zone. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

952. In relation to a submission from Riarnne Klempel (S296.001) seeking land to be rezoned to expand the Barrytown township settlement area, Ms Easton did not support this submission, noting that there has been substantial upzoning in Barrytown to allow the township to expand and that further rezoning is unnecessary. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

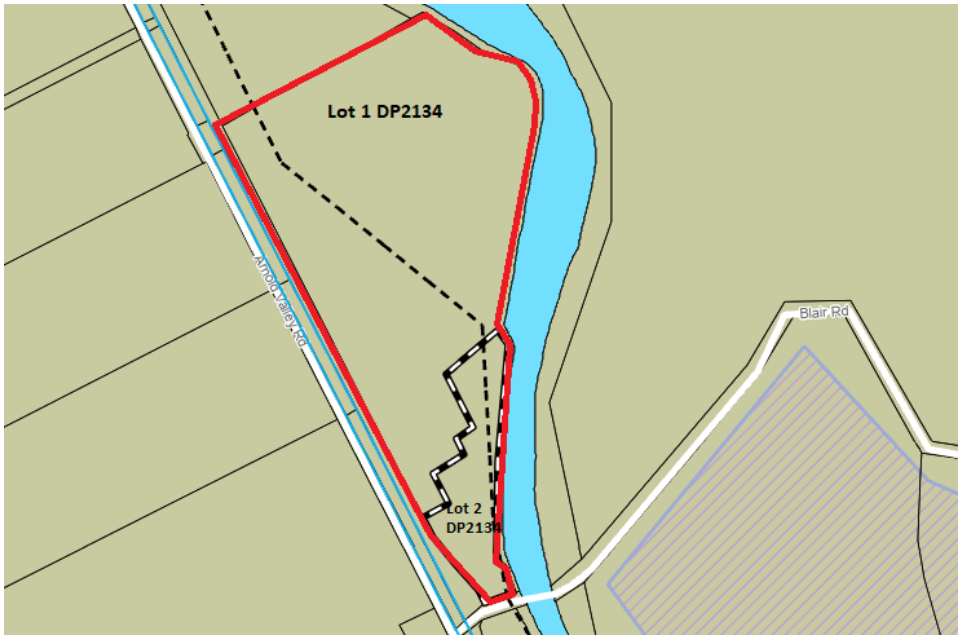
953. In relation to a submission from Shirley Godfrey (S406.001) seeking that two parcels of land, described as PT RS 1999 BLK VII WAIMEA SD. Area 11.9559ha and Sec 11 SO557707. Area 1.2126ha, be rezoned to rural residential, Ms Easton did not support this submission as she could not determine the location of the properties. The Panel agrees with Ms Easton's recommendation to reject the submission and to retain the notified zoning.

954. In relation to a submission from Suzanne Hills (S443.047) seeking that 3345 Coast Road be rezoned to Rural Lifestyle, as the adjacent properties have been rezoned, Ms Easton supported this submission as she could not identify any reason why this property had been excluded. The Panel agrees with Ms Easton's recommendation to accept the submission and to rezone the property to Rural Lifestyle.

955. In relation to a submission from Craig Schwitzer (S96.025) and Riarnne Klempel (S67.0060) to rezone 64 Cargill Road from General Rural zone to Rural Residential Zone, Ms Easton did not support this submission, noting there has been substantial upzoning in Barrytown to provide for expansion and allow for rural lifestyle development. Ms Easton considered that rezoning this large site would substantially expand rural residential use at the detriment of primary production values. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

956. The Panel accepts Ms Easton's recommendation to reject the submission from Te Kinga Estates Limited to rezone Lot 2 568525 to Rural Residential. While we acknowledge Mr Kinney's statement, he did not provide us with additional evidence regarding servicing or infrastructure needs, environmental or cultural effects, or the need for further Rural Residential zoning in the Moana area. We note that the BTW report scenarios examined the implications of developing the property with 4000m² sites and on-site servicing. It notes that the property drains to three sub-catchments, which drain, respectively, to Lake Brunner, the Arnold River, and Molloy Creek. Given that the site in question is 134 hectares and would substantially increase the housing potential, we consider resolution of these factors to be necessary.

957. For the above reasons, the Panel recommends that the proposal to rezone Lot 2 568525 to Rural Residential by Te Kinga Estates Limited be rejected



958. In relation to a submission from Peter Jefferies (S546.001) seeking that the Highly Productive Land Precinct be removed from 843 Atarau Road, Ms Easton did not support this submission, noting the property is within a significant farming area and the precinct is appropriate. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

959. In relation to a submission from Martin and Lisa Kennedy (S545.001) seeking to remove the Highly Productive Land Precinct from Lot 3 DP 2743) in the Grey Valley, at Atarau, Ms Easton did not support this submission noting that while she could not determine the exact location of the property, it is in a significant farming area. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

960. In relation to a submission from Nick Pupich & Sandy Jefferies (S546.001) seeking to remove the Highly Productive Land Precinct from 729 Atarau Road, Ms Easton did not support this submission noting that it is in a significant farming area. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

961. Ms Easton supported a submission from CMP Kokiri (S611.001) seeking Lots 1 and 2 DP2134, (containing a meat processing plant), be rezoned to General Industrial or similar relief, noting that General Industrial would be an appropriate zoning. Ms Easton considered Light Industrial to be the most appropriate zoning. She said the plant is located at the southern end of the property, with other parts being bush and farmland, including a Significant Natural Area. Initially she did not support split zoning because she considered the ecosystem and biodiversity provisions are intended to manage impacts on the SNA. (s42A para 502-503).

962. The map identifying this area in the s42A report doesn't clearly show the boundaries of Lot 1. For clarity, the lots are identified in the map below, outlined in red.

963. Ultimately, Ms Easton's recommendation, as detailed in her reply, supported LIZ for both lots 1 and 2, but for the SNA to be the General Rural zone.

964. The Panel has given consideration to the various options before it. We are not persuaded that Ms Callaghan's bespoke option is appropriate, when existing zones are available. We consider this would simply add unnecessary complexity to the Plan and we were unclear just how this option would be more efficient and effective compared to either a General Industrial or Light Industrial zoning. In the end we agree with Ms Easton that a Light Industrial Zoning is the most appropriate option, but we do not consider it is necessary to carve out and rezone the SNA General Rural. In our view it sufficient to rely on the SNA provisions in the Plan to provide protection. We also note this avoids the creation of a complex zoning outcome for the site. The Panel therefore recommends that Lots 1 and 2 DP2134 be rezoned LIZ.

965. In relation to a submission from Bede Udy (S154.001) seeking to rezone 2 Cashmere Bay Road, Moana, from Rural Lifestyle to Rural Residential, Ms Easton did not support this submission, noting this would be out of character with the surrounding zoning and land uses. The Panel agrees with Ms Easton's recommendation to reject the submission and to retain the notified zoning.

966. In relation to a submission from Ngai Tahu (S620.016) seeking that Section 2 SO 12078 be rezoned to General Rural, Ms Easton supported this submission noting that this was an error as the Plan maps incorrectly show it as a water body. The Panel agrees with Ms Easton's recommendation to accept the submission and to rezone the site General Rural.

967. In relation to a submission from Murray Stewart (S217.002) seeking that the Highly Productive Land Precinct be removed from rocky and landslide areas of 746 Taramakau Settlement Road, Ms Easton did not support this submission, noting that the focus of the precinct is retaining economic farming units and avoiding further fragmentation of rural land. The Panel disagrees with the recommendation and notes that whether this is identified as Highly Productive Land Precinct will be confirmed through the mapping exercise.

968. In relation to a submission by T Croft Ltd (S460.003) the Panel notes from Ms Hadfield's evidence that the s42A report omits any comment on the submitter's request that 139 Arnold Valley Road (Lot 2 DP2261) be rezoned from General Rural Zone to Light Industrial Zone to be

consistent with the surrounding land. Ms Hadfield notes that Appendix 2 to the s42A report, which lists the reporting officer's recommendations to accept/reject each submission, recommends that the submission be accepted. She noted that this site is 4000m^2 and contains a house that was originally approved under a resource consent as a manager's residence and currently occupied by Frank (director and shareholder of T Croft Ltd), and Clare Croft. Ms Hadfield requested the Panel rezone 139 Arnold Road to Light Industrial, consistent with the reporting officer's recommendation in her Appendix 2.

969. The Panel visited the site and we agree with Ms Hadfield that given the use of the neighbouring site being industrial, and the usage of the residence being directly connected with that usage, Lot 2 DP 2261 should be rezoned to Light Industrial, being consistent with Ms Easton's recommendation. The Panel notes that Ms Easton, within her reply, supported rezoning 139 Arnold Valley Road, the manager's residence, to light industrial. The Panel recommends Lot 2 DP2261 be rezoned LIZ.

970. In relation to the International Panel and Lumber (IPL) (FS98.005) car park zoning error, the Panel accepts Ms Hadfield's evidence that IPL contacted Davis Ogilvie in May 2023 to lodge a further submission after they noticed that the zoning of part of their land at Gladstone, containing the staff car park for the IPL factory, had been proposed for re-zoning under the notified TTPP. The car park site (Part Lot 2 DP 1460) is held in the same title as the main factory site (Lot 1 DP 1460). A copy of Record of Title WS1A/184 was attached as Appendix 1, to Ms Hadfield's evidence. Under the operative Grey District Plan, the IPL factory site, including the car park, was included in the Industrial Zone. Under the TTPP, the car park has been re-zoned as Rural Lifestyle.

971. Ms Easton's advice to the Panel was that the Rural Lifestyle Zoning of the car park located on Osmond Road, Gladstone, adjacent to the factory building, is an error and that amending the zoning to General Industrial could be treated as a Clause 16 amendment. The Panel notes that Clause 16 has arisen for consideration because the scope available under the further submission to support rezoning is questionable. We note Ms Hadfield's evidence confirms the carpark has been utilised as a carpark for as long as the factory has been operational, and a common zone over the factory and carpark would be anticipated by both neighbours and plan users alike. The Panel, based on this advice and evidence, recommends utilising clause 16 that the International Panel and Lumber Carpark, being Part Lot 2 DP 1460, be rezoned General Industrial, as is the status quo under the operative Plan.

972. In relation to the Griffen & Smith Ltd (S353.004) submission, which identified an anomaly in the Zone maps in that there are areas around the Mitre 10 Site and Blaketown lagoon zoned General Rural Zone. This includes the flood wall, the road reserve, the railway line, and some areas of Council-owned land adjacent to the airport. This submitter sought that they be rezoned to reflect the zoning of the adjacent land as follows:

- That the of the railway line adjacent to the Commercial Zone is rezoned as Commercial Zone, not zoned General Rural Zone
- The legal road between Mitre 10 and the Greymouth Hospital (which includes the hospital entrance) should be shown as road, not zoned General Rural Zone
- All the Council owned land south of Raleigh Street that forms part of the Airport should be zoned Special Purpose (Airport Zone)
- The flood wall and the triangular parcels of land around Waterwalk Road should be zoned Open Space Zone. 7. These amendments are shown in the map below:

973. Ms Hadfield provided additional planning evidence to support the proposed rezoning. Ms Easton, in her s42A addendum report, agreed that the General Rural Zone identification of these lands is an error, and supports the approach proposed by the submitter as outlined in that planning evidence. The Panel accepts the evidence of Ms Hadfield and agrees with Ms Easton's recommendation to rezone the land as detailed on the map in Appendix 3.

Westland District

974. In relation to the Several submitters[163] that sought to rezone 148 Kumara Junction Highway to Settlement Zone - Rural Residential Precinct, Ms Easton did not support these submissions due to concerns about reverse sensitivity on the SFF site, noting that SFF has concerns about residential uses on their southern boundary, and rezoning on the northern boundary would magnify these issues. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

975. In relation to a submission from Westland Farm Services (S550.015) seeking that the General Rural part of Rural Section 1264 and Section 8-10 Survey Office Plan 12249 be rezoned to Settlement Rural Residential Precinct, Ms Easton supported this submission as she considered this a zoning error. The Panel agrees with Ms Easton's recommendation to accept the submission for the reasons she provides, and the site be rezoned to Settlement Rural Residential Precinct.

976. In relation to a submission from Freehold Properties (Investments) LLP (FP) seeking that 2902 Franz Josef Highway be rezoned as Settlement Zone, Ms Easton did not support this submission as there is no Settlement Zone on the west side of the State Highway and this site is in a wider rural area. Westland District Council confirmed this would not accord with the wider plan for the Franz Joseph area. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

977. In relation to a submission from Forest Habitats Ltd and Jacbrat Holdings Limited (S138.001, S220.001) seeking that the zoning of 135 Ruatapu-Ross Road is changed from General Rural to Rural Lifestyle, Ms Easton supported this submission as Westland District Council consider this would be an appropriate transition from the Settlement Zone and allow some expansion of the Ruatupu community. The Panel agrees with Ms Easton's recommendation to accept the submission for the reasons she provides, and the site be rezoned to Rural Lifestyle.

Forest Habitats Limited

978. In relation to a submission from Forest Habitats Limited seeking that 117 Arthurstown Road be rezoned to Settlement Zone - Rural Residential Precinct, Ms Easton did not support this submission. Ms Easton's reasons noted that this property is within a wider area of the General Rural Zone; the rezoning would result in fragmentation of that zone and could create reverse sensitivity effects with primary production. In addition, the surrounding roads are subject to flood risk, and the increased residential population in this area is considered undesirable.

979. Ms Easton noted in her s42A report that Forest Habitats had a resource consent in process for part (27.3834ha) of the submission site. The submission site is some 98ha as shown on Appendix 1 of the evidence of Mr MacDonell dated 25 June 2024.

980. Since our hearing a Commissioner has released a decision, dated 14 March 2025, approving an application to subdivide land into 17 allotments (including amalgamation) and land use

[163] Denis and Wendy Cadigan, Birchfield Ross Mining Limited, and Phoenix Minerals Limited

consent to erect a total of 12 dwellings, including no more than one dwelling per allotment on Lots 1 to 12, and to form an unformed legal road for residential access, resulting from the three-stage subdivision of land at 117 Arthurstown Road, Hokitika.

981. The consented site is located on the Hokitika River side of Arthurstown Road, with the balance of the submission site being situated to the south of Arthurstown Road. Ms Easton has confirmed in response to a post-hearing question from the Panel that no appeals have been lodged against the resource consent decision, with the appeal period having lapsed.

982. Ms Easton's reply noted that the proposed rezoning is much more extensive than the commentary or map in the s42A report implied. As presented to the hearing by Forest Habitats Limited, a large area, some 98 ha. in the Arthurstown locality is sought to be rezoned from General Rural, as notified, to Rural Residential Precinct. Ms Easton considered this rezoning to be inappropriate, and she did not support it. Principally, she was concerned about the flood hazard in the area, which has been identified based on a LIDAR-informed hydrodynamic model, under a 1:100-year flood, generally regarded as the "gold standard" for flood modelling.

983. Ms Easton advised that the Arthurstown area is a well-known flooding area, and part of the property proposed includes an area of Flood Hazard Severe, as well as most of the Title 2 and 3 properties, as shown on the Plan titled "Plan of Existing 9 Titles with Possible House", dated 4 April 2024 attached as Appendix 3 to Mr MacDonell's evidence being covered by the Flood Hazard Alert overlay.

984. Ms Easton advised that while the TTPP Flood Hazard Overlays do not include an allowance for climate change, this information is available and was included in part of the evidence presented. This shows that the submission site would be under 0.5 – 1m of water in a 1:100-year flood. Localised changes to the Hokitika River, as outlined in the submitter's evidence, have occurred because of the normal dynamic process of braided rivers in "normal" years and do not reflect how the river might respond in a significant flood event. Ms Easton noted that a substantial part of the submission site is also covered by the Coastal Hazard Alert Overlay, as identified in Variation 2, indicating that, as well as flood risk, there is significant risk from storm surge inundation in a large coastal hazard event.

985. Now that post hearing a resource consent has been granted for part of the site, the Panel need to decide whether we can consider that consent, and if so, what is the outcome, in this process, for the entire submission site. We note that we were certainly aware, based on the evidence from both Forest Habitat and Ms Easton, that a resource consent was in process. It seems to the Panel that it is artificial to ignore the fact that a consent for part of the site has been granted subject to conditions.

986. Notwithstanding the above, applicable considerations for a resource consent and recommendations on a proposed plan are different. Resource consent considerations are focused on the subject site, its surrounds, the application, its effects and the provisions of relevant plans. Our recommendation process has a district-wide focus, considering from an efficiency and effectiveness point of view which Plan provisions, that is, the notified or those promoted by submitters, best meet the purposes of the RMA.

987. So, in this case, the question is whether the notified plan provisions and zoning of General Rural or those supported by Forest Habitat, which are the Rural Residential Precinct provisions and zoning, are better in achieving the purpose of the RMA. We note that other Chapters, such as the Hazards Chapter of the Plan, will have Plan provisions that also apply to this site.

988. The consent includes a number of conditions. Those resource consent conditions have a focus on hazards, primarily flooding, which provides for conditions requiring that the minimum finished floor levels of any dwelling, including a buffer, shall be designed, constructed, and thereafter maintained to a minimum height of RL 6m in terms of NZVD 2016. However, all future building sites are required to be assessed by a registered engineer at the time of building consent to ensure that higher modelled flood levels above RL6m do not apply to that building site. In the instance that they are applicable, the finished floor level of any dwelling shall be designed, constructed and thereafter maintained to be 500mm above that higher flood level. Climate change and storm surge are to be assessed and provided for. Certification from the engineer that the floor height of the proposed dwelling meets conditions is to be supplied to Westland District Council with the building consent application.

989. The Commissioner, in granting consent, was satisfied that conditions, including those detailed above, would protect buildings from hazards. As well, reliance was placed on warnings to occupants to vacate in the event of a threat of hazards.

990. The Panel note, based on the submitter's evidence of flood modelling from Hutchinson, Consulting Engineers, the flood modelling for titles 5, 6, and 7 located south of Authurstown Road provides similar depths and flood velocities to those on the northern side of the road. So similar conditions as to dwelling floor levels would be required.

991. Title 5 is 42.27 ha; Title 6 is 14.4ha, and Title 7 is 13.7ha. So, assuming rezoning to Settlement Zone - Rural Residential Precinct, the minimum lot size for subdivision is 4000m^2; for less than this, it is a Discretionary Activity.

992. Any subdivision would, however, be a Restricted Discretionary Activity under SUB-R13 because it would be to create allotments in the Flood Susceptibility Overlay. Matters of discretion in SUB-R13 include c. *the location and design of proposed buildings, vehicle access and infrastructure concerning natural hazard risk*. Natural Hazards Overlays apply to titles 5-7. Flood Hazard Susceptibility entirely covers Title 7, Title 5 is about 95% covered by Flood Hazard Susceptibility, and Title 6 is about 85% covered by Flood Hazard Susceptibility. New buildings for sensitive activities (which include residential) must have a finished floor level of 500mm above the 1% AEP event (Rule NH-R10 - Permitted Activity). So, the subdivision rule could restrict the locations of buildings, and the natural hazard rule would set the freeboard requirement.

993. The Panel acknowledge that this exercise on the application of TTPP provisions shows that the Plan can control both the placement and conditions under which dwellings could be constructed on the southern side of the submission site. However, when considering the submitters' flood modelling evidence provided by Hutchinson Consulting Engineers, we are unclear as to how many new dwellings could be constructed as, perhaps understandably, possible building platforms were not identified for the southern portion of the submission site to the same degree of detail as for the now consented portion. So, we are unclear how many dwellings could be involved and how many more people may be in any development.

994. As to fragmentation, Mr MacDonell pointed out that as of right, some of the sites within the submission site could be built on, so if fragmentation is an issue, fragmentation has already occurred, and more development will not have a significant impact. As well, he noted that the land is not highly productive, with limited production potential. Grazing at low densities appeared to be the current primary rural activity. Mr MacDonell considered that reverse sensitivity effects with rural-based activities would not arise. He did not consider that the presence of mining to the south of the subject site would cause reverse sensitivity issues for

the mine. He considered that a sufficient buffer distance was in place to address any reverse sensitivity effects on that mining activity. Mr MacDonell did not comment on the suitability or functionality of the immediate roading network in the event of a hazard.

995. Assuming rezoning, we accept that the plan provisions could, based on modelling of hazards, limit the number and location of new dwellings, and control dwelling floor heights. However, we are unclear on the number of dwellings that could be established on the balance of the submission site, assuming rezoning. We assume that, given the size of the balance area, there could be a large number of dwellings. Given what we know of flood risk, notwithstanding that a resource consent has been granted for a small portion of the submission site, we consider that increasing the number of people who could be exposed to flood risks beyond that allowed by the consented site would be inappropriate. While flood modelling can be conservative, it is only modelling. There is no guarantee that future flooding will follow the modelled predictions. Floods will place occupants and those called on to assist in rescue or recovery at risk. Existing roading may be capable of remaining available in times of flood, or not. As well, property, including assets such as waste infrastructure, could be damaged beyond repair during a flood. We did not receive evidence that there were no other available options for housing development in the locality. For all these reasons, plus those advanced by Ms Easton, we do not consider rezoning the submission site, including that part now consented, to be appropriate. Hence, we recommended the submission be rejected and the notified zoning for the submission site be retained.

Other Submissions

996. In relation to a submission from Erin Stagg seeking a larger area of Settlement Zone around Haast township, Ms Easton did not support this submission, noting that the pTTPP already provided substantial Settlement Zoning to allow for growth, and further rezoning would take residential development closer to the airport with associated reverse sensitivity risks. She also noted that updated coastal hazard mapping identifies a larger area that will be affected by inundation hazard than the Proposed Plan hazard mapping indicates, making the larger block inappropriate for upzoning. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

997. In relation to a submission from Totally Tourism to rezone Lot 33 Deposited Plan 409401, to Settlement zone - Settlement Centre Precinct, Ms Easton did not support this submission, as there is no planned servicing infrastructure in this area. The existing Franz Alpine Resort water supply is non-compliant with new residents required to provide on-site wastewater and water supply tanks. Ms Easton also notes that the Alpine Fault traverses this site. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

998. In relation to a submission from Gavin Molloy seeking that the zoning of the land at Franz Alpine Resort as Tourist and Residential Zone and the Westland District Plan provisions are carried over into TTPP, Ms Easton did not support this submission. Ms Easton noted that downzoning of this area has occurred in response to issues that have arisen over time, including concerns about water infrastructure and the availability of better information about natural hazard risks. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

999. In relation to a submission from Hapuka Landing Ltd seeking to rezone Lots 1-18 DP 498766, Lot 19 DP 498766 and Lot 100 DP 498766 from General Rural Zone to Settlement Zone Coastal Settlement Precinct or an alternative that recognises the existing environment, Ms Easton did

not support this submission. Ms Easton acknowledged that the area has been subdivided with one house developed on the site but did not support the rezoning as she was not clear on what the most appropriate zoning would be and had concerns about the development being within the Coastal Hazard Severe Overlay. Ms Easton noted that residential buildings are non-complying under this overlay, and this is why a General Rural zone was applied to the site. However, permitted activity standards in this zone do not apply to these properties. She considered that a Settlement Zone – Coastal Settlement Precinct Zone would send a message that further development was appropriate. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

1000. In relation to a submission from Hindman Smartsaw Ltd (S37.001) seeking to rezone Lot 1 and Lot 2 DP 462928 (a sawmill) for industrial use, Ms Easton supported this submission noting this zoning would appropriately reflect the use of this site. The Panel agrees with Ms Easton's recommendation to accept the submission for the reasons she provides and to rezone the site for industrial use.

1001. In relation to a submission from Vance & Carol Boyd (S447.005) seeking a review of the Rural Lifestyle Zone because some sites within this zone are below the minimum permitted lot size, Ms Easton did not support this submission. Ms Easton notes that the zone is new and has been applied across a range of property sizes based on what is considered an appropriate zone, with consideration given to whether further subdivision is appropriate. Ms Easton notes that the submitter's property is in Hannah's Clearing, where the main settlement has a Settlement zone, but the periphery is zoned Rural Lifestyle Zone, with these lots being larger than those in the main settlement and subject to the Coastal Hazard Severe Overlay.The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides and to retain the notified zoning.

General Mapping Issues

1002. In relation to a submission from Westpower Limited (S547.501) seeking that a hashed line shown in the planning maps on 10 West Drive be deleted, Ms Easton supported this submission, considering this a mapping error. The Panel agrees with Ms Easton's recommendation to accept the submission for the reasons she provides and to delete the hashed line as shown in the planning maps on 10 West Drive.

1003. In relation to a submission from Lynley Hargreaves (S481.024) seeking that there be no rezoning of areas where there has not been public consultation on the approach, Ms Easton did not support this submission. Ms Easton noted that consultation had been carried out through the development of the pTTPP and that, as the operative Plans are very old, very substantial rezoning was necessary due to NPS requirements and the plan being a combined plan. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides.

1004. In relation to a submission from Cape Foulwind Staple 2 Ltd (S568.002) seeking that all planning maps accurately reflect legal appellations at the time of printing, Ms Easton supported this submission in part noting that the PTTPP maps were produced with the most up-to-date cadastral information available at the time. However, as updating of the pTTPP base maps is not automatic and will be undertaken periodically, at times, not all legal titles will show on the maps. The Panel agrees with Ms Easton's recommendation to accept this submission in part for the reasons she provides.

1005. In relation to a submission from Jackie and Bart Mathers and Gillman (S228.009) seeking the rail corridor to be rezoned from General Rural to Rural Lifestyle on the basis that it could provide for coastal retreat once no longer required for rail purposes, Ms Easton did not support this submission. Ms Easton noted that this would require a split zoning as the corridor outside of the main towns is zoned General Rural, and that NZRC owns this land and is unlikely to be available. The Panel agrees with Ms Easton's recommendation to reject the submission for the reasons she provides.

Hearing Panel's Recommendation

1006. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends that the relevant submission points identified in the footnotes below are accepted or accepted in part and recommends that the following amendments be made to the **Planning Maps and as shown in Appendix 1**:

Zoning	
Precincts	
Settlement Zone – Rural Residential Precinct 4	Strips of land adjacent to the road from the former cement works site to the end of lighthouse road between Cape Foulwind Road and the adjoining SETZ-PREC4 land at Omau. General Rural Zoned part of Part RS 1264 and Section 8-10 Survey Office Plan 12249
General Rural Zone	3 Bayfield Street, Seddon Section 2 SO 12078 SNA area on the CMP Kokiri site
Rural Lifestyle Zone	42 Hatters Terrace, Nelson Creek, 3316 Coast Road, Barrytown (Lot 2 DP 3403), and two lots in front of 3320 Coast Road (RES 1021 and PT RS 4809 BLK I WAIWHERO SD) Two sites adjacent to 267 Rutherglen Road (Lot 2 Deposited Plan 485621 and Lot 1 Deposited Plan 485621). 388A and 388B Lake Brunner Road 3342 Coast Road, Barrytown
Waipuna Rural Lifestyle	13ha of land at 540 – 578 Waipuna Road, Waipuna
Ross Road Rural Lifestyle Zone	135 Ruatapu – Ross Road, Ruatapu

Light Industrial	Strips of land between Cape Foulwind Road and the adjoining LIZ land at Omau fronting the former cement works. Part Section 8 Block I Steeples Survey District (CFS2 'Area 3' triangle) CMP Kokiri site at 7 Blair Road, Arnold Valley T Croft Limited dwelling at 139 Arnold Valley Road
General Industrial	Hindeman Smartsaw Ltd site Lot 1 and Lot 2 DP462928, Harihari International Panel and Lumber Carpark Part Lot 2 DP 1460
Delete dashed lines	10 West Drive, Hokitika

APPENDIX 1 – RECOMMENDATIONS ON PLAN PROVISIONS

Definitions

Term	Definition
Agricultural aviation activities	**means the intermittent operation of an aircraft from a rural airstrip or helicopter landing area for rural production activities, plantation forestry production, and conservation activities for biosecurity, or biodiversity purposes, including stock management, and the application of fertiliser, agrichemicals, or vertebrate toxic agents (VTA's). For clarity, aircraft includes fixed-wing aeroplanes, helicopters, and unmanned aerial vehicles (UAVs).**
Agricultural, Pastoral and Horticultural Activities	means the use of land or buildings where the primary purpose is to produce livestock, crops and other agricultural produce that relies on the productive capacity of land, and includes: a. agriculture, pastoral/livestock farming, dairying and horticulture except for intensive indoor primary production; b. beekeeping; c. sphagnum moss collection; d. storage of products and initial processing of horticultural and agricultural products produced on that site; e. the storage, treatment and disposal of solid and liquid animal waste; f. wood lots; g. stock sale yards; h. rural research; i. rural produce retail (where the rural produce is grown or produced on site, and products manufactured from it are offered for sale); j. farm quarries; k. intermittent use of rural airstrips and landing areas by aircraft undertaking activities for ~~rural production purposes~~ **agricultural aviation activities**; ~~and~~ **l. greenhouses** **m. artificial crop protection structures; and** n. ancillary structures/accessory buildings.
Commercial Forestry	**means exotic continuous-cover forestry or plantation forestry.**
Exotic continuous-cover forestry	**means** **(a) a forest that is deliberately established for commercial purposes, being at least 1 ha of continuous forest cover of exotic forest species that has been planted and—**

	(i) will not be harvested or replanted; or **(ii) is intended to be used for low-intensity harvesting or replanted; and** **(b) includes all associated forestry infrastructure; but** **(c) does not include—** **(i) a shelter belt of forest species, where the tree crown cover has, or is likely to have, an average width of less than 30m; or** **(ii) forest species in urban areas; or** **(iii) nurseries and seed orchards; or** **(iv) trees grown for fruit or nuts; or** **(v) long-term ecological restoration planting of indigenous forest species; or** **(vi) willows and poplars space planted for soil conservation purposes.**
Farm quarry	means an open pit or excavation from which quantities of soil, stone, gravel or mineral ~~is~~ are extracted for farming activities on the same ~~site~~ **farm property.**
Intensive Indoor Primary Production	Means primary production activities that principally occur within buildings and involve growing fungi, or keeping or rearing livestock (excluding calf-rearing for a specified time period) or poultry. **Advice Note: For the avoidance of doubt intensive indoor primary production does not include wintering barns or herd homes where the primary production activity principally occurs in an outdoor environment.**
Primary Production	**Means:** **a. any aquaculture, agricultural, pastoral, horticultural, mining, quarrying or forestry activities; and** **b. includes initial processing, as an ancillary activity, of commodities that result from the listed activities in a);** **c. includes any land and buildings used for the production of the commodities from a) and used for the initial processing of the commodities in b); but** **d. excludes further processing of those commodities into a different product.**
Land Based Primary Production	**means production from agricultural, pastoral, horticultural, or forestry activities that is reliant on the soil resource of the land.**
Plantation Forestry	**means a forest deliberately established for commercial purposes, being—** **a. at least 1 ha of continuous forest cover of forest species that has been planted and has or will be harvested or replanted; and**

	b. includes all associated forestry infrastructure; but **c. does not include—** **(i) a shelter belt of forest species, where the tree crown cover has, or is likely to have, an average width of less than 30m; or** **(ii) forest species in urban areas; or** **(iii) nurseries and seed orchards; or** **(iv) trees grown for fruit or nuts; or** **(v) long-term ecological restoration planting of forest species; or** **(vi) willows and poplars space planted for soil conservation purposes.**
Specified Māori land	**means:** **(a) Māori customary land and Māori freehold land (as defined in Te Ture Whenua Māori Act 1993):** **(b) land set apart as a Māori reservation under Part 17 of Te Ture Whenua Māori Act 1993 or its predecessor, the Māori Affairs Act 1953:** **(c) land held by or on behalf of an iwi or a hapū if the land was transferred from the Crown, a Crown body, or a local authority with the intention of returning the land to the holders of mana whenua over the land:** **(d) land vested in the Māori Trustee that is constituted as a Māori reserve by or under the Māori Reserved Land Act 1955, and remains subject to that Act:** **and in the context of implementing the National Policy Statement on Indigenous Biodiversity, also means:** **(e) Treaty settlement land, being land held by a post-settlement governance entity (as defined in the Urban Development Act 2020) where the land was transferred or vested and held (including land held in the name of a person such as a tipuna of the claimant group, rather than the entity itself):** **(i) as part of redress for the settlement of Treaty of Waitangi claims; or** **(ii) by the exercise of rights under a Treaty settlement Act or Treaty settlement deed.**
Woodlot	**means a forest of up to 1ha of continuous forest cover of deliberately established forest species that has been planted and has or will be harvested or replanted and is not regulated by the NES – CF due to its size or non-commercial nature. It does not include forest species in urban areas, nurseries and seed orchards, trees grown for fruit or nuts, long term ecological restoration**

	planting of forest species or willows and poplars space planted for soil conservation purposes.

Rural Zones – Objectives and Policies

Overview

Rural areas represent the majority of private land within the West Coast/Te Tai o Poutini. They are working environments – with farming, mining, tourism, horticulture, and forestry being undertaken alongside a number of smaller industries. They contain native bush, wetlands, renewable electricity generation sites and national grid infrastructure. Rural areas are also residential environments – characterised by ~~a~~ lower levels of built development and greater separation distance from neighbours.

The rural area is characterised by its open vistas and natural features that are of importance to the wider community. Components of the rural area include the coastline, waterbodies, vegetation and the absence of built-up areas.

Small settlements and townships are a significant feature within the rural areas of the West Coast/Te Tai o Poutini, with numerous coastal and inland settlements around the districts. Some of these settlements were once much larger, due to past mining and forestry activities which supported the settlements population. Some are expanding, mainly due to the increase in tourism activities or their proximity to the main centres meaning they are becoming more like commuter areas.

Settlements have a range of characteristics – coastal, historic, bush living and rural. They are often typified by the presence of historic or longstanding industrial uses, although commercial activity is only found in the largest of these places.

Because the Rural areas represent such a large part of the West Coast/Te Tai o Poutini, in addition to the RURZ - Rural Zones Objectives and Policies the Strategic Objectives also provide particularly relevant considerations for the management of these areas.

Key points to note are:

- The strategic direction for AG – Agriculture **is** to maintain productive values and maintain agricultural viability **including through enabling support industries and services.**
- **Regionally significant infrastructure, and renewable electricity generation activities are provided for in the strategic directions around climate change and resilience, and are necessary activities within Rural zones**.
- The importance of identifying and protecting unique and important NENV - Natural Environments as well as areas where subdivision use and development can occur;
- Supporting POU - Poutini Ngāi Tahu as kaitiaki, in economic activity around tourism and visitors and in their management of Pounamu and Aotea stone resources;
- The role that the rural areas play in terms of supporting TRM – Tourism as a major economic activity on the West Coast/Te Tai o Poutini.

There are three RURZ - Rural Zones on the West Coast/Te Tai o Poutini - the GRUZ - General Rural Zone, the RLZ - Rural Lifestyle Zone and the SETZ - Settlement Zone.

- The GRUZ - General Rural Zone covers much of the land on the West Coast/Te Tai o Poutini where primary production uses are the major activities. There are two Precincts within the Zone - GRUZ - PREC1 - Community Living Precinct and GRUZ - PREC5 - Highly Productive Land Precinct.

- The SETZ - Settlement Zone covers all the wide range of settlements that are outside of the four main towns throughout the West Coast/Te Tai o Poutini. Because of the range of conditions within the Settlement Zone there are three Precincts within the Zone - SETZ - PREC2 -Settlement Centre Precinct, SETZ - PREC3 Coastal Settlement Precinct, and SETZ - PREC4 - Rural Residential Precinct.
- The RLZ - Rural Lifestyle Zone is located around the edges of towns and settlements. It includes areas that were predominantly farmed in the past, but have gradually moved out of economic primary production, although they still may have rural activities occurring.

Alongside the RURZ - Rural Zone Policies there is a specific policy for each Precinct.

Note with Regard to ~~Plantation~~ Commercial Forestry

There are no specific provisions as relate to ~~plantation~~ **commercial** forestry within the RURZ - Rural Zone Chapters. This is because ~~plantation~~ **commercial** forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial** Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered.

Rural Zones Objectives

RURZ-O1	To provide for a range of activities, uses and developments that maintain the amenity and rural character values of the rural environment, while **protecting** ~~retaining~~ highly productive ~~and rural activities~~ **land for land based primary production**, and supporting a productive rural working environment **and rural activities**.
RURZ-O2	~~To~~ **The Rural Lifestyle Zone** provide**s** for low-density rural lifestyle living on the outskirts of settlements where this will support settlement viability and not lead to conflicts with productive rural land use or rural character.
RURZ-O3	To maintain and enhance the distinctive rural character and amenity of West Coast/Te Tai o Poutini settlements while: c. Allowing settlements to grow and adapt as economic activity changes; d. Providing for commercial and industrial land uses in larger settlements where these landuses provide for local community and rural services.
RURZ-O4	To support the expansion of existing settlements and necessary infrastructure in areas at low risk of natural hazards, and implement hazard management to reduce the risk where existing development is located in high risk locations.
RURZ-O5	To support the use and extraction of mineral resources located within the rural environment, recognising that mineral resources are widespread, and that provided adverse effects are minimised and rehabilitation of land occurs following mineral extraction, mineral extraction can be appropriate in a range of locations.
RURZ-O6	To ensure appropriate levels of infrastructure servicing for communities and development within rural areas, recognising that outside of settlements or major developments, on site infrastructure servicing is expected.
RURZ-O7	**The General Rural Zone is managed to ensure its primary production purpose is not compromised by reverse sensitivity effects.**

Rural Zones Policies

Rural Amenity and Character	
RURZ-P1	**Within the General Rural Zone enable primary production activities as the predominant land use, alongside activities that support primary production**.
RURZ-P~~1~~**2**	~~Enable a variety of activities to occur within RURZ - Rural Zones while maintaining rural amenity and character. Outside of settlements, activities should:~~ **Rural character and amenity within the GRUZ - General Rural Zone and RLZ - Rural Lifestyle Zone is maintained by:** a. ~~For b~~**B**uildings and structures hav~~e~~**ing** a bulk and location that is characteristic of rural environments **and primary production activities**; b. Maintain**ing** privacy and rural outlook for residential buildings; c. **Ensuring activities are** ~~Be~~ compatible with existing development and the surrounding area **while recognising that primary production activities can generate noise, odour and dust;** d. Have~~ing~~ appropriate setbacks from the road **and adjacent primary production activities** ~~significant natural and cultural features~~; **and** e. **Locating activities sensitively in the environment to minimise adverse visual and cultural effects including restricting activities on ridge lines or ancestral mountains.** ~~f. Minimise adverse visual effects if sited on prominent ridges or immediately adjacent to public roads; and~~ ~~g. Have awareness of cultural landscapes and avoid activities being located on the ridgelines and peaks of ancestral mountains~~
RURZ-P~~2~~**3**	Provide for growth and change to settlements **within the SETZ – Settlement Zone** that: c. Improves the long-term viability of the settlements and their communities; d. Fits with the historic, cultural and environmental character of the existing settlement; c. Provides new housing opportunities in locations that are away from significant risks to life, safety and property damage from natural hazards; d. Integrates with the existing residential settlement and maintains a consolidated settlement form; e. Supports rural community needs by providing for community facilities and educational facilities; and f. Does not compromise the ~~dominance of the~~natural and cultural landscape setting and minimises ribbon residential development along the coastline, on prominent spurs, ridges and skylines and avoids development on the ridgelines and peaks of ancestral mountains.

RURZ-P~~3~~**4**	Expansion of existing settlements beyond current boundaries should support the existing character and amenity of the settlement and avoid areas of high hazard risk, high natural or Poutini Ngāi Tahu cultural values, or ~~significant agricultural~~ **primary** production values.
RURZ-P~~4~~**5**	Provide for rural lifestyle development **within the RLZ – Rural Lifestyle Zone**[164] on the outskirts of towns and settlements where this will not conflict with ~~rural production values~~ **primary production activities**, and recognising that these have the following characteristics: f. Large lots with onsite infrastructure servicing; g. A mix of activities; h. Low traffic and moderate noise levels; i. Dominance of open space and plantings over buildings; and j. Setbacks from property boundaries.
Production Values	
RURZ-P~~5~~**6**	~~Recognise that there are only~~ **Protect the remaining** small areas of highly productive land for **land based primary** ~~and soils for agricultural~~ production ~~on the West Coast/Te Tai o Poutini and where possible locate non-agricultural activities outside of these highly productive locations~~ **including by**: **a. avoiding subdivision, unless:** **iv. the proposed lots will maintain the overall productive capacity of the land over the long-term;** **v. on specified Māori land; or** **vi. for regionally significant infrastructure;** **b. avoiding inappropriate use or development that is not land based primary production; and** **c. any subdivision, use or development:** **iii. minimises or mitigates loss of the availability or capacity of high productive land; and** iv. **avoids or otherwise mitigates any reserve sensitivity effects on land based primary production**. **Advice Note: For the purposes of determining what is inappropriate use of development for the purposes of clause b. reference is to be made to the NPS-HPL.**
Non-rural activities	
RURZ-P~~6~~**7**	Recognise that the rural areas may be the most appropriate location for some utility~~y~~**ies**, **regionally significant infrastructure, educational facilities,** industrial or commercial uses to establish, where these have a functional relationship with rural areas, **or where regionally significant infrastructure has a functional need or operational need to locate in that area** provided

[164] Cashmere Bay Dairy Ltd (S461.012)

	the character and amenity of the rural areas is maintained and adverse effects are managed.
RURZ-P~~7~~**8**	Recognise that where non-rural activities are located in rural areas, this should not be to the detriment of the effective function**ing** of towns and settlements, **n**or to avoid the costs of connection to community funded infrastructure.
RURZ-P~~8~~**9**	Provide for new commercial and industrial activities within settlements where this does not detract from residential amenity.
Visitor Economy	
RURZ-P~~9~~**10**	Recognise that the rural areas form an important part of the visitor economy of the West Coast/Te Tai o Poutini, particularly as a location where tourism and visitor attractions are established.
RURZ-P~~10~~**11**	Support the development of appropriate tourism and visitor businesses such as accommodation, education and other facilities which relate to the rural environments in which they are located. **and which do not adversely affect primary production activities**
Infrastructure in Rural Areas	
RURZ-P~~11~~**12**	Subdivision and development in GRUZ – General Rural and RLZ - Rural Lifestyle Zones, the SETZ - PREC3 – Coastal Settlement Precinct and the SETZ - PREC4 -Settlement Zone – Rural Residential Precinct should recognise the character and form of rural infrastructure including: d. Roads with roadside ditches rather than kerb and channel; e. An absence of street lights and urban style footpaths; and f. On-site provision of water supply **with sufficient capacity for firefighting purposes** and on-site land treatment and disposal of stormwater and wastewater.
RURZ-P~~12~~**13**	Within the SETZ – Settlement Zone (outside of the SETZ - PREC3 Coastal Settlement Precinct and SETZ-PREC4 – Rural Residential Precinct) ensure that sufficient wastewater, water supply, refuse disposal, roading, footpath, open space and parking infrastructure servicing is provided as part of new development.
RURZ-P~~13~~**14**	Where community scale infrastructure is developed to support more than 10 privately owned lots this should be to appropriate standards and vested in the Council to ensure ongoing maintenance and renewal.
RURZ-P~~14~~**15**	Where new infrastructure is required to support rural lifestyle development or settlement expansion this new infrastructure should be put in place at the time of development at the expense of the developer.
RURZ – P16	**Ensure that buildings of 18m or more in height within the Westport Radio Mast EM Overlay are designed and constructed to prevent significant safety risks from electromagnetic radiation.** **Advice note: The primary electromagnetic risk in the Westport Radio Mast EM Overlay arises from the potential for tall structures to absorb radio-wave energy from Radio New Zealand's AM transmission station at Cape Foulwind. Radio New Zealand can provide technical advice on the risk to**

	specific proposed structures as well as advice on steps to minimise and reduce risks
Reverse sensitivity	
RURZ-P15**7**	New development should be designed and located with sufficient buffers so that existing rural uses and ~~consented~~ **lawfully established** activities are not unreasonably compromised by the proximity of sensitive neighbouring activities.
RURZ-P16**8**	There should be sufficient buffers provided from infrastructure such as wastewater treatment plants and land disposal areas, **renewable electricity generation activities, electricity** transmission **and other regionally significant** infrastructure and **telecommunication and radiocommunications infrastructure**, and water supply catchments ~~to avoid reverse sensitivity effects on the infrastructure~~ **to ensure that infrastructure is not compromised by reverse sensitivity effects.**
Papakainga Housing	
RURZ-P17**9**	Enable the housing needs of Poutini Ngāi Tahu whānui to be met in rural areas and locations safe from significant natural hazards.
Mineral Extraction	
RURZ-P18**20**	Addressed in the Mineral Extraction Recommendation
RURZ-P19**21**	Addressed in the Mineral Extraction Recommendation
RURZ-P20**22**	Addressed in the Mineral Extraction Recommendation
Airfields and helipads	
RURZ-P26**8**	Provide for development **and use** of ancillary infrastructure such as **rural** airstrips and ~~helipads~~ **helicopter landing areas** which support rural land uses ~~such as farming~~ **including rural production, conservation** and recreation.
RURZ-P27**9**	Manage the location and operation of **rural airstrips** ~~airfield~~ and helicopter landing areas within the rural area **for activities other than primary production, and conservation** to provide for the amenity values of the surrounding rural and settlement areas.
RURZ-P28**30**	Enable aircraft and helicopter movements within the rural area for ~~purposes~~ **agricultural aviation activities** ancillary to rural production on a seasonal and short-term basis.
GRUZ-PREC1 - Community Living Precinct	
GRUZ-PREC1-P1	Subdivision, use and development within the GRUZ - PREC1 - Community Living Precinct should: 1. Provide for grouped housing, community infrastructure and other activities with appropriate buffers to avoid impacts on the amenity of surrounding properties and the environment; 2. Minimise any impacts on natural environment values and appropriately locate wastewater treatment infrastructure to avoid adverse effects on water quality;

3. Provide for appropriate expansion and redevelopment of the buildings and activities within the Precinct, allowing for change and growth of the communities within it; and
4. Be undertaken in a planned manner, in accordance with a concept plan agreed with the Grey District Council.

General Rural Zone

Overview

The GRUZ – General Rural Zone is the largest zone that affects private land on the West Coast/Te Tai o Poutini. Rural land is an important resource as it underpins the social and economic well-being of the West Coast/Te Tai o Poutini. The rural area is a dynamic environment, influenced by changing farming practice and by a wide range of productive activities. The RURZ – Rural Objectives and Policies and GRUZ – General Rural Zone Rules provide the framework for managing the effects of development within this zone.

The GRUZ - General Rural Zone provides for primary production, such as pastoral farming, livestock, horticulture and forestry. It also provides for resource extraction such as quarrying and mining**, regionally significant infrastructure**, and intensive indoor farming, such as indoor poultry and pig farms. These activities have the potential to generate adverse activities beyond the boundaries of a site, for example: noises from farm animals and machinery, odour from dairy-sheds and associated effluent treatment and discharge systems, silage/baleage and agricultural fertiliser, light overspill, and traffic effects from milk tankers, aggregate trucks and stock trucks. The effects of rural production activities therefore need to be appropriately managed and mitigated, while recognising that the GRUZ – General Rural Zone is a production-oriented working environment that is characterised by these activities.

The GRUZ - General Rural Zone is also characterised by an open, vegetated landscape that is interspersed with low density buildings and structures that are predominantly used for rural activities, such as barns and sheds, or larger, more numerous buildings of industrial scale and appearance used for intensive primary production or rural industry. **A number of renewable electricity generation activities are located within this zone and these activities provide a crucial role in ensuring provision of electricity supply to the West Coast and are recognised as regionally significant assets.** Rural halls, domains and schools which serve the needs of the rural community are also present, however there is a general lack of urban infrastructure in the zone such as street lighting and footpaths. Te Tai o Poutini Plan seeks to maintain this rural character.

Where numerous or larger scale buildings or structures are proposed, their location, height and scale are managed to ensure development does not compromise the qualities of the rural setting or rural character.

A range of structures associated with regionally significant infrastructure are also a feature of the rural areas.

Urban activities such as commercial and retail, or industrial activities not associated with primary production, are restricted within the zone. Rural lifestyle subdivision is also limited due to the potential for reverse sensitivity effects impacting on primary production activities and the potential for fragmentation of productive land.

The RURZ – Rural Zones Objectives and Policies and GRUZ – General Rural Zone Rules provide the framework for managing the effects of development in the GRUZ – General Rural Zone. However, there are additional specific policies and different rules for the two precincts – the GRUZ – PREC1 – Community Living Precinct and the GRUZ – PREC5 – Highly Productive Land

Precinct. Where there is a conflict between a GRUZ – General Rural Zone provision and the GRUZ – PREC1 – Community Living Precinct or GRUZ – PREC5 – Highly Productive Land provision, within each Precinct, the relevant Precinct provision applies.

Note with Regard to ~~Plantation~~ Commercial Forestry

There are no specific provisions as relate to ~~plantation~~ **commercial** forestry within the RURZ – Rural Zone Chapters. This is because ~~plantation~~ **commercial** forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial** Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered.

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to the provisions in this chapter, a number of Part 2: District-wide Matters chapters also contain provisions that may be relevant for activities in the GRUZ – General Rural Zone, including:

- ~~Overlay Chapters – the Overlay Chapters have provisions in relation to Historic Heritage; Notable Trees; Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscapes; Natural Character and the Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.~~
- **The ENG Energy chapter contains rules applying to energy activities and renewable electricity generation activities throughout the district, and accordingly the rules in this chapter do not apply to these activities. Similarly, the INF Infrastructure chapter contains rules applying to specified infrastructure such as telecommunications, wastewater, stormwater and water supply installations, pipelines and meteorological facilities and accordingly the rules in this chapter do not apply to those activities.**

  The TRN Transport chapter contains the rules around the development of the transport network and the performance standards that apply for construction of these facilities and accordingly the rules in this chapter do not apply to those activities.[165]
- **Sites and Areas of Significance to Māori, Historic Heritage and Notable Tree Chapters - there may be sites and areas of significance to Māori, historic heritage or notable trees identified on individual sites within the General Residential Zone. Specific information on the provisions that apply to these can be found in the Sites and Areas of Significance to Māori, Historic Heritage, and Notable Trees Chapters.**
- **Natural Hazards - natural hazards are widespread on the coast and in some locations natural hazard overlays may affect areas in the General Residential Zone. Information on natural hazard overlays and provisions can be found in the Natural Hazards chapter.**
- **Natural Character and Margins of Waterbodies -in some locations areas of General Residential Zone may extend into the riparian margins of waterbodies. The Natural Character and Margins of Waterbodies Chapter contains provisions on how these areas must be managed.**
- **Ecosystems and Biodiversity – Where indigenous vegetation clearance is proposed within a Residential Zone, the provisions of the Ecosystems and Biodiversity chapter apply.**[166]

[165] Consequential stemming from Manawa S438.127 and Transpower S299.028,
[166] Forest and Bird (S560.034)

- **General District Wide Matters** - provisions in relation to Earthworks in particular may be relevant to many activities.
- **Subdivision** - The Subdivision Chapter sets out the requirements for subdivision activities in the GRUZ - General Rural Zone.
- **Financial Contributions** – The Financial Contributions Chapter sets out the requirements for contributions of costs for activities which impact on the local network utility operators.

Relationship with Other Plans

Many activities that occur in rural areas are also regulated by the West Coast Regional Council through Regional Plans, including the Regional Land and Water Plan, Regional Air Plan and Regional Coastal Plan. When planning to undertake an activity, the status under the relevant Regional Plans should also be confirmed and any necessary resource consents applied for under both Plans.

GRUZ – R1 Agricultural, Pastoral or Horticultural Activities and Buildings and structures

Activity Status Permitted

Where:

1. Maximum building **or structure** height above ground level is:
   i. 10m; except that
   ii. No building, structure or tree shall protrude into the Airport Approach Path of any airport or aerodrome identified on the planning maps and as described in Appendix Nine;
2. Buildings **and structures** are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary, **5m from the rail designation, 10m from any settlement zone boundary** and ~~10~~**5**m from internal boundaries;
3. The minimum separation distance between buildings housing more than 10 animals or commercial livestock and a residential/settlement/rural lifestyle zone boundary shall be 30m and from any residential building on another site 50m, and from any other boundary 20m;
4. Woodlots are not established within:
   i. 10m of the boundary of an adjoining property unless that property is within plantation forest; and
   ii. 40m of a dwelling.
      1. Within the Rifle Range Protection Areas only buildings that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities are established; ~~and~~
      2. Performance standards for beekeeping in the Westland District apply as follows:

iii. No bees may be kept on a property less than 600m^2 net site area; and

iv. Beehives must be placed with an obstruction in front of them or be elevated to enable bees to be 2.5m above ground level prior to crossing the site boundary~~;~~.

1. **The maximum ground floor area of any single building is 1000m^2 or 500m^2 for any residential building**;
2. **Vehicle crossing standards in Rule TRN – R1 are met**; **and**

3. **No building housing sensitive activities shall be located within 150m of a Designated community wastewater treatment facility site boundary**.

Advice Note:

1. If land is used for disposal of effluent or solid waste then there may be rules in the Regional Air Plan and Regional Land and Water Plan administered by West Coast Regional Council.
2. Quarrying activity within the Pounamu and Aotea Overlays is subject to Rule SASM – R7.

Activity status where compliance not achieved: **Restricted Discretionary for Agricultural, Pastoral or Horticultural buildings not meeting standard 7, Otherwise** Discretionary

GRUZ – R2 Conservation and Recreation Activities

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with.
2. Within the Rifle Range Protection Areas, Recreation Activities are restricted to Recreational Firearms ~~Target~~ **Shooting.**

Activity status where compliance not achieved: Discretionary where 1 is not complied with Non-complying where 2 is not complied with.

GRUZ-R3 Residential Activities and Residential Units

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with;
2. No residential activities or residential units occur within the Rifle Range Protection Area;
3. Residential unit density is no more than one unit per 10ha net site area in the Highly Productive Land Overlay and one unit per 4ha net site area in the rest of the General Rural Zone except
   i. Where:
      a. The site is already in existence and complied with the previous relevant Grey, Buller or Westland District Plan density provisions; or
      b. The site is subject to an approved subdivision consent at the operative date of the plan;
      c. Then the residential unit density is no more than one unit per site;
   ii. Where this is within the Community Living Precinct and in accordance with the Concept Plan contained in Appendix Eight; ~~and~~
4. There is no more than 3 minor residential units per 10ha net site area that:
   i. Are located within 20 metres of and share the driveway with either the principal dwelling; or
   ii. Are worker accommodation associated with primary production buildings; **and**
5. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008**).

Activity status where compliance not achieved:

Restricted Discretionary where this is Temporary Worker Accommodation subject to Rule GRUZ – R22, Otherwise Discretionary

Advice Notes:

1. Where a residential building or noise sensitive activity is located within:

vi. 80m of a State Highway with a speed limit of 70kph or greater; or

vii. 40m of a State Highway with a speed limit of less than 70kph; or

viii. 40m of a Railway Line; or

ix. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

x. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements are set out in Rule NOISE – R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

GRUZ-R4 Papakāinga Developments

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with;
2. No papakāinga development occurs within any Rifle Range Protection Area;
3. Residential building density is no more than one unit per hectare net site area, however units are able to be clustered; ~~and~~
4. On-site wastewater, water supply and stormwater systems are developed to serve the entire papakāinga**; and**
5. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008)**

Advice Notes:

1.Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements set out in Rule NOISE – R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

GRUZ – R5 Minor structures

Activity Status Permitted

Where:

1. These are not structures associated with Agricultural, Pastoral and Horticultural Activities Permitted under Rule GRUZ – R1;
2. ~~All performance standards for Rule GRUZ – R1 are complied with~~; **Structures are set back a minimum of 10m from the road boundary, 20m from the State Highway boundary and 5m from internal boundaries**
3. Masts, poles, aerials and pou whenua must not exceed 7m in height;
4. Any antenna dish must be less than **1.5m** in diameter;
5. Any other structure must not exceed 10m^2 and 2m in height; and
6. Within the Rifle Range Protection Area only minor structures that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities undertaken within the area are established.

Activity status where compliance not achieved: Controlled

GRUZ-R6 Fences, Walls and Retaining Walls

Activity Status Permitted

Where:

1. Fences, walls and retaining walls are a maximum 2m height above ground level;
2. The fence, wall or retaining wall is not used for advertising or any other purpose other than a fence, retaining wall or wall; and
3. Within the Rifle Range Protection Area only fences walls and retaining walls that are reasonably necessary for the operation of the Rifle Range or to carry out Agricultural, Pastoral or Horticultural Activities undertaken within the area are established.

Activity status where compliance not achieved: **Restricted** Discretionary

~~**GRUZ-R7 Relocated Buildings**~~

~~Activity Status Permitted~~

~~Where:~~

~~1. All performance standards for Rule GRUZ – R1 are complied with;~~
~~2. Any relocated building intended for use as a dwelling must have been designed and built to be used as a dwelling;~~
~~3. A building pre-inspection report shall accompany the application for a building consent for the destination site. That report is to identify all reinstatement works that are to be completed to the exterior of the building. The report shall include a certification by the property owner that the reinstatement works shall be completed within a 12 month period;~~
~~4. The building shall be located on permanent foundations approved by building consent no later than 2 months of the building being moved to the site; and~~
~~5. All other reinstatement work required by the building inspection report and the building consent to reinstate the exterior of any relocated dwelling shall be completed within 12~~

~~months of the building being delivered to the site. This reinstatement work is to include connections to all infrastructure services and closing in and ventilation of the foundations.~~

~~Activity status where compliance not achieved: Controlled~~

GRUZ -R~~8~~7 Residential Visitor Accommodation

Activity Status Permitted

Where:

1. This is ancillary to a residential or rural activity or is located within the GRUZ – PREC1 – Community Living Precinct;
2. All performance standards for Rules GRUZ – R1, NOISE – R1, -R2 and -R5, LIGHT – R1 and -R3 and SIGN – R15 are complied with;
3. There is a maximum of 6 paying guests at any one time;
4. Notification to the District Council is required 10 working days prior to the activity commencing;
5. Records of letting activity must be kept and provided to the Council ~~on request~~ **annually**;
6. No heavy vehicle movements are generated; and
7. In the Buller District, the accommodation is homestay accommodation with a permanent resident living on site.

Advice Note:

Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or
ii. 40m of a State Highway with a speed limit of less than 70kph; or
iii. 40m of a Railway Line; or
iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or
v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements set out in Rule NOISE – R3 will apply.

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R~~9~~8 Home Business

Activity Status Permitted

Where:

1. This is ancillary to a residential activity;
2. All performance standards for Rules GRUZ – R1, NOISE – R1, -R2 and -R5, LIGHT – R1 and -R3 and SIGN – R15 are complied with;
3. **There are no more than two full-time equivalent persons engaged in the home business that reside off site**
4. ~~A maximum of 10 heavy vehicle movements occurs per day and whichever is the greater of 30 light vehicle movements per day or 210 light vehicle movements per week; and~~
4. No external generation of dust, odour or smoke occurs as part of the activity.

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R~~10~~9 Emergency Service Activity

Activity Status Permitted

Where:

1. All performance standards for Rule GRUZ – R1 are complied with except that:
   a. Hose drying towers are exempt from the height standard; and
   b. A setback of 5m from the road or State Highway Boundary is required.
2. **Where the facility will located within the Westport Radio Mast EM Overlay, any hose drying or siren tower of 18m or greater must be certified by Radio New Zealand that the risk of Electromagnetic coupling with this structure has been mitigated.**

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-R1~~3~~2 Community Halls

Activity Status Permitted

Where:

1. No restriction on hours is in place for up to 12 days per calendar year;
2. No restriction on hours is in place where the hall is in use for Civil Defence Emergency Management purposes;
3. For circumstances other than outlined in **1 and** 2 ~~and 3.~~ above, hours of operation are limited to:
   i. 7am to 10pm Sunday – Thursday;
   ii. 7am to 12~~pm~~**am** midnight Friday and Saturdays

Activity status where compliance not achieved: Restricted Discretionary

GRUZ-14~~3~~ Community Facilities and Educational Facilities in the Community Living Precinct

Activity Status Permitted

Where:

1. These facilities are located in accordance with the Concept Plan in Appendix Eight.

Activity status where compliance not achieved: Controlled

Controlled Activities

GRUZ-R1~~5~~4 Community Facilities and Educational Facilities in the Community Living Precinct not meeting Permitted Activity Standards

Activity Status Controlled

Matters of control are:

a. Design and location of structures; and
b. ~~Landscape measures~~ **Measures to mitigate landscape effects**;
c. Methods of wastewater and stormwater treatment and disposal;
d. Methods of ensuring safe drinking water supply;
e. Any requirement for financial contributions; and

f. Parking and access.

Activity status where compliance not achieved: N/A

GRUZ-R16<u>5</u> Minor structures not meeting Permitted Activity Standards

Activity Status Controlled

Where:

1. The minor structure does not exceed 10m in height; and
2. All other performance standards for Rule GRUZ – R1 are complied with.

Matters of control are:

a. Design and location of structures; and

b. ~~Landscape measures~~ **<u>Measures to mitigate landscape effects</u>**.

Activity status where compliance not achieved: Discretionary

~~**GRUZ-R17 Relocated Buildings not meeting Permitted Activity standards**~~

~~Activity Status Controlled~~

~~Where:~~

~~All performance standards for Rule GRUZ – R1 are complied with.~~

~~Matters of control are:~~

~~a. Design and location of structures;~~

~~b. Methods of wastewater and stormwater treatment and disposal;~~

~~c. Methods of ensuring safe drinking water supply;~~

~~d. Any requirement for financial contributions;~~

~~e. Landscape measures; and~~

~~**f.** Appearance of buildings.~~

~~Activity status where compliance not achieved: Discretionary~~

GRUZ – R1~~9~~<u>7</u> Intensive Indoor Primary Production in the Community Living Precinct

Activity Status Controlled

Where:

1. All performance standards for Rule GRUZ – R1 are complied with; and
2. This is located in accordance with the Concept Plan in Appendix Eight.

Matters of control are:

a. Design and location of buildings;

b. Management of access, traffic and parking;

c. Management of odour, noise, lighting and dust;

d. Method of effluent management and disposal;

e. ~~Landscape measures~~ **<u>Measures to mitigate landscape effects</u>**;

f. Hours of operation;

g. Any impacts on the production values of surrounding land;

h. Effects on visual amenity and rural character; and

i. Methods of wastewater and stormwater treatment and disposal.

Activity status where compliance not achieved: Restricted Discretionary

Restricted discretionary activities

GRUZ-R~~20~~18 Intensive Indoor Primary Production

Activity Status Restricted Discretionary

Where:

1. All performance standards for Rule GRUZ – R1 are complied with.

Discretion is restricted to:

a. Bulk and location of buildings;

b. Management of access, traffic and parking;

c. Management of odour, noise, lighting and dust;

d. Method of effluent management and disposal;

e. ~~Landscape measures~~ **Measures to mitigate landscape effects**;

f. Hours of operation;

g. Any impacts on the production values of the surrounding land;

h. Any requirement for financial contributions;

i. Effects on visual amenity and rural character; and

j. Methods of wastewater and stormwater treatment and disposal.

Activity status where compliance not achieved: Discretionary

GRUZ-~~21~~19 Rural Industry

Activity Status Restricted Discretionary

Where:

1. All performance standards for Rule GRUZ – R1 are complied with.

Discretion is restricted to:

a. Bulk and location of buildings;

b. Management of access, traffic and parking;

c. Management of odour, noise, lighting and dust;

d. Hours of operation

e. ~~Landscape measures~~ **Measures to mitigate landscape effects**;

f. Any requirement for financial contributions;

g. Any impacts on the production values of the surrounding land;

h. Effects on visual amenity and rural character; ~~and~~

i. Methods of water supply; **and**

j. Methods of wastewater and stormwater treatment and disposal.

Activity status where compliance not achieved: Discretionary

GRUZ-R22~~0~~ Visitor Accommodation ~~and~~ not meeting Permitted Activity Standards and Temporary Worker Accommodation

Activity Status Restricted Discretionary

Where:

1. This is ancillary to a farming, conservation or residential activity; and
2. All performance standards for Rule GRUZ – R1 are complied with.

Discretion is restricted to:

a. Number of visitors/workers staying on site;

b. Number of days of use for the accommodation;

c. Management of traffic and parking;

d. ~~Landscape measures~~ **Measures to mitigate landscape effects**;

e. Any requirement for noise insulation where these are located by a State Highway or within an Airport Noise Overlay;

f. Any impacts on the production values of the surrounding land;

g. Any requirement for financial contributions;

h. Effects on visual amenity and rural character; and

i. Methods of wastewater treatment and disposal.

Activity status where compliance not achieved: Discretionary

GRUZ-R23~~1~~ Papakāinga Developments not meeting Permitted Activity Standards

Activity Status Restricted Discretionary

Where

1. These are not established within any Rifle Range Protection Area.

Discretion is restricted to:

a. Design and location of structures;

b. Requirements for wastewater, water supply or stormwater servicing;

c. Any requirement for noise insulation where these are located by a State Highway or within an Airport Noise Overlay;

d. Any requirement for financial contributions; ~~and~~

e. ~~Landscape measures~~ **Measures to mitigate landscape effects**.

f. **Management of access and parking and**

g. **Within the Westport Radio Mast EM Overlay, any requirements to mitigate the risk of electromagnetic coupling, including during the construction phase**.

Activity status where compliance not achieved: Non-complying

~~**GRUZ-R24 Non-rural activities**~~

~~Activity Status Restricted Discretionary~~

~~Where:~~

~~1. The maximum floor and yard area for any non-rural activity shall be 250m^2; and~~

~~2. All performance standards for Rule GRUZ – R1 are complied with.~~

~~Discretion is restricted to:~~

~~a. Management of access, traffic and parking;~~

~~b. Landscape measures;~~

~~c. Hours of operation;~~

~~d. Management of odour, noise, lighting and dust;~~

~~e. Any impacts on the production values of the surrounding land;~~

~~f. Any requirements for management of hazardous substances in accordance with the objectives and policies in the Hazardous Substances chapter;~~

~~g. Any requirement for financial contributions;~~

~~h. Effects on visual amenity and rural character; and~~

~~i. Methods of water supply, wastewater and stormwater treatment and disposal.~~

~~Activity status where compliance not achieved: Discretionary~~

GRUZ-R2~~6~~3 Community Facilities, Educational Facilities and Emergency Service Facilities not Meeting Permitted Activity Standards

Activity Status Restricted Discretionary

Discretion is restricted to:

a. Management of access, parking and traffic generation;

b. Hours of operation;

c. Noise management and lighting;

d. ~~Landscape measures~~ **Measures to mitigate landscape effects; and**

e. Within the Westport Radio Mast EM Overlay, any requirements to mitigate the risk of electromagnetic coupling, including during the construction phase.

Activity status where compliance not achieved: N/A

GRUZ – R24 Fences, Walls and Retaining Walls not meeting Permitted Activity Standards

Activity Status Restricted Discretionary

Discretion is restricted to:

a. Design and location of structures

b. Height of structures

c. Shading and dominance effects on adjoining sites.

Activity status where compliance not achieved: N/A

GRUZ – R25 Agricultural, Pastoral and Horticultural Activities where the Maximum Ground Floor Area of any Building does not Meet Permitted Activity Standards

Activity Status Restricted Discretionary

Discretion is restricted to:

a. Bulk and location of buildings;

b. Effects on visual amenity and rural character;

c. Measures to mitigate landscape effects; and

d. Methods of stormwater treatment and disposal.

Activity Status where Compliance Not Achieved: N/A

Discretionary Activities

GRUZ-R2~~7~~6 Agricultural, Pastoral and Horticultural Activities, Conservation and Recreation Activities not meeting Permitted, Controlled or Restricted Discretionary Activity Standards

Activity Status: Discretionary

Activity status where compliance not achieved: N/A

GRUZ-R2~~8~~7 Minor Structures, ~~Fences, Walls, Retaining Walls and Relocated Buildings~~ not meeting Permitted or Controlled Activity Standards

Activity Status: Discretionary

Activity status where compliance not achieved: N/A

GRUZ-R2~~9~~8 Intensive Indoor Primary Production or Rural Industry not meeting Permitted or Restricted Discretionary Activity Standards

Activity Status: Discretionary

Activity status where compliance not achieved: N/A

GRUZ-R3~~0~~29 ~~Non-rural~~ Industrial and Commercial activities ~~not meeting Permitted or Restricted Discretionary Activity Standards~~ Excluding Rural Industry

Activity Status: Discretionary

Where:

1. The activity is not ~~for large format retail~~ **a Commercial activity** with a floor and/or yard area of greater than 250m^2; nor any
2. ~~Non-rural i~~ **Industrial** activities located within 10km of any Industrial Zone site of sufficient size to accommodate the activity.

Activity status where compliance not achieved: Non-complying

GRUZ-R3~~1~~0 Visitor and Temporary Worker Accommodation not meeting Permitted or Restricted Discretionary Activity Standards

Activity Status Discretionary

Where:

~~1. The visitor and temporary worker accommodation is ancillary to a farming, conservation or residential activity.~~

Activity status where compliance not achieved: ~~Non-complying~~ **N/A**

GRUZ-R3~~3~~2 Residential Activities and Residential Units not meeting Permitted ~~or Restricted Discretionary~~ Activity Standards

Activity Status Discretionary

Where:

1. This does not occur within any Rifle Range Protection Area.

Activity status where compliance not achieved: Non-complying

GRUZ-3~~5~~3 Any Activity not provided for by another Rule in the zone

Activity Status: ~~Non-complying~~ **Discretionary**

Activity status where compliance not achieved: N/A

Non-complying Activities

GRUZ-34 ~~Non-rural Activities, Visitor and Temporary Worker Accommodation~~ Residential Activities and Residential Units, Commercial and Industrial activities not meeting any other Rule in the zone

Activity Status: Non-complying

Activity status where compliance not achieved: N/A

Rural Lifestyle Zone

Overview

…

Other relevant Te Tai o Poutini Plan provisions
It is important to note that in addition to the provisions in this chapter, a number of Part 2: District-wide Matters chapters also contain provisions that may be relevant for activities in the GRUZ - General Rural Zone, including:

- ~~Overlay Chapters - the Overlay Chapters have provisions in relation to Historic Heritage; Notable Trees; Sites and Areas of Significance to Māori; Ecosystems and Indigenous Biodiversity; Natural Features and Landscapes; Natural Character and the Margins of Waterbodies; Natural Hazards; and the Coastal Environment. Where an activity is located within an overlay area (as identified in the planning maps) then the relevant overlay provisions apply.~~
- **Sites and Areas of Significance to Māori, Historic Heritage and Notable Tree Chapters - there may be sites and areas of significance to Māori, historic heritage or notable trees identified on individual sites within the General Residential Zone. Specific information on the provisions that apply to these can be found in the Sites and Areas of Significance to Māori, Historic Heritage, and Notable Trees Chapters.**
- **Natural Hazards - natural hazards are widespread on the coast and in some locations natural hazard overlays may affect areas in the General Residential Zone. Information on natural hazard overlays and provisions can be found in the Natural Hazards chapter.**
- **Natural Character and Margins of Waterbodies -in some locations areas of General Residential Zone may extend into the riparian margins of waterbodies. The Natural Character and Margins of Waterbodies Chapter contains provisions on how these areas must be managed.**
- **Ecosystems and Biodiversity – Where indigenous vegetation clearance is proposed within a Residential Zone, the provisions of the Ecosystems and Biodiversity chapter apply.**
- **General District Wide Matters** - provisions in relation to Earthworks in particular may be relevant to many activities.
- **Subdivision** – The Subdivision chapter sets out the requirements for subdivision activities the RLZ - Rural Lifestyle Zone.

- **Financial Contributions** – The Financial Contributions chapter sets out the requirements for contributions of costs for activities which impact on the local network utility operators

Relationship with Other Plans

Many activities that occur in rural areas are also regulated by the West Coast Regional Council through Regional Plans, including the Regional Land and Water Plan, Regional Air Plan and Regional Coastal Plan. When planning to undertake an activity, the status under the relevant Regional Plans should also be confirmed and any necessary resource consents applied for under both Plans.

Note with Regard to ~~Plantation~~ Commercial Forestry

There are no specific provisions as relate to ~~plantation~~ **commercial** forestry within the RURZ - Rural Zone Chapters. This is because ~~plantation~~ **commercial** forestry is principally regulated by the Resource Management (National Environmental Standard for ~~Plantation~~ **Commercial** Forestry) Regulations 2017. Exceptions to this occur in the Overlay Chapters and where forestry activities are proposed these chapters must be considered.

RLZ - R1 Agricultural, Horticultural and Pastoral Activities and Buildings

Activity Status Permitted

Where:

1. The activity does not include:
   i. Intensive indoor primary production;
   ii. The storage and disposal of solid or liquid animal waste other than that generated on the site;
   iii. Stock sale yards; or
   iv. Farm quarries;
2. The maximum gross ground floor area of a single building is 350m^2;
3. The maximum height above ground level is:
   i. 10m for residential buildings **and emergency service facilities**;
   ii. 7m for non-residential buildings; except
   iii. No building, structure or tree shall protrude into the Airport Approach Path of any airport or aerodrome identified on the planning maps and as described in Appendix Nine;
4. Buildings are set back a minimum of 10m from the road boundary, **5m from any rail designation boundary,** 20m from the State Highway Boundary and ~~10~~ **3m** from all internal boundaries;
5. Site coverage is a maximum of 30%; ~~and~~
6. ~~Performance standards for poultry farming and pig keeping apply as follows:~~

   ~~Shelters and buildings used to house or feed poultry or pigs must be setback at least 30m from any boundary;~~

~~7. For poultry setbacks of 10m from any residential building on another site and 2m from the site boundary;~~

~~8. For pig keeping setbacks of 50m from any residential building on another site and 100m for any shelter holding 4 or more pigs;~~

Shelters and buildings used to house or feed poultry or pigs must be set back at least 30m from any boundary.

9. Performance standards for beekeeping in the Westland District apply as follows:
    a. No bees may be kept on a property less than 600m^2 net site area; and
    b. Beehives must be placed with an obstruction in front of them or be elevated to ensure all bees are able to be 2.5m above ground level prior to crossing the site boundary**; and**
10. **Vehicle crossing standards in Rule TRN – R1 are met**.

Advice Notes:

1. If land is used for disposal of effluent or solid waste then there may be rules in the Regional Air Plan and Regional Land and Water Plan administered by West Coast Regional Council.

2. Sale of stock produced on the property is not considered a stock sale yard in terms of standard 1.iii

Activity status where compliance not achieved: Discretionary

RLZ - R2 Conservation Activities

Activity Status Permitted

Where:

1. All relevant performance standards for Rule RLZ - R1 are complied with.

Activity status where compliance not achieved: Discretionary

RLZ - R3 Residential Activities and Residential Units

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1 are complied with.
2. Residential unit density is no more than one unit per 1ha net site ~~area on physically contiguous land except where the site is already in existence at the date of notification of the Plan; and~~
3. There is no more than 1 minor residential unit with a maximum gross floor area of 65m^2 where this is located within 20 metres of and shares the driveway with the principal dwelling**; and**
4. **Provision shall be made for a sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008).**

Advice Notes:

1. Where a residential building or noise-sensitive activity is located within:
    i. 80m of a State Highway with a speed limit of 70kph or greater; or
    ii. 40m of a State Highway with a speed limit of less than 70kph; or
    iii. 40m of a Railway Line; or
    iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

vi. Then the acoustic insulation requirements set out in Rule NOISE - R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

Activity status where compliance not achieved: Discretionary

RLZ - R4 Papakāinga Developments

Activity Status Permitted

Where:

1. Performance standards 3-5 for Rule RLZ - R1 are complied with;
2. Residential building density is no more than one unit per 1000m^2 net site area, however units can be clustered; ~~and~~
3. On-site wastewater, water supply and stormwater systems are developed to serve the entire papakāinga~~.~~**; and**
4. **Provision shall be made for sufficient water supply and access to water supplies for firefighting in accordance with the New Zealand Fire Service Firefighting Water Supplies Code of Practice (SNZ PAS:4509:2008)**

Advice Note**s**:

1. Where a residential building or noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the Noise Insulation Requirements set out in Rule NOISE - R3 will apply.

2. The New Zealand Fire Service Firefighting Water Supplies Code of Practice PAS:4509:2008 should be consulted when determining the most appropriate design for firefighting water supply. Fire and Emergency New Zealand is available to assist with this.

Activity status where compliance not achieved: Discretionary

RLZ - R5 Minor Structures

Activity Status Permitted

Where:

1. ~~All performance standards for Rule RLZ - R1 are complied with.~~ **Structures are setback a minimum of 10m from the road boundary, 20m from the State Highway Boundary and 3m from internal boundaries**
2. Masts, poles, aerials and pou whenua must not exceed 7m in height;

3. Any antenna dish must be less than 1**.5m** in diameter;
4. Any ornamental or garden structure must not exceed 2.4 m in height; and
5. Any other structure must not exceed 10m^2 and 2m in height.

Activity status where compliance not achieved: Controlled

RLZ – R6 Fences Walls and Retaining Walls

Activity Status Permitted

Where:

1. Fences, walls and retaining walls are a maximum 2m height above ground level; and
2. The fence, wall or retaining wall is not used for advertising or any other purpose other than a fence, retaining wall or wall.

Activity status where compliance not achieved: **Restricted** Discretionary

~~**RLZ – R7 Relocated Buildings**~~

~~Activity Status Permitted~~

~~Where:~~

~~1. All performance standards for Rule RLZ - R1 are complied with.~~
~~2. Any relocated building intended for use as a dwelling must have been designed and built to be used as a dwelling;~~
~~3. A building pre-inspection report shall accompany the application for a building consent for the destination site. That report is to identify all reinstatement works that are to be completed to the exterior of the building. The report shall include a certification by the property owner that the reinstatement works shall be completed within a 12 month period;~~
~~4. The building shall be located on permanent foundations approved by building consent no later than 2 months of the building being moved to the site; and~~
~~5. All other reinstatement work required by the building inspection report and the building consent to reinstate the exterior of any relocated dwelling shall be completed within 12 months of the building being delivered to the site. This reinstatement work is to include connections to all infrastructure services and closing in and ventilation of the foundations.~~

~~Activity status where compliance not achieved: Controlled~~

RLZ – R~~8~~7 Home Business

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1 are complied with.
2. Hours of operation are limited to:
   i. 7am-10pm weekdays; and
   ii. 8am - 8pm weekends and public holidays; except where:
      a. The entire activity is located within a building;
      b. Each person engaged in the activity outside the above hours resides permanently on site; and

c. There are no visitors, customers or deliveries to the activity outside of the above hours; and

3. **There is no more than one full-time equivalent person engaged in the home business that resides off-site.**

~~4. A maximum of 10 heavy vehicle movements per day and whichever is the greater of 30 light vehicle movements per day or 210 light vehicle movements per week; and~~

4. No external generation of dust, odour or smoke occurs as part of the activity.

Activity status where compliance not achieved: Discretionary

RLZ – R~~9~~8 Residential Visitor Accommodation

Activity Status Permitted

Where:

1. This is ancillary to a Residential Activity;
2. All performance standards for Rule RLZ - R1, NOISE - R1, -R2, and -R4, LIGHT - R1 and -R3 and SIGN -R15 are complied with;
3. There is a maximum of **6** paying ~~6~~ guests at any one time;
4. Written Notification to the District Council is required 10 working days prior to the activity commencing;
5. No heavy vehicle movements are generated; and
6. Records of letting activity must be kept and provided to the Council **annually** ~~on request~~; and
7. In the Buller **and Westland** District**s** the accommodation is homestay accommodation with a permanent resident living on site.

Advice Note:

Where a residential building or noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or
ii. 40m of a State Highway with a speed limit of less than 70kph; or
iii. 40m of a Railway Line; or
iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or
v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the acoustic insulation requirements set out in Rule NOISE - R3 will apply

Activity status where compliance not achieved: Restricted Discretionary

RLZ – R~~10~~9 Community Facilities, Educational Facilities, Emergency Service Facilities and Recreational Facilities

Activity Status Permitted

Where:

1. All performance standards for Rule RLZ - R1, NOISE - R1, -R2, and -R4 and LIGHT - R1 and -R3 are complied with;
2. Hours of operation are limited to:

i. 7am-10pm weekdays; and

ii. 8am - 8pm weekends and public holidays; except

iii. For community halls lawfully established at the time of notification of the Plan:

3. Hours of operation on Friday and Saturday are 7am - 12~~pm~~**am** midnight; ~~and~~
4. No restriction on hours is in place for up to 12 days per calendar year; **and**
5. **There are no hours of operation for emergency service facilities**

Advice Note:

Where a noise sensitive activity is located within:

i. 80m of a State Highway with a speed limit of 70kph or greater; or

ii. 40m of a State Highway with a speed limit of less than 70kph; or

iii. 40m of a Railway Line; or

iv. The 50 dBA Noise Contour boundary of Franz Josef Heliport; or

v. The 55 dBA Noise Contour boundary of the Westport or Hokitika Airports or Greymouth or Karamea Aerodrome.

Then the Noise Insulation Requirements are set out in Rule NOISE - R3 will apply.

Activity status where compliance not achieved: Discretionary

Controlled Activities

RLZ – R1~~2~~1 Minor structures not meeting Permitted Activity Standards

Activity Status Controlled

Where:

1. The minor structure does not exceed 10m in height; and
2. All other performance standards for Rule RLZ - R5 are met.

Matters of control are:

a. Design and location of structures; and

b. ~~Landscape measures~~ **Measures to mitigate landscape effects**.

Activity status where compliance not achieved: Discretionary

~~**RLZ – R13 Relocated Buildings not meeting Permitted Activity Standards**~~

~~Activity Status Controlled~~

~~Where:~~

~~1. All performance standards for Rule RLZ - R1 are complied with.~~

~~**Matters of control are:**~~

~~a. Design and location of structures;~~

~~b. Landscape measures; and~~

~~c. Appearance of buildings.~~

~~Activity status where compliance not achieved: Discretionary~~

Restricted Discretionary Activities

RLZ – R14<u>2</u> Residential Visitor Accommodation not meeting Permitted Activity Standards

Activity Status Restricted Discretionary

Where:

1. This is ancillary to a farming, conservation or residential activity; and
2. All performance standards for Rule RLZ - R1 are complied with.

Discretion is restricted to:

a. Number of visitors staying on site;
b. Number of days of use for the visitor accommodation;
c. Management of traffic and parking;
d. ~~Landscape measures~~ **<u>Measures to mitigate landscape effects</u>**;
e. Any impacts on the production values of the surrounding land;
f. Any requirement for financial contributions;
g. Effects on visual amenity and rural character; and
h. Methods of wastewater treatment and disposal.

Activity status where compliance not achieved: Discretionary

<u>RLZ – R13 Fences, Walls and Retaining Walls not meeting Permitted Activity Standards</u>

<u>Activity Status Restricted Discretionary</u>

<u>Discretion is restricted to:</u>

<u>a. Design and location of structures</u>

<u>b. Height of structures</u>

<u>c. Shading and dominance effects on adjoining sites.</u>

<u>Activity status where compliance not achieved: N/A</u>

Discretionary Activities

RLZ – R16<u>5</u> Agricultural, Horticultural and Pastoral Activities and Buildings not meeting Permitted Activity Standards

Activity Status Discretionary

Where:

1. The activity does not include:
    i. Intensive indoor primary production;
    ii. The storage and disposal of solid or liquid animal waste other than that generated on the site; or
    iii. Stock sale yards.

Activity status where compliance not achieved: Non-complying

RLZ – R17<u>6</u> Commercial Activities

Activity Status Discretionary

Where:

1. ~~The maximum combined floor and yard area for any Commercial activity shall be 100m^2;~~ ~~and~~ **The activity is not for large format retail with a floor and/or yard area of greater than 250m^2; and**
2. All performance standards for Rule RLZ - R1 are complied with.

Activity status where compliance not achieved: Non-complying

RLZ – R1~~8~~7 Conservation Activities, Recreation Activities, Emergency Service Facilities, Educational Facilities and Community Facilities not meeting Permitted Activity Rules

Activity Status Discretionary

Activity status where compliance not achieved: N/A

RLZ – R1~~9~~8 Minor Structures, ~~Fences, Walls, Retaining Walls and Relocated Buildings~~ not meeting Permitted or Controlled Activity Rules

Activity Status Discretionary

Activity status where compliance not achieved: N/A

RLZ – R~~20~~19 Residential Visitor Accommodation not meeting Permitted or Restricted Discretionary Activity Rules

Activity Status Discretionary

Activity status where compliance not achieved: N/A

RLZ – R2~~1~~0 Home Business not meeting Permitted or Restricted Discretionary Activity Rules

Activity Status Discretionary

Activity status where compliance not achieved: N/A

RLZ – R2~~2~~1 Residential Activities, Residential Units and Papakāinga Developments not meeting Permitted Activity Rules

Activity Status Discretionary

Activity status where compliance not achieved: N/A

RLZ – R2~~5~~2 Any activity not provided for in another rule in the zone

Activity Status ~~Non-complying~~ **Discretionary**

Activity status where compliance not achieved: N/A

RLZ- R23 Agricultural, Horticultural and Pastoral Activities and Commercial Activities not meeting the Permitted or Discretionary Activity Rules

Activity Status Non-complying

Activity status where compliance not achieved: N/A

RLZ – R24 Industrial Activities including Rural Industry

Activity Status Non-complying

Activity status where compliance not achieved: N/A

Mapping

Identify all LUC 1-3 on land the Planning Maps as the Highly Productive Land Precinct and delete land that is not LUC 1-3.

Zoning

Precincts

Settlement Zone – Rural Residential Precinct 4

Strips of land adjacent to the road from the former cement works site to the end of lighthouse road between Cape Foulwind Road and the adjoining SETZ-PREC4 land at Omau.

APPENDIX 2 - PANEL MINORITY POSITION

Minority View of Commissioner Bartlett – Gloriavale Community Living Precinct

1. Overview

1. Commissioner Bartlett considers that addition of GRUZ-PERC1 – Community Living Precinct in the General Rural Zone is not required and does not meet the purpose and principles of the Act; therefore, the following should be deleted from the Plan:

    - Reference to GRUZ-PREC1 Community Living Precinct in the RURZ Overview
    - Reference to GRUZ–PREC1 Community Living Precinct in the GRUZ Overview
    - GRUZ–PREC–P1
    - Reference to Community Living Precinct in GRUZ-R3
    - Reference to GRUZ–PREC1 in GRUZ–R8
    - GRUZ-R14
    - GRUZ-R15
    - GRUZ-R19
    - Appendix Eight
    - Reference to GRUZ–PREC1 in SUB-R18
    - INF-R21

2. Submissions

2. With regard to the **RURZ Overview**, Misato Nomura (S151.008) requested that some precincts be combined because there were too many precinct layers that made the plan hard to read, and it was not clear to the submitter that they all warranted separation.

3. With regard to the **GRUZ Overview**, there were no submissions that referenced precincts in the General Rural Zone, or the Community Living Precinct specifically.

4. With regard to **GRUZ-PREC1-P1**, there was a submission in support from Poutini Ngāi Tahu (S620.243) which emphasised that wastewater needs to be appropriately treated so that it does not result in adverse effects on water quality. Buller Conservation Group (S552.177) and Frida Inta (S553.177) requested an amendment from reference to "Grey District Council" to the "relevant district council". Other submitters supported the policy without providing a reason (e.g. Chris & Jan Coll (S558.488)).

5. With regard to **GRUZ-R3**, there were no submissions that specifically referenced the Community Living Precinct.

6. Te Mana Ora (S190.970) supported clauses (3) and (4) of the rule on the basis that the lot sizes should be adequate to support on site wastewater systems, supporting good public health outcomes. Grey District Council did not submit on the rule. Buller District Council (S538.499) made a number of recommendations on amendment to clause (3) of the rule, but did not request amendment to clause (3)(ii). Greg Maitland (S571.011) sought deletion of clause (3) because he considered the rule onerous and not reflective of topographical diversity. Submitters sought a variety of potential densities in relation to clause (3) of the rule (e.g.

Graeme Cavaney (S121.002), Elly Group Limited (S164.001) and Christopher and Donna Meates (S430.002)), that focussed on allowing use while maintaining rural character. A number of submitters sought for existing non-compliance to be recognised (e.g. Peter Langford (S615.179)).

7. With regard to **GRUZ-R8**, there were no submissions that specifically referenced the Community Living Precinct.

8. Te Mana Ora (S190.975) supported the rule on the basis that it provides for appropriate standards to support good public health outcomes. Grey District Council (S608.109) submitted on the rule only as it related to provision of letting records to the council. Westland District Council (S181.040) submitted on the rule, focussed on the requirement to have a permanent resident on site. Buller District Council (S538.503) supported the rule as a whole because it provides for residential visitor accommodation. Charles Elley (S251.001) sought deletion of the rule because he considered it should be a matter for landowners to determine use. A number of submitters sought for existing non-compliance to be recognised (e.g. William McLaughlin (S567.559)).

9. With regard to **GRUZ-R14**, Te Mana Ora (S190.981) supported the rule but did not provide a reason. Ministry of Education (S456.049) supported the rule because it manages the operation of educational facilities in the General Rural Zone. A number of submitters supported the rule amongst a suite of provisions (e.g. William McLaughlin (S567.569)) without providing a reason.

10. With regard to **GRUZ-R15**, Te Mana Ora supported the rule but did not provide a reason. A number of submitters supported the rule amongst a suite of rules (e.g. William McLaughlin (S567.570)) without providing a reason. Grey District Council (S608.751) supported the matters of control in the rule in relation to stormwater, wastewater, drinking water, parking and access.

11. With regard to **GRUZ-R19**, Te Mana Ora (S190.982) supported the rule but requested protection of water supply within a Drinking Water Protection Zone. Grey District Council (S608.754) supported the matters of control in the rule in relation to access, traffic, parking, effluent disposal, wastewater and stormwater treatment. A number of submitters supported the rule amongst a suite of rules (e.g. William McLaughlin (S567.574)) without providing a reason.

12. With regard to **Appendix Eight**, there were no submissions referencing this appendix, which did not contain a concept plan at the time of notification.

13. With regard to **SUB-R18**, there were no submissions that specifically referenced the Community Living Precinct.

14. Submitters either supported (e.g. Neil Mouat (S535.028)), sought amendment to clause (2) (e.g. Chris & Jan Coll (S558.247)), or sought to correct an error in the rule (e.g. Westpower (S547.387)).

15. With regard to **INF-R21**, Te Mana Ora (S190.982) supported the rule but did not provide a reason. Grey District Council (S608.521) supported the rule, while also requesting an amendment to the definition of wastewater. Toka Tū Ake EQC (S612.015) supported the rule on the basis that it supports consideration of natural hazards. Poutini Ngāi Tahu (S620.095) supported the rule on the basis that it supports land based effluent disposal. Forest & Bird (S560.162) sought a new matter of discretion for consideration of natural values.

3. Evidence

3.1 Section 32 Report

16. The Section 32 Report for the Rural Zones contained analysis of the Community Living Precinct. In particular, a memorandum from principal planner Lois Easton to the TTPP Committee dated October 2021 provided an analysis of the draft policies and rules for the Community Living Precinct within the Grey District. The precinct is described as intending to cover areas currently used by Gloriavale, and proposed for future use, as living and community space, including provision for on-site wastewater, water supply, energy generation, schooling and rural industries. The precinct is noted as providing for a light level of regulation, linked to the development of a concept plan for two Gloriavale sites, one existing site and one site yet to be developed. The memorandum identifies limited impact on neighbours because of the distance from the sites to neighbouring properties.

17. Ms Easton identified in the memorandum that the Gloriavale community: has been established by resource consent under the Grey District Plan; is home to more than 600 residents; has on-site servicing, schooling and two large farms; and is considering expansion to other locations. She assessed that the Planning Standards threshold for a special purpose zone could not be met, and that the nature of the activities at the community did not readily fit within the Settlement Zone, so a bespoke precinct was proposed. The precinct is identified as being limited to the main Gloriavale complex and associated land, as well as developable land at Lake Brunner. The precinct is described as designed to be "*more like the approach of a special purpose zone*" (paragraph 6), incorporating the range of existing activities on site; and that it provides a mechanism to "*give some certainty on environmental effects, while recognising that the development should be allowed to proceed without unnecessary consenting requirements*" (paragraph 8).

18. Ms Easton identifies that within the precinct land there are significant natural environment values and the Alpine Fault runs through the properties.

19. The October 2021 memorandum does not contain an analysis of higher order instruments.

20. The October 2021 memorandum is the sole basis provided for introduction of the Community Living Precinct.

3.2 Reporting Officer Evidence

21. The s42A Report for the Rural Zones did not provide further analysis of the basis for the Community Living Precinct. Ms Easton's advice responded to relevant submissions on specific provisions in the General Rural Zone.

22. With regard to **GRUZ-PREC1-P1**, the s42A Report made no amendment to the policy, based on Grey District Council being the only relevant council, and support from submitters.

23. With regard to **GRUZ-R3**, the s42A Report did not explore relevance to the Community Living Precinct when responding to submission points.

24. With regard to **GRUZ-R8**, the s42A Report did not explore relevance to the Community Living Precinct when responding to submission points.

25. With regard to **GRUZ-R14**, the s42A Report made no amendment to the rule, based on support from submitters.

26. With regard to **GRUZ-R15**, the s42A Report made no amendment to the rule, based on support from submitters.

27. With regard to **GRUZ-R19**, the s42A Report rejected the submission from Te Mana Ora on the basis that there were no identified Drinking Water Protection Zones and it was a matter for regional council. Submissions seeking accommodation of non-compliance were also rejected, based on existing use rights for lawfully established activities and reliance on a resource consent process to address any non-compliance.

28. With regard to **Appendix Eight**, the s42A Report did not discuss the appendix, or the implications of the lack of a concept plan at the time of notification of the Plan.

29. Ms Easton responded at the Rural hearing to questions asked about the relationship of notified Plan provisions with the findings of the Royal Commission of Inquiry into Abuse in Care. She advised that the scope of submissions did not provide for a response to the findings of the Inquiry. She explained that the concept plan, once developed and included in Appendix Eight, was envisaged as the means of ensuring oversight of facilities and services at the community, particularly wastewater. Her right of reply did not provide any additional comment.

30. With regard to **SUB-R18**, the s42A Report recommended deletion of this rule and replacing it with two non-complying activity rules, with proposed SUB-R27C applying to the Community Living Precinct when minimum lot sizes for the General Rural Zone are not met.

31. With regard to **INF-R21**, the s42A Report recommended retaining the rule as notified, on the basis of support from submitters.

3.3 Submitter Evidence

32. No evidence on the Community Living Precinct was provided at the hearing from Grey District Council or representatives of Gloriavale.

33. With regard to **GRUZ-PREC1-P1**, Frida Inta, in response to questions at the hearing, indicated that she had not been sure that the policy only applied to Gloriavale at the time of her submission.

34. With regard to **SUB-R18**, Martin Kennedy on behalf of Westpower recorded acceptance of the s42A Report position.

35. With regard to **INF-R21**, Rachel Pull on behalf of Poutini Ngāi Tahu advised support for the matter of discretion relating to effects on Poutini Ngāi Tahu values, and acceptance of the s42A Report position.

4. Analysis

4.1 Lack of evidence in support of precinct and provisions

36. The Grey District Plan did not specifically provide for community living at Gloriavale, therefore the notified TTPP introduces bespoke zoning for Gloriavale for the first time since the community established within the district, and specifically provides for its expansion.

37. No analysis has been provided to the Panel explaining the need for zoning of new land for an expanded community, or how this meets the purpose and principles of the Act. Neither has any evidence been provided to the Panel to advise why the community cannot simply rely on its existing consents for the current community footprint. If existing facilities and on-site services are sub-standard or require upgrading, this would ordinarily be a matter for compliance or consenting.

38. Analysis by Ms Easton identified that conditions for a special purpose zone could not be met, presumably because existing zoning could manage the activities at Gloriavale.

39. Overall, there was a low level of engagement with the Community Living Precinct amongst submitters, and a paucity of supporting evidence from any party.

40. Poutini Ngāi Tahu, in relation to GRUZ-PREC1-P1 and INF-R21, emphasised wastewater and discharge to land. Te Mana Ora, generally in relation to GRUZ-R3, also emphasised the importance of sufficient land for on-site wastewater systems. The General Rural Zone rule framework already requires on-site provision of services where there is no reticulated system available, as does the Settlement Zone. Issues with on-site wastewater systems, if currently occurring, do not provide a compelling argument for establishing a bespoke precinct and bespoke provisions.

41. Ministry of Education support for GRUZ-R14 is not convincing in the absence of a concept plan, because without it there is no “management of educational facilities within the General Rural Zone”. Unlike Kaiata Park, for instance, where the Panel received detailed plans for the development and was able to consider a range of matters, no such evidence was provided in relation to Gloriavale, either in terms of the existing settlement or the planned development at the new site. There are no other conditions governing community facilities or educational facilities, or the development of a concept plan, under GRUZ-R14 or Appendix Eight. The Panel has no basis on which to conclude that either the existing community facilities and educational facilities, or those proposed at the new development, will meet standards expected of other community facilities or educational facilities in the district or region.

42. Grey District Council supported the matters of control in GRUZ-R15. The Panel received no evidence to support controlled activity status, as opposed to restricted discretionary for

example. The Panel do not know why the council and TTPP Committee decided that community facilities and educational facilities at Gloriavale, whether at the existing site or the new site proposed for development, should always be granted; nor why they should be subject to different standards than community facilities or educational facilities elsewhere in the district.

43. Similarly, Grey District Council supported the matters of control in GRUZ-R19. The Panel have no evidence to explain why the council and TTPP Committee decided that intensive indoor primary production at Gloriavale, whether at the existing site or the new site proposed for development, should always be granted; nor why they should be subject to different standards than intensive indoor primary production elsewhere in the district.

4.2 Inquiry findings and Part 2 of the RMA

44. There is scope in submissions to delete the precinct (e.g. Misato Nomura (S151.008)). The Plan would be simplified, as the submitter sought, and the sites would revert to existing rural zoning options. This would seem particularly appropriate in relation to GRUZ-R19.

45. In light of the Royal Commission of Inquiry – Abuse in Care (the Inquiry) findings and recommendations, deletion of the precinct and associated provisions is warranted, and would be consistent with upholding the purpose and principles of the RMA. The Inquiry findings and recommendations were not available at the time of notification of the TTPP, but were available at the time of the Rural Zones hearing.

46. Key findings of the Inquiry, informed by 41 Glorivale abuse survivors, included that:

- in relation to the nature and extent of abuse in care, abuse and neglect were particularly prevalent in faith settings (particularly Catholic, Anglican and Gloriavale)[167];
- in relation to the findings of fault of abuse in care, relevant Ministers, Secretaries and Chief Executives of Education were at fault for (amongst other failings): having less oversight of private schools compared to State or State-integrated schools, potentially increasing opportunities for abuse and neglect; and failing to keep children safe during the school day; and
- in relation to the findings of fault of abuse in care, from the time of inception of the Gloriavale community in 1969, senior leadership were at fault for: allowing physical and sexual abuse to happen in the community; perpetuating cycles of harm; failing to recognise harm, or the scale and extent of abuse; failing to protect survivors of abuse; requiring forgiveness from the victim; allowing perpetrators to continue in the community and to continue abusing; failing to engage with NZ Police or other official organisations; and creating a culture that allowed abuse to occur.[168]

47. Recommendations of the Inquiry included that:

[167] Whanaketia – Through pain and trauma, from darkness to light (June 2024), Preliminaries, p51
[168] *Ibid.*, p71 and 79

- the government should prioritise and accelerate current work to close care and protection residences, which perpetuate the institutional environments and practices that led to historic abuse and neglect in care (Recommendation 70);
- all State and faith-based entities providing direct or indirect care to children, young people and adults should review physical building and design features to identify and address elements that may place children, young people and adults in care at risk of abuse and neglect, including:

  a. consideration of how best to use technology such as CCTV cameras and body cameras without unduly infringing personal privacy, including taking into account any applicable guidance documents and the legal requirements for the collection of personal information under the Privacy Act 2020;
  b. reviewing any policies or processes that place children, young people, or adults in care with others who may put them at risk (for example, children and young people in care and protection being placed together with children, young people, or adults in the justice system);
  c. if care settings include physically isolated spaces, for example private offices or a confessional box, ensuring there are tailored measures in place to address the risks arising, including the risk of undetected abuse and neglect; and
  d. if care is to be delivered in a geographically isolated or remote area, ensuring there are tailored measures in place to address the risks arising from the geographical setting, including the risk of undetected abuse and neglect (Recommendation 75); and
- the government should take all practicable steps to ensure the ongoing safety of children, young people, and adults in care at Gloriavale (Recommendation 88)[169]

48. Findings specific to Glorivale included:

- widespread use of solitary confinement;
- practices ruled as forced labour by the Employment Court;
- recognition by the community of intergenerational sexual abuse and physical abuse of children;
- abuse experienced was strongly shaped by the community's social and physical environments, their interpretation of religious teachings, authoritarian control and separation from the rest of the world;
- survivors saw separation from mainstream society as a form of abuse, a contributing factor to further abuse and something that triggered abusive actions by leadership;
- the exclusive nature of Gloriavale led to economic abuse, medical neglect and educational neglect;
- women received less education than men;
- Māori community members experienced discrimination;
- having a disability led to physical and psychological abuse and educational neglect;
- sexual and physical abuse was normalised in teaching[170]; and
- the community had no redress process or relevant policies in place in June 2024[171].

[169] *Ibid.*, p137, 138 and 146
[170] Whanaketia – Part 4 - Nature and Extent - Māngai nuitia te kupu pono (June 2024), p81, p84, p86, p167, p203-209
[171] Whanaketia – Part 8 – Puretumu Torowhānui, Holistic Redress - Tiritiri ki toi whenua (June 2024), p65

49. Inquiry recommendations for the future of Gloriavale included that it be a "regulated population" within a new national care safety regulatory system, under a "Care Safety Act"[172]. Survivor Rosanna Overcomer called for lasting change to provide a safe environment for community members:

> "*We can hope and heal and work for a better life. But we want lasting change for our families still inside. We want a safe place for our nieces and nephews to grow up in. We want them to have the same liberties, opportunities, education and care any New Zealander deserves. We need to know there will be significant changes to the systems and leadership that brought us here today*."[173]

50. The Inquiry findings as a whole indicate the need for greater regulation of the community, rather than light-handed regulation, as outlined in the Section 32. Particularly relevant to the TTPP are the findings that geographical isolation and separation from mainstream society are conditions that increase risk of abuse. Zoning the isolated community, and its expansion to another isolated location, deliberately separate from other settlements and communities within the Grey District and the wider region, exacerbates this identified risk to the health and safety and well-being of community members, including children born and raised in the community who have no access to the outside world. Submissions from Te Mana Ora supporting the precinct and provisions on the basis of good public health outcomes do not stand up to scrutiny in light of these Inquiry findings. Providing for education facilities as a permitted activity with no guidance as to how they should be designed to protect the safety of children fails to heed Recommendation 75 of the Inquiry and its warning regarding the tailored measures required for schools in geographically isolated settings. The Inquiry found Māori members of the community to have diminished standing, contrary to the principles of Te Tiriti o Waitangi and Section 8 of the RMA. Submission from the Ministry of Education does not stand up to scrutiny in light of these Inquiry findings. Neither do the submissions of Grey District Council in support of the precinct and provisions, and the position of the TTPP Committee supporting expansion of the community under a controlled activity status, with no ability to decline applications and no publicly available concept plan to interrogate.

51. No evidence has been presented to the Panel that zoning of the Community Living Precinct, including its expansion, will provide for the health and safety, and social, cultural and economic well-being of Gloriavale community members, the Grey District or the West Coast region. The Inquiry findings provide evidence that there are risks to the health and safety, social, cultural and economic well-being of Gloriavale community members, including children and vulnerable community members, from geographical isolation and conditions at the school within that isolated setting.

52. The RPS does not mention Gloriavale or specifically provide for commune style living in the region. Chapter 5, Objective 1 recognises the role of resource use and development and its contribution to enabling people and communities to provide for their social, cultural and economic well-being, which associated Policy 1 then enables.

[172] Whanaketia – Part 9 – The Future – Hei ara mōu kei taku pōkai kotuku, p146-147
[173] Ibid., p244

53. The TTPP must be prepared in accordance with the provisions of Part 2, and must have particular regard to an evaluation report prepared in accordance with section 32, under s73 of the RMA. The Section 32 report was deficient with regard to assessment under Part 2 of the Act. Deletion of the Community Living Precinct would better give effect to Part 2 of the Act, whilst still providing for consenting of a variety of Gloriavale activities in accordance with relevant provisions of the rural zones and districtwide subdivision and infrastructure provisions. The benefit of this approach will be: reduced plan complexity and improved plan effectiveness; potential for improved and consistent outcomes for Gloriavale community members, the Grey District and the region through increased scrutiny and transparency of activities (at the existing site and any additional site); and greater ability to incorporate response to the findings of the Inquiry into implementation of plan provisions. Increased consenting costs will likely be incurred by the Gloriavale community, but are expected to be outweighed by the benefits to that community, and the wider community.

TE TAI O POUTINI PLAN COMMITTEE

PART A – INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Introduction

1. Matters to do with our appointment and other preliminary matters applicable to all Hearing Panel's recommendations on the proposed Te Tai o Poutini Plan ('**pTTPP**' or '**the Plan'**) are recorded and addressed in Recommendation Report 1.

2. This Recommendation Report relates to Part 2 – Historical and Cultural Values of the PTTPP; and contains the Hearing Panel's evaluations and recommendations to the TTPP Committee on the submissions and further submissions received on the Historic Heritage – Ngā Tuku Ihotanga chapter and Schedule One.

3. The Section 32 Report[1] provided an evaluation of the options for management of historic heritage in the Plan, including the regulatory framework, key resource management issues, the evidence base and evaluation of options. The Section 32 Report distinguishes historic heritage and archaeological sites from sites and areas of significance to Māori (SASM), which are separately addressed in the Plan in accordance with the National Planning Standards 2019[2] ('**Planning Standards'**), and subject to a separate Recommendation Report. The Hearing Panel ('**the Panel'**) recognise a close relationship between the Historic Heritage and SASM chapters because sites and areas of significance to Māori are part of the RMA definition of '*historic heritage*', and there are some items, areas and archaeological sites overlapping between Schedule One and Schedule Three of the Plan. The Historic Heritage Chapter therefore recognises and provides for matters of national importance under section s6(f) and section 6(e) of the RMA.

4. The S42A Officer's Report Historic Heritage ('**s42A Report**') was authored by Ms Lois Easton, an independent planner with Kererū Consultants who worked with the TTPP Committee during development of the draft plan. The s42A report was circulated prior to the hearing, responding to submissions and further submissions and making recommendations for consideration by the Panel. The s42A report and Appendices 1 – 3 were provided on 25 October 2023 in accordance with Minute 2. These appendices included recommended amendments to plan text, recommendations on individual submission points, and a statement of advice from heritage professional Dr Ann McEwan. Additional appendices to the s42A were provided at the hearing.

5. The advice of Dr McEwan contained in Appendix 3 to the s42A Report specifically responded to nine submissions requesting additions to Schedule 1A: Schedule of Historic Heritage Items and Areas. These included submissions from Ailsa Hart, Barbara King, Brendon McMahon, Glenn Johnston, Greymouth Heritage Trust, Heritage New Zealand Pouhere Taonga ('**HNZPT**'), Kate Kennedy, Laura Mills, Frida Inta and Paul Thomas.

6. Ms Easton provided her right of reply on 12 January 2024 in accordance with the direction of the hearing Panel. This provided for the statutory shutdown period of 20 December to 10 January, meaning that her reply was received within 10 working days of the hearing, in accordance with Minute 2. Appendices to her rights of reply included advice from Dr McEwan

[1] Te Tai o Poutini Plan – Section 32 Evaluation Report Four Historical and Cultural Values – Ngā Uara ā-Ahurea, ā-Hītori Hoki - Historic Heritage Ngā Tuku Ihotanga - Notable Trees Ngā Rākau Whakamaumahara – Sites and Areas of Significance to Māori Ngā Wāhi Tāpua ki te Māori

[2] National Planning Standards, November 2019, Section 7 District-wide Matters Standard, 15 and 17

and archaeologist T J O'Connell in response to the submissions of Laura Mills and Frida Inta regarding potential additions to Schedule 1A. Ms Easton also responded to specific questions raised by the Panel during the hearing.

7. The s42A Report, appendices and right of reply addressed 223 submission points and 36 further submission points from 42 submitters, including residents, community groups, property owners, statutory agencies and businesses with an interest in the management of historic heritage. A number of core matters were raised by submitters for consideration by the Panel:

    - the West Coast historic heritage context;
    - the process of identifying historic heritage items, sites and areas;
    - the need to protect against loss of remaining historic heritage;
    - the ongoing and future use of historic heritage items, sites and areas;
    - the process for demolition and destruction of historic heritage items; and
    - Māori heritage relationships.

8. The matters raised by submitters are discussed as they arise within the following sequence of sections in this report:

    a. Definitions
    b. General/Whole Chapter;
    c. Overview;
    d. Objective;
    e. Policies;
    f. Rules;
    g. Methods; and
    h. Schedules

9. This Recommendation Report largely follows the same structure as the s42A Report and provides a brief summary of the issues raised in submissions and further submissions, the s42A Report analysis and recommendations, submitter evidence and statements, and the Reporting Officer's reply evidence, before providing the Panel evaluation and recommendation.

10. This Recommendation Report should be read in conjunction with the s42A Report and Addendum Report and the tracked change version of the notified Plan provisions (attached as Appendix 1 to this Report). The tracked change version of the TTPP provisions forms an integral part of the recommendations and records all recommended amendments (additions and deletions) to the notified TTPP provisions made by the Panel. The tracked change version of the TTPP shows the Panel's recommended changes to the notified provisions in **bold and underlining** indicating additions and ~~strikethrough~~ indicating deletions. If there is any discrepancy between this Recommendation Report and the tracked change version of the Plan, the tracked change version of the Plan in Appendix 1 must prevail.

11. This Recommendation Report contains the reasons for the Panel's recommendations. These comprise either adoption of the reasoning and recommendations of the original section 42A Reports or the Reporting Officer's reply evidence (Councils' right of reply post hearing adjournment), or a specific reasoning by the Panel.

12. Where the Panel recommends the TTPP provisions should remain as notified, it is because:

    (a) The Panel has adopted the reasoning and recommendation of the s42A Report or Addendum Report to retain the provision as notified; or

    (b) The Panel has adopted the reasoning and recommendation to retain the provision as notified as recommended in the Reporting Officer's reply evidence; or

    (c) The Panel has recommended to retain the provision as notified for reasons set out in this Recommendation Report.

13. Where there is a recommended change to a notified provision of the TTPP, it is because:

    (a) The Panel has recommended amendment to a provision for reasons set out in this Recommendation Report in response to a submission point, which the s42A Report did not recommend; or

    (b) The Panel adopted the reasoning and recommendation of the s42A Reports or Addendum to change the provision to that recommended in the original s42A Report; or

    (c) The Panel has adopted the reasoning and recommendation to that recommended in the Reporting Officer's reply evidence; or

    (d) A consequential change has been necessary following on from a recommendation in either (a), (b) or (c).

14. Where there may be a different recommendation between the s42A Report and the Reporting Officer's Addendum or reply evidence (i.e. the recommendation by the Reporting Officer has changed as a result of hearing the evidence of submitters), unless the Panel recommendation specifically adopts the original s42A Report's reasoning and recommendations, the reasoning and recommendations in the (later) reply to evidence has been adopted and it must be taken to prevail.

15. If there are circumstances where the Panel consider that alternative relief is more appropriate than that requested in submissions and further submissions to give effect to the RMA, NZCPS, national policy statements and/or RPS, but are still within the scope of the relief sought, the relevant recommendation clearly sets out the nature of the change and the reason for the change. This is recorded in this Recommendation Report.

16. If any changes are recommended to the provisions (since the Section 32 Report was completed) a further evaluation, if required pursuant to section 32AA of the RMA, has been undertaken. Any such circumstances are referred to in this Recommendation Report in sufficient detail to demonstrate a further evaluation was undertaken.

17. Clause 16(2) of the First Schedule of the RMA enables the Panel to recommend amendments to alter information, where such an alteration is of minor effect, or may correct any minor errors. In the Panel's recommendations below each section considered in Part C of this Report

and in the tracked change version of the notified Plan provisions (Appendix 1 of this Report) records any such minor amendments.

1.2. Terminology in this Report

18. Throughout this Report, the following abbreviations will be used.

ADP	Accidental Discovery Protocol
Bathurst	Bathurst Resources Limited and BT Mining Limited
BDC	Buller District Council
Chorus	Chorus New Zealand Limited
Councils	Buller District Council, Grey District Council, and Westland District Council
Director General	Director General of Conservation
DOC	Department of Conservation
Federated Farmers	Federated Farmers of New Zealand
GDC	Grey District Council
Heritage List	New Zealand Heritage List/Rārangi Kōrero
HNZPT	Heritage New Zealand Pouhere Taonga
Kiwirail	Kiwirail Holding Limited
Manawa	Manawa Energy Limited
The Heritage List	New Zealand Heritage List/Rārangi Kōrero
NPSREG	National Policy Statement for Renewable Electricity Generation 2011
NPSUD	National Policy Statement on Urban Development 2020
One NZ	One New Zealand Group Limited (formerly Vodafone)
Planning Standards	National Planning Standards 2019
Poutini Ngāi Tahu	Te Rūnanga o Ngāi Tahu, Te Runanga o Ngāti Waewae, Te Rūnanga o Makaawhio
pTTPP or the Plan	Proposed Te Tai Poutini Plan

REG	Renewable Electricity Generation
RMA or the Act	Resource Management Act 1991
RPS	West Coast Regional Policy Statement
RSI	Regionally Significant Infrastructure
SASM	Sites and Areas of Significance to Māori
Spark	Spark New Zealand Trading Limited (formerly Telecom)
Te Mana Ora	Te Mana Ora (Community and Public Health) of the NPHS/ Te Whatu Ora
Telecommunications companies	Spark Trading New Zealand Limited, Chorus New Zealand Limited, One NZ Group Limited (formerly Vodafone New Zealand Limited) and FortySouth
Transpower	Transpower New Zealand Limited
TTPP Committee	Te Tai o Poutini Plan Committee
Waka Kotahi	NZ Transport Agency Waka Kotahi
WCRC	West Coast Regional Council
WDC	Westland District Council
Westpower	Westpower Limited

1.3. Procedural Steps and Issues

19. Procedural matters arose in relation to the decision-making process for the Historic Heritage Chapter of the Plan, including:

- pre-hearing meeting;
- online hearing;
- additions to the s42A Report; and
- Manawa evidence.

20. A pre-hearing meeting was held on 25 September 2023 focussed on the submission points of HNZPT. The meeting was attended by representatives of HNZPT (Arlene Baird, Robyn Burgess and Christine Whybrew) and West Coast Regional Council ('**WCRC**') (Ben Douglas), as well as planning and heritage consultants for the TTPP Committee (Lois Easton and Dr Ann McEwan).

21. The Panel issued Minute 11 on 30 November 2023 advising that the Historic Heritage hearing would be conducted entirely online.

22. Additional appendices 4A – 4F to the s42A report were provided at the hearing. These appendices comprised of site records describing the values and extent of six historic heritage items and areas in the Westland and Grey districts recommended by Ms Easton for inclusion in Schedule 1A of the proposed plan, on the basis of Dr McEwan's advice. These appendices were provided to the Panel for completeness, as contextual information and examples of the kind of detailed assessments intended to be undertaken for all sites in Schedule 1A and made available to plan users by 2026. The absence of the information in these appendices at the time of releasing the s42A report is not considered by the Panel to have disadvantaged any party to the process. The information pertained specifically to the submissions of Laura Mills and Brendon McMahon who requested that these historic heritage items and areas be included in Schedule 1A, which the s42A report and appendices support.

23. Notes from the pre-hearing meeting were available at the hearing but were not available at the time of writing the s42A report. Ms Easton advised the Panel that outcomes from the pre-hearing were incorporated into her report, such that the late release of pre-hearing notes to accompany the s42A report was not prejudicial to the process. The Panel agreed, upon review of the notes and finding reference to the corresponding pre-hearing meeting discussions in the s42A report analysis and recommendations[3]. HNZPT were able to provide additional insight on matters discussed in pre-hearing through their written and oral evidence.

24. Expert evidence of submitters was provided twenty working days in advance of the hearing, in accordance with Minute 2, including tabled evidence; however, due to an administrative error, the tabled evidence of Manawa Energy Limited ('**Manawa**') was not loaded on to the pTTPP website, meaning that there was a delay in access for other participants in the process. The s42A officer identified one further submitter on the original Manawa submission (S438.063), Birchfield Coal Mines Ltd (FS232.017), which was in support of the Manawa submission. As such, Ms Easton noted during the hearing that no parties had been prejudiced by this error.

25. Consideration of Manawa evidence by the Panel was not impacted by the error as the Panel had received a copy of the evidence at the time it was lodged. The substance of Manawa evidence was fully canvassed through the hearing process; consequently, the Panel are satisfied that the administrative error did not materially affect the process or outcome.

1.4. Hearing Arrangements

26. A hearing into the submissions received on the Historic Heritage Chapter was held on the 7th of December 2023.

27. All participants in the hearing joined via audio visual link. The hearing was concluded in one day. A video recording of the hearing was made available on the pTTPP website.

1.5. Appearances

28. The following participants appeared at the hearing:

[3] See paragraphs 28, 95, 124, 155, 172, 173 and 201 of the s42A report

Ms Laura Mills (S240) for herself

Poutini Ngāi Tahu (S620)

- Ms Susan Aitken, planner

Chorus, Spark, One NZ & FortySouth (S663)

- Mr Graeme McCarrison, on behalf of Spark NZ Trading Limited

- Mr Andrew Kantor, on behalf of Chorus NZ Limited

- Mr Chris Horne, planner

Westpower Limited (S547)

- Mr Rodger Griffiths, on behalf of the company

- Mr Martin Kennedy, planner

The O'Conor Institute Trust Board (S466)

- Mr Mark Lile, planner

Heritage New Zealand Pouhere Taonga (S140)

- Ms Arlene Baird, acting area manager Canterbury/West Coast

Bathurst Resources Ltd and BT Mining Ltd (S491)

- Mr Campbell Robertson, environmental manager

Ms Frida Inta (S553) on behalf herself and Buller Conservation Group (S552)

1.6. Overview of submitter evidence received

29. For those appearing at the hearing, legal submissions were received from Mr Joshua Leckie and Ms Christina Sheard for Bathurst (dated 23 November 2023).

30. For those appearing at the hearing the following evidence and/or statements were received:

(a) Laura Mills, hearing statement (undated);

(b) Ms Susan Aitken, planner for Poutini Ngāi Tahu (evidence dated 9 November 2023 and statement dated 7 December 2023);

(c) Mr Graeme McCarrison for Spark NZ Trading Ltd, Mr Andrew Kantor for Chorus NZ Ltd and Mr Colin Clune for One NZ Group Ltd and FortySouth (formerly Vodafone NZ Ltd) (joint evidence dated 8 November 2023)

(d) Mr Martin Kennedy, planner for Westpower Limited (evidence dated 6 November 2023);

(e) Mr Mark Lile, planner for The O'Conor Institute Trust Board (evidence dated 9 November 2023);

(f) Ms Arlene Baird for Heritage New Zealand Pouhere Taonga (evidence dated 8 November 2023 and hearing statement, undated);

(g) Campbell Robertson for Bathurst Resources Limited and BT Mining Limited (evidence dated 9 November 2023)

(h) Ms Frida Inta and Buller Conservation Group (hearing statement dated 7 December 2023)

31. Following the receipt of the s42A Report:

(a) Amy Young tabled evidence on behalf of the Director General, dated 9 November 2023, acknowledging that the reporting officer had accepted the Director General's submission points, and that she supported the solutions identified in the s42A Report.

(b) Stephanie Styles tabled evidence on behalf of Manawa, dated 7 November 2023, that indicated outstanding matters to be resolved in relation to renewable electricity generation ('**REG**') in order to give effect to higher order instruments. She outlined that the Kumara hydro-electric power scheme and the Kaniere McKays hydro-electric power scheme both incorporate elements of historic heritage as part of their operation. She noted that the historic elements of these assets were not currently listed as historic heritage, but a further review may result in their inclusion, so the intent of the submission was to future-proof the Plan provisions.

1.7. Right of Reply

32. Ms Easton provided her right of reply on 12 January 2024, which included an updated Appendix 1 showing tracked changes to the notified provisions, as well as two archaeological appraisals from archaeologist T J O'Connell, and two further appraisals from Dr Ann McEwan. These appraisals responded to the matters raised at the hearing by Frida Inta in relation to the Mōkihinui Midden site (NZAA Site Number L28/1) and the Mōkihinui-Seddonville railway line site (NZAA Site Number L28/36); as well as the matters raised by Laura Mills in relation to the Hannan and Seddon building in Werita Street, Greymouth and the Mt Griffin serpentine quarry remnants.

1.8. Site Visits

33. The Panel undertook site visits from Karamea to Jackson Bay, including observations of historic heritage sites in Reefton, Stockton, Millerton and Denniston, Blackball, central Greymouth and Kumara.

PART B - STATUTORY REQUIREMENTS AND DOCUMENTS

34. This section of the report considers the requirements for preparation of a district plan, as relevant to the SASM Chapter, particularly section 73, section 74 and section 75 of the RMA, with reference to the Memorandum of Counsel from Ms de Latour dated 13 October 2024.

35. The Panel have considered the role of the Historic Heritage Chapter in assisting Buller District Council, Grey District Council and Westland District Council ('**the Councils**') to carry out their functions under section 31 of the Act, including integrated management.

36. The Panel relies on the Section 32 Report[4] assessment of relevant statutory requirements and direction contained in higher order instruments.

37. For completeness, the Panel have considered the definition of historic heritage in Section 2 of the RMA which describes the scope of matters for consideration in this chapter, as follows:

(a) means those natural and physical resources that contribute to an understanding and appreciation of New Zealand's history and cultures, deriving from any of the following qualities:

(i) archaeological:

(ii) architectural:

(iii) cultural:

(iv) historic:

(v) scientific:

(vi) technological; and

(b) includes—

(i) historic sites, structures, places, and areas; and

(ii) archaeological sites; and

(iii) sites of significance to Māori, including wāhi tapu; and

(iv) surroundings associated with the natural and physical resources

38. While there is a separate report dedicated to the Sites and Areas of Significance to Māori – Ngā Wāhi Tāpua ki te Māori ('**SASM**') chapter, archaeological sites are addressed in this report and may include verified and as yet undiscovered sites of significance to Māori, such as individual midden finds not otherwise within an area identified in Schedule 3 – Sites and Areas of Significance to Māori and corresponding maps. Unverified archaeological sites are also a matter for this Recommendation Report.

39. A number of unverified archaeological sites of Māori origin are identified in Appendix Ten to the Plan. The notified version of the Plan contained no policies, rules or methods that specifically referenced Appendix Ten in order to understand how to apply plan provisions in the Historic Heritage – Ngā Tuku Ihotanga chapter and/or the Sites and Areas of Significance to Māori – Ngā Wāhi Tāpua ki te Māori chapter in relation to this appendix. The Panel addresses this issue in response to evidence received through the hearings in the Recommendation Report for the SASM Chapter, and other chapters of the Plan where the matter arises.

40. With reference to section 74 of the RMA, the Panel have made recommendations in accordance with territorial authority functions as they pertain to historic heritage (section 31), the purpose of sustainable management (Part 2), Planning Standards, the NZ Coastal Policy

[4] Section 11.2.7, p57

Statement ('**NZCPS**') and relevant national policy statements. The Panel have also had regard to the provisions of adjacent territorial authorities, and relevant entries on the New Zealand Heritage List/Rārangi Kōrero ('**Heritage List**'), as well as strategies and plans prepared under other Acts, where relevant.

41. As a matter of national importance, the Panel recommendations recognise and provide for the "*protection of historic heritage from inappropriate subdivision, use and development*". The Panel has turned its mind to understanding what may be appropriate and inappropriate subdivision, use and development in the context of Te Tai o Poutini/West Coast region as a whole and within the three districts covered by the Plan. The Panel also acknowledge that there is historic heritage in Schedule One that relates to section 6(e), section 7(a) and section 8 of the RMA.

42. Efficient use and development of historic heritage, where appropriate, (section 7(b)) is a matter addressed by recommended provisions seeking to enable repurposing of historic heritage items and areas. Maintenance and enhancement of amenity values associated with historic heritage items and areas, and archaeological sites (section 7(c)), and the maintenance and enhancement of their quality (section 7(f)) is addressed by recommended provisions allowing for repurposing as well as those focussed on ways to improve upon past management of historic heritage within the region.

43. The finite characteristics of historic heritage items and areas and archaeological sites (section 7(g)) and the effects of climate change on them (section 7(i)) are particularly relevant to recommended provisions managing potential for demolition and potential for relocation of heritage items. The latter issue is related to management of significant risks from natural hazards, another matter of national importance that is addressed in the Natural Hazards – Ngā Mōreareatanga Aotūroa chapter and associated Recommendation Report. Providing for potential relocation of heritage items through the recommended provisions of the Historic Heritage – Ngā Tuku Ihotanga chapter contributes to meeting objectives for natural hazard risk management, assisting integrated management of natural and physical resources.

44. The Planning Standards in Standard 15 and Standard 17 set requirements for plans that address Historic Heritage and Sites and Areas of Significance to Māori respectively. The Panel recommendations have been made on the understanding that the SASM Chapter must contribute to achievement of objectives in the Historic Heritage Chapter, which is further discussed in the Recommendation Report for the SASM Chapter and discussed in relation to relevant objectives in this report. Standard 15, referenced in relation to this report, requires provisions to be located in the Historic Heritage Chapter where they pertain to identification of historic heritage, protection and management of historic heritage, heritage orders, and schedules of identified historic heritage and heritage orders, which may be in appendices. This standard is followed in the Plan.

45. The NZCPS, Objective 6, recognises that historic heritage in the coastal environment is extensive, but not fully known, and is vulnerable to loss or damage from inappropriate subdivision, use and development. The Coastal Environment – Te Taiao o te Takutai chapter of the PTTPP, CE-P1, addresses historic heritage values in the coastal environment, as discussed in the Recommendation Report for the Coastal Environment Chapter. Policy 2 and Policy 6 of the NZCPS are relevant to Panel recommendations regarding management of unverified NZAA archaeological sites, including those that are located within the coastal environment, guided by NZCPS direction to incorporate buffers.

46. Panel responses to the evidence of Manawa Energy Limited ('Manawa') ensure the provisions in the Historic Heritage Chapter appropriately give effect to the National Policy Statement for Renewable Electricity Generation ('**NPSREG**').

47. The West Coast Regional Policy Statement ('**RPS**') Chapter 4, Objective 4 seeks that "*the significant values of historic heritage are appropriately managed to contribute to the economic, social and cultural well-being of the West Coast*". The Panel understand this objective in the context of Part 2 of the RMA, particularly section 6(f), interpreting the term "*significant*" to mean historic heritage is significantly valued as a matter of national importance. The Panel consider that in order to "*appropriately manage*" historic heritage it must be protected from inappropriate subdivision, use and development. Such management is then able to contribute to the economic, social and cultural well-being of the West Coast, as the Panel reads that objective. The Panel accepts that there may be degrees of value that influence how individual historic heritage items and areas and archaeological sites are protected, and therefore appropriately managed.

48. Policy 5 of Chapter 4 supports Objective 4, promoting the sustainable management of historic heritage through: "*identifying significant values associated with historic heritage*"; ensuring that subdivision, use and development does not detract from those values once identified; and encouragement of adaptive reuse of historic heritage where appropriate and practicable. The Panel again reads this policy in the context of section 6(f), meaning that historic heritage is presumed to have significant values associated with it as a matter of national importance and that identifying historic heritage means also identifying its values, such that there is no doubt regarding the significance of historic heritage, and that it is valued. The Panel interprets the need to not detract from identified historic heritage and its values as meaning that historic heritage is to be protected from inappropriate subdivision, use and development. The Panel acknowledge the efforts of the TTPP Committee, contributors from the community, submitters and owners of historic heritage to support adaptive reuse on the West Coast, including through the Plan provisions, as a means of giving effect to this policy. The Panel have given consideration to the economic implications, as signalled in the policy explanation, and the social and cultural implications of recommendations. The Panel has referenced the section 32 and 32AA analyses and further considers the costs and benefits of any recommended changes from the notified version of the PTTPP as necessary. The Panel recommendations give effect to the RPS as it relates to historic heritage.

49. The Panel received evidence that all items on the Heritage List within the West Coast region have been added to Schedule 1A: Schedule of Historic Heritage Items and Areas. HNZPT advised that listed items are not protected by virtue of being on the list, hence the need for scheduling and provisions in the Plan, and for schedules to be "*comprehensive and defensible*", as described in the evidence of Ms Baird. The Panel acknowledge that this requires the preparation of assessments and site records for the benefit of heritage owners and planners to understand values requiring protection. HNZPT emphasised to the Panel that all pre-1900 sites are archaeological sites by definition under the HNZPT Act, whether or not they are scheduled in the district plan. The Panel recognise the need to protect archaeological sites, both known and unknown or unverified.

50. The Panel recognise the relationship between the Plan and Department of Conservation ('**DOC**') polices and strategies, and management plans guiding DOC responsibilities towards historic heritage on public conservation land. The reporting officer, Lois Easton, advised the Panel in her right of reply that the preservation and protection of natural and historic resources are matters for conservation under the Conservation Act 1987, and that DOC manages the largest heritage portfolio in the country. The Panel note that some historic

heritage items and areas included in Schedule 1A of the Plan, including Big River Quartz Mine, Denniston Historic Area, Waiuta Historic Area, Brunner Mines Historic Area and Ross Historic Area, have a relationship with historic places actively managed on public conservation land[5]. Application of section 4(3) of the RMA determines that historic heritage on public conservation land is outside the jurisdiction of the Plan.

51. Clause 10 of the First Schedule states that providing decisions on individual submissions is unnecessary. The Panel's recommendations are made within the scope of requested relief, either individual submissions or groups of submissions making similar requests, as specified in the reasons for recommendation.

PART C – SUBMISSIONS, EVIDENCE, EVALUATION AND RECCOMENDATIONS

2. HISTORIC HERITAGE - NGĀ TUKU IHOTANGA

52. Historic heritage is variously described through the s42A report, submissions and evidence presented to the hearing as "*items*", "*buildings*", "*structures*", "*sites*", "*areas*" and "*landscapes*". The phrase "*items and areas*" is used throughout this report and as part of Panel recommendations. "*Items*" is considered by the Panel to include buildings, structures and materials. "*Areas*" includes the location of historic heritage items, landscape settings and delineated or mapped historic heritage places. '*Archaeological sites*' are separately referenced. Where other terms are used, such as "*buildings*", "*structures*" or "*materials*", these are used specific to the context of analysis and recommendations.

53. The Panel received evidence from the reporting officer and submitters on the historic heritage context of the region.

54. **Ms Easton** described Te Tai o Poutini as "exceedingly rich" in historic heritage resources. She advised that all three operative district plans pre-date the introduction to the RMA in 2003 of protection for historic heritage from inappropriate subdivision, use and development as a matter of national importance, and therefore also the Heritage New Zealand Pouhere Taonga Act 2014 ('**HNZPT Act**') that established the functions and powers of HNZPT[6]. She noted that this has meant inconsistent and ad hoc outcomes for historic heritage in the region. She emphasised financial implications of maintaining heritage buildings, in particular due to earthquake strengthening requirements, and that "demolition by neglect" has been a significant problem in parts of the region. She outlined the challenges in Greymouth due to the prevalence of heritage buildings situated on leasehold land within the town, further affecting investment in maintenance, repairs and upgrade of these buildings. She stated that over the life of the Grey District Plan many heritage buildings have fallen in to disrepair, with examples of demolition, notably Remingtons Hotel and Waitaki House. She described the Plan process as an opportunity to reduce barriers to undertaking necessary works on such buildings, whilst being sensitive to their heritage values.

55. Significantly, Ms Easton identified that there is currently no historic heritage professional capability on the West Coast, either within councils or locally based consultants, despite the abundance of historic heritage, and therefore heavy reliance is placed on assistance from HNZPT, as well as contracted expertise from outside the region, particularly in relation to assessment of historic heritage items and areas, and archaeological site assessments. This context has been recognised by the Panel in the approach taken to identifying expertise

[5] P106, Table 2 of the West Coast Conservation Management Strategy
[6] The Buller District Plan was amended three times between 2004 and 2011, and the Grey District Plan was amended in 2014, however these amendments did not fully align the plans with statutory changes

suitable for undertaking assessments, including the definition of '*suitably qualified or experienced heritage professional*'.

56. In her right of reply, Ms Easton acknowledged a connection between protection of historic heritage and tourism opportunities. She noted that each of the district councils have cultural heritage tourism projects (e.g. Westland Cultural Heritage Tourism project) and locations (e.g. Ross goldfield, Shantytown, Reefton, Denniston Plateau), and that the Pounamu Pathway project recently received significant support from Development West Coast. Overall, she described historic heritage tourism as a small but growing part of West Coast tourism offerings and that she considered it a priority to support that growth. The Panel, therefore, recognise the relationship between the Historic Heritage Chapter provisions and Tourism Strategic Objective TRM-O1 in the Plan.

57. Arlene Baird of **HNZPT** advised that the West Coast has already lost "*an absolutely massive amount*" of heritage, and that the region is "*incredibly unique*" with heritage that is not found anywhere else in the country. Ms Baird followed that there is a need to strive to protect as much historic heritage as possible.

58. **Laura Mills**, a journalist with a passion for documenting history and a weekly heritage feature in the Greymouth Star, described a limited network of organisations and community members working to preserve West Coast heritage, with ad hoc funding. She noted that there is no business driving heritage preservation, and that investigation is dependent upon volunteer effort. Ms Mills expressed concern about previous demolition and potential further demolition of heritage listed buildings in Greymouth, and noted the vulnerability of heritage buildings in small towns. She considered that heritage tourism was taking a back seat to nature based and adventure tourism, although there was visitor interest in West Coast heritage.

59. Susan Aitken, planner for **Poutini Ngāi Tahu**, indicated that historic heritage of significance to Poutini Ngāi Tahu was included in both Schedule One and Schedule Three of the plan, so the provisions of the Historic Heritage Chapter and the SASM Chapter together support historic heritage values of cultural importance, along with unverified archaeological sites in Appendix Ten.

60. Ms Easton confirmed that all objectives in the Historic Heritage Chapter are applicable to sites and areas of significance to Māori, and that policies HH-P1, HH-P2, HH-P3 and HH-P9 are suitable policies to apply in relationship with the policies in the SASM Chapter.

2.1. Definitions

Submissions and Further Submissions

61. The s42A Report, on pages 12-14, summarises submissions and further submissions on definitions.

62. HNZPT (S140.002, S140.003, S140.006 and S140.007) was the sole submitter on the definitions for '*archaeological site*', '*heritage fabric*', '*relocation*' and '*repositioning*'.

63. Poutini Ngāi Tahu (S602.031 and S620.032) was the sole submitter on the definitions for '*heritage resource*' and '*historic heritage*'.

64. HNZPT (S140.004) and Federated Farmers (S524.009) submitted on the definition of '*heritage professional*', in support of retaining as notified and requesting deletion respectively. Federated Farmers (S524.137, S524.046 and S524.138) sought an alternative definition for

'*suitably qualified heritage professional*'. The Federated Farmers submission points were opposed, variously in full or in part, by HNZPT (FS111.004, FS111.006, FS111.008) and BDC (FS149.049).

65. BDC (S538.168) sought clarification on what was meant by '*ADP commitment*' in relation to HH-R3, which is also discussed in relation to that rule.

Section 42A Report Analysis and Recommendations

66. Ms Easton supported the request of HNZPT to introduce a definition of '*archaeological site*', differentiated from '*site*', which is defined in the Plan. She recommended no amendments to the definitions of '*relocation*' and '*repositioning*', which HNZPT sought to be retained as notified. She also recommended amending the definition of '*historic heritage*' to match section 2 of the RMA in response to the Poutini Ngāi Tahu submission point, and recommended no amendments to the definition of '*heritage resource*', which Poutini Ngāi Tahu sought to be retained as notified.

67. Ms Easton did not support the submission points of Federated Farmers regarding the definition of of '*heritage professional*'. She acknowledged limited availability of heritage professionals in the region, but noted that relocation and modification of heritage items without input from appropriate expertise was an issue that had previously resulted in damage to important heritage resources. She emphasised that the definition supports rules that allow for repair, maintenance and earthquake strengthening of historic heritage buildings. She acknowledged the further submission of BDC that sought to delete reference to a minimum of 5 years of experience because the council did not wish to ascertain the work experience of every professional. She considered that any heritage professional providing advice to the Councils would provide information about their expertise.

68. Ms Easton responded to the BDC submission point by recommending a definition of '*Accidental Discovery Protocol Commitment*' to support implementation of HH-R3.

Hearing and Submitter Evidence/Statements

69. Arlene Baird on behalf of HNZPT advised that having the right expertise assessing historic heritage was particularly important and she believed that the qualifications covered by the proposed definition of '*heritage professional*' were potentially broad enough to cover a range of expertise, including architectural expertise. She acknowledged that there are occasions where an architect can have worked on heritage projects for ten years without having a particular heritage related qualification and have the right expertise, which has been overcome by councils consulting with HNZPT. She said that HNZPT takes a peer review role and assists councils. She gave the example of Christchurch City Council having a list of approved heritage professionals. She agreed that the expertise needed may differ depending on the project, and supported the use of an advice note that HNZPT may be consulted in each case, along with the use of the proposed definition. The proposed definition is used in other plans and is therefore supported by HNZPT, but Ms Baird indicated that it may benefit from an '*or*' that refers to an approved council list. She was comfortable with the term '*suitably qualified heritage professional*'.

70. Mark Lile, planner representing The O'Conor Institute Trust Board, raised the issue of capacity constraints on the West Coast, as well as nationally. He emphasised the scope of expertise that needs to be covered, particularly architectural qualifications and experience, in the definition of '*heritage professional*'. Mr Lile emphasised the importance of ensuring flexibility in the wording of the definition and/or the associated rules, potentially dropping the word

'*heritage*' from the term or otherwise addressing what is captured by the definition to reflect the reality of practice in the region.

71. Susan Aitken, planner representing Poutini Ngāi Tahu, sought clarification for plan users regarding what constitutes a '*suitably qualified heritage professional*' in order to support proposed method HH-M2. She noted that an advice note would not carry any weight. She sought that the definition be expanded to Poutini Ngāi Tahu cultural heritage expertise, determined by the relevant Rūnanga.

Reporting Officer Reply Evidence

72. There was no further evidence from Ms Easton in her right of reply on the matter of definitions.

Hearing Panel's Evaluation

73. The Panel accepts the advice of the reporting officer, with the exception of the definition of '*heritage professional*'. The Panel also note that HNZPT sought that the reference to '*site*' in the '*heritage fabric*' definition should not link to the Plan definition for '*site*'. Evidence from Arlene Baird did not further explore this point. The Panel can see the issue raised by HNZPT and consider that removal of the term '*site*' is an available course of action, as alternative relief. The word '*place*' is already part of the definition and therefore the matter of location is covered, without introducing complications that might arise from use of the term '*site*' as defined in the Plan. The Panel also understand that all uses of the term '*site*' will incorporate a hyperlink to the interpretation of the term, so the alternative relief is necessary to address the issue raised in submission. The same is true in relation to the term '*archaeological site*' which is referenced in the Overview of the Plan but is not included as a definition in the Interpretation section. The Panel consider that including a definition in the Plan would provide additional relief on this submission point and should mean the same as the HNZPT Act 2014.

74. The Panel have identified the need for a consequential amendment to the definition of '*heritage fabric*' in light of the submissions from The O'Conor Institute Trust Board (S466.013) and Frank and Jo Dooley (S478.056), as discussed in the Rules section of this Recommendation Report. Interior heritage fabric is only relevant to those heritage items in Schedule One that incorporate the phrase "*fixtures and fittings*" in their description of "*Extent*", which the Panel considers is helpful to clarify in the definition of '*heritage fabric*' in addition to amendments in the rules.

75. The Panel has considered concerns expressed by submitters regarding the potential limitations of the notified definition of '*heritage professional*', which during the course of the hearing was often referred to as '*suitably qualified heritage professional*'. The Panel accepts the view of Ms Baird that it is necessary to emphasise heritage expertise in the definition. The Panel also accepts the concerns of Mr Lile regarding clarity around the definition capturing related fields, such as architects. The Panel has further considered the evidence of Ms Baird regarding the peer support and peer review role that HNZPT offers to councils and to practitioners in the heritage field. Ms Baird stated that HNZPT does recognise some experts whose experience may not otherwise be captured in the notified definition of '*heritage professional*', particularly those with many years of experience (e.g. ten years) who may lack a relevant qualification. She also acknowledged during questioning that different types of expertise may be required depending on the circumstances of each case, so that '*suitably qualified*' may differ between proposals.

76. In the Christchurch City Council example cited by Ms Baird, involving a council approved list, HNZPT had not compiled the council list of suitably qualified heritage professionals, but Ms Baird said that HNZPT would support those on the list as having appropriate expertise to undertake heritage assessments. The Panel expressed concerns during the hearing about relying on a list approved by council, which may give rise to legal issues.

77. The Panel is of the view that a definition of '*suitably qualified heritage professional*', as requested in the Federated Farmers submission points, needs to rely on objective criteria to determine what '*suitably qualified*' means in relation to a heritage professional. In this respect, HNZPT are the statutory body with a primary function nationally to assess and protect historic places, historic areas, wāhi tupuna and and wāhi tapu, and provide support for persons with a legal or equitable interest in such places and areas[7]. The Panel considers that the act of peer review and recognition by HNZPT of heritage expertise is a means of support that HNZPT can, and currently does, provide to the district councils. The Panel also considers that the act of peer review and recognition by HNZPT, and evidence of such, is a legitimate objective means of establishing whether a person can be considered a '*suitably qualified heritage professional*', on the evidence given by HNZPT to the hearing. While the Panel can see that an advice note is helpful for plan users, this cannot overcome any limitations of the definition itself because the advice note has no statutory weight, as noted by Ms Aitken.

78. In response to submissions and evidence of submitters concerning the definition of '*heritage professional*', the Panel has determined the need to recommend an additional pathway for someone to be considered suitable, reliant on HNZPT advice, and also note that the term should be '*suitably qualified or experienced heritage professional*' to reflect the different pathways provided for in the definition. The Panel consider that the definition should be accompanied by an advice note, and consequential amendments made to the rules to incorporate the expanded term. The Panel note that Poutini Ngāi Tahu did not submit on the definition, however the evidence provided has guided drafting of the advice note to accompany the definition, and ensures consistency with the approach taken in the SASM Chapter.

79. The Panel recommend adopting the definition of '*Accidental Discovery Protocol Commitment*' to support implementation of HH-R3, but consider that the second sentence in the wording recommended by the reporting officer is better suited to an advice note accompanying the definition.

Hearing Panel's Recommendation

80. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends accepting or accepting in part the submission points footnoted below, and recommend the following changes to the **Definitions** section of the Plan:

Accidental Discovery Protocol Commitment means a written commitment to adhere to the accidental discovery protocol as contained in Appendix Four.

Advice note: This does not replace any archaeological authority required by HNZPT.[8]

[7] Heritage New Zealand Pouhere Taonga Act 2014, s13(1)(a)
[8] Buller District Council S538.168

Archaeological site has the same meaning as in the Heritage New Zealand Pouhere Taonga Act 2014 (as set out below).[9]

Means, subject to section 42 (3) of the Heritage New Zealand Pouhere Taonga Act 2014, –

a) **Any place in New Zealand, including any building or structure (or part of a building or structure), that-**

i. was associated with human activity that occurred before 1900 or is the site of the wreck of any vessel where the wreck occurred before 1900; and

ii. provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand; and

b) **Includes a site for which a declaration is made under section 43(1) of the Heritage New Zealand Pouhere Taonga Act 2014.**

Heritage fabric means any physical element, feature, material or finish which contributes to the heritage values, in whole or in part, of a structure, place, object **or** feature ~~or site~~.[10] **Heritage fabric only includes any interior element, feature, material or finish where specifically identified in Schedule One Historic Heritage Items and Areas that reference fixtures and fittings**.[11]

Historic heritage ~~means sites, buildings and areas identified in Schedule One Historic Heritage Items and Areas and Archaeological Sites~~ **has the same meaning as in section 2 of the RMA (as set out below) –**

a) means those natural and physical resources that contribute to an understanding and appreciation of New Zealand's history and cultures, deriving from any of the following qualities:

i. archaeological;

ii. architectural;

iii. cultural;

iv. historic;

v. scientific;

vi. technological; and

b) includes –

[9] Heritage New Zealand Pouhere Taonga S140.002
[10] Heritage New Zealand Pouhere Taonga S140.003
[11] The O'Conor Institute Trust Board S466.013, Frank and Jo Dooley S478.056

i. historic sites, structures, places, and areas; and

ii. archaeological sites; and

iii. sites and areas of significance to Māori, including wāhi tapu; and

iv. surroundings associated with the natural and physical resources

Suitably Qualified or Experienced Heritage Professional means a person with a degree or recognised post-graduate qualification in a field related to heritage conservation or management**, which may include architecture,** and at least five years of experience in a heritage conservation or management role; **or otherwise, a person peer reviewed and recognised by Heritage New Zealand Pouhere Taonga as having experience in heritage conservation or management relevant to undertaking the required role**.

Advice Note: Relevant experience in heritage conservation or management includes cultural expertise held by members of Poutini Ngāi Tahu, and consultation with Poutini Ngāi Tahu is needed to identify expertise relevant to undertaking the required role. [12]

2.2. Historic Heritage General/Whole Chapter

Submissions and Further Submissions

81. The s42A Report, on pages 8-10, summarises submissions and further submissions on the Historic Heritage Chapter as a whole. There were two submitters in support, one supporting in part and seven seeking amendments.

82. The Greymouth Heritage Trust (S104.007) sought that the Plan outline how and when heritage sites and buildings can be added to the Plan, and what would be required to be included. Rocky Mining Limited (S474.033 and S474.036)) and Papahaua Resources Limited (S500.022 and S500.025) sought recognition of the functional need and operational need of mineral extraction activities, and that use of the terms '*avoid*', '*protect*', '*prevent*' or '*minimise*' are limited to situations where they are warranted.

Section 42A Report Analysis and Recommendations

83. Ms Easton responded to the submission of Greymouth Heritage Trust by noting that a plan change would be required to add historic heritage items and areas and archaeological sites to the Plan schedules. She acknowledged that there are likely to be important heritage items and areas and archaeological sites valued by the community that are not included in the schedules because the list is largely made up of historic heritage items and areas and archaeological sites listed by HNZPT. She recommends a new method HH-M2 is added to the Plan to address this matter, which is further discussed in the Methods section of this report.

[12] Federated Farmers of New Zealand S524.009, S524.137, S524.046 and S524.138

84. Ms Easton responded to the points of the mining companies by citing Part 2 of the RMA and noting that there is no direction in higher order instruments that would give mineral extraction priority over matters of national importance. She considered that use of the terms that were causing concern for the mining companies are appropriate in the context of providing protection for historic heritage, in accordance with section 6(f) of the RMA.

Hearing and Submitter Evidence/Statements

85. The submitters did not provide evidence in support of their positions, but the Panel did receive evidence on the new proposed method HH-M2, which is discussed in the Methods section of this Report.

Reporting Officer Reply Evidence

86. There was no further evidence from Ms Easton in her right of reply on the general matters raised, aside from new Method HH-M2 which is discussed in the Methods section of this report.

Hearing Panel's Evaluation

87. The Panel accepts the advice of the reporting officer on the general matters raised.

Hearing Panel's Recommendation

88. No amendments are recommended to the Plan in relation to the general matters raised, with the exception of new Method HH-M2, which is discussed in the Methods section of this report.

2.3. Historic Heritage Overview

Submissions and Further Submissions

89. The s42A Report, on pages 10-12, summarises submissions and further submissions on the Overview of the Historic Heritage Chapter. There was one submission point opposing in part and seven submission points seeking amendments, from HNZPT, Poutini Ngāi Tahu and GDC, with further submissions from Westpower and Poutini Ngāi Tahu.

Section 42A Report Analysis and Recommendations

90. Ms Easton generally supported submissions seeking changes to the Overview, with the exception that she considered it necessary to be clear that Appendix Ten archaeological sites are not currently mapped and would need to be introduced by way of plan change. She did not support the request of GDC (S608.010) to remove all references to sites and areas of significance to Māori, consistent with other recommendations.

Hearing and Submitter Evidence/Statements

91. Arlene Baird on behalf of HNZPT acknowledged the acceptance of their submission points on the Overview that made obligations to archaeological sites clearer for Plan users.

92. Susan Aitken on behalf of Poutini Ngāi Tahu accepted the alternative wording provided in the s42A Report regarding Appendix Ten. She recorded her agreement with the reporting officer that all of the objectives are relevant to SASM, as well as Notable Trees, and that policies HH-P1, HH-P2, HH-P3 and HH-P9 are the relevant policies for SASM. She supported the remainder

of the recommendations on Poutini Ngāi Tahu submission points, whilst also noting some additional typos that were not picked up in Appendix 1 to the s42A Report.

93. Martin Kennedy, on behalf of Westpower, provided further evidence on further submission FS222.0161 in light of the s42A Report rejecting the point in favour of the HNZPT submission point S140.015. He recommended some wording that would satisfy the intent of the submission and further submission, adding "*including archaeological sites*".

Reporting Officer Reply Evidence

94. Ms Easton, in response to a question from the Panel, considered that there may be value in referencing heritage tourism in the Overview, which would provide a link to the Strategic Direction for Tourism in the Plan. She did not provide any recommended wording.

Hearing Panel's Evaluation

95. The Panel generally accepts the advice of the reporting officer on the Overview. The Panel also agree with Mr Kennedy that the additional wording he recommends would assist, which is further discussed in relation to the method in the Methods section of this report. The Panel have considered any need for additional reference to heritage tourism but find that reference is already present in paragraph three of the Overview, which is considered to be sufficient and provides a link to the Strategic Direction for Tourism in the Plan.

96. The Panel also recommend amending the Overview to avoid use of the term '*sites*' that may be problematic, preferring the overarching terms '*items*' and '*areas*', and separate reference to '*archaeological sites*', which mirrors the headings in the notified versions of Schedule 1A and Schedule 1B.

97. With regard to Appendix Ten, the Panel do not consider that an alert layer for information purposes is a matter for a plan change. The Panel consider that addition of these sites to Schedule One would warrant a plan change, so the Overview is amended on the basis of this understanding.

Hearing Panel's Recommendation

98. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends accepting or accepting in part the submission points footnoted below, and recommend the following changes to the **Historic Heritage – Ngā Tuku Ihotanga Overview**:

Overview

~~Sites~~ **Items**[13], areas, memorials and buildings may have historic heritage values if they are places or objects ~~which~~ **that**[14] people associate with their identity, history, and events or cultural traditions.

Historic heritage values are important because they provide a tangible insight into our past and can be an important source of knowledge**,**[15] and a social and cultural link to the past that is important

[13] Consequential amendment arising from Heritage New Zealand Pouhere Taonga S140.003 and S140.003
[14] RMA First Schedule, Clause 16
[15] RMA First Schedule, Clause 16

to the community. The destruction or damage of heritage values can cause the loss of this knowledge**,**[16] as well as a social/cultural link to the past.

As well as meeting the specific duties under section 6 of the Resource Management Act 1991, protecting historic heritage values can help teach people about their past, foster a sense of identity and community**,**[17] and provide economic opportunities in heritage, tourism, recreation, restoration and marketing.

Te Tai o Poutini Plan manages different types of historic heritage.

Historic Heritage items are listed in Schedule One**, Schedule Two and Schedule Three. Schedule One predominantly covers the built and colonial heritage and also** ~~The schedule also~~[18] identifies if there are any interior elements of a heritage building that are also protected. **Schedule Two covers notable and heritage trees that are important to the community and Schedule Three reflects Poutini Ngāi Tahu historic heritage areas**.[19]

Historic areas are also listed in Schedule One. There are eight historic areas – Denniston Historic Area, Reefton Historic Area, Waiuta Historic Area, Greymouth Railway Station Historic Area, Moana Railway Station Historic Area, Brunner Mines Historic Area, Jack's Mill School Historic Area and Ross Historic Area.

Under the Heritage New Zealand Pouhere Taonga Act 2014, ~~A~~**a**rchaeological[20] sites are any place in Aotearoa New Zealand (including buildings and structures) that are associated with pre-1900 human activity, where there is evidence relating to the history of New Zealand that can be investigated using archaeological methods. There are a large number of archaeological sites identified in the West Coast/Te Tai o Poutini. While all archaeological sites are protected under **the**[21] Heritage New Zealand Pouhere Taonga Act 2014, archaeological sites **predominantly related to European colonial history**[22] of particular significance to the community on the West Coast/Te Tai o Poutini are included in Schedule One and the Historic Heritage rules also apply to these archaeological sites. **This schedule can also contain post-1900 items and areas**.[23] **The archaeological sites listed in Schedule One, while an important part of the West Coast/Te Tai o Poutini, are not the full list**.[24] Alongside this, the New Zealand Archaeological Association has identified a list of archaeological sites of Māori origin. **Further investigation is required to ensure the exact spatial location and extent of these archaeological sites, therefore** ~~T~~**t**hese[25] are included in Appendix Ten for information. **This appendix raises awareness for plan users, particularly resource consent applicants, of the increased likelihood of discovering archaeological material of Māori origin in the vicinity of these areas. Appendix Ten will be mapped and included as an "Alert Layer" on the e-plan maps. The Councils will continue to work with both Heritage New Zealand Pouhere Taonga and Poutini Ngāi Tahu over the next ten years to ensure that the archaeological sites of Māori origin are accurately mapped before being considered for inclusion in Schedule One via a plan change**.[26]

[16] RMA First Schedule, Clause 16
[17] RMA First Schedule, Clause 16
[18] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.151
[19] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.151
[20] Heritage New Zealand Pouhere Taonga S140.015
[21] RMA First Schedule, Clause 16
[22] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.152, S620.100
[23] Heritage New Zealand Pouhere Taonga S140.015
[24] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.152, S620.100
[25] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.152, S620.100
[26] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.152, S620.100

Historic heritage and archaeological sites are also important to Poutini Ngāi Tahu **for values other than historic heritage**.[27] Some of these sites and areas are identified, with other Sites **and Areas**[28] of Significance to Māori, in Schedule Three. Notable trees of value to Poutini Ngāi Tahu are identified in Schedule Two. Where a site is scheduled in multiple locations, the provisions of all chapters must be considered. **Some objectives and policies of this chapter also apply to sites listed only in Schedule Two or Schedule Three**.[29]

Other relevant Te Tai o Poutini Plan provisions

It is important to note that in addition to this chapter, a number of chapters also contain provisions that may be relevant to historic heritage, including:

• **Sites and Areas of Significance to Māori** – the Sites and Areas of Significance to Māori Chapter contains the provisions in relation to the sites and areas identified in Schedule Three.

• **Notable Trees** – the Notable Trees Chapter contains the provisions in relation to trees identified in [30]Schedule Two.

• **Subdivision** – the Subdivision Chapter contains provisions which relate~~d~~ to the subdivision of land with historic heritage ~~sites~~ **items**[31] and areas – in particular Rules SUB – R10 and SUB – R17.

• **Financial Contributions** – the Financial Contributions Chapter provides the framework and provisions that allow for waivers for financial contributions in circumstances where **historic** heritage[32] ~~sites and~~ items **and areas**[33] are protected.

• **Signs** – the Signs Chapter contains provisions ~~which~~ **that** relate to signs that are placed on and around historic heritage ~~sites~~ **items**[34] and areas – in particular Rule SUB – R7.

• **The Zone Chapters** – ~~T~~**t**[35]he Zone chapters contain some provisions which exempt historic heritage buildings from complying with performance standards, for example visitor accommodation requirements in the Town Centre Zone.

• **Appendix Ten** – ~~T~~**t**[36]his appendix contains NZAA listed archaeological sites of Māori origin. The exact spatial location and extent of these sites has not yet been clearly identified but they are included in this appendix for information purposes **and are a matter for consideration where resource consent is required for an activity that may impact an archaeological site. Appendix Ten will be mapped and included as an "Alert Layer" in the e-planning maps**.[37] Like all archaeological sites, these **archaeological sites**[38] are protected under the Heritage New Zealand Pouhere Taonga Act 2014.

[36] RMA First Schedule, Clause 16
[37] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.101, S620.353
[38] RMA First Schedule, Clause 16

Aside from Te Tai o Poutini Plan, there are other key Acts and regulations seeking to protect and conserve historic heritage.

The Heritage New Zealand Pouhere Taonga Act 2014 (HNZPT Act) – under this act it is unlawful to destroy, damage or modify an archaeological site (regardless of whether the site is scheduled in Te Tai o Poutini Plan or not) without obtaining an archaeological authority from Heritage New Zealand Pouhere Taonga (HNZPT) before work starts. An archaeological authority is required in addition to any resource consent required by the Council. If you discover a previously unknown archaeological site (for example, when you are undertaking ~~earth~~works[39]) you must stop any work that could affect the **archaeological[40]** site and contact HNZPT for advice on how to proceed. If there are human remains**/kōiwi or taonga**[41] revealed, then the Accidental Discovery Protocol in Appendix ~~Five~~ **Four[42]** must be followed and if any artefacts are found they must be handed over to the Ministry for Culture and Heritage.

The Building Act 2004 – this Act and associated regulations manage earthquake-prone buildings. Earthquake strengthening to scheduled **historic[43]** heritage buildings and items is a permitted activity so long as the strengthening work does not compromise the historic heritage building or item**'**s[44] heritage values.

2.4. Historic Heritage Objectives

Submissions and Further Submissions

99. The s42A Report, on pages 17-20, summarises submissions and further submissions on the Objectives of the Historic Heritage Chapter.

100. There were six submissions in support of the objectives as a whole.

101. With regard to **HH-O1**, there were two submissions in support seeking that the objective be retained as notified.

102. With regard to **HH-O2**, there were two submissions in support seeking that the objective be retained as notified, and one seeking amendment. Westpower (S547.170) sought additional wording to say "*from inappropriate subdivision, use and development*".

103. With regard to **HH-O3**, there were two submissions in support seeking that the objective be retained as notified, and one seeking amendment. Westpower (S547.171) sought additional wording to say "*from inappropriate subdivision, use and development*".

104. With regard to **HH-O4**, there were two submissions in support seeking that the objective be retained as notified, and two seeking amendment. Westpower (S547.172) sought additional wording to say "*from inappropriate subdivision, use and development*", replacement of the word "*restricting*" with "*managing*", and the addition of "*where sustainable alternatives*

[39] Heritage New Zealand Pouhere Taonga S140.017
[40] Heritage New Zealand Pouhere Taonga S140.017
[41] Te Rūnanga o Ngāi Tahu, Te Rūnanga o Ngāti Waewae, Te Rūnanga o Makaawhio S620.102, S620.154
[42] RMA First Schedule, Clause 16
[43] RMA First Schedule, Clause 16
[44] RMA First Schedule, Clause 16

exist". Kiwirail (S442.047) sought the addition of "*while recognising the functional or operational need of infrastructure*".

Section 42A Report Analysis and Recommendations

105. Ms Easton supported use of the phrase "*inappropriate subdivision, use and development*" being added to HH-O2, HH-O3 and HH-O4, to align with section 6(f) of the RMA. She did not support the additional Westpower amendments to HH-O4 because she considered that they would undermine the purpose of the objective. She also did not support the Kiwirail submission point seeking reference to '*functional need*' and '*operational need*' because HH-O4 is addressing a matter of national importance and it would not be appropriate at the objective level.

Hearing and Submitter Evidence/Statements

106. Susan Aitken, on behalf of Poutini Ngāi Tahu, accepted the recommended amendments to the objectives in the s42A Report, although the Poutini Ngāi Tahu submission points had supported retaining the objectives as notified.

107. Martin Kennedy, on behalf of Westpower, reiterated his position that the additional requested amendments to HH-O4 would be consistent with s6(f) of the RMA and also reflect the reality of heritage management, particularly as experienced by communities with limited resources.

108. Stephanie Styles, in the tabled evidence from Manawa, acknowledged the partial acceptance of their submission point on HH-O2, which sought to retain the objective as notified.

Reporting Officer Reply Evidence

109. In her right of reply Ms Easton did not recommend any additional amendments to the objectives.

Hearing Panel's Evaluation

110. The Panel accepts the addition of the phrase "*inappropriate subdivision, use and development*" in HH-O3 and HH-O4 for the reasons identified by the reporting officer and submitters. However, the Panel does not recommend including it in HH-O2 because the objective is already describing sensitive development, which is appropriate development, while protecting values of historic heritage items and areas.

111. The Panel consider that the term "*managing*", rather than "*restricting*", better describes the process involved in any relocation, repositioning, internal and external alterations and additions to heritage items. The policy and rule framework describes the way in which this is done to protect historic heritage values, and supports these activities to occur in an appropriate manner. The Panel therefore agree with Westpower on this matter. However, the phrase "*where sustainable alternatives exist*" is problematic because alternatives may differ over time depending on a range of factors, including technological and financial. The Panel consider that the policy framework does allow for demolition and destruction to occur in limited circumstances, and that therefore the objective as notified is misaligned with policy. The Panel consider the policy to be important, allowing for demolition and destruction when particular conditions are met. While the Panel understand submitter concerns that recognising this at the objective level introduces risk of more demolition and destruction occurring, it is part of the policy design of the notified Plan. Recommendations to the Panel

are to modify the associated policy, rather than to delete it from the Plan, and therefore the objective needs to reflect this. The Panel therefore offer alternative relief on the Westpower submission point.

Hearing Panel's Recommendation

112. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends accepting or accepting in part the submission points footnoted below, and recommend the following changes to the **Historic Heritage – Ngā Tuku Ihotanga Objectives**:

HH-O1

Recognise, protect and celebrate the benefits of historic heritage of the West Coast/Te Tai o Poutini and its contribution to wellbeing through supporting a sense of place, community identity, culture and economic opportunities.

HH-O2

Provide for development opportunities that are sensitive to the identified values of scheduled historic heritage items and areas while providing for the protection of these values.

HH-O3

Identify, assess and recognise historic heritage places and features that are valued locally, regionally and nationally to ensure their protection **from inappropriate subdivision, use and development**[45] for future generations.

HH-O4

Protect historic heritage **from inappropriate subdivision, use and development** by ~~restricting~~ managing relocation, repositioning, internal and external alterations and additions to heritage items and ~~not~~ **only** allowing demolition and destruction **in limited circumstances**. [46]

2.5. Historic Heritage Policies

Submissions and Further Submissions

113. The s42A Report, on pages 21-25, summarises submissions and further submissions on the Policies of the Historic Heritage Chapter.

114. There was one submission in support of the policies as a whole from BDC.

115. With regard to **HH-P1**, there was one submission in support from Te Mana Ora.

116. With regard to **HH-P2**, there were two submissions in support from Te Mana Ora and Poutini Ngāi Tahu.

117. With regard to **HH-P3**, there were two submissions in support from Te Mana Ora and HNZPT.

[45] Westpower S547.171
[46] Westpower S547.172

118. With regard to **HH-P4**, there were two submissions from Te Mana Ora and HNZPT, and one supporting in part. Manawa (S438.063) sought addition of the phrase "*where practicable*".

119. With regard to **HH-P5**, there were two submissions in support from Te Mana Ora and Northern Buller Communities Society Incorporated, one supporting in part and two seeking amendments.

120. HNZPT (S140.021) sought to delete the word "*or*". Westpower (S547.173) sought addition of the phrase "*or the supply and use of energy*". Manawa (S438.064) sought addition of two clauses that allow for alterations required to enable continued use of the item, or for maintenance or repair purposes.

121. With regard to **HH-P6**, there was one submission in support from Te Mana Ora and three seeking amendments.

122. HNZPT (S140.022) sought addition of the phrase "*assessed by a suitably qualified heritage professional*". Poutini Ngāi Tahu (S620.107) sought an additional clause that referenced impacts on Poutini Ngāi Tahu values associated with any item or site or area of significance to Māori. Westpower (S547.174) sought an additional phrase that referenced technical, locational, functional or operational constraints or requirements of energy activities.

123. With regard to **HH-P7**, there were two submissions in support from Te Mana Ora and Northern Buller Communities Society Incorporated, one supporting in part and two seeking amendments.

124. Westpower (S547.175) sought an additional phrase that referenced technical, locational, functional or operational constraints or requirements of energy activities. Bathurst (S491.011) sought additional wording to indicate that a suitably qualified heritage professional may be required to undertake an assessment, having regard to the nature of the protected heritage item. Manawa (S438.065) sought additional wording to reference significant risk to public safety, or adverse effects on the efficient functioning or operation of regionally significant infrastructure.

125. With regard to **HH-P8**, there were two submissions in support from Te Mana Ora and Northern Buller Communities Society Incorporated, and one seeking amendment.

126. Westpower (S547.176) sought an additional phrase "*or the supply and use of energy*".

127. With regard to **HH-P9**, there were two submissions in support from Te Mana Ora and Poutini Ngāi Tahu, and one supporting in part.

128. HNZPT (140.023) sought amendments to include the phrase "*prioritising sites of Māori origin*".

129. Kiwirail (S442.048) sought a new policy to read as follows:

> **HH-PXX**
>
> Only allow new infrastructure on or within heritage items, heritage settings and historic heritage sites, identified in Schedule One where it can be demonstrated that: there is an operational need or functional need that means the infrastructure's location cannot be avoided; and the new infrastructure will protect and maintain the particular heritage and/or cultural values of that building, site, area, item and/or feature.

130. Greymouth Heritage Trust (S104.009) sought a new policy to read as follows:

> **HH-PXX**
>
> That the Plan promotes the identification of human activity in the now that will become heritage assets in the future.

Section 42A Report Analysis and Recommendations

131. With regard to **HH-P2**, Ms Easton provided evidence at the outset of the hearing process on a whole of Plan submission from David Ellerm (S581.005) that sought the phrase "*including landowners*" be included to accompany reference to "*stakeholders*", supporting the addition of this phrase to HH-P2.

132. With regard to **HH-P4**, Ms Easton did not support the addition of "*where practicable*" because she considered this would inappropriately allow for degradation of heritage values.

133. With regard to **HH-P5**, Ms Easton supported the submission point of HNZPT to remove "*or*" because the policy links to HH-R2 and both limbs need to be satisfied. She also supported the Westpower submission point to include supply and use of energy as a consideration because it also links to HH-R2, and upgrading electricity supply can be an important aspect of enabling use of historic heritage.

134. Ms Easton did not support the Manawa submission point seeking consideration of continued use or maintenance and repair. She considered clause a) to be the primary direction of the policy, and that the additions from Manawa would allow for a wide range of activities that could substantially degrade heritage values. She also did not consider repairs and maintenance to be within the realm of '*additions and alterations*', which are defined.

135. With regard to **HH-P6**, Ms Easton supported the submission point of HNZPT to specify assessment by a suitably qualified heritage professional because it recognises the importance of professional oversight when relocating a historic heritage item. She supported the submission point of Poutini Ngāi Tahu seeking reference to impacts on Poutini Ngāi Tahu values and sites and areas of significance to Māori because a range of heritage items are within SASM sites and areas.

136. Ms Easton did not support the Westpower submission point seeking reference to constraints or requirements of energy activities because she did not consider it to be a relevant matter when assessing whether or not to reposition or relocate a heritage item. She considered the focus of the assessment to be heritage values and the impact of moving the item on those values.

137. With regard to **HH-P7**, Ms Easton did not support the Westpower submission point seeking reference to constraints or requirements of energy activities because she did not consider it to be a relevant matter when assessing whether or not to allow the demolition or destruction of a heritage item. She also did not support the submission point of Bathurst seeking that an assessment may not always be necessary, on the basis that the heritage item has already been identified as having value and its protection as a matter of national importance. She considered it appropriate that a suitably qualified heritage professional provide an assessment to guide decision-making.

138. Ms Easton supported the request of Manawa for an additional matter to be included with regard to risk to public safety, however she did not consider adverse effects on regionally

significant infrastructure to be sufficient reason to justify demolition or destruction of a heritage item.

139. With regard to **HH-P8**, Ms Easton did not support the Westpower submission point seeking an additional matter of consideration around supply and use of energy. She considered that clause c), d) and e) of the policy already provide for a range of circumstances that could accommodate supply and use of energy.

140. With regard to **HH-P9**, Ms Easton did not support the amendment sought by HNZPT to include all NZAA archaeological sites and prioritise sites of Māori origin, because resources on the West Coast are severely constrained, with over 1000 NZAA archaeological sites and over 200 of Māori origin. She considered that recommended Method HH-M2 would assist.

141. With regard to the additional policy proposed by Kiwirail, Ms Easton supported this as part of the policy suite because she considered there was a gap, such that there was not recognition in the notified policies of circumstances where there may be a functional need or operational need for critical infrastructure to locate on or within a heritage item. She recommended adoption of the wording proposed by Kiwirail.

142. With regard to the additional policy proposed by the Greymouth Heritage Trust, Ms Easton explained that the matter had been considered during drafting of the Plan, but there is no clear mechanism to protect items or areas that may have historic heritage value in the future. Examples discussed during plan development included the site of the Holcim Cement Works, and she considered that such examples belonged in the category of "sense of place" or "amenity values" rather than historic heritage. She therefore recommended no amendments based on the submission point.

Hearing and Submitter Evidence/Statements

143. With regard to **HH-P4**, Stephanie Styles, on behalf of Manawa, tabled evidence indicating disagreement with the conclusion of the s42A Report regarding the effect of adding "*where practicable*" to the policy. She cited the NPSREG, which requires decision-makers to have particular regard to logistical or technical practicalities, and gave the example of Manawa adaptive re-use of historic heritage items in their schemes, which means some change to those items. Rather than allowing for significant degradation of heritage values, she considered that the recommended amendment from Manawa would take into account the reality of the operational requirements of owners of heritage items. She also noted that the policy would not negate the need for a resource consent, but would allow assessment in decision-making that allows for practicalities.

144. With regard to **HH-P5**, Stephanie Styles, in her tabled statement considered the reasoning of the s42A Report in rejecting reference to alterations required to enable the continued use of the item, which she did not agree with. She offered alternative wording to support the intent of the submission, as follows:

> c. the alterations are necessary to enable the continued adaptive reuse of the heritage item while maintaining heritage values to the fullest extent possible.

145. Ms Styles also considered rejection of reference to alterations required for maintenance or repair, and emphasised that the point of including the matter was to illustrate that repair and maintenance may be the purpose of the alterations. She maintained that maintenance and repair are legitimate considerations, and she was guided by Manawa experience with the schemes that incorporate heritage items.

146. With regard to **HH-P6**, Susan Aitken, on behalf of Poutini Ngāi Tahu, acknowledged the reporting officer's acceptance of wording proposed in their submission and agreed with the reasoning provided in the s42A Report.

147. Martin Kennedy, on behalf of Westpower, did not agree with the reasoning in the s42A Report for rejecting their submission point. He considered RSI related issues to be relevant if they are the reason for any proposed relocation or repositioning, and continued to seek inclusion of the matter in this policy.

148. With regard to **HH-P7**, legal submissions from Joshua Leckie and Christina Sheard for Bathurst outlined the statutory framework governing historic heritage items and areas, emphasising that protection and regulation of Heritage List items is achieved through the objectives, policies and rules of District Plans, and that archaeological sites are those that pre-date 1900, so they cannot be modified or destroyed without authority from HNZPT. The legal submissions argued for a heritage assessment to be a discretionary requirement, that could be considered during the resource consent process, on the basis that there will be situations where the conditions of the building determine that demolition or destruction is appropriate, where the structure is not safe or reasonably able to be repaired.

149. Campbell Robertson, on behalf of Bathurst, identified that a building they own on Section 2 SO Plan 14868 NL10A/582 within the Denniston Historic Area may pre-date 1900, and that this area is identified in Schedule One of the Plan, as well as the Heritage List as a Category 1 Historic Place. He outlined that the building was damaged and over-all in a state of disrepair, as a result of vandalism and potentially also extreme weather events. Mr Robertson supported addition of consideration of risks to public safety in the policy. He considered that images of the building provided in his evidence demonstrated that the building is not safe, or reasonably able to be repaired, such that the additional burden of obtaining a report was unnecessary and the matter could be determined by a council planner.

150. Arlene Baird, on behalf of HNZPT, supported the strong language of this policy that states demolition and destruction "*will not be allowed*", reflecting the importance of providing protection for historic heritage, although there are some scenarios where demolition or destruction may be provided through a consenting route.

151. Martin Kennedy, on behalf of Westpower, did not agree with the reasoning in the s42A Report for rejecting their submission point. He considered RSI related issues to be relevant when considering proposals to demolish or destroy historic heritage items. He argued that the matter assists in guiding decision-making where potential conflicts arise, and continued to seek inclusion of the matter in this policy.

152. Stephanie Styles, on behalf of Manawa, in her tabled statement assessed the s42A Report response to their submissions point that sought the matter of public safety to be incorporated and agreed with the alternative relief proposed, with the exception that she considered the word "*viable*" should be replaced with the word "*practicable*", to better align with the NPS-REG. However, she disagreed with the conclusion reached regarding the matter of efficient functioning or operation of RSI, and considered that the NPS-REG provided weight to the matter. She expressed concern regarding acceptance of the proposed policy from Kiwirail on the basis that it is about new infrastructure and could have unforeseen consequences, inconsistent with the approach recommended by Manawa in their submission points.

153. With regard to **HH-P8**, Martin Kennedy, on behalf of Westpower, did not agree with the reasoning in the s42A Report for rejecting their submission point. He emphasised that the

intent was to ensure the viability of use of heritage items, similar to HH-P5, and he considered that undertaking alterations for the use and supply of renewable energy would support that outcome. He therefore continued to seek inclusion of the matter.

154. With regard to **HH-P9**, Arlene Baird, on behalf of HNZPT, explained that their submission point sought a commitment to undertake a programme to accurately map all NZAA sites, rather than just those of Māori origin. She acknowledged, having considered points raised in the pre-hearing meeting, that the resources of the Councils are severely constrained. She supported the recommended Method HH-M2, which would provide a clear pathway for additional sites to be included in the Plan.

155. Susan Aitken, on behalf of Poutini Ngāi Tahu, accepted the reasoning for rejection of their submission point and considered that recommended Method HH-M2 provides for a process to add archaeological sites to Schedule One of the Plan. She considered that although Appendix Ten archaeological sites are not yet mapped, their historic heritage status is still recognised and provided for in the Plan as a matter for discretionary and non-complying resource consent processes, and that NZAA sites of Māori origin are protected under the HNZPT Act.

156. With regard to the additional policy proposed by Kiwirail, Martin Kennedy, on behalf of Westpower, did not support the wording of the policy, although he supported the intent. He considered that the intent of the policy could be achieved by accepting other Westpower submission points, and he expressed concern that policy wording would mean historic heritage would always prevail over RSI, with no assessment of the impact of that policy outcome.

Reporting Officer Reply Evidence

157. With regard to **HH-P5**, Ms Easton agreed with the amendment recommended by Stephanie Styles to allow alterations necessary to enable adaptive reuse of heritage items while maintaining heritage values. She also agreed that upgrading of energy supplies should be to the historic item, not supplying the wider network, and therefore recommended corresponding amendments.

158. With regard to **HH-P6**, Ms Easton responded to a query from the Panel asking if the policy could be re-worded more clearly to address the intention of managing heritage items on leased land in Greymouth. She considered that there may be scope in submissions where submitters had asked for the Plan to be written in "plain English" and recommended amended wording for clause g).

159. With regard to **HH-P7**, Ms Easton agreed with the amendment recommended by Stephanie Styles to exchange the word "*viable*" with the word "*practicable*" in the requested clause to address matters of public safety. She considered questions raised by the Panel including regarding how "*unreasonable*" would be assessed, and whether guidance could be provided by way of an advice note. She agreed that an advice note could be helpful, but that assessment would be on a case by case basis. She referred to section 85(b) of the RMA which references an "*unfair or unreasonable*" burden without further clarification, and she could not find case law to assist the question. Ms Easton also responded regarding any available mechanism to make people maintain heritage items, indicating that there was only section 131 of the Building Act regarding the need for policy around dangerous and unsanitary buildings, as applicable to heritage buildings. She considered the question of whether criteria were needed to guide assessment of practicable alternatives, and reiterated that it would be done on a case

by case basis. She advised that "*practicable*" might differ based on a number of factors, including the degree of deterioration of the building, potential uses in its location, or characteristics of the building or item that make it more or less suitable for adaptive reuse.

160. Ms Easton also confirmed for the Panel, in response to questions at the hearing, that the Bathurst property that was the subject of their submission is situated within the Denniston Historic Area.

161. With regard to **HH-P9**, Ms Easton responded to a question from the Panel by indicating that she considered prioritisation could be a useful addition to the policy. She did not identify scope for the addition, but did recommend a list of priorities similar to recommended Method HH-M4. She also advised that the 90 heritage items referenced by HNZPT at the hearing were sites that people sought to be included in the Heritage List, and resulted in Waiuta Historic Area being included in Schedule One of the Plan. She noted that the HNZPT information on these sites is available to support further assessment for inclusion in Schedule One. She reiterated that HNZPT can only apply general pre-1900 archaeological sites provisions from the HNZPT Act in the absence of scheduling in the Plan.

162. In response to Panel questions about steps to prepare a variation to the Plan in relation to the historic heritage schedule, Ms Easton noted that over the next two years detailed site records would be produced for each of the items in Schedule One. Following that, a variation would be prepared to update the schedule listings, which could be as early as 2026. However, she noted that there was no budget to assess the 90 additional sites referenced by HNZPT or any programme in place to do so. She noted that items in Appendix Ten would be reviewed once the site records for schedule items were complete.

Hearing Panel's Evaluation

163. With regard to **HH-P1**, the Panel do not recommend any amendments in response to submissions and evidence.

164. With regard to **HH-P2,** the Panel agree with the recommendation of Ms Easton to incorporate the phrase "*including landowners*" in this policy in response to the whole of Plan submission point of David Ellerm.

165. With Regard to **HH-P3**, the Panel do not recommend any amendments in response to submissions and evidence.

166. With regard to **HH-P4**, the Panel agree with the reporting officer's recommendation, and note that addition of the new policy for RSI may address the matter raised by Manawa regarding compatibility with the NPS-REG.

167. With regard to **HH-P5**, the Panel agree with the recommendation in the reporting officer's right of reply, and with the evidence of Manawa on this policy. The Panel agree that alterations may be required during repair and maintenance, as highlighted by Manawa, but consider that the addition of c) covers a wide range of circumstances where alterations may be required to enable continued adaptive reuse, including repair and maintenance, so are satisfied that no further addition to the policy is required.

168. With regard to **HH-P6**, the Panel agree with the recommendation in the reporting officer's right of reply, and have further considered the evidence of Westpower and Manawa in relation to RSI and the new policy proposed by Kiwirail. The Panel accept that there may be occasion for relocation or repositioning due to relationship with RSI, and therefore

recommend amendment to the policy, incorporating additional matters for consistency with the new policy proposed by Kiwirail.

169. With regard to **HH-P7**, the Panel have considered the request of Bathurst for a discretionary consideration regarding the need for a professional assessment and agree with the reporting officer that council planning officers should have appropriate technical advice to inform decision-making. The Panel have also considered the submission points of Westpower and Manawa regarding impacts on RSI as a reason for destruction or demolition. The Panel consider that section 6(f) requires protection from inappropriate subdivision, use and development, and that it is not appropriate to prioritise RSI over a heritage item when it comes to permanent demolition or destruction. The Panel consider that the notified conditions of the policy need to be satisfied, while supporting the point that public safety is a suitable matter to add to the policy, including in response to the Building Act 2004. Only where these conditions are satisfied should there be a pathway, including in circumstances where owners of RSI seek demolition or destruction of a heritage item.

170. With regard to **HH-P8**, the Panel agree with the recommendation and reasoning of the reporting officer, and note that the new policy also addresses the matter raised by Westpower.

171. With regard to **HH-P9**, the Panel have reviewed scope in relation to the policy and find that the matter of prioritisation is limited to sites of Māori origin, as referenced in the HNZPT submission point. The Panel recommend adopting the requested amendment to wording of the policy. The Panel also note that recommended method HH-M4, on the evidence received, is focussed on assessments of historic heritage items and areas included in Schedule 1A, and listed archaeological sites in Schedule 1B, within the two year period, but will not involve archaeological sites of Māori origin in Appendix Ten or NZAA sites more broadly. The Panel consider that an information only alert layer is an available option for the Councils, utilising a standard buffer around the recorded location of the archaeological site (e.g. 100m), with an explanation that the location of the archaeological sites is unverified and the buffer area is therefore an alert that archaeological material may be encountered during works. This would provide for an interim step while policy HH-P9 is implemented. The Panel understand that information layers are not part of the Plan, and are therefore not subject to Plan Change requirements, but can assist Plan users applying the Plan framework.

172. With regard to the new policy proposed by Kiwirail, the Panel recommend including an amended version of the policy specific to RSI, having listened to the concerns raised by Westpower and Manawa. The Panel consider that the version recommended by Ms Easton is too broad, encompassing all infrastructure, and that given Kiwirail assets are RSI, it is appropriate to restrict the new policy to RSI.

173. The Panel agree with the reporting officer recommendation regarding the new policy proposed by Greymouth Heritage Trust. The Historic Heritage Chapter is not the right location for preservation of modern items that may be of future historic heritage value. The Panel have not identified an alternative location in the Plan for the proposed amendment and consider that mechanisms outside the Plan will be required to assist the aim of the submitter.

Hearing Panel's Recommendation

174. For the reasons outlined above, and subject to our consideration of Part 2 of the RMA, the Panel recommends accepting or accepting in part the submission points footnoted below, and recommend the following changes to the **Historic Heritage – Ngā Tuku Ihotanga Policies**:

HH-P1

Recognise that historic heritage items **and areas**[47] may be valued on a national, regional or local scale.

HH-P2

Identify, assess and map heritage buildings, features, places ~~and sites~~[48] and archaeological sites, in partnership with Poutini Ngāi Tahu and Te Rūnanga o Ngāi Tahu and in consultation with the community and key stakeholders**, including landowners**.[49]

HH-P3

Assess the values of historic items and areas using the criteria set out in Method 3 of Chapter 4 in the West Coast Regional Council Policy Statement:

a. Historic;

b. Cultural;

c. Architectural;

d. Archaeological;

e. Technological;

f. Scientific;

g. Social;

h. Spiritual;

i. Traditional;

j. Contextual; and

k. Aesthetic.

HH-P4

Enable the use, including adaptive reuse**,**[50] of historic heritage items identified in Schedule One, while ensuring that their identified values are maintained.

HH-P5

When considering the proposals for external alteration of historic heritage items identified in Schedule One, the following matters should be considered:

[47] RMA First Schedule, Clause 16, for internal consistency with Schedule One
[48] Consequential amendment arising from Heritage New Zealand Pouhere Taonga S140.003 and S140.003
[49] David Ellerm S581.005
[50] RMA First Schedule, Clause 16

a. Any external alteration will not significantly detract from an item of historic heritage value; ~~or~~[51]

b. The alterations are for the primary purpose of improving structural performance, fire safety, **upgrading energy supply** or physical access **to the heritage item;**[52]

c. The alternations are necessary to enable the continued adaptive reuse of the heritage item while maintaining heritage values to the fullest extent possible. [53]

HH-P6

When considering proposals for relocation or repositioning of historic heritage items identified in Schedule One, the following matters shall be considered:

a. The impact on the physical integrity of the item and practical considerations associated with relocating or repositioning;

b. Whether the item can be accommodated without having a significant adverse effect on the structure and heritage values of the item;

c. Whether the item is at immediate risk from natural hazards identified in the Natural Hazard Chapter of this plan;

d. Whether the relocation is to return an item to its original location;

e. The impact of the movement of the item on public access to the item;

f. The importance of the heritage item's setting to its heritage significance and the impact of relocation or repositioning on that significance; ~~and~~

g. The historic heritage item and land it is sited on are in different ownership and ~~following investigation and assessment into~~ **there is no** practical option~~s~~ for the ~~retention of the historic heritage~~ item **to remain** in its current location~~, it is unreasonable for the item to remain.~~**; and**[54]

h. **Functional need and operational need of regionally significant infrastructure, where there is no practicable alternative location and heritage values of the item are maintained**.[55]

HH-P7

Demolition and destruction of **a** historic heritage item~~s~~[56] identified in Schedule One will not be allowed unless it can be demonstrated, through investigation and assessment by a suitably qualified **or experienced**[57] heritage professional that:

a. The extent of the work required to retain the heritage item~~s~~[58] is of such a scale that the heritage values and integrity of the heritage item would be significantly compromised;

[51] Heritage New Zealand Pouhere Taonga S140.021
[52] Westpower Limited S547.173
[53] Manawa Energy Limited S438.064
[54] Gina Hogarth S304.003
[55] Westpower Limited S547.174, and consequential to acceptance of Kiwirail Holdings Limited S442.048
[56] RMA First Schedule, Clause 16
[57] Consequential amendment arising from decision on the definition of '*heritage professional*'
[58] RMA First Schedule, Clause 16

b. **The item poses a significant risk to public safety and there is no practicable alternative to make the item safe;**[59]

c. The costs to retain or repair the heritage item would be unreasonable;

d. All other viable alternatives, including relocation and repositioning,[60] have been fully considered.

HH-P8

Internal alteration of historic heritage buildings identified in Schedule One assessed as having significant internal values will not be allowed unless it can be demonstrated that:

a. The alterations are for the primary purpose of improving structural performance, fire safety or physical access; or

b. It is in a serious state of disrepair, and cost to remedy is prohibitive; or

c. Any alteration will not detract from its heritage value; or

d. It is of a temporary or easily reversible manner and will support its ongoing use; or

e. It can be altered in part without significant adverse effects on the heritage values for which the item is listed in Schedule One.

HH-P9

The Councils will work with Heritage New Zealand Pouhere Taonga and Poutini Ngāi Tahu to create a yearly work programme ~~which~~ **that**[61] will enable all NZAA sites ~~of Māori origin~~[62] ~~o~~**i**n[63] Te Tai o Poutini to be accurately mapped within the next ten years, **prioritising sites of Māori origin**.[64] These will be included in the planning maps as a Plan Change.

HH-P10

Only allow regionally significant infrastructure on or within historic heritage items or areas identified in Schedule One where it can be demonstrated that:

a. functional need or operational need of the infrastructure means that there is no practicable alternative to its location; and

b. The infrastructure will protect and maintain the heritage values of the item or area.[65]

2.6. Historic Heritage Rules

Submissions and Further Submissions

175. The s42A Report, on pages 28-31, 36-37 and 40-46, summarises submissions and further submissions on the Rules of the Historic Heritage Chapter.

176. There was one submission on the rules as a whole. Brian Anderson (S576.002) sought that historic values should be assessed as mining proposals arise.

177. With regard to **HH-R1**, repairs and maintenance, there were two submissions in support from Te Mana Ora and BDC, one opposing in part and two seeking amendment.

178. HNZPT (S140.024) sought an additional clause requesting that repair and maintenance work be date stamped where it was indistinguishable from the original.

179. The O'Conor Institute Trust Board (S466.013) and Frank and Jo Dooley (S478.056) sought that the rule make it clear that internal alterations not affecting the external appearance of the building were permitted.

180. With regard to **HH-R2**, earthquake strengthening, fire protection and accessibility, there were four submissions in support from Te Mana Ora and BDC, one opposed and four seeking amendment.

181. The O'Conor Institute Trust Board (S466.014) and Frank and Jo Dooley (S478.057) sought reference to '*suitably qualified and experienced architects*', while Federated Farmers (S524.009) sought reference to '*suitably qualified heritage professional*'. Westpower (S547.177) sought to include reference to the supply of energy.

182. With regard to **HH-R3**, there were two submissions in support from Te Mana Ora and Westpower, one supporting in part, one opposed, one opposing in part and three seeking amendment.

183. HNZPT (S140.025) sought reference to "*archaeological site*". Westpower (S457.178 and S547.179) sought addition of the word "*or*", and sought to include reference to energy, overhead lines and fence post holes. Federated Farmers (S524.045) sought new wording for clause d). BDC (S538.168 and S538.170) sought clarification regarding what was meant by an Accidental Discovery Protocol ('**ADP**') commitment, and deletion of rule HH-R5 in order to rely on HH-R3 with amendment to refer to new infrastructure connections to heritage buildings. The Director General (S602.052) sought that clause a) reference rules in the Earthworks Chapter, including rules EW-R1 – EW-R6. Manawa (S438.066) sought an additional clause referring to maintenance and repair of RSI within the existing footprint of the infrastructure. The telecommunication companies (S663.036) sought additional reference to maintaining underground telecommunication assets and installation of new connections in circumstances where the item is not an archaeological site.

184. With regard to **HH-R4**, there was one submission in support from Te Mana Ora, one opposed, one opposing in part and one seeking amendment.

185. HNZPT sought (140.026) sought that repositioning of a historic heritage item on the same site is classified as a discretionary activity and relocating to a new site is classified as a non-

complying activity. BDC (S538.169) sought deletion of the note that repositioning and relocation proposals will always be publicly notified, deletion of the word "*sustained*" and amendment so that it was a hazard professional rather than a heritage professional that would be required. The Director General (S602.053) sought reference to an archaeological authority issued by HNZPT or written approval by HNZPT.

186. With regard to **HH-R5**, there were two submissions in support from Te Mana Ora and the telecommunications companies, one opposed and three seeking amendments.

187. Federated Farmers (S524.137) supported use of the term "*suitably qualified heritage professional*". Westpower (S547.181) sought addition of reference to energy in the title of the rule and in clause 1) of the rule. The Director General (S602.054) sought reference to an archaeological authority issued by HNZPT or written approval by HNZPT. BDC (S538.170) sought deletion of the rule because the Council considered the controlled activity rule to be onerous for necessary connections to services, and that the ADP could be relied upon to address matters associated with potentially unearthing archaeological material.

188. With regard to **HH-R6**, there were four submissions in support from Te Mana Ora, BDC, Manawa and Federated Farmers, and five seeking amendments.

189. Federated Farmers (S524.138) supported use of the term "*suitably qualified heritage professional*". HNZPT (S140.027 and S140.028) sought that "*repairs and maintenance, earthquake strengthening, fire protection and accessibility upgrades*" should be a separate rule from "*additions and alterations and associated earthworks*" for ease of plan use, and sought changes to clauses a) and c) of the rule. The TTPP Committee (S171.015) sought that the rule be restricted discretionary with no conditions, and that status when compliance is not achieved should be "*N/A*". Westpower (S547.182 and S547.183) sought reference to supply of energy in the title of the rule and reference to technical, locational, functional or operational constraints or requirements of energy activities.

190. With regard to **HH-R7**, there was one submission in support from Te Mana Ora, one opposed, one opposing in part and three seeking amendments.

191. HNZPT (S140.029) sought discretionary status for repositioning and non-complying status for relocation. BDC (S538.172) sought deletion of reference to all repositioning and relocation proposals being publicly notified. Westpower (S547.184) sought an additional clause that referenced technical, locational, functional or operational constraints or requirements of energy activities. The Director General (S602.055) sought reference to an archaeological authority issued by HNZPT or written approval by HNZPT. Poutini Ngāi Tahu (S620.108) sought an additional clause referencing impacts on cultural values on sites and areas of significance to Māori and implementation of advice from Poutini Ngāi Tahu.

192. With regard to **HH-R8**, there were three submissions in support from Te Mana Ora, HNZPT and Manawa seeking that the rule be retained as notified.

193. With regard to **HH-R9**, there was one submission in support from Te Mana Ora and one opposed.

194. HNZPT (S140.031) sought that demolition and destruction of a historic heritage item or area is classified as a non-complying activity because of the irreversibility of the action and the resulting loss of connection with history.

195. With regard to **HH-R10**, there was one submission in support from Te Mana Ora, two opposed and one seeking amendment.

196. Manawa (S438.069) sought that the rule be deleted because it is unreasonably restrictive of nationally significant activities, and that a restricted discretionary activity status would be appropriate with a single matter of discretion referencing the impact on the heritage item. BDC (S538.173) also sought deletion of the rule because it was considered too onerous. Westpower (S547.185) sought that the rule be replaced with a restricted discretionary activity status for new energy activities.

197. With regard to **HH-R11**, there was two submissions in support from Te Mana Ora and BDC seeking that the rule be retained as notified.

Section 42A Report Analysis and Recommendations

198. In relation to the submission of Brian Anderson, Ms Easton considered that there were existing mechanisms in the HNZPT Act requiring archaeological authority to be obtained. She noted that many of the sites Mr Anderson raised concerns about would meet the definition of an archaeological site and would therefore be covered by the HNZPT Act.

199. With regard to **HH-R1**, Ms Easton did not support the request of HNZPT for date stamping of repair and maintenance work because she considered it to be an unreasonable burden, not standard practice, and difficult to monitor or enforce. Ms Easton explained, in relation to alterations to interiors, only those items in Schedule One that incorporate the phrase "*fixtures and fittings*" are restricted in relation to interior alterations. She saw opportunity to provide this clarity to plan users in response to the submissions of The O'Conor Institute Trust Board and Frank and Jo Dooley by adding an advice note to the rule.

200. With regard to **HH-R2**, Ms Easton supported the submissions seeking a clear reference to the expertise required to apply the rule and recommended use of the defined term '*heritage professional*' from the notified Plan. She also supported the Westpower submission point seeking reference to supply of energy, but did not support replacing "*and*" with "*or*" because she considered that both clauses of the rule needed to be satisfied to ensure activities did not detract from heritage values.

201. With regard to **HH-R3**, Ms Easton supported reference to "*archaeological site*". She did not support addition of "*fence*" because this was not the intent of the rule. She noted that network utility poles could disturb archaeological sites, and for similar reasons she rejected the Federated Farmers submission point. She supported BDC seeking guidance on the Accidental Discovery Protocol commitment and recommended a definition be included in the Plan to provide that guidance.

202. Ms Easton supported reference to "*overhead line*" because she considered its absence to be a drafting error, but she did not consider reference to "*energy*" as necessary because electricity lines are already incorporated as network utilities. She supported the request of Manawa for maintenance and repair of existing RSI to also be permitted, and the request of the telecommunications companies in relation to existing underground assets. However, she did not support permitted status for new underground connections, which she considered should be assessed as part of a resource consent process, and for similar reasons did not support the BDC request to delete HH-R5. She accepted the submission point of the Director General in part, as it relates to EW-R1 because she considered it appropriate that these general standards for earthworks apply.

203. With regard to **HH-R4**, Ms Easton responded to the request of HNZPT for a discretionary rule for repositioning and a non-complying rule for relocating a heritage item. She noted that she had discussed the matter with Dr Ann McEwan and on that basis recommended that the rule should be restricted discretionary, rather than controlled.

204. Ms Easton supported the BDC request to remove the word "*sustained*" on the basis that the rule is managing imminent threat. She emphasised the importance of use of a heritage professional to inform relocation and repositioning decisions in order to appropriately protect heritage values. In response to the matter of notification, Ms Easton noted that the matter of public input was of importance to the community, as evidenced during the consultation process for development of the plan. She therefore did not recommend deleting the reference to public notification, but accepted the issue of timeliness raised by BDC and so recommended amendment to the notification clause.

205. Ms Easton did not propose any wording changes in response to the submission point of Federated Farmers. In response to the Director General's submission point she considered an advice note to be most appropriate, given that the matter of an archaeological authority is not within RMA jurisdiction.

206. With regard to **HH-R5**, Ms Easton did not support deletion of the rule, as sought by BDC, and considered a controlled activity status to be appropriate to allow for conditions to manage adverse effects in particular circumstances. She agreed with Westpower that energy connections should be referenced and considered their absence to be a drafting error. She considered an advice note to be the appropriate response to the Director General's submission, but agreed that approval from HNZPT would be important given that the rule does not require an assessment from a heritage professional.

207. With regard to **HH-R6**, Ms Easton did not consider it necessary to split the rule in two, as requested by HNZPT due to the efficiency of retaining all these matters in the one rule. She supported the amendments requested by HNZPT to clause a) and clause c). She supported the submission of the TTPP Committee that the rule should be restricted discretionary with no conditions and non-compliance should not result in another activity status. She also supported the Westpower submission point requesting reference to supply of energy, but did not support the additional matter of discretion associated with functional need and operational need.

208. With regard to **HH-R7**, Ms Easton responded to the request of HNZPT for a discretionary rule for repositioning and a non-complying rule for relocating a heritage item. She noted that she had discussed the matter with Dr Ann McEwan and on that basis recommended that the rule should be discretionary, rather than restricted discretionary. She therefore considered that full discretionary status would allow for the matter of HNZPT interests to be considered as raised by the Director General, consideration of Poutini Ngāi Tahu values as raised by Poutini Ngāi Tahu, and functional need or operation need of RSI as raised by Westpower. In response to BDC, as with HH-R4, Ms Easton recommended an amended notification clause.

209. With regard to **HH-R8**, similar to other requests of the Director General, Ms Easton favoured an advice note in relation to archaeological authority requirements, and agreed that approval from HNZPT would be important given that the rule does not require an assessment from a heritage professional.

210. With regard to **HH-R9**, Ms Easton discussed the matter of activity status with Dr Ann McEwan; and reconsidered her position based on what she understood of the West Coast historic

heritage context, community views during plan development, the activity status in existing district plans in the region, and the plans of other territorial authorities. Her conclusion, on balance, was that discretionary status was not sufficiently protective and that non-complying status, as requested by HNZPT, would be more appropriate.

211. With regard to **HH-R10**, Ms Easton reconsidered the rule status in light of the submissions of BDC, Westpower and Manawa and agreed that the notified rule was too onerous, so she recommended restricted discretionary status instead, with similar matters of discretion as Rule HH-R8.

212. With regard to **HH-R11**, Ms Easton noted support for the rule.

213. With regard to the submissions of Rocky Mining Limited (S474.006) and Papahaua Resources Limited (S500.027) seeking a new restricted discretionary activity for mineral extraction, Ms Easton did not support these submissions. She noted that protection of historic heritage from inappropriate subdivision, use and development was a matter of national importance, whereas mineral extraction, while an important economic activity in the region, is not recognised as requiring additional weight or consideration and is not an activity expected to occur in historic heritage areas.

Hearing and Submitter Evidence/Statements

214. With regard to **HH-R1**, Mark Lile on behalf of The O'Conor Institute Trust Board provided evidence that the Institute building is Category 2 on the Heritage List and is identified in Schedule One as HH19, but is not shown as having internal "*fixtures and fittings*" of heritage value. Mr Lile indicated support for the advice note recommended by the reporting officer in response to the issue raised in submission.

215. Arlene Baird, on behalf of HNZPT, in her evidence dated 8 November 2023 responded to the s42A Report rejection of date stamping work, describing the act of date stamping as a simple and effective measure that does not place a burden on owners and is consistent with the ICOMOS NZ Charter. However, she accepted the position of the reporting officer and noted that, where necessary, HNZPT can advocate for date stamping through consultation on individual cases. Following discussion at the hearing, outlining the simple acts required to date stamp activity, she provided wording for a date stamping condition, with accompanying advice note, as follows:

> **x. New materials, works or reconstructed elements shall be date stamped to indicate the time of their installation.**
>
> ***Advice note: Date stamping is a term used in heritage conservation to mean marking with a date, not necessarily a stamp, and is important to clearly distinguish replicated or introduced features and new areas of fabric from heritage fabric so changes to the heritage item can be readily understood in the future. The dating of new or introduced fabric may be undertaken by a number of permanent means. It is recommended that a builders pencil be used with regard to masonry or timber, or small steel plate can be used on timber. A permanent marker pen may be used on steel elements. Marking should be in unobtrusive locations. Not all new fabric requires dating, where there are areas of new or introduced material, it can be done on examples of this, rather than on every piece. It should be noted that some treated t imber and plasterboard is already dated.***

216. With regard to **HH-R2**, Mark Lile on behalf of The O'Conor Institute Trust Board indicated support for use of the term '*suitably qualified and experienced heritage professional*' in the rule, provided that it appropriately covers architectural expertise.
